Finally, the social security taxes, which are paid into the general fund of the U.S. Treasury like any other taxes, would not come close to building an adequate reserve even if used for that purpose.

Some actuaries say that obligations incurred but not provided for—and these do not include the currently proposed additions—amount to upward of $500 billion.

Presumably some of those "unfunded obligations" will have to be an outright gift from the Treasury, which means that social security is in part, at least, simply another handout in the name of welfare, but more fraudulent than most because its participants are led to believe they are paying for what they will get.

Franklin Roosevelt observed, when the Social Security Act was passed, that by making contributions, even though they might not be sufficient, beneficiaries would feel they had a legal, moral and political right to collect.

"With those taxes in there," Henry Hazlitt quoted F.D.R. as saying, "no damn politician can ever scrap my social security program."

Not many politicians, damned or otherwise, have dared to try. The social security insurance myth has become so firmly established that any honest attempt to inject actuarial principles and provide any resemblance to an insured pension program never gets to first base. And any effort to strain the hypocrisy out of social security and turn it into a forthright Federal handout paid by an annual appropriation by Congress would seem doomed to failure.

Social security has become one of the untouchable verities along with home, flag, and mother.

So when two Nebraska Congressmen dare to raise the voice of reason, dare to talk about social security as it really is, and dare to vote against its extension, they display uncommon courage.

Their action compliments the voters of their districts, because it indicates the two Congressmen believe their constituents also know the truth about social security, and will back them up.

Statement of the Czechoslovak National Council of America Regarding Cuba

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Wednesday, May 3, 1961

Mr. DOUGLAS. Mr. President, the Czechoslovak National Council of America with headquarters in Chicago, speaks for many American citizens of Czechoslovak descent who are dedicated to resisting communism everywhere in the world and to the cause of Czechoslovak freedom.

These citizens viewed with great distress Cuban Premier Castro's use of Czechoslovakian equipment and personnel to defeat the Cuban Freedom Fighters. On April 20, this group officially informed President Kennedy of its feelings in this matter and pledged its support of President Kennedy's leadership.

Mr. President, I ask unanimous consent that a copy of the April 20 telegram sent by the Czechoslovak National Council of America to the President of the United States be printed in the Appendix of the RECORD along with these remarks.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

APRIL 20, 1961.

President JOHN F. KENNEDY,
The White House,
Washington, D.C.:

Czechoslovak National Council of America, speaking on behalf of countless American citizens of Czechoslovak descent, wishes respectfully to inform you of the following:

We welcome the words of determination and courage which you have spoken this day on the Cuban situation. We pledge ourselves wholeheartedly to any effort you may decide upon in the defense of our hemisphere against the establishment of a Communist bridgehead. We applaud your statement and share your opinion that the Soviet Government has no moral right to lecture us on intervention, especially since the U.S. Government has given no support to the Cuban freedom fighters.

Soviet accusations of U.S. intervention to the contrary, we believe that massive support in equipment and personnel given to Fidel Castro by Communist governments constitutes a form of indirect intervention which deserves condemnation by the United Nations and justifies energetic action by members of the Organization of American States in collective defense of the security of our hemisphere.

As American citizens of Czechoslovak descent we deplore specifically the presence in Cuba of Czechoslovak equipment and personnel on the side of Fidel Castro. We wish to assure you with utmost emphasis that this fact does in no way reflect the political beliefs of the Czechoslovak people. In full knowledge of their true feelings we bear witness to the fact that the overwhelming majority of Czechs and Slovaks, though not able to speak freely, are unequivocably dedicated to the principles of freedom and democracy and are opposed to the intervention in Cuba by their Commnnist puppet government.

Just as we Americans of Czechoslovak descent, so do the people of Czechoslovakia wish to see the United States under your enlightened guidance assume leadership of the entire free world in a bold action geared not only to the containment of communism but in keeping with the ultimate goal, the liberation of captive nations everywhere.

CZECHOSLOVAK NATIONAL COUNCIL OF AMERICA,
ANDREW VALUSEK,
President.
VLASTA VRAZ,
Executive Vice President.
FRANCIS SCHWARZENBERG,
Chairman, Political Committee.

Official Secrecy

EXTENSION OF REMARKS
OF
HON. CHARLES M. TEAGUE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. TEAGUE of California. Mr. Speaker, under leave to extend my remarks, I call the attention of my colleagues in the Congress to an excellent editorial appearing in the Monterey (Calif.) Peninsula Herald of April 28, 1961, entitled "Official Secrecy":

OFFICIAL SECRECY

President Kennedy yesterday asked the country's newspapers to cooperate in an increase of governmental secrecy.

He said that we are living in a virtual state of war in which a considerable amount of secrecy is essential to safeguard national security.

"I am asking the members of the newspaper profession and industry in this country to reexamine their own obligations—to consider the degree and the nature of the present danger—and to heed the duty of self-restraint which that danger imposes upon us all," he said.

We agree that it is essential that military secrets be guarded from potential enemies. We go beyond that. For purposes of effective propaganda we think it would be a good idea to curtail the ballyhoo in this country about what we expect to do in the future, etc., etc.

We doubt, however, that the President has directed his appeal to the right place in addressing the country's newspapers. The newspapers, after all, merely reflect the situation that exists in official quarters. We believe that his advice could more appropriately be given to his own administration.

We have a publicity-mad officialdom in this country, with rival services and departments employing huge staffs of publicists to plug their side, to get credit, to get their names into papers, etc.

The White House itself under President Kennedy has engaged in a press-agentry worthy of Ringling Bros.-Barnum & Bailey combined shows.

As recently as April 12, the following directive was sent to all Federal departments:

"At a White House meeting of Cabinet assistants, we have been advised again that the speeches of Cabinet and sub-Cabinet officers do not contain sufficient reference to the President and his personal interest in, and compassion with, the problems which face the Nation. Liberal quotations from his speeches, past or present, should be used.

"It is also to be kept in mind that, in making announcements of local projects, the President should be given a credit line in the lead paragraph."

In such a mad scramble for publicity it isn't surprising that confidential information may sometimes be given out.

And when rival services are seeking funds from Congress, statements to support that service may be made without regard for their general effect.

Some of Mr. Kennedy's own campaign statements were criticized for undermining U.S. prestige abroad.

Contradictory statements by some of his Cabinet officers have scarcely helped the the United States in the international field. We don't think it helps our cause when the President has to revise and correct the remarks of his Secretary of Defense.

The fact is that the Kennedy administration is just about the gabbiest in history.

There is always the possibility, too, that suppression of news in the interest of national security may in reality be carried on simply to avoid legitimate political criticism.

During World War II military censorship frequently went beyond the requirements of military security. It was used for political purposes and for covering up mistakes.

In that conflict we know of no authenticated case in which information published in the press caused the life of a single soldier or the loss of a single ship or battle. But there were plenty of cases where official mistakes—some of them inexcusable—cost heavily.

President Roosevelt's ill-considered insistence on unconditional surrender probably cost thousands of lives.

Soviet spies did not wrest our atomic bomb secrets from us by reading of them in the

newspapers. They got them by going much closer to the source, aided by the negligence of the Truman administration.

And with hundreds of governmental officials talking their heads off today, we doubt that Soviet spies are relying much on newspapers for their information. Some of the Washington cocktail parties attended by officials probably yield far more secret information of value.

We are sure that the newspapers of the country will cooperate fully in all legitimate efforts to halt the spread of information that is properly secret or confidential.

The question, it seems to us, is whether President Kennedy can get similar cooperation from his own administration.

Federal Funds and State Schools

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by David Lawrence which appeared in the Washington Star of April 28, 1961:

FEDERAL FUNDS AND STATE SCHOOLS—U.S. DEMAND IN VIRGINIA CASE FEARED AS BLOW TO EDUCATION AID PLAN

(By David Lawrence)

President Kennedy may have dealt a fatal blow to the movement to obtain money from the Federal Government to subsidize public schools. He has just demanded that the legislature of a sovereign State—Virginia—be compelled to take punitive action against a single county for failing to open its schools or else abandon the whole public-school system throughout the State. In view of this development, will Congress now take a chance and appropriate money that gives a bureau in Washington potential power over the operation of the public schools throughout the United States?

To tell a State how it must appropriate its funds, how it shall set up its own system of education, and what steps it must take to satisfy the Federal Government's demands is unprecedented in American history. Yet this, in effect, is the authority sought by the Department of Justice, with the approval of the President, in applying to a Federal court for an order against the State of Virginia.

The step is far-reaching. It could mean that in the future the Federal Government could even tell a State it must have a uniform system of government applying to every county or city. It so happens that the State of Virginia permits its counties and independent cities to adopt, as they choose, various forms of executive management or control by boards of supervisors elected by the people. But, under the theory just applied by the U.S. Department of Justice, the counties and municipalities would not be permitted to have their own forms of local government, but would have to adopt a system uniform throughout the State. If any county or city deviated, it would be in danger of being compelled to accept an order of the Federal Government in Washington served upon the State through the courts.

This doctrine is, of course, based upon the concept of the 14th amendment which the Supreme Court of the United States proclaimed in its desegregation decisions in 1954. The point was made then that equal protection of the laws means equal application of State laws to children attending public schools. But there is nothing in the 14th amendment or anywhere else in the Constitution which says the Federal Government may tell a State it cannot provide funds to keep its public schools open in 97 counties and 32 independent cities because a single county happens to close such schools. This is an obvious form of punitive action that can readily be repeated by an Executive order directing any State which accepts Federal funds to operate all its schools according to standards laid down by a Federal bureau.

For months now, the lobbyists for Federal aid to education and the politicians who hope to get votes through promised increases in teachers' salaries have been denying that any form of Federal control of education would be involved in current proposals for financial aid to State schools. But now it turns out that, without any specific right granted through existing law, an executive order could be issued—or a court decree sought by direct intervention of the Federal Government—telling a State how to run its educational system.

The Federal Government is demanding not only that a State reopen public schools in a particular county but that it shall stop State and county tuition grants for the use of parents who send their children to private schools and cease to pay from State funds for the "maintenance and operation of public schools anywhere in Virginia" as long as the public schools in one county are closed.

This can only mean that the Federal Government now feels it can interfere in any tuition grants, fellowships, scholarships or other forms of aid if it doesn't like the way the States operate such educational programs. It is certainly something novel for the Federal Government to tell State legislatures how to spend their money.

It will be contended that the Supreme Court has not as yet ruled on the new demand of the Department of Justice for dictatorial powers over education in the States. But it may be taken for granted that the lawyers at the Department have blazed a new trail and probably have found new devices satisfactory to them whereby the end will justify the means.

If the Federal Government can tell the State of Virginia that it cannot provide funds for its public schools unless it makes every county and city conform to a pattern approved by the Federal Government, then constitutional government, as it has been known since the founding of the Republic, will indeed have vanished. Government by executive order or court decree will have supplanted acts of Congress and the laws of 50 State legislatures.

Archbishop Lucey, of San Antonio, Makes Eloquent Plea That "Poor in Latin America May Live Like Human Beings"

EXTENSION OF REMARKS
OF
HON. RALPH YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, May 3, 1961

Mr. YARBOROUGH. Mr. President, at a special mass for the 3-day Inter-American Conference sponsored by the Texas Federation of Women's Clubs in commemoration of Pan American Day, His Excellency, the Archbishop Robert E. Lucey made a stirring plea for the poor and needy of Latin America.

In this time of great need for better understanding of the problems facing the people of Latin America, I believe Archbishop Lucey's message is of special importance. To call it to the attention of all Members of the Congress, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent article entitled "Archbishop Pleads for Latin American Social Order," from the April 21, 1961, issue of the Alamo Messenger.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Alamo Messenger, Apr. 21, 1961]

ARCHBISHOP PLEADS FOR LATIN AMERICAN SOCIAL ORDER

A plea to men of power and prestige in Latin America "to create a just social order in which the poor and the needy may live like human beings," was voiced in San Fernando Cathedral last Sunday by Archbishop Robert E. Lucey.

The archbishop expressed his appeal in a sermon delivered at a special mass for the 3-day Inter-American Conference sponsored by the Texas Federation of Women's Clubs in commemoration of Pan American Day.

Among those present at the mass were Milton Barall, Deputy Assistant Secretary of Bureau of Inter-American Affairs, State Department, who represented President Kennedy; Dr. Manuel Mendez G., Vice Minister of Government and Justice of the Republic of Panama; Ricardo Cucalon, Chief of Protocol of Republic of Panama; Consul General Angela Munoz Lew, also of Panama; officers of the women's clubs; Mayor and Mrs. J. Edwin Kuykendall; and military officers from 17 Latin American nations.

"The American people," the archbishop declared, "have always been generous and they have assisted many nations with large grants of money, food, and medicine. Through the Marshall plan we put several European nations on their feet and saved them from the slavery of communism. We have also sent expert technicians to various Latin American countries to give leadership in the fields of engineering and agriculture. But it is now apparent that we should strengthen the economies of those nations and over a period of years help them to help themselves.

"Prudence, caution, and good will must be employed in this operation. The Latin Americans are not asking for charity. The governments of the republics south of the border recognize that industries must be established to raise standards of living; employment must be provided for the working people; housing must be improved; schools and hospitals are needed in many places.

"Our Government and our people will consider it a privilege to assist the Latin-American republics to give a happier and a better life to millions of citizens who are our neighbors and our friends. But if this program is to succeed people of great wealth in those countries must share their blessings with their fellow countrymen who are becoming restless and who will not much longer patiently endure the poverty and the wretchedness to which they have been condemned.

"Historically, men who possessed great fortunes have sometimes been blind and deaf; blind to the frightful poverty of their fellowmen and deaf to the cries of anguish that rose from the impoverished masses of the people. In many parts of the world a spirit of revolution is obvious among the peasants and the exploited workers. Wealthy families in Latin America should recognize and practice the principles of social justice which are a part of their Christian heritage.

"Time is running out. Men of power and prestige must begin now to create a just social order in which the poor and needy may live like human beings in decent and frugal comfort. Otherwise, rioting, and violence may destroy both the men of wealth and their property.

"When our program of cooperation in Latin America gets under way we must proceed with great prudence and caution to the end that we should really help our Latin-American neighbors and not solidify and make permanent the present wretched social order in which there is great wealth on one side and unspeakable poverty on the other. That is not the way to treat our brethren in Latin America.

"If our reputation south of the border and all the way down to the Argentine has not always been good perhaps we should pause to give that problem serious consideration. Our businessmen should never forget that natural resources in Latin America and everywhere were given by God for all the people. It is certainly arrogant to establish commercial operations in a foreign country in order to exploit for selfish gain either the people or the resources of that nation. This sort of thing does not create good neighbors."

"'Blessed are the peacemakers, for they shall be called children of God,'" concluded the archbishop. "We should work and pray for peace not only in the sense of avoiding armed conflict but also that we should learn to treat the citizens of other countries with honor, with respect, and with friendship for only thus shall we be worthy of the blessings of peace."

De Gaulle's Verbal Blast at U.N.

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. DERWINSKI. Mr. Speaker, in view of the crises we face in many parts of the world and seem unable to solve, it is important to note the firmness with which General de Gaulle handled the rebellion which broke out in Algeria agains the French Government.

Since President Kennedy's first major trip in the field of personal diplomacy will take place late this month when he visits Paris, it is well for us to praise the position that General de Gaulle maintains in his attitude towards the United Nations and international diplomacy.

In the Washington Evening Star of Tuesday, May 2, the column written by Constantine Brown is a thoughtful commentary on the thinking of the great French statesman:

[From the Evening Star, Washington, D.C., May 2, 1961]

DE GAULLE'S VERBAL BLAST AT U.N.—CRITICISM OF COMPROMISE AND OF SOVIET USE OF WORLD GROUP CALLED A SERVICE

(By Constantine Brown)

The Western World, indeed the whole non-Communist world, owes a great debt of gratitude to French President Charles de Gaulle for speaking the simple truth.

Statesmen in every nation have an understandable habit of circumlocution. They beat about the bush on every occasion, play coyly with words, avoid directness as a habit. Unfortunately, often the direct and unvarnished truth would serve their purposes better, and almost always it would certainly serve the world better.

But General de Gaulle, no mere amateur himself when it comes to the proper use of the well-chosen phrase, disdains to hide his real views behind a facade of verbiage. When the matter at hand is significant enough, and when the real story needs telling, the man who has been described as the conscience of France speaks out.

It should have come as no surprise when General de Gaulle turned the full force of his Gallic verbal guns on the faltering United Nations recently. The great man who lost patience with the ridiculous bickering and ineffectual splinterization of the French Fourth Republic's National Assembly could hardly be expected to admire the shifty maneuvering and sometimes dangerous compromises indulged in by the General Assembly of the United Nations and by the Security Council.

In the De Gaulle view, the entire structure of the United Nations needs to be rebuilt, just as he himself rebuilt the tottering structure of the French Government and ended the long years of vacillation, of indecisiveness, of inability to function that afflicted the Fourth Republic.

The timing of the French President's remarks on the United Nations was in itself significant. They were made at a press conference in the Elysee Palace only 3 days after the White House had announced that President Kennedy was to visit Paris.

There could be little doubt that, in making his very sharp and discerning comments on the U.N. and on the nature and organization and effectiveness of the North Atlantic Treaty Organization, General de Gaulle was putting his youthful guest-to-be on notice. The two subjects are certain to be a very important part of the Paris talks, and General de Gaulle is not considered likely to back away from the stand he has taken.

At the U.N., said General de Gaulle, the Assembly has taken unto itself the powers and functions that are supposed to be exercised by the Security Council. As a result, he said, the Security Council has disintegrated, and the Assembly now interferes in matters that the U.N. Charter was specifically drawn up to check. "The Assembly * * * can deliberate on everything and anything," the general observed.

And that deliberating, the Frenchman went on, amounts to "scandalous and tumultuous sessions where it is impossible to organize objective debate and which are filled with invective delivered by the Communists and their allies. The U.N. has brought to the Congo its own global incoherence."

France, he went on, would have no part of this chaos. General de Gaulle was not threatening French withdrawal from the U.N. or its allied bodies. But he specifically declared that France would have nothing to do, with either money or men, in U.N. ventures such as that currently under way, with dubious evidence of success, in the troubled Congo.

"Under these conditions, France does not see how we can take any other attitude toward the United Nations—or the Disunited Nations—than that of the greatest reserve."

There we have the crux of the matter. The U.N. has more and more been functioning as an expensive propaganda sounding board for international communism, and for the so-called neutralist nations that are constantly being used to pull Communist chestnuts out of the global fire.

It took the great Frenchman to speak the plain truth.

Medical Care Under Social Security: A Program That Would Undermine America's Quality Health Care System for Her People

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. CURTIS of Missouri. Mr. Speaker, I recently had the opportunity of addressing the annual meeting of the Connecticut State Medical Society at Hamden, Conn. At that time I spoke on the proposal which had been made that we put a program for medical care for the aged in our social security system. This would result in a significant, and most unfortunate, fall in the quality of medical care which Americans now enjoy. An answer in perpetuity for a need that is temporary and being met better every day could well cost Americans, aged and not, the quality medical care which we have become accustomed to.

I would like to place this speech in the RECORD at this point:

THE MEDICAL COLD WAR—WHAT IS YOUR IQ ON THE MEDICAL CARE CONTROVERSY?

(Speech of Hon. THOMAS B. CURTIS, of Missouri; senior Republican House Member, Joint Economic Committee, member of Ways and Means Committee, South St. Louis, St. Louis County, Mo., before the annual meeting of the Connecticut State Medical Society, April 27, 1961, Hamden, Conn.)

There is much misinformation, misunderstanding, propaganda and outright falsehoods abroad concerning the real facts regarding medical care legislation pending before this Congress. News stories, radio and TV programs, and, even many officials are guilty of speaking from the hip without having examined into the facts. The proponents of government compulsory health insurance pretend to be experts, which they are not, in all fields in which they urge a government takeover of both industry and the professions. They are hard at work disguising the true facts by parading before the public's eye drawings, pictures and cartoons of people in distress while claiming that the solution to all of these ills, aches and pains can be supplied through "free" government-supplied food, housing, unemployment checks and medical services. Doesn't it seem strange that the only two committees of this Congress charged with the responsibility of considering health care legislation, after examining the facts, hearing testimony and meeting in extended executive sessions have voted down by a ratio of at least two to one the compulsory government programs presented them. Let me provide you with some of the pertinent information upon which these decisions have been made. A majority of the members of both the House Ways and Means Committee and Senate Finance Committee are agreed that with all of the voluntary, local, State and Federal medical programs available to our population, including the recently enacted legislation now popularly known as the Mills-Kerr bill, every person in the United States is possessed of either the ways or the means for securing proper medical care. Admittedly, for a small percentage of our population there is now and

has been in the past difficulty in meeting the cost of prolonged and expensive illnesses. The appropriate reference committees of Congress which have considered this problem over the past several years have, in their reports, indicated that more than 70 percent of the total population and over 50 percent of the aged possess health insurance. Moreover the quality of insurance protection is and has been improving rapidly. One example of the improvement in this field is the recent action by your State's legislature, the Connecticut General Assembly. It has given approval to a plan by which Connecticut insurance companies can join together in providing health insurance for the aged. This is a truly significant step forward. We know that cancellation of health insurance because of age has been nearly eliminated. Some of this improvement possibly has come in the bright light generated by congressional hearings.

We know that the quality of medical care in the United States under our system is the best in the world, whether the individual purchases health care voluntarily or receives it from one of the levels of government without having any agency impose a compulsory health tax upon him. We know that this kind of a system guarantees a higher quality of medical care than is being delivered to the population in all other parts of the world under compulsory systems—compulsory in the tax sense, and compulsory in the sense that the tax is paid whether the individual uses the system or not, and compulsory in the sense that the providers of care report to government authority and deliver the kind of care which is prescribed by government rather than by the doctor. We know that in no nation other than our own does any similar population group live longer and have less incidence of disease than do Americans. We know that in every civilized nation in the world except in the United States there exists a system of government or socialized medicine. It is no accident that by comparison we excel all these systems in the quality of medical care which is available to our population. We know that 30 years ago our medical students—in fact, medical students from all sections of the world—flocked to the medical centers of Europe for their education. This was before the day that governmental medicine systems came to these former great medical centers. Today medical students the world over, including Western Europe, travel, not to Eprope, but, rather to the United States. In every nation in the world except our own, the ratio of doctors to population is on the decline, with all of the adverse implications that such a decline has upon all the population. The ratio of physicians per patient in the United States is remaining steady at about one physician to 750 of population despite our population explosion. Reports from abroad indicate that fewer sons of physicians in foreign countries are following their father's footsteps in the medical profession. Because few young men are attracted to the medical profession in Great Britain and because many are coming to the United States, the ratio of physicians to population which was 1 to 877 in 1947 decreased to 1 to 1,149 by 1957, indicates loss in quality.

Even in Canada, which has a compulsory tax-supported system which involves only hospitalization, there is a loss of physicians to the United States in excess of 200 per year.

If we need further proof of the great number of foreign-trained physicians who have recently come to America, make a trip to a hospital and there talk to some of the 12,000 and more foreign-graduated physicians who are interning and serving residencies in our hospitals, it makes a trip to the hospital have the enchantment of a visit to 100 foreign countries. And a goodly majority of these foreign-trained doctors, you will learn, have applied for U.S. citizenship.

On the technique side of medicine, difficult and advanced treatment and surgery has become so highly developed in the United States that daily one reads in the newspaper of collections being made to rush some person to the United States for open heart surgery or for treatment of some difficult condition or disease.

Would the United States continue to have the quality lead in medicine if we were to move from our present programs of free enterprise medicine, sprinkled with our compassionate Government-supplied programs which we have for our indigent sick? Isn't it time that each of us take the trouble to really inspect our own communities to learn who it is in our area are not receiving the best quality medical care in the world?

A few of my colleagues in Congress tell me about heart-rending letters which they receive from their constituents under great hardship because of medical expenses and yet, if they will take the trouble to follow through on any one of these few letters received, if they will call upon a local official or a close personal physician friend to look into the complaint, in 999 cases out of 1,000 it will be found that the constituent is eligible to apply for voluntary health insurance, or that one of the programs established by some level of Government will, if that person should present himself, supply the needed medical services either without cost or at a cost which can be afforded by either the constituent or his family. Is this true in New Haven? Is this true in Connecticut? It is true in St. Louis. It is true in Missouri.

Thus far I have indicated the highlights of what I have found to be the case as pertains to quality of medical care and availability of service for all of our population. Next I wish to allude to a few statistics which apply to costs under the system of medical care which we follow in America as compared to the costs of programs under other countries' compulsory-type health care systems. Too few people are aware that under our system we are expending $25.2 billion annually to bring health services to our population. Private care costs in the most recent year available, 1959, according to reliable Federal statistics, reach a total of $18.965 billion, while all levels of Government expended an additional $6.23 billion. Private care expenditures breakdown as follows: $4.998 billion for physicians' charges, $5.514 billion for hospital charges, $3.604 billion for drugs, $1.963 million for dentists, $1.185 billion for appliances, $542 million for nurses, therapists, osteopaths, chiropractors, etc., $220 million for nursing homes.

The proponents of national compulsory health insurance would have us add to our present $80 billion Federal budget a large part of the cost of medical care which is now being borne independently of Government. If they would but check a few of the other countries, they would find this additional tax load would be but a beginning of the ultimate tax increase Congress would have to vote if we imitated the foreign systems. I made this statement because it is the history of Government health programs that the medical care expenditures spiral upward when Government takes over. This is because once the tax is imposed and the benefits are free, the benefits will be excessively used. Let me give you several examples.

The Province of Saskatchewan, which is immediately to the north of North Dakota, is a Province of people who look and act like our own. Should you cross the boundary from North Dakota into Saskatchewan, there would be few indications that you are not still in the United States. Prior to 1947, when Saskatchewan began their free hospitalization for the aged experiment, people over 65, on the average, utilized hospitals 2½ days per year. This was the same utilization rate for the United States for that same age group at that time and still is. However, after 13 years, the average person over 65 in Saskatchewan was found to be using a hospital bed 8 days per year. Just imagine what would happen to the $25.2 billion total expenditure for medical care here in the United States should we adopt such a system.

I am in possession of a letter from Great Britain which indicates that the average hospital stay for the total population because of hospitalization for medical illnesses averages 27.6 days and that the average stay in the surgical departments averages 13.4 days, whereas in the United States our average stay for medical cases is 10.3 days and our average stay for surgical cases is 7.5 days. The information on the U.S. experience comes from the U.S. National Health Survey Reports. Imagine, if you will, the increase in taxes we would have to vote, not to provide needed health services, but, rather, to satisfy the demands of a population which can get this extra care free. And if any person has in mind attempting to answer this argument with the statement that what I have pointed out only indicates that people don't get enough hospitalization, let me erase such a thought by repeating what I have said earlier. Our population lives longer, we have less incidence of disease than any of these other countries, because of our top quality preventive and curative medical care and the high standards of living which our people enjoy. The Blue Cross program directors would do well to inaugurate $25 or $50 deductible policies to offer to their policyholders. They would find that the premium they would have to charge would be so much lower because of the elimination of abuse resulting from this simple discipline that the deductible policies would outsell the "first dollar of cost" policies.

Under our system of free enterprise medical care, we know that on the average, every 2 years, since 1930, we have added a new 4-year medical school so that now we have a total of 83. We know that our medical school graduates in 1940 totaled 3,745, and that last June our medical schools graduated 7,081, and that next year the rate will be correspondingly up. We know that our rate of hospital and other medical facility construction under free enterprise and our form of Government exceeds that of the rest of the world. In Great Britain, bludgeoned by the high cost of their medical program, only one new hospital was built in the first 10 years of their socialized medicine program, thus indicating that government did sacrifice quality by permitting obsolescence and deterioration of their hospitals and health facilities.

The majority of the Congressmen who serve on the committees which have studied this legislation sincerely believe that if Congress should enact legislation to cover any segment of our society, whether that segment be the aged or the young, we will have established a principle which will yield to coverage of the total population. We know this by the experience of every foreign country, because none of them have stopped with coverage of a single age group without going the full route of coverage for the entire population. Indeed there is no logic to limiting health care by the age of a person. If the U.S. Congress should imitate these foreign medical systems, we will be inviting the skyrocketing cost phenomena which have happened in all of the foreign countries. The $25.2 billion which is being expended today by our people for medical care will double or even triple if the experience of other countries proves the rule. And the increased money instead of being carefully spent under the discipline the indi-

vidual person exercises over his or her own personal budget will be scattered and wasted. It will damage the effectiveness we derive from the expenditure of less funds.

Many people say, but let's do something. My answer is look what we have done in our society and are continuing to do. Government can help some, but the essential program must remain in the private sector. Last year in Congress we passed a supplementary program for the aged with low incomes, not so much out of necessity as out of a desire to be doubly sure that cost should not bar any person in our society from receiving adequate health care. It is the Mills-Kerr bill, which many States are implementing. The Department of Health, Education, and Welfare, early this week said that more than half of the State legislatures had either enacted or were poised to enact legislation providing funds to match the Federal contributions so that all those persons in need, not as falsely stated "on relief" who are in a position to pay all of their living expenses, but not all their medical care, will be assisted in that area. The viciousness with which some of the promoters of the social security approach to health care for the aged have attacked this act by calling it degrading and an insult to the older people, is astounding. Their reaction suggests anger at having a social problem upon which they were relying to provide the beginning of their program for socialized medicine.

I call attention to a report which I shall put in the CONGRESSIONAL RECORD next week along with this speech. It lists over $3.75 billion annually being spent under the auspices of the Federal Government in programs in which it is actively engaged and it reveals also that an additional $5.731 billion is being paid out under Federal programs on account of health and disability to more than 7 million beneficiaries. Realize, however, when you go through this list, that none of these programs is of a compulsory nature, such as would be a program financed under the social security system. Study, too, the provisions of the Mills-Kerr legislation which was enacted last Congress, and realize, if you will, that 25 States will have implemented this program before adjournment time in the State legislatures in this calendar year. I shall also put in the CONGRESSIONAL RECORD a letter from a British medical official which reveals several facets showing weaknesses in the British medical program. This letter shows me just enough to want Congress to inquire further into that program and the programs of several other of the foreign countries which have experimented with compulsory health systems. Because I have such a curiosity and because I believe the American people can benefit from the experience of these countries, I am urging my chairman, the Honorable WILBUR MILLS, suggesting that we consider at the next committee meeting the feasibility and advisability of sending a delegation to make an objective study and to report on the advantages and disadvantages of government medicine before this Congress again considers the enactment of such a program for our population.

Finally, I want to call attention to a letter I received from Joseph P. Clark, president, St. Louis Labor Council, AFL–CIO, in which he asked me if I would help vote out of committee a compulsory Federal health care bill tied to the social security system, even though I opposed this approach.

I replied by pointing out that many times I have voted measures out of committee to which I was opposed if I felt the committee had done a study job which was sufficient to enable the House to come to intelligent decisions on the policy matters involved. This has not been done. In this letter I asked for some reciprocity on the part of the national labor leaders who, in camera, decided several years ago to try to enact into law a compulsory Federal health care program tied to the social security program. I asked them through my letter to Mr. Clark to listen in an unprejudiced way to the facts and arguments that I and others have advanced in support of what we believe is the most effective way to meet the problem of health care for the aged and why we feel the compulsory Federal approach will badly damage and in no sense help to solve this important social problem.

Regrettably there has never been an appeal to reason on the part of the promoters of compulsory, Federal health care legislation from the beginning of their campaign to the presesnt. The promotion has been an appeal to emotion not to reason. It carries with it a viciousness of attacking the motives of those who will not bow to their will that is foreign to honest public debate and not conducive to reaching an intelligent solution to the social problem. This matter became so serious last year that on May 2 I took the floor of the House to deliver an address entitled "Lobbying and Reporting: The Future of Representative Government in the United States." I was happy, Vital Speech of the Day selected this speech as one they republished. This speech needs to be read by all Americans, not just in relation to this issue and the rotten propaganda and political pressure techniques it embraces, but in relation to all legislative promotions going on in the United States today. As I speak there are paid teams going around my congressional district ignorant of the issues involved in the problem of health care for the aged but intent on one thing alone, to appeal to the emotionalism of my people and break my will to judge legislation on the basis of reason and true humanity.

In the speech, Mr. Speaker, I made reference to letters from a union official and my reply to him. I should like to place these in the RECORD. Finally, Mr. Speaker, I should like to place in the RECORD the letter from the British medical official to which I referred:

ST. LOUIS LABOR COUNCIL,
St. Louis, Mo., March 29, 1961.

Hon. THOMAS B. CURTIS,
Congressman, Clayton, Mo.

DEAR CONGRESSMAN: Under date of March 20, I addressed a communication to you relating to the King-Anderson bill H.R. 4222 and S. 909 which are health bills for the aged as an extension of the social security system.

I asked for your position on this legislation and further urged that even if you don't agree with the purposes of the program that you should vote to report the bill out for consideration by the House of Representatives. You made your position clear in your recent vote to enlarge the Rules Committee by stating that you didn't believe that any committee should hold up legislation and not permit the entire Congress to have an opportunity to pass judgment. I am hoping that you will follow the same principle on this important legislation.

An early reply will be appreciated.

Sincerely,

JOSEPH P. CLARK, *President.*

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., April 14, 1961.

Mr. JOSEPH P. CLARK,
President, St. Louis Labor Council, AFL–CIO, St. Louis, Mo.

DEAR MR. CLARK: Thank you for your letter of March 30, 1961. I certainly shall give serious consideration to the King-Anderson bill relating to health care for the aged if the Ways and Means Committee ever calls it up for consideration. This I have no control over. The agenda are by practice and I believe by rights under the control of the chairman and his 15 to 10 majority.

I say this although I am strongly opposed to tying health care for the aged to the social security system. In my judgment, for the reasons I have advanced in many speeches on the floor of the House and to the general public in person, on radio and TV, this would seriously damage the health care program in our society for all of us, including the older people, and we have the greatest health care program existing in any society, past or present.

Indeed, it has been the very success of our health care program that has brought about the very serious problems that our older people are faced with in this area. It has been the success of the health care program, not its failure, which has kept our older people with us 10 years longer than they or anyone had anticipated.

This should be a blessing to us and to them and I am satisfied it can be if we will approach the problem with care, and on the basis of appealing to knowledge and good reason rathar than appealing to prejudice and unwarranted charges that those who do not agree with our approach are either (a) unconcerned about the aged or (b) socialists.

Perhaps someone can come forward with facts or arguments that have not yet been presented to me to demonstrate that my judgment is in error. That is why I say I will give serious consideration to the King-Anderson bill.

Cannot there be some reciprocity in this? Cannot you and the top labor leaders who for several years now have taken a fixed position on this serious problem give serious consideration to what I have been trying to point out? Indeed, if I am right and you are wrong, you will both damage the old people and all of us and solve nothing. If I am right and you are wrong, the programs I have advocated—some of which are now law—will enable us to solve this problem.

Congressman Forand has refused to debate me publicly on this issue. Walter Reuther refused to appear on a TV program to debate the matter with me. Senator McNamara has declined to debate me, so has Congressman Machrowicz, Senator McCarthy, Secretary of Health, Education, and Welfare Ribicoff (although in this instance I feel there is good reason why a Cabinet Secretary should not appear on the same forum to debate a Congressman). In fact, no one seems interested in examining the facts and arguments I have adduced in respect to this important issue.

Yes, I would vote a bill out of committee for floor debate even though I opposed the bill. I have done this many times. I am perfectly willing to have my facts and arguments tested in any fair forum. I wish a few others—particularly those in opposition to my views—had the same attitude toward the need for fair debate.

Sincerely,

THOMAS B. CURTIS.

BRITISH MEDICAL ASSOCIATION,
London, February 10, 1961.

DEAR SIR: Dr. Lord wrote to me on the 23d of January seeking some information in connection with a study being undertaken into the cost of medical care for the aged, in conjunction with the American Medical Association. I am afraid that in a number of instances the information which Dr. Lord was seeking is just not available, but I set out below such data as I can:

1. Average length of stay in hospital, in days: nonteaching hospitals, 1959; medical departments, 27.6; surgical departments, 13.4.

2. The same figure for persons over 65 years is, nonteaching hospitals, 144.8; London teaching hospitals, 138.8; Provincial

teaching hospitals, 153.8 (chronic sick and geriatric departments).

3. Weekly cost of beds in acute hospitals is nonteaching hospitals, £25 16s. 7d.; teaching hospitals, London, £36 9s. 7d.; teaching hospitals, provinces, £30 4s. 11d.

4. The hospital cost per day of persons over 65 is not available.

5. The cost of the National Health Service per head of population is £13 0s. 0d.

6. The medical care cost per person over 65 is not available.

7. The ratio of doctors per population in 1957 (the latest figure available) is 1:1,149.

8. The ratio of doctors per population 10 years ago—1947—was 1:877.

I hope that the above information will be of some assistance to you.

Yours faithfully,

WALTER HEDGECOCK,
Deputy Secretary.

Wheat Sales to the Indian Government

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Wednesday, May 3, 1961

Mr. CARLSON. Mr. President, Mr. Terence McDonald, vice president of American Flours, Inc., of Newton, Kans., is on leave and is working on a 2-year assignment as grain and milling technician with Wheat Associates' office at New Delhi, India. This office is operated jointly by Great Plains Wheat, Inc., and its sister organization in the Pacific Northwest, Western Wheat Associates.

Mr. McDonald has made a study of wheat sales to the Indian Government, under Public Law 480, and has written a very excellent article on it.

In this article Mr. McDonald stresses the importance of wheat as a major element in our foreign policy and the building of good will among the people of India.

I am confident this same situation prevails in many other countries on the globe where we are using our surplus farm commodities for promoting good international relations.

There is little doubt that many millions of people would have starved to death had it not been for wheat sales. As recently as 1952, 1½ million to 3 million people died in India because of a lack of an estimated 300,000 tons of cereal.

There is little doubt that the U.S. sales of wheat have been a major element in our foreign policy which have obtained more good will for the United States than many times the amount of money spent in other ways.

Mr. President, I ask unanimous consent that the article be made a part of these remarks and printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

None of you would ever use the word "surplus" in reference to wheat if you had the opportunity of visiting the countries of the Far East and seeing the millions of people who are undernourished. We can certainly be thankful for the abundant supplies of food in America and we should do everything possible to make the most practical use and to conserve our resources. In India, the increase in population each year is equal to the entire population of Australia (which is larger than India.) Here is another way to look at the situation. It takes over one million tons of food (37 million bushels) to feed the annual increase in population. Or, to increase the daily caloric intake 23 calories, it would require an additional million tons. The present diet is recognized officially as being deficient in terms of total calorie intake, as well as unbalanced in terms of calorie source. Present figures estimate an average of 2,000 calories per day, however a survey indicated that 25 percent of the people consume less than the average and many get only 1,000 to 1,500 a day.

Wheat sales under Public Law 480 have convinced Indian government officials of United States' good will. There is little doubt that many millions of people would have starved to death had it not been for these wheat sales. As recent as 1952, 1½ to 3 million people died in India for an estimated lack of only 300,000 tons of cereals of approximately one tenth of the wheat we are shipping annually to India. There is little doubt that U.S. sales of wheat have been a major element in our foreign policy and have obtained more good will for the United States than many times that amount of money spent in other ways. Evidence that money spent for military purposes does not always bring good results can be seen by riots in Turkey, Korea, etc.

India offers excellent prospects for increased consumption of wheat. About half of the population is already familiar with wheat products in one form or another and consumption would increase if the requisite purchasing power were available and the price relationship with alternate grains favorable. A large millet-eating population now accepts wheat, and many tell us that people in rice areas will take wheat foods for one meal now that they have become accustomed to wheat products.

There is much criticism of U.S. wheat in India. It stems from a preference for white wheat for chaptatis, and from the foreign materials and dockage. The Indian Government buys all of the wheat coming to India on a bid basis, and we have hopes that the Government will specify lower limits of dockage and foreign material since it soon will be possible to issue certificates showing these combined grading factors.

As one travels throughout the world, it becomes increasingly evident that there is little effort to promote U.S. wheat by anyone except the organizations sponsored by the wheat growers. This is not a criticism of the grain trade, but only a statement of fact. You probably realize the amount of salesmanship that would be put forward if all of the farm tractor manufacturers had one dealer and he carried all makes of tractors. It would certainly be "take your choice and pay your money" with little effort to influence you unless there was more profit margin in one brand or another. It is the same with the international grain firms. Their interest is in making money, and rightfully so, and it makes little difference whether they sell United States, Canadian, or Australian wheat. Recently there are indications that some are beginning to push the sale of U.S. wheat, and we are hopeful that it will continue to grow.

We have found oversea personnel of the various U.S. Government agencies to be competent and dedicated to their work, even though living under conditions that are not at all attractive at times and at considerable personal discomfort compared to their living at home in the United States. Naturally there are conflicts of personality, but by and large the United States is well represented and is making friends with local populations through these "ambassadors."

It seems the biggest criticism by the U.S. public (especially businessmen) is directed toward the cost of storage, export subsidy, and "subsidies to the farmer." I feel the farmers should not have the burden of reserve stocks themselves, but the cost should be borne by all citizens. One has only to see the cost of not having adequate storage here in India to realize that present costs of storage in the United States are not unreasonable. The usual practice is for the farmer to pay double the sale price of wheat at harvest to obtain seed wheat. It is also well to realize that U.S. business does very little trade with underdeveloped countries and two-way trade begins only when they develop their own resources. Wheat under Public Law 480 programs has been a large contributor toward overall economic improvement in many countries.

So, let us take a look at the overall results of our wheat programs: benefits to U.S. foreign policy, development of wheat markets as well as for U.S. manufactured articles, stabilization of U.S. wheat markets, maintenance of production facilities, prevention of starvation to millions, and numerous other benefits. Of these, the Christian humanitarian satisfaction of having shared your abundance with less fortunate human beings is probably the most important of all. After looking at these benefits, it becomes apparent that wheat sold under Public Law 480 for foreign currency as payment is a good program.

The Blurred Vision

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. DERWINSKI. Mr. Speaker, President Kennedy visited the great city of Chicago last Friday evening to address a political fund raising banquet sponsored by the Daley machine of Cook County. Although he did not allude to the vote frauds perpetrated by that group on November 8, 1960, he had intended to discuss the New Frontier domestic program.

An editorial in the Chicago Tribune of Monday, May 1, entitled "The Blurred Vision," gave the people of the Chicago area pertinent information on the President's undelivered address. Because of the interest that we all maintain in President Kennedy's statements, I submit the Tribune résumé for the information of the Members:

THE BLURRED VISION

The speech delivered in Chicago, Friday night by President Kennedy, was not the speech prepared for delivery and widely distributed in advance. The speech Mr. Kennedy actually gave largely centered on the Communist threat, with only incidental mention of the New Frontier domestic program. The speech which the President tossed away was, nevertheless, interesting as it provided an authentic insight into Mr. Kennedy's economic views, and, as such, it is subject to comment.

The unspoken speech purported to be an outline of Mr. Kennedy's vision of America. That vision was one of total Government planning, prescription, and direction. The President listed an endless catalog of things he thought ought to be done, or which, if attended to, might be desirable. And all of them were to be done by Government.

Reverting to his campaign theme of

getting America moving again, Mr. Kennedy's original text stated that he would like to think of the Democratic return to the White House as the time when the United States began to move forward.

The trouble with oversimplified theses is that they overlook too much. Mr. Kennedy's thesis overlooked the very apparent fact that this country has been steadily moving forward since the time of the first settlements. As for its progress during the 8 preceding years, when the Republicans held executive responsibility, the facts and figures were cited by Mr. Eisenhower in his state of the Union message last January.

They were impressive and hardly suggested that the country had been on dead center. Gross product up 25 percent over 1952, family income up 15 percent over that year, runaway inflation hobbled—these were among the accomplishments. And Mr. Eisenhower's parting counsel was that one of the best things Government could do was to assure free rein to the energy and talent of every American.

From Mr. Kennedy's draft text, it was plain that this was not his approach. He complained of our own unwillingness to do what must be done, and if there was any doubt about who was to do these things which must be done, his reference to a dozen messages, covering almost every activity of Government, cleared up that point. He, supported by the power of Government, was taking charge.

Mr. Kennedy conceded that this flurry of legislative proposals—hundreds of new bills have poured forth from departments and agencies—had tended to blur the vision which he was offering. But it is not the rush of activity that betrays the blurred vision. The fact is that blurred vision accounts for the helter-skelter activity of the administration.

The blur arises from the notion that it is only by Government action that an America can be built which will fulfill its own promise of greatness. This country has always moved most purposefully when the creative resources of the people were not hampered by central planning, when freedom of choice through the expressed preferences of the marketplace determined direction, when Washington know-it-alls got out of the way.

What Mr. Kennedy intends, as he wrote in his draft, and as his whole program attests, is just the reverse of this. The product is not to be a welfare state, but a state with meaningful compassion—one of those distinctions which doesn't define much of anything.

We have always distrusted the doctrine of perfectibility as it pertains either to men or to nations, especially when it is to be achieved through political techniques applied by wide screen social draftsmen. The trouble with the process is that nobody is left any incentive but the politicians, and, when that is so, it is difficult to get people to bestir themselves to move anywhere, despite all of the tugging and hauling of the Government.

Long-Range Farm Bill Definite Step Toward Parity Income for Farmers

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to extend my remarks, I would like to include in the RECORD the testimony given May 1 by Edwin Christianson, president of the Minnesota Farmers Union, on the overall farm bill before the House Agriculture Committee:

STATEMENT OF MINNESOTA FARMERS UNION PRESIDENT

Mr. Chairman and members of the committee, we commend you for the attention directed to the needs of farmers in past years. We know that you have always sought to provide whatever legislative authority our Secretaries of Agriculture have asked for if it opened the way for farmers to improve prices and incomes. We appreciate this evidence of concern and interest on the part of the committee and we appreciate this opportunity to appear before you at this time of economic crisis in agriculture.

The decline in the net income of farmers since 1951 (when the parity ratio stayed consistently over 100) and the more than $20 billion loss in net income to producers since that time illustrates in realistic and understandable terms the extent to which agriculture has gone through an economic wringer. We know that you are familiar with the overall economic setback in agriculture and the disastrous effect that abandonment of farm programs would have upon farm families.

In our opinion, the proposed Agricultural Act of 1961 is a step in the right direction toward correcting this.

The policy declaration at the start of the bill sets forth some much-needed and significant goals. Particularly important are:

"(a) Afford farmers the opportunity to achieve parity of income with other economic groups by providing them with the means necessary to adjust their agricultural output to requirements and to develop markets for their products.

"(b) Enable farmers, under accepted democratic methods and through cooperation with, and assistance by, the Government, to participate more directly and effectively in the determination of agricultural policies and in formulation and administration of programs to effectuate such policies.

"(c) Authorize the utilization of such additional and varied price and income stabilization methods as will best protect the prices and incomes of farmers."

In evaluating the provisions of the bill, it seems to us the important question in each instance is whether the particular provision will tend to help attain the policy goals which are spelled out in the declaration of policy.

Generally speaking, the proposed Agricultural Act of 1961 is an enabling act type of legislation, permitting more commodities to come under marketing order or marketing quota programs, and providing some clarification and recodification of existing authority.

The actions which have been taken so far this year by the administration and the Congress have been very helpful. These have been valuable first steps, but they are first steps and only that.

The price support increases on milk, corn and the other feed grains, soybeans, flax, and other commodities will certainly be of help this year in lessening the cost-price squeeze on farmers.

The efforts to provide more adequate operating credit are helpful, as are the provisions for advance payments on storage fees and the advance payments on the diverted acres in the feed grain program.

It is estimated that the improvement in total net farm income for this year may be as much as 10 percent above 1960. But at best, this will still leave farmers far short of a price and income level representing a fair return upon investment and labor.

The actions of Congress and the administration so far this year will help tide farmers over—which is important in itself—but it must be followed by some dramatic improvements in 1962. Otherwise, all that has been accomplished is to move up to a plateau somewhat better than that which existed the past year, but not enough better to put farmers on an economic footing where they have some prospect of survival.

The purpose of the 1961 feed grain bill and administrative action taken, increasing price supports, was to help tide farmers over, but the purpose of the long-range legislation must not be simply to buy time, but to make definite and substantial steps toward parity prices and income.

There is a tremendous urgency for action which will improve farm prices and income. Simple passage of this bill will not, of course, result in an automatic increase in the price level of any commodity—the increase will have to await whatever action may be initiated pursuant to the provisions of this legislation.

Passage of the bill would undoubtedly bring some early recommendations for programs for wheat and feed grains for 1962.

We urge the immediate use of title I authority of the bill, reducing the time of getting additional programs into operation in order that producers may avail themselves of the assistance provided by the act at the earliest possible time.

We feel that these objectives of H.R. 6400 merit approval by the committee:

1. Retention of parity of income as the goal and the basis for programs to be developed.

2. Opportunity for the family farm pattern of agriculture to strengthen and to continue to be the basic pattern in American agriculture.

3. Opportunity for producers to have a voice in development of quota and price stabilization programs.

4. Opportunity to institute a variety of programs to meet the varying needs of different commodities.

5. Retention of present programs until such time as producers initiate their own programs.

6. Expansion of consumption of food by needy and low-income consumers both here and abroad.

7. Administration of programs in such a way as to reduce costs substantially over current expenditures, and

8. Provision for extension of marketing order and marketing quota programs to more commodities, as desired by producers; and expansion of marketing orders, where desired, to regional or national scope.

NATIONAL FARMER ADVISORY COMMITTEES (TITLE I, SUBTITLE A)

Farm program recommendations and development would begin with farmers themselves under the provisions of this subtitle.

The selection of nominees to the advisory committees by elected county committeemen and by general and commodity farm organizations assures the availability of committee members who understand the needs of the producers they will represent. We believe that the knowledge that comes from firsthand work with farmers and their problems is an essential element in the makeup of these advisory committees, and we agree fully with the condition that 60 percent of the gross income of such members comes from farming operations.

We understand that the Secretary of Agriculture will select one-third of the members of advisory committees from nominees named by general and commodity farm organizations. We approve this provision, and on behalf of National Farmers Union let the record show that we will cooperate fully with the Secretary when he requests nominees from among the members of our organization.

MARKETING QUOTAS (TITLE I, SUBTITLE C)

The productive capacity on farms today has given farmers a greater understanding of the need for more control over production and marketing of their produce. We concur fully with the enabling provisions of the bill that would extend to all farmers the opportunity to devise programs to more effectively manage their production. We point out that the producers of an agricultural commodity would come under this subtitle only if the procedures followed under subtitle E of the bill are used. In our judgment this is a completely realistic way to involve coverage of other agricultural commodities under this subtitle.

Moreover, we believe that the procedures outlined in the bill would result in programs which comply with the peculiar needs of a particular commodity or a group of related commodities. This is true because of the latitude which would be provided for extending the right to use marketing quotas. In this connection, Farmers Union, supports marketing quotas expressed in either acreage or in units of production, if producers approve.

Under this subtitle, authority is provided for the institution of quotas for up to 3 years. We believe this extension of quota periods to be practical.

PRICE STABILIZATION (TITLE I, SUBTITLE D)

We approve of the wide latitude given the Secretary in methods of supporting commodities in addition to existing authority to use loans and purchases. National Farmers Union supports broadening legislation to include compensatory payments. There are certain commodities, such as perishable farm products, for which the only practical means for supporting prices is through compensatory payments. We believe, moreover, that this may be a more satisfactory means of dealing with some commodities which are moving into export where our fair share of the export market is currently dependent upon export subsidies.

However, we strongly recommend the elimination of the limitation of 90 percent of the parity price on the support that may be provided under this subtitle. We believe that such a limitation is inconsistent with the objective of full parity of income for agriculture.

We strongly endorse the authority granted to the Secretary in this subtitle which would limit compensatory payments to the proportion of farm production which would reflect a family farm operation. This would do two things: (1) It expresses rightly, we believe, the interest and concern of Congress in strengthening the family farm pattern of agriculture, and (2) it would be a safeguard insofar as costs of such programs are concerned.

We concur with the provision of the bill which would continue the price support program then in operation if Congress should disapprove a program submitted by the President.

CONGRESSIONAL REVIEW (TITLE I, SUBTITLE E)

Mr. Chairman, in closing we want to assure you that we recognize full well that one Congress may not commit another Congress on any matter—on farm programs or otherwise. Moreover, we in Farmers Union have always looked to the Congress for resolving the differences that exist between farm organizations over agricultural policy. We know Congress to have the final authority and we would not have it any other way.

We have great respect for this committee. You have demonstrated over the years your interest in the welfare of both farmers and consumers and the farm laws which you have drafted stand as a monument to this interest.

We are confident that you will continue to serve the national interest in the decisions that you will make concerning the Cooley-Ellender bill.

It is our hope that this committee will complete hearings on all parts of the bill as expeditiously as possible in order to assure consideration by the Congress at an early date.

Advice for the Legal Profession

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Wednesday, May 3, 1961

Mr. KEATING. Mr. President, the April issue of the American Bar Association Journal contains a very interesting article by Sol M. Linowitz, Esq., of Rochester, N.Y. In this article Mr. Linowitz gives his answer to this question from a law student:

What would you say are the most important things for me to learn in order to be sure I will be a good lawyer?

Mr. Linowitz' advice is not for would-be lawyers alone. His sage and inspiring words contain a message for all who are privileged to me members of the legal profession.

Mr. President, I know that Mr. Linowitz' article will be of interest to many Members and I therefore ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOME AVUNCULAR WORDS FOR WOULD-BE LAWYERS

(By Sol M. Linowitz)

Recently I received a letter from a law student at one of our great law schools. He asked me a simple question: "What would you say are the most important things for me to learn in order to be sure I will be a good lawyer?" I have been thinking a good deal about that question and about how to answer it most meaningfully and helpfully.

Here are the things I would tell him:

In the first place, I would say to the young man that a good lawyer must be a truly cultured person—one who is familiar with what has been thought, felt, and written in the past. I would emphasize that our basic legal canons—such as freedom of speech, of press, of religion—are not merely jural but fundamental concepts which can be properly understood only in the historical perspective of man's long battle for liberty in different times and in many places. And that the real meaning of legal rights and constitutional guarantees can be truely grasped only if one first appreciates the ancient roots of our freedoms and the relevance of yesterday to today. John Stuart Mill said it well: "Men are men before they are lawyers or physicians or manufacturers; and if you make them capable and sensible men, they will make themselves capable and sensible lawyers and physicians."

Secondly, I would stress the vital importance of human relations. For human relations is the stuff of which law is made. We are, true enough, a nation of laws and not of men; and yet our laws are made by men, are administered by men, are applied to men. No lawyer worth his salt can practice his calling impersonally. If he is to be a lawyer in the real and deep sense of the word, he must concern himself with people and with those things which hold people together or drive them apart. He must know what makes people tick. He must know how to work with those he must serve. On the wall of Cornell's Willard Straight Hall is the line from Terence: Nihil humani a me alienum—"Nothing human is foreign unto me." This is and must be part of the creed of the law student preparing himself for his profession.

Third, I would implore the law student to raise his eyes from his desk and casebooks and see his role in terms of the world about him. I would ask him to recognize that what is happening in areas of the world far removed is in these critical times vitally related to his profession. For mankind has never known a more urgent challenge than the one which faces us now—to try to fashion a world of peace through law at the very moment when powerful nations now have it in their power completely to destroy civilization. The lawyer has a key role to play in the development of a world of law. And the law student must understand that part of his responsibility will be to help in bringing about a peaceful world and to play his part in the efforts to find a way by which men may live together rather than die together.

Fourth, I would tell him he must be prepared to stand up courageously in defense of those principles of law and justice which are at the heart of our calling. The true law student has to feel in his bones a respect for our judicial procedures—he must know deep within him that the way we do things in this country is fundamental to our thinking and talking about freedom and justice; he must understand that the way we proceed after truth, the way we reach an objective by weighing and measuring and accepting and rejecting in order to determine what is true and what is not, the way of making up one's mind with fairness and objectivity and always with respect for our basic presumptions of innocence and integrity—all these are essential parts of our basic strengths and keystones of our heritage. For our American legal procedures stand not only for a right to freedom and justice but for a way to freedom and justice.

HONEST MEN MUST NOT ALWAYS REMAIN SILENT

The law student must, therefore, understand that bad things cannot be justified in the name of high purpose without damaging and ultimately destroying that purpose. He must know that there are times when honest men must not remain silent; and that lawyers above all others must show a constant willingness to stand up and speak truth in the bright light rather than cower half hidden and silent in the shadows.

Fifth, I would ask the law student to learn the right way to lose as well as the right way to win, how to accept defeat with grace after a case has been fairly tried and decided. William James once said that our civic genius as a people was "the trained and disciplined good temper toward the other side when it fairly wins its inning." In these days of payola, payoff, of deceitful claims, of shady compromises, of win by hook or crook, the lawyer must stand resolutely for fairplay. For the whole dignity of the law depends on the recognition that justice will be done if the ground rules of our system are followed. Tinkering with our courts, tampering with our legal procedures can bring our machinery of justice to a grinding halt. Again and again the point must be made to our law student: It is far, far better to lose fairly than to win meanly.

I would recall one episode in our history which puts it in a way I shall never forget: At his first inauguration, Lincoln arose to take his oath of office and looked about for a place to put his hat. Behind him on the platform was Stephen Douglas—the man who had disagreed violently with Lincoln on some vital issues and who had fought and lost to Lincoln in the bitter campaign for the presidency. And it was Douglas, Carl

Sandburg tells us, who reached forward and held Lincoln's hat all during the ceremony.

There is the symbol I would offer our law student of how nobly to confront defeat after a fair fight: Abraham Lincoln's hat in Stephen Douglas' hands.

WHAT LAWYERS SHOULD NOT BE

Finally, I would ask the law student to approach his calling with a sincere humility. This is what I would like to say to him and the other students in our law schools: It may be that you are entering the practice of law because you feel it is a comfortable way to make a good living; because it is a pleasant and not too demanding calling; or because it is a profession which brings with it certain recognition and entitles you to certain privileges. To those among you who are becoming lawyers for these reasons I would make one very sincere and solemn plea: Please don't enter the practice of law. We have too many like you already. We have too many who consider the law in terms of what they can get out of it rather than what they can put into it. We have too many who measure their achievements in terms of the marketplace and who look upon their license as affording them opportunities for gain rather than challenges to responsibility.

To those of you, however, who look upon the law as a great and exciting profession which stands for championing of the right and adherence to great principles—as one which at a pivotal moment in world history affords unprecedented challenge, opportunity, and obligation—to you I would say "welcome" warmly and with enthusiasm and in these words of Justice Oliver Wendell Holmes:

If a man has the soul of Sancho Panza, the world to him will be Sancho Panza's world; but if he has the soul of an idealist, he will make—I do not say find—his world ideal. Of course, the law is not the place for the artist or the poet. The law is the calling of thinkers. But to those who believe with me that not the least godlike of man's activities is the large survey of causes, that to know is not less than to feel, I say—and I say no longer with any doubt—that a man may live greatly in the law as well as elsewhere; that there as well as elsewhere his thought may find its unity in an infinite perspective: that there as well as elsewhere he may wreak himself upon life, may drink the bitter cup of heroism, may wear his heart out after the unattainable.

Law Day Address of Representative Burr P. Harrison of Virginia, Before Richmond, Va., Bar Association, May 1, 1961

EXTENSION OF REMARKS

OF

HON. J. VAUGHAN GARY

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1961

Mr. GARY. Mr. Speaker, under leave to extend my remarks, I include a speech of my esteemed friend and colleague the Honorable BURR P. HARRISON, of Winchester, Va., Representative of the Seventh Congressional District of Virginia. Mr. HARRISON delivered his brilliant and learned address before the bar association of my native city of Richmond, Va., on May 1, in observance of Law Day. His timely remarks should be read and heeded by every citizen of our Republic:

LAW DAY ADDRESS OF REPRESENTATIVE BURR P. HARRISON, OF VIRGINIA, BEFORE RICHMOND, VA., BAR ASSOCIATION, MAY 1, 1961

Throughout America today many gatherings commemorate the sublimity of our system of constitutional law. Most of these assemblies will hear a worthier speaker than you, but no orator anywhere will address this subject in a happier atmosphere than I. We meet here in Richmond where Patrick Henry defied the tyranny of British lawlessness and asserted his demand for liberty or death; here in Richmond where was enacted Thomas Jefferson's Virginia Statute of Religious Freedom; here in Richmond which witnessed the Virginia Convention of 1788, probably the outstanding group of intellectual giants ever to meet in one assembly, who subjected the provisions of our Constitution to its most penetrating and exhaustive debate; here in Richmond from whence as a member of this bar went John Marshall to expound that Constitution and to assure it the vibrancy of life and the virtue of justice, and, finally, here in Richmond, where sits the Virginia Supreme Court of Appeals, one court left in this land which restricts its doings to the problems of the forum and scorns to engage in the political controversies which belong on the Hustings, one court left in this land that holds that plain words have plain meanings and rejects the philosophy of Humpty-Dumpty that a "word means what I choose it to mean—no more and no less," one court left in this land whose members do not, and have no occasion to, engage in degrading wrangles as to which of them has degraded the court. Thank God there is one such court left in this land.

Our purpose today is to compare our system of law with the tyranny that bears the name of law wherever the Red Fascists of communism hold sway. It is time that, with absolute candor and no reservation, we should contrast all our strengths and weaknesses, our opportunities and our vulnerabilities, with those of our deadly enemies. Events of the last 10 days have brought us understanding, as never before, of the dire peril in which we stand. The daily march of momentous episodes carry us to the full realization that the sword which can plunge our own individual children into slavery or destruction hangs over their head by a single thread.

In a balance between our system of constitutional law and theirs of terror and oppression, the scales weigh heavily in our favor. Under honest administration, our law is the servant of the people; under theirs, the people are the servants of the law. Ours derives its just powers from the consent of the governed; theirs is maintained by subjugation and suppression. Theirs is tyranny under the law of terror; ours is liberty under the law of self-government.

We cannot lose this struggle if we are faithful to the principles of our law. Our strength will be as the strength of 10 and we will be the strong man to run the race. Communism's brutality and despotism is the soft underbelly which makes it vulnerable. If our country adheres to its constitutional government, we may walk through the valley of the shadow of death and fear no evil.

It is in the cancerous erosion of representative government that our peril lies. The paring away of our system of law, a little at a time, in imitation of totalitarian methods, is folly that leads to destruction. If our people have become so complacent and so effete that they permit our system of constitutional law to be whittled away by those who have sworn to defend it, we will lose this struggle with communism—and what's more, we will deserve to lose it.

Under the methodical arrangement of the parts of our law, the sole power to make law is in legislatures, which are quite as responsible for the public welfare as executives and judges. Yet, for years, the American people have permitted the lawmaking power vested in the legislatures of the several States to be siphoned off to Washington. During this same time, the power of the elected representatives in Washington has been subverted to bureaucracy and the judiciary. The balance of power is in imbalance, and the liberties of the people suffer as a consequence.

In no area is legislative responsibility more cynosural than in the power over the public purse. More and more over the years, State legislatures are required to appropriate in accordance with formulas developed by Washington bureaucracy. This goes on while elected representatives in the Congress delegate increasing control of public funds to a civil service over which neither the people, nor the Congress, nor, actually, the President, has effective control.

On Wednesday of last week, the Government of the United States moved dramatically to invade further the power of the people's representatives over the public purse and to subjugate the expenditure of public money to the notions of nonelected strangers in Washington, D.C. Tiny is the county of Prince Edward, but great is the principle that its people have the right to be taxed only by their representatives, a right inestimable to them and formidable to tyrants only.

The 14th amendment was designed as a shield to protect the individual from the State. In the tiny county of Prince Edward, we shall learn whether it will become a sword to strike down local self-government.

With reference to that part of their effort devoted to the closing of all Virginia schools until Prince Edward does their will, the actions of these nonelected Washington officials in by-passing the Virginia Supreme Court of Appeals is, in some respects, the most insulting of all. It is basic that the laws of no State shall be found to be administered contrary to the Federal Constitution until passed upon by the legitimate interpreter of State laws, the State supreme court. There must be somebody in the Department of Justice with sufficient legal training to find the case of *Harrison* v. *Day* in volume 200 of the Virginia Reports, where the obligation of the State with respect to public education is clearly set forth.

The action in Prince Edward, though ruthless, is not an isolated incident. It forms a pattern. It finds its counterpart in the decision of Federal judiciary to substitute its judgment for that of the discount committees of banks and to compel banks to release their money after judges have looked into the minds of money lenders and have found that credit was denied on account of political activity and not because of credit risk. It has its counterpart in the action of Federal judiciary in compelling a renewal of an ended contract when one of the parties did not want to renew the contract. It has its counterpart in the action of Federal judiciary in forbidding the lawful assembly of parents to discuss the educational problems of their children. It has its counterpart in the action of Federal judiciary in decreeing that when Congress said a closed shop shall be illegal, Congress meant a closed shop shall be legal; that when Congress said shop foremen may not be organized, Congress meant shop foremen may be organized. It has its counterpart in countless bureaucratic and judicial performances done without sanction of law and maintained by fiat which on one occasion was backed by militray force.

All this is the beginning of despotism and, unchecked, leads to absolute despotism. It

is an interesting coincidence that the menace of communism has grown as the virility of our self-government has declined. As we weaken our system of checks and balances; as we eclipse the powers of elected representatives of the people; as we move away from the spirit of constitutional law, we dissipate a powerful weapon in the arsenal of democracy and move toward the day of annihilation and destruction.

Faces Death To Save Life

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to extend my remarks, I would like to place in the RECORD the story of how Mrs. Charles Miller, 945 Third Street, Eau Claire, Wis., risked her life to save a young neighbor boy from drowning in the icy waters of the Chippewa River. The article about her heroic act appeared in the Eau Claire Leader, Eau Claire, Wis.:

WOMAN RESCUES BOY FROM RIVER

The life of an 8-year-old Eau Claire boy was saved Saturday afternoon by a heroic young mother of four who jumped, half slid and half fell down a 70-foot bank and swam out 15 feet in the Chippewa River to reach the unconscious lad.

Lloyd Lium, son of Mr. and Mrs. Robert Lium, 829 Fifth Street, was floating face down in the icy water when he was reached by Mrs. Charles Miller, 30, of 945 Third Street. He fell off the steep bank into the river at the rear of the Miller home, near the junction of Third Street and Truax Boulevard.

Mrs. Miller swam to shore with the lad but was unable to climb out as the water is 10 to 15 feet deep right at the shoreline. She managed to grasp a rock lying partly under water, and hold the boy's face above water.

Her daughter, Patty, 9, was at the top of the bank and Mrs. Miller told her to run to the H and H grocery, 854 Third Street, a block away, and have them call for help.

After Patty ran to get help, Mrs. Miller spotted a speedboat towing a water skier. She called for help but they sped past. On the return run, the skier, Gary Kruger, 17, North Shore Drive, heard her calls.

He motioned to the two men in the boat and they headed for Mrs. Miller and the boy. Kruger dropped off his skis by Mrs. Miller and helped her hold the boy until the boat could be turned. She was cold and nearing exhaustion when he arrived to help.

In the boat were Orville and Orvie Frank, twin brothers who live at 402 First Avenue. They pulled the boy, Mrs. Miller and Kruger into the boat. They then sped up the river to the Riverview boat landing where they got into Kruger's car and rushed to Luther Hospital.

Lium, a chunky, freckle-faced lad, was admitted to the hospital for observation. He suffered numerous scratches and bruises.

Mrs. Miller refused treatment and was taken home by Kruger and the Franks. She also suffered numerous scratches and bruises to her arms, legs and face.

The Eau Claire police and fire departments were called at 2:49 p.m. but when they arrived Mrs. Miller and the boy had been pulled from the river and were on their way up the river.

Mrs. Miller, who is not much bigger than the red-haired Lium boy, said she was out taking clothes from the line when she heard her son, Chuck, 8, call for help.

She said Lloyd had come to their house Saturday to play with Chuck. The two boys were playing by the bank when Lloyd tripped and fell over the bank.

Police said it is almost a straight drop of about 65 to 70 feet to the river. One foot from the bank and the water is over your head, police reported.

Mrs. Miller ran through heavy brush to the bank. She said she looked over and could see Lloyd's bright jacket in the river. He was floating face down about 15 feet from shore.

Somehow she jumped, slid and scrambled down the brush-covered bank to the river, dove in and swam to the boy. When she got to him he didn't move.

She towed him to the shore and when she got his face out of water he began to cry and spit up water. Mrs. Miller saw the boat coming down the river toward the dam and called for help. When they failed to see her she said her heart just sank.

Kruger, however, spotted her when the boat had swung around and began towing him back up the river.

Mrs. Miller, who classes herself as "not too good a swimmer," said she and her husband moved to Eau Claire in September from St. Cloud. Besides Chuck and Patty there is a daughter, Kathy, 7, and a son, Mike, 16 months.

When asked what she thought of when she jumped and slid down the bank, Mrs. Miller said she couldn't remember much about going down. She added she didn't hesitate about going down because she has children of her own and knew how the boy's parents would have felt.

She said she must have been in the water about 5 minutes and it was "really cold." It was after she returned home from the hospital when she realized she lost a pair of shoes during the rescue.

Sgt. Arthur Neuser, a veteran of 24 years with the police department, reported it was one of the most heroic rescues he has ever seen. "It took a lot of nerve to do what she did and most people would have thought twice before trying to get down that bank," he added.

Other police officers at the scene took a look at the bank and just shook their heads in admiration of Mrs. Miller's feat. When asked how she felt, Mrs. Miller was typical of most women when she replied, "much better after having a good hot bath."

She reported that residents in the area have long been concerned about that portion of the riverbank. "Last year they talked about putting up a fence," she reported.

She added that her husband and a group of other fathers are going to the city council meeting Tuesday evening and ask the city to put up a fence along the bank. "Perhaps a near tragedy like this will help the city to act quickly in constructing a fence," she said.

Remarks of Hon. Paul A. Fino, of New York, at Dedication of Bluttal Building at the Kingsbridge Heights Jewish Center in the Bronx

EXTENSION OF REMARKS
OF
HON. JACOB H. GILBERT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. GILBERT. Mr. Speaker, my dear friend and colleague, Congressman PAUL A. FINO, was recently a guest speaker at the Kingsbridge Heights Jewish Center in the Bronx. Congressman FINO's remarks were delivered on the occasion of the dedication of the Bluttal Building of the center which ceremonies were held on Sunday, March 19, 1961.

I am privileged to insert in the Appendix of the CONGRESSIONAL RECORD the full text of Congressman FINO's speech:

Mr. Chairman, Rabbi Miller, Mrs. Bluttal, members of the center, distinguished guests, and ladies and gentlemen, today is a proud and special day for Kingsbridge Heights, and I am honored to be here among you. When Mr. Moskowitz kindly invited me to attend this event, he described the 3 years of effort which this community building represents, as a labor of love. I can well believe that it has been a labor of love. The idea for facilities like these, in this location, is a splendid one. And the only thing better than that good idea is the structure itself. This community building, in my judgment, is a magnificent and impressive one.

Beauty and utility seem to be found in close company more and more often these days. This is true of many of the implements and gadgets we use around our homes, and it is becoming more and more the case with many of the buildings we live and work in. Sometimes I think many of the Government buildings in Washington were built on the theory that utility and beauty are enemies, and that if you try to achieve one of these two aims, you might as well forget the other. I can report that utility generally came out on top.

On the other hand, here in New York, it seems to me, we have had several delightful examples in the last few years of structures, many of them office buildings, in which usefulness and attractive design are combined. This community building, which your efforts have put here, is a happy illustration of trend.

I haven't been inside this center yet, but from without it seems to have a welcome aspect. In my imagination, I can already picture the meetings which will be taking place here, the banquets that will be held, the plans made, and the work that will be done, the festive occasions that will be celebrated, and the possibilities that exist there for quiet conversation, reading, reflection and relaxation.

The American Jewish Year Book informs me that this fine community center is one of approximately 350 Jewish community centers in the United States. In 1947 these organizations had a combined membership of 458,000 and today it is well over 600,000. These figures seem dry in print, but in the light of what I have seen here today, they take on vitality and significance. Beyond those community centers which are already up and in operation, there are several more in the building stage and in the planning stage. These facts are testimony that our developing communities need these centers, and that these needs are being met in a lively and energetic way. This community building in Kingsbridge Heights is going to be good for this neighborhood and city. It is also a blessing, I feel confident, to the Nation at large. By putting your structure here you have brought many benefits to this neighborhood. You have, first of all, put a new luster on the very word "neighborhood." Your building is going to be a place where neighbors and friends can pursue common interests and solve mutual problems together.

Sometimes I think the reason we hear so much about togetherness these days is that there is so little of it left anymore. Why is this? Partly because we have solved some of our more immediate problems of food and shelter. Maybe there is less in the way

of family activities together because of rapid transportation and commuting. Father no longer lives and works in the same locality. He spends a third of his life at work, a third at home, and a third on the train or bus or in the taxicab or car. Maybe television is the villain—maybe that is why we see each other less often. In any event, with this building you have created, there is a good chance that Kingsbridge Heights is somewhat closer to our idea of a neighborhood with all the pleasant connotations which that word suggests.

The Bronx needs space for recreation and relaxation, that is certain, and you have provided it. This new and spotless structure should be taking on a lived-in look very quickly. That is all to the good. That is the way it is supposed to look. Activities in this building will be an indication of how much this building is needed and evidence that we need more community buildings like it. Not only does your fine community building help this neighborhood and community, it is also a feather in the cap of the whole United States. I have one thing in mind when I make this assertion.

The way in which you have helped the United States at large is simply this. You have demonstrated the idea that there is a necessary partnership between Government, on the one hand, and private efforts on the other. Government can accomplish much when broad-scale action is required. But often in the area of human needs, what is required is a local, neighborhood, tailor-made response to a specific problem. This is the type of response your new community building represents. You have put your minds and energies into it, and, of course, your hearts. By doing so, as I said before, you have made a gift to the whole country.

In closing, may I say in your own language, "Mozeltov."

Other Kinds of Price Fixing

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. MULTER. Mr. Speaker, the following article, which I commend to the attention of our colleagues, is from the April 24, 1961, issue of the New Republic. Professor Barber brings to light and comments on other forms that price fixing may and does take within our economic system and seemingly within the law. The author's analysis of the oligopolistic industries is directly to the point and the alternatives it offers deserve attention:

OTHER KINDS OF PRICE FIXING
(By Richard J. Barber)

Almost as the seven individual defendants in the price collusion case tried in Philadelphia were being released from prison, the Department of Justice filed a $12 million damage suit against the electrical equipment manufacturers, charging that as a result of the bid-rigging conspiracy the Government had paid prices up to 66 percent higher than otherwise would have prevailed. In the months ahead several other damage suits will be initiated by private utilities and various units of local and State government. Attorney General Robert Kennedy has announced that his Department will step up its activity in respect to price fixing—and organized crime. And President Kennedy reportedly will issue soon an Executive order, directing that all identical contract bids received by Federal agencies be reported to the Justice Department.

Up to now the Government has been concerned largely with the conspiratorial forms of price fixing, typified by the electrical equipment litigation as an instance of overt collusion among a group of alleged competitors. Thousands of other similar examples could be found, involving almost every conceivable product, ranging from autos, gasoline, toys, and diapers, to tranquilizers, soft drinks, and live lobsters. One feature, though, does distinguish the electrical goods case from the typical price-fixing conspiracy: it was one of the few occasions in which large corporations were apprehended and successfully prosecuted. Usually only the smaller firms are caught: the gasoline service station operators in Lake County, Ind.; the lobstermen in Maine; the installers of auto replacement glass. For it is not just the giant firm that dislikes competition. The desire to eliminate rivalry, the quest of the quiet life is equally as intense in the corner druggist and service station operator. To say that in that portion of the economy where the markets contain a large number of fairly small sellers "honest price competition prevails," as T. K. Quinn has said, is only partly correct, for competition can be effectively restricted in industries characterized by a fairly large number of sellers without conspiring. For example, as a result of retailer pressure, 45 States have enacted fair trade laws, which permit manufacturers to control resale prices. These laws can have precisely the same effect as direct collusion between the competing retailers. Still another device for eliminating price rivalry is the trade association. By collecting data on output, sales, inventories, and the actual prices at which sales are being made, and furnishing this promptly to its members, the association provides exactly the information needed by knowledgeable competitors for determining the going price. Conformance then is more likely to be the rule than the exception. Yet this kind of trade association activity is generally accepted as being within the law. As long as this view remains in force (and certainly it deserves serious reconsideration), considerable price uniformity will exist, without actual collusion.

In the oligopolistic industries, those in which a very small number of producers are dominant, price competition can be eliminated without collusion, and even without recourse to trade association. (This doesn't mean that these industries do not have trade associations, but only that the associations do not perform the same function here as in the industries with a larger relative number of firms.) Where there are, say, three companies producing most of the industry's output (automobiles, for example), the condition, once nicely described as spontaneous coordination, will invariably be present: each seller knows that it both affects and is affected by the market choices of its rivals. If seller X establishes a significantly lower price than what has prevailed, its share of the market will increase markedly; its rivals, Y and Z, can thus be expected to match X's newly announced price. Whatever gain X might originally have anticipated by cutting its price is lost. Under these circumstances, it doesn't take long for the parties, independently, to price in a uniform fashion—reserving their rivalry for other outlets (such as product design and advertising). This hypothesis is confirmed by a look at auto pricing. For 1961 the manufacturers' suggested retail prices of the full-size, six-cylinder models varied by only $6 among the big three: the Chevrolet was the highest at $2,316; the Plymouth the lowest at $2,310; the Ford, $2,311. This is representative of the usual situation. In 1956, Ford initially announced an average price increase on its 1957 models of 2.9 percent. Two weeks later General Motors increased its 1957 model prices by an average of 6.1 percent. A week later Ford revised its prices upward, to match almost dollar for dollar the comparable GM prices.

What is true of autos is also true of most other major industries; one recent survey, by Harvard professors Carl Kaysen and Donald Turner, shows that in more than two-thirds of some 150 manufacturing industries, at least a third of the output was produced by eight or fewer firms. In over a third of the total number of industries, eight or fewer firms accounted for over half the output. And even this does not give the full picture, for in a number of vital markets the degree of concentration is significantly higher—in autos (with GM and Ford together accounting for about 75 percent of domestic new car registrations), in tin cans, cigarettes, distilled liquors, synthetic fibers and photographic equipment. Mr. Quinn indeed understated the case when he said that a third of the economy is characterized by oligopolistic markets.

In the oligopolistic industries, then, competition is virtually eliminated, yet the bogeyman of overt collusion is absent. Confronted by this immensely serious problem what can be done to protect the public? Mr. Quinn would establish a Price and Wage Board, with authority to fix prices and wages. Whether regulation of this sort is feasible and desirable, and can be confined to the oligopolistic sector without ultimate extension to the remainder of the economy, raises a number of important questions.

More pertinent to this discussion, however, Mr. Quinn's proposal seemingly rests on either or both of two implicit assumptions, neither of which, in my view, is tenable: First, that the corporations of the size found in the oligopolistic industries are inevitable, or technologically essential; second, that there is no way to restore competition to these markets—that there is not now, and cannot be, an effective procedure for disaggregating the dominant firms and creating a larger number of firms of efficient scale and roughly equal size. I disagree with both of these assumptions.

First, the available evidence strongly suggests that in most of the oligopolistic industries a firm, to be efficient, does not need to be as big as the existing leaders. Again, take automobile production. In 1959, the Chevrolet and Ford divisions of their respective parent organizations each produced more than 1.4 million passenger vehicles. Yet authoritative analysts, both in the academic community and within the industry itself (in the person of George Romney, the president of American Motors), estimate that minimum production costs can be achieved by a manufacturer with annual capacity of as few as 300,000 units. There is similar evidence to demonstrate that no necessary correlation exists between large firm size and research performance. Witness in this connection the relatively greater progressiveness of small and medium-size steel companies—such as Armco and National—than the industry leader, United States Steel. What we really have in this country are numerous giant corporations representing aggregations of capital considerably larger than required for efficiency. Plants or corporate divisions, individually capable of attaining minimum costs, have simply been collected into massive financial empires whose existence is not inevitable, and is indeed detrimental to the functioning of the economy.

Second, means can be found for increasing the number of firms in those markets now accurately described as oligopolistic, though whether we have these means at this moment is open to doubt. In their interpretation of the Sherman Act, our oldest and most important Federal antitrust stat-

ute, the courts in the past several years have placed increased emphasis on the power held by a group of firms to control the market, as an index of violation. But in the most pertinent case, that involving the three dominant cigarette manufacturers, the evidence permitted the inference that the companies had actually conspired, in the traditional sense. Thus, in directing a suit, say, against the auto producers, the Government might have to establish the existence of a conspiracy. And this would be difficult, for, as noted earlier, oligopolists need not conspire to eliminate competition. The Sherman Act, therefore, may not be adequate to cope with the problem. Perhaps section 5 of the Federal Trade Commission Act is a more potent instrument (at least one decision suggests this) and under its chairman, Paul Rand Dixon, the FTC may endeavor to explore the outer reaches of that statute.

A simpler approach would disregard the question of conspiracy altogether. Attention would be directed to the actual degree of market concentration. Thus, if four or fewer firms accounted for 60 to 70 percent of total sales in a given market, they would become targets for reorganization automatically. While firms might seek to justify their position, by showing, for instance, that their scale of operation is essential for maximum efficiency, in most instances there would probably be no adequate defense. The next step would call for a division of the firms' assets, looking to the creation of as many new, independent entities as would be consistent with optimum efficiency. In the auto industry, this might lead to the creation of as many as 20 firms, of approximately equal size. What the Securities and Exchange Commission has done in relation to public utility holding companies is illustrative.

If the present oligopolistic markets can be made significantly more competitive, without loss of operating and innovating economies, why should we assume, as Mr. Quinn apparently does, that the only solution is wage and price regulation? I would prefer to rest my case on the competitive system rather than on price regulation or, for that matter, on some variety of syndicalism. Hopefully the new administration will turn its spotlight on the oligopolies, and not confine its attention to cases involving overt collusion. A competitive order demands that we prosecute price-fixers and begin a program of industrial deconcentration.

The Bullet the Reds Fear Most

EXTENSION OF REMARKS
OF
HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. WRIGHT. Mr. Speaker, with permission to extend my remarks, I would like to bring to the attention of the House a perceptive and enlightening article on the Nation's only supersonic bomber, the B–58 Hustler. The article, "The Bullet the Reds Fear Most," appeared in the April 23 issue of the New York Mirror magazine. Mr. James Winchester, the author of the article, does the country a great service by his vivid and accurate description of the power, speed and adaptability of the most advanced manned bomber in the Nation's air arsenal.

The arguments by some that all manned bombers are obsolete is thoroughly refuted by Mr. Winchester's sharp portrayal of the recordbreaking performances of this manned missile, not only because of its invaluable military striking capacity but because of the opportunity its development holds for tomorrow's civilian supersonic airliner.

Let me suggest that not only Members of the Congress but those in the executive branch charged with the grave responsibility of determining our country's military needs, thoroughly and carefully read this penetrating article. For if provision is not made for continued production of this bomber, we could find ourselves without the manned bomber force so envied and feared by the Soviets today. We must suffer with our missile gap; let us not knowingly instigate a bomber gap.

The above-mentioned article follows:

THE BULLET THE REDS FEAR MOST
(By James H. Winchester)

Often called the plane the Reds fear most, America's newest and fastest bomber is on sky patrol. It is the supersonic B–58 Hustler, a needle-nosed, sweptback delta-wing killer.

Not only can this fantastic aircraft penetrate to targets in the enemy heartland while flying at great altitudes—more than 60,000 feet—and at speeds of more than twice that of sound (better than 1,400 miles an hour) but it can also make bomb runs at treetop levels, where search radar is blind.

Just recently, a B–58—which is being merged into the arsenal of the U.S. Air Force's Strategic Air Command this year—hedgehopped 1,400 miles across four States at 700 miles per hour, never more than 500 feet off the ground, sometimes as low as 200 feet.

"We were traveling a little faster than a .45 caliber pistol bullets," reports B. A. Erickson, a civilian test pilot from Convair, the plane's builder, who made the flight. "No wonder people on the ground had trouble recognizing what we were."

Early in 1961, a three-man Air Force crew from SAC's 43d Bombardment Wing, at Carswell Air Force Base in Texas, the only field in the Nation where B–58s are now stationed, streaked their four-jet Hustler around a 1,000-kilometer course over the California-Arizona desert at an average 1,284.73 miles an hour to set three new world speed records, taking two of them away from the Soviet Union. The maximum ground speed on this record-breaking flight was a blistering 1,430 miles an hour.

For their achievement, the bomber's three-man crew, headed by the pilot, Maj. Harold Confer, of McCook, Nebr., was awarded the 1961 Thompson Trophy, given annually for outstanding airspeed accomplishments.

Until the 2,000 mile-an-hour B–70 bomber, now being built, becomes operational in the late 1960s, the B–58 will remain the U.S. Air Force's only supersonic bomber. It is the Strategic Air Command's reply to those who have been saying that intercontinental missiles are making the manned bomber obsolete. The SAC doctrine is that a blend of manned bombers and missiles will be needed indefinitely.

In addition, this new supersonic bomber has a vital potential civilian role—to break the trail for a supersonic airliner. A B–58 supersonic transport, says Convair, would be available for civilian use within 3 to 5 years. This would be long before any other supersonic commercial plane could be put into operation.

In paving the way for tomorrow's supersonic airliner—capable of flying coast to coast in under 3 hours—the B–58 would be doing what the B–52 jet bomber did in blazing the way for the introduction of its civilian counterpart, today's widely used Boeing 707 transport.

The B–58 is like nothing less than a manned missile. There is almost nothing traditional about it. It is unconventional in speed, in size, in its accomplishments and techniques. In one giant step, for instance, the B–58 has achieved a greater speed increase over the fastest previous strategic bomber than was reached in the preceding 50 years of aircraft design and manufacture.

But it is more than just a new Air Force bomber that can fly at twice the speed of sound. The B–58 dramatically reverses a recent trend toward larger and larger manned planes. It is designed around a minimum size concept, an important part of which is a disposable armament pod carried beneath its slender fuselage.

This pod is dropped after the bombs—either nuclear or conventional, have been let go—and obviates the necessity of hauling the empty compartment back to home base. There are other uses for this pod, too—for fuel to extend range, to carry cameras for reconnaissance or for electronic countermeasure equipment.

It takes only three men to crew the B–58, compared with the six needed to fly a B–52.

In designing the B–58, engineers incorporated hundreds of devices which make the plane almost automatic in its operation. Some of the magic black boxes, included in the Hustler, house electronic countermeasures that make it practically impossible for enemy radar to determine the plane's position; gunnery that automatically locks on and fires at an attacking interceptor; and automatic air-conditioning gear.

The air conditioning in itself is incredibly engineered. There's enough equipment aboard the aircraft to service about 15 average-sized 2-bedroom homes. Electronic devices, as well as the three crewmen aboard, are all kept in a constant 75-degree F. temperature; whether the B–58 is flying in the tropics or over the North Pole, and at speeds which produce air friction that heats leading edges of the wing and parts of the exterior skin to about 300 degrees F.

No wonder the Russians are having nightmares over the Hustler. It's America's new big stick.

Proposed Regulations for Ads of Investment Advisers

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article from the Wall Street Journal of April 5, 1961, and the correspondence following it.

It is heartening to observe this activity on the part of the Securities and Exchange Commission and I think they are to be commended for promulgating the proposed rules. It is my sincere hope that after the serious consideration of my suggestions they also will be incorporated in the new regulations.

[From the Wall Street Journal, Apr. 5, 1961]

SEC WOULD BAR CERTAIN ADS ON INVESTMENT ADVICE—IT SEEKS TO HALT TESTIMONIALS, REFERENCE TO PAST ADVICE, ADS FOR GRAPHS, FORMULAS—COVERS ADVISERS, COUNSELORS

WASHINGTON.—The Securities and Exchange Commission proposed new rules to

curb alleged fraudulent and deceptive advertising by companies and individuals who sell or collect a fee for investment advice.

The new rules apply to advertising by an estimated 1,600 so-called investment advisers registered with the SEC, and to anyone, whether registered or not, who collects a fee for counseling investors about when to buy and sell what securities.

Thus, the SEC crackdown would also affect individuals and concerns that call themselves investment "counselors," broker-dealers that collect special fees for investment advice when the advice is not incidental to the purchase or sale of securities, and stock market chartists advertising charts, graphs, formulas or other statistical devices as aids to securities buying or selling.

The agency listed some examples of ads it thinks ought to be illegal. One recently in a New York newspaper promoted an "extraordinary special situation report on an overlooked industry group" in which "we expect stock prices to double and triple." A direct-mail ad said, "If you had acted on our advice not too many months ago you could have turned $1,000 into $2,137 in just 68 days." A newspaper ad said there were "opportunities in warants" for investors "interested in making $1 do the work of $100 or $1,000 in a rising market."

The SEC proposed rules to define certain investment adviser ads as fraudulent, deceptive, or manipulative. It would prohibit advertising testimonials and would forbid calling attention to past recommendations. Such ads "are misleading by their very nature," the SEC said, because they emphasize only the recommendations that turned out well.

Advisers couldn't run ads offering to sell any graph, formula, or other device that tells an investor when to buy or sell stocks. They could not describe a report, analysis, or other service as free "unless it is in fact entirely free and subject to no conditions or obligations." A final catchall rule makes unlawful any ad that "contains any untrue statement of a material fact or is otherwise false or misleading."

The Commission set May 15 as the deadline for investment advisers and anyone else interested to file comments; all regulatory agencies are required by Congress to follow that procedure in adopting new rules. After the comments are in, the SEC may make changes and then probably will fix an effective date.

The rules would implement an amendment Congress passed last September to the 1940 Investment Advisers Act. That act made it unlawful for investment advisers to engage in fraudulent or deceptive practices. But the SEC has never brought action against an adviser for advertising his own abilities falsely, because the law was too vague.

Last year's amendment expanded the SEC's regulatory authority, including the power to define wrongful advertising in its rules, and gave the agency a range of enforcement tools; it can suspend or revoke an erring adviser's registration, probably putting him out of business, or it can go to court for an injunction or to prosecute. Maximum penalties a court can give an adviser guilty of violating SEC rules: A $10,000 fine or 2 years in jail or both.

The SEC said the advertising rules are only the first step in its campaign to tighten up the regulation of investment advisers. Another rule under study would state what books and records an adviser must keep. The 1960 amendment gives the Commission the power to inspect such books and records.

An SEC official said the rules were not proposed until now, even though the amendment was passed last September, because the Commission "has too many other things to do and not enough staff help to do them. We're simply taking first things first."

APRIL 15, 1961.

Hon. ORVAL L. DUBOIS,
Secretary, Securities and Exchange Commission, Washington, D.C.

DEAR MR. SECRETARY: I was indeed pleased to note the publicity attendant upon the activity of your agency to regulate the advertisements of financial consultants and advisers.

I will be pleased to receive a copy of your proposed new rules.

It has occurred to me that there should be a rule requiring all persons giving this kind of advice, and particularly brokers who are buying and selling securities, to furnish in writing full information concerning those securities which they own whenever they give any advice with reference to the purchase or sale thereof. I think that in every such instance they should be required to state the details as to the date of acquisition, quantity and price paid, and then also be required to give advance notice of their intention to dispose of such securities whenever they have given advice as to the purchase thereof.

If your proposed new rules do not cover these items, I would appreciate having your reaction as to the advisability thereof.

Sincerely yours,

ABRAHAM J. MULTER.

SECURITIES AND EXCHANGE COMMISSION,
Washington, D.C., April 24, 1961.

The Honorable ABRAHAM J. MULTER,
The House of Representatives,
The Congress of the United States,
Washington, D.C.

DEAR CONGRESSMAN MULTER: Your letter of April 15, 1961 to Mr. Orval DuBois, has been referred to me for reply. Pursuant to your request I am happy to enclose a copy of Investment Advisers Act Release No. 113 announcing the Commission's proposal to adopt rule 206(4)(1) to prohibit certain advertisements by investment advisers as fraudulent, deceptive or manipulative within the meaning of the Investment Advisers Act.

You suggest that there should be a rule requiring all persons giving investment advice to furnish written information concerning their own transactions in the securities they recommend. You propose that when they give advice as to the purchase of particular securities they be required to state the date of their own acquisitions, the amount purchased, and the price paid; and that they should also be required to give advance notice of their intention to dispose of such securities.

As release No. 113 points out, the Commission has accelerated its regulatory program since the amendment of the Investment Advisers Act in September 1960, and one important phase of this program involves a study of the acts and practices of investment advisers which may be considered to be fraudulent, deceptive, or manipulative, with a view to adopting rules and regulations designed to prevent such acts and practices.

The problem to which you refer is one of those being studied. Certainly a person who has the obligations of a fiduciary should not be permitted to engage in activities which may conflict with his obligation of undivided loyalty to his customer or client; and where he has any position in a security being recommended, or has engaged in any activities which might affect the price or bear upon the objectivity of his recommendation, all material facts with respect thereto should have to be disclosed. The problem is a complex one, however, and just what conditions should be made applicable in these particular situations must be given careful thought.

Your suggestion is greatly appreciated. You may be sure it will be given serious consideration.

Sincerely yours,

PHILIP A. LOOMIS, JR.,
Director.

SECURITIES AND EXCHANGE COMMISSION,
Washington, D.C.

(Investment Advisers Act of 1940, release No. 113)

NOTICE OF PROPOSED RULE TO PROHIBIT CERTAIN ADVERTISEMENTS BY INVESTMENT ADVISERS AS FRADULENT, DECEPTIVE OR MANIPULATIVE UDER THE INVESTMENT ADVISERS ACT OF 1940

Notice is hereby given that the Securities and Exchange Commission has under consideration a proposal to adopt rule 206(4)(1) defining certain advertisements by investment advisers to be fraudulent, deceptive or manipulative active within the meaning of section 206(4) of the Investment Advisers Act of 1940.

Since the adoption of the Investment Advisers Act of 1940, section 206 of the act has made it unlawful for registered investment advisers to engage in fraudulent or deceptive activities. The effectiveness of these provisions were limited, however, because the Commission did not have the power to define specific activities to be fraudulent or deceptive.

In September 1960 the act was amended in many important respects. Section 206 was made applicable to all investment advisers whether registered or not. In addition, a new subsection (4) of section 206 prohibits any investment adviser from engaging in any act, practice or course of business which is fraudulent, deceptive, or manipulative and gives the Commission the power, by rules and regulations, to decline and to prescribe means reasonably designed to prevent such acts, practices and courses of business.

Since the amendment of the act the Commission has accelerated its regulatory program with respect to investment advisers. One important phase of this program involves a study of the acts and practices of investment advisers which may be considered to be fraudulent, deceptive, or manipulative, with a view to adopting rules and regulations designed to prevent such acts and practices. The present proposal is the first step in implementing this phase of the program.

The proposed rule 206(4)(1) would prohibit an investment adviser from publishing or circulating; or from causing any other person to publish or circulate, any advertisement which the rule defines to be fraudulent, deceptive, or manipulative.

In considering the specific provisions of the rule several important considerations should be borne in mind. Investment advisers are genefally required to adhere to a stricter standard of conduct than that applicable to ordinary merchants, securities are intricate merchandise, and clients or prospective clients of investment advisers are frequently unskilled and unsophisticated in investment matters. Since it is to such persons that a substantial amount of investment advisory advertising is directed, the proposed rule is intended to implement the statutory mandate by foreclosing the use of practices which have a tendency to mislead or deceive such persons.

The first subparagraph of the proposed rule would prohibit advertisements containing testimonials of any kind concerning the investment adviser or any advise, analysis, report or other service rendered by the investment adviser. Subparagraph (2) would prohibit the use of advertisements which call attention to past recommendations of the investment adviser which were or would

have been profitable to any person. Such advertisements are misleading because by their very nature they emphasize the comments and activities favorable to the investment adviser and ignore those which are unfavorable.

Subparagraph (3) would prohibit an investment adviser from using an advertisement which represents, directly or indirectly, that any graph, chart, formula, method, system or other device being offered can in and of itself be used to determine which securities to buy or sell, or when to buy or sell them. This same subparagraph would also prohibit an advertisement which represents that any such graph, chart, etc., being offered will enable or assist any person to make his own decisions as to which securities to buy or sell or when to buy or sell them without fully disclosing the limitations and difficulties with respect to its use.

Subparagraph (4) of the rule would prohibit an advertisement from representing that any report, analysis, or other service will be obtained free or without charge unless it is in fact entirely free and subject to no conditions or obligations.

Subparagraph (5) contains a more general provision to make it unlawful for an investment adviser to use any advertisement if it contains any untrue statement of a material fact, or is otherwise false or misleading.

It has been suggested that there are many other areas in which it may be appropriate to adopt rules defining certain practices to be fraudulent, deceptive or manipulative. As pointed out above, the Commission has power not only to define such acts or practices, but also to adopt rules designed to prevent them.

Section 204 of the act, as amended, gives the Commission the power to require investment advisers subject to registration to maintain books and records prescribed by the Commission and to inspect such books and records. The Commission has published, in Investment Advisers Act Release No. 111, its proposed rule to prescribe the books and records to be maintained. Its inspection program should furnish valuable information indicating some areas which might be the subject of regulation to prevent fraudulent, deceptive or manipulative practices. However, the Commission would like to have the suggestions of all informed persons (including those engaged in business as investment advisers, and those who have employed the services of such advisers in any capacity) concerning other rules and regulations which might be adopted to prevent such practices.

The text of proposed rule 206(4)(1) discussed above, defining certain advertisements as fraudulent, deceptive, or manipulative, is as follows:

PROPOSED RULE 206(4)(1)

(a) It shall constitute a fraudulent, deceptive, or manipulative act, practice or course of business within the meaning of section 206(4) of the act, for any investment adviser, directly or indirectly, to publish, circulate, or distribute any advertisement—

1. which refers, directly or indirectly, to any testimonial of any kind concerning the investment adviser or concerning any advice, analysis, report, or other service rendered by such investment adviser; or

2. which refers, directly or indirectly, to past recommendations of such investment adviser which were or would have been profitable to any person; or

3. which represents, directly or indirectly, that any graph, chart, formula, method, system, or other device being offered can in and of itself be used to determine which securities to buy or sell, or when to buy or sell them; or which represents, directly or indirectly, that any graph, chart, formula, method, system, or other device being offered will enable or assist any person to make his own decisions as to which securities to buy or sell, or when to buy or sell them, without fully disclosing, in close juxtaposition and with equal prominence, the limitations and difficulties with respect to its use; or

4. Which contains any statement to the effect that any report, analysis, or other service will be furnished free or without charge, unless such report, analysis or other service actually is or will be furnished entirely free and without any condition or obligation, directly or indirectly; or

5. Which contains any untrue statement of a material fact, or which is otherwise false or misleading.

(b) For the purposes of this rule the term "advertisement" shall include any notice, circular, letter or other communication, written or oral, which offers (1) any analysis, report, or publication, or (2) any graph, chart, formula, method, system or other device intended to be used in connection with making any determination as to when to buy or sell any security, or which security to buy to sell, or (3) any other investment advisory service.

All interested persons are invited to submit their views and comments on proposed rule 206(4)(1) and their suggestions with respect to other rules which should be adopted to prevent fraudulent, deceptive or manipulative acts or practices, on or before May 15, 1961. All such communications will be available for public inspection.

By the Commission:

ORVAL L. DUBOIS, *Secretary.*

Review of the Conscience of a Conservative

EXTENSION OF REMARKS

OF

HON. SPESSARD L. HOLLAND

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 3, 1961

Mr. HOLLAND. Mr. President, there has recently come to my attention a review of Senator GOLDWATER's book, "The Conscience of a Conservative," prepared by Jerry Cullum. Jerry, who is 14, is in the ninth grade of the Sanford public schools, Sanford, Fla.

I feel that this is a splendid paper showing the kind of thinking by the younger generation which should be encouraged. I ask unanimous consent to have this review printed in the Appendix of the RECORD.

There being no objection, the review was ordered to be printed in the RECORD, as follows:

REVIEW OF "THE CONSCIENCE OF A CONSERVATIVE"

(By Jerry W. Cullum)

"The Conscience of a Conservative," by the Honorable Senator BARRY GOLDWATER, is one of the most refreshing books to appear on the political scene in years. After huge amount of empty oratory and vague phrases such as "you never had it so good" and "America must move forward", at last there appears a politician who tells exactly why he believes his system is the more practical.

Basically, Senator GOLDWATER's purpose is to show why he believes liberalism impracgan taking over those "powers reserved to the States or to the people." One cannot help but gather from the record that the liberals have been greatly responsible for this.

One case is the Federal Government's interference into the field of agriculture. Here, and in many other cases, the liberals have made all manner of ridiculous interpretations of the law to make their program constitutional. For example, since farm controls were excused on the grounds that they came under interstate commerce, a farmer was fined for planting wheat that was consumed on his own farm. It was reasoned that had he not produced the wheat, he might have purchased it from someone else, and that purchase might have affected the price of wheat transported interstate.

Although the Senator examines Federal expansion in detail, he also moves into another danger to our society—the corruption and growth of the labor unions. It is noted that so-called "liberals" calling for all types of new legislation have been tolerant of and even friendly toward the union monopolies. (Witness the political platform of one of our political parties.) Senator GOLDWATER calls for lovers of freedom to battle to curb the power of these huge organizations.

One other subject is covered by the Senator—foreign policy. He asks one important question about foreign aid—what good has it done? In many cases, none at all. He calls for the termination of the aid that actually causes our prestige to decline, and also calls for private investment in the underdeveloped nations. In another chapter, he points out that negotiations with the Communists can only lead to further defeat for the Western World.

But the Senator does not simply outline the problems. He also offers solutions. The primary responsibility, he says, rests with the American people. They must first see that men are elected to office who have the courage and conviction to return this country to the Constitution. When the Federal Government begins to withdraw its controls of business and its vast welfare programs, the responsibility for the handling of these affairs will once more rest with the States and the people, which is as it should be. When the Government stops making futile attempts to coexist with communism, and begins an active fight in all fields against it, our prestige, and if not that, certainly our self-respect, will begin to rise once more.

This, in much abbreviated form, is his argument. Although I cannot do this noble work justice in such limited space, I would like to state my own feelings on the subject: If this is conservatism, God grant us more conservatives.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

Appendix

A Cogent View on Our Highway Program

EXTENSION OF REMARKS
OF

HON. CLEM MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1961

Mr. CLEM MILLER. Mr. Speaker, of all the witnesses appearing before the Ways and Means Committee to testify on the Federal highway program, none was more convincing than that of State Senator Randolph Collier, of California. His statement was a cogent and lucid explanation of the issues presented. Senator Collier knows whereof he speaks. California could produce no more knowledgeable witness on this subject. As chairman of the senate committee on transportation he has assumed a great share of the responsibility for our farflung highway system. It is with this experience in mind, Mr. Speaker, that I request his statement be printed below:

The facts necessary to make a full appraisal of the impact of the President's recent proposal regarding financing of the Federal highway program are not yet at hand, at least out in California. However, we are confident that we can set forth certain preliminary observations clearly indicating that the suggested heavy taxes on commercial vehicles will have serious consequences for the State's economy in general, and its trucking industry in particular.

First, it should be noted that California's highway users presently make a substantial contribution to the highway programs of other States. California's users pay about 9.7 percent of the taxes used to finance the Federal highway programs, while the State receives back about 8.7 percent of Federal aid for all eligible highways systems. In light of the current magnitudes a single percent is a figure of real import. Thus, California's taxpayments into the highway trust fund, are reaching about $305 million while its aids, at best, will level off at about $265 million a year. It might be noted here that the most recent inventory of interstate highway needs reduces California's share about one-half of 1 percent (from 10.162 to 9.656 percent), which means a loss of about $11 million a year under current authorizations.[1] While this shift is acceptable under the rules of the game which California has supported, a transfer of some $40 million of capital out of the State's economy is not to be considered lightly. There are limits to the extent of redistribution or equalization that can be assumed without serious internal consequences.

It is only fair to note that California is presently faced with enormous local road and street needs that have been verified by careful engineering study, but for which no adequate financing is in sight from any source—Federal, State, or local.

[1] California receives a little less than 5.8 percent of apportionments for primary, secondary, and urban Federal-aid highways.

It should be noted also that, under the present Federal highway tax structure, California's share of total user taxpayments is expected to climb consistently (though its share of aid will not), simply because motor vehicle use in California is expected to rise more rapidly than in the country as a whole. (For example, California highway travel is estimated to rise 2.65 times between 1956 and 1976 as compared with 1.93 times for the Nation.) Thus, without any change in the Federal user tax structure California user payments will rise, from well under 10 percent to at least 13 percent of the total in the later years of the program.

However, the immediately disturbing feature is the current proposal to shift more of the emphasis in the Federal tax structure to heavy commercial vehicles. Our concern is grounded in the fact that the West, California in particular, has such large proportions of the heavy vehicle fleets, especially of the diesel rigs and large freight combinations. For example, it is estimated that California accounts for about 14 percent of the diesel fuel used on the Nation's highways. Thus, we currently pay about 14 percent of diesel taxes as against about 9.5 percent of gasoline taxes. Even if a high differential rate could be justified (and about this we have reservations in regard to the Federal highway program), Californians would have reason for real concern.

We also have reason to be concerned about heavy license or use taxes on large vehicles. While accurate data on vehicle sizes for the individual states are not available, we may note that the Pacific Coast has about 15.7 percent of all freight combinations as against only 13 percent of all motor vehicles. However, the really astonishing fact is that the Pacific Coast has over 45 percent of all combinations in the country having five axles and more. Clearly, all proposals to tax heavy vehicles more proportionately than they are taxed now singles out the West, California in particular, for a disproportionate tax increase to support the Federal highway program.[2]

Our rough preliminary estimate is that Californians would contribute about $12 million more a year under current proposals to concentrate on truck taxes than they would under either an "across-the-board" or a simple fuel tax increase.[3] In other words, the transfer of capital out of California for highways will increase to more than $50 million a year in the immediate future; and the figure will grow substantially over the years.

Now, if heavier taxes on commercial vehicles to support the Federal highway program could be clearly justified, we would have less firm grounds for complaint. But the plain fact is that legitimate questions may be asked about the current tax proposals.

We are rather surprised that positive findings can be made about the truckers' share before the results of the $27 million Illinois test road have been made available for analysis. We are rather surprised at the proposed diesel tax differential of 75 percent when no study, to our knowledge, has ever demonstrated need for such a high differential to equalize diesel and gasoline tax payments. In this connection, we might note that only seven States now have diesel tax differentials and in only two is the differential as high as 50 percent. In California, the gasoline tax rate is 6 cents as against 7 cents for diesel fuel, a differential of 16⅔ percent.

But the more basic question we would raise involves the extent of responsibility of heavy commercial vehicles for urban highways, especially the urban portions of the Interstate System.

On a nationwide basis about 45 percent of the interstate need is in cities. In recent years more than 38 percent of Federal aid for all highway systems went into urban areas. Now, if we would be honest and forthright we would be forced to admit that this interstate need is not caused primarily by interstate or even by long-distance travel. And, of course, it is not caused by commercial vehicle movements. The plain fact is that urban interstate highways are being built to accommodate a portion of the peak-hour demands of commuters. That the President recognizes this essential truth seems to be indicated in his highway message which was quoted in the press, as follows:

"It has always struck me as ironic that so many of our citizens—so ingenious in quickly devising ways of ending almost every minor irritation—would so readily tolerate every morning and evening the incredible congestion of our antiquated highways that take a heavy toll in automotive costs and depreciation, to say nothing of human nerves and tempers."

The clear inference is that the Federal highway program is expected to provide relief for the peak-hour congestion problem. In view of this enlightened statement, it strikes us as ironic to make offhand implications about the responsibility of heavy commercial vehicles—at least for the urban part of the problem. One is entitled to ask how much of the cost of peak-hour congestion should be attributed to commercial vehicles. After all, more than two-thirds of the Federal highway program is devoted to the Interstate system, of which more than 40 percent of the cost is in the cities.

It would be instructive to know what part heavy vehicles play in the main traffic streams during the commuter rushes. Our own observations are that heavy vehicles operations are not major considerations in the design capacity of city freeways; unfortunately adequate data on this matter are not available. It is interesting to note, however, that an estimate of travel by the U.S. Bureau of Public Roads showed that trucks and combinations accounted for about 15 percent of all travel on urban interstate highways in 1957; but the figure for combinations alone was less than 5 percent. And, of course, percentages during peak hours would be very much less.

Another look at the data shows that trucks and combinations ran up only 4.6 percent of their total mileage on the urban portions of the Interstate System. Actually, almost 85 percent of all truck and combination travel takes place entirely off the Interstate System. The fact to remember is that user taxes, whether Federal or State, are appli-

[2] More than two-thirds of the truck-trailer combinations and over half of the tractor-semitrailer-trailers are in the Pacific division, which has only 16 percent of the total registration of truck combinations. Third Progress Report of the Highway Cost Allocation Study, 1959, p. 12.

[3] Based on the assumption that $300 million more a year is to be raised.

cable regardless of where the travel takes place; this fact should not be ignored in appraisal of the burden and equity of highway user charges.

We feel rather sensitive about distribution of user tax burdens in California because we have given much attention to the problem. We also feel strongly about the urban situation because California has been a leader among the States in attempting to meet metropolitan congestion problems. This is illustrated by the fact that more than 70 percent of our interstate needs is in urban areas. In fact, according to our most recent estimate our two big metropolitan areas (the bay area and the Los Angeles-San Diego complex) account for about 75 percent of our total interstate needs (an urban area figure much higher than the national proportion). Now, we happen to know that these areas have a very much smaller proportion of heavy vehicles than 75 percent. In fact, their proportions of commercial vehicles, especially the larger ones, are considerably smaller than their proportions of ordinary passenger cars, a circumstance which suggests caution in assessing costs of urban facilities against commercial vehicles without appraisal of all the facts.[4]

Actually, much of our trucking industry in California operates in areas far remote from interstate highways, not only from the urban portions but from the rural segments as well. As one example, we might cite the logging industry in the Redwood Empire, which operates many huge diesel rigs, nons of which ever gets near an interstate highway.

It occurs to us that it will be uneconomic as well as inequitable to single out the trucking industry for differentially higher Federal user tax burdens. At the least, there should be a much better demonstration of their responsibility for Federal highway costs, especially in urban areas, than anything we have yet seen. We believe there is a strong presumption against taking dollars from California's trucking industry, and hence from its economy, in order to build interstate commuter routes in Boston, St. Louis, New Orleans, or Denver—or even in Los Angeles or San Francisco for that matter.

In the final analysis, we must recognize that the more centralized our highway financing becomes, the more approximate and crude will be our highway-user tax programs. The chasm between tax payments and highway expenditures becomes almost too wide to bridge at the Federal level. It is our considered view that the problem of achieving reasonable balance between tax burdens of commercial vehicles and ordinary passenger cars can be worked out with more precision and equity at the State level. Federal highway-user taxes would best be imposed on a broad base.

---

[4] For example, only 28.7 percent of California's for-hire motor vehicles are situated in Los Angeles County, as compared with more than 40 percent of the passenger cars.

The Real Estate Investment Trust Act and Its Potential for Urban Renewal

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1961

Mr. KEOGH. Mr. Speaker, last year the Congress enacted legislation providing a new method of taxing real estate investment trust, which distribute 90 percent of their income annually to their beneficiaries.

My attention has been invited to a recent address by John C. Williamson, director of the department of governmental relations, National Association of Real Estate Boards, before the sixth annual conference on urban renewal of the National Association of Housing and Redevelopment Officials on the subject of the Real Estate Investment Trust Act and its potential for urban renewal.

Under unanimous consent I include this address in the Appendix of the CONGRESSIONAL RECORD:

THE REAL ESTATE INVESTMENT TRUST ACT AND ITS POTENTIAL FOR URBAN RENEWAL

(Address by John C. Williamson, director, department of governmental relations, National Association of Real Estate Boards, before the Sixth Annual Conference on Urban Renewal, National Association of Housing and Redevelopment Officials, Pittsburgh, Pa., April 18, 1961)

Mr. Chairman, ladies, and gentlemen, I want to thank you for this opportunity to discuss one phase of this tremendous problem of financing urban renewal by private developers.

The National Association of Real Estate Boards and the National Association of Housing and Redevelopment Officials share a common goal in the field of urban renewal. If you were to look closely at the basis for our differences, and there are differences if you compare our recent respective statements before the Senate Housing Subcommittee, you will find that the magnitude of these differences is inversely proportionate to the role of private enterprise in the field of urban renewal.

Notwithstanding some of our critics, the realtors accept the concept of urban renewal capital grants by the Federal Government. However, we cling zealously to the philosophy which ran through this program during its consideration by the Congress and its ultimate acceptance by the business community—that is, that private enterprise would play a predominant role in the redevelopment of urban renewal areas. Accordingly, the realtors have supported the various financing mechanisms in the law today which are designed to assist private enterprise to fill this role.

If you were to read the testimony of the chairman of the realtors' Washington committee before the Senate Housing Subcommittee last week, you would have noted that he expressed some concern over provisions in the bill which would vest in local redevelopment agencies, as well as local public housing authorities, the means to engage directly in the redevelopment of urban renewal areas.

That is why the subject of private financing for private redevelopers in the urban renewal process is so important to us. We must assist in the development of concrete solutions directed at the great problems of urban renewal.

One of these great problems is money.

The problem is one of money that doesn't sojourn too long away from the pocket of the developer. Reflect for a moment on the developers with whom you have personally been in contact during the past years. Do you know any who didn't want to get his money out of a project as soon as possible; that is, if he were one of the rare ones who had any money in the project in the first place.

The problem, as we view it, is to contrive some financing mechanism which would attract the money of the nonspohisticated investor who would be content with a yield which has characterized real estate investment certainly during the post-World War II period. I say "nonsophisticated investor" to exclude the more sophisticated type which spelled the success of the real estate syndicate in some of our metropolitan areas. He needs and is getting the high yield on prime income producing properties. For urban renewal, particularly, we need the small investor who does not have the means for the large investment needed to buy into a syndicate nor require the inordinately high yield as a prerequisite to investment.

To find the answer we went back into the early 20th and late 19th century and dusted off a device which had made tremendous contributions to the development of many of our large cities during the last century, the real estate investment trust or, as it is known sometimes, the "Massachusetts trust" because of its history and development in that State.

Unfortunately, the real estate investment trust went into oblivion in the early thirties, cut down, so to speak, as it stood on the threshold of a new era, an era which saw the beginning of the Federal Home Loan Bank System, the Federal Housing Administration, the beginning of America's 20th century revolution in home ownership and urban development.

The real estate investment trust at that time was an unincorporated association which held real estate for investment and distributed the proceeds to its investors or shareholders. Such trusts were not subject to the Federal corporate tax and were therefore able to pass through maximum income to the beneficial owners.

However, there were many unincorporated associations at that time which were not content to obtain passive income for their beneficiaries. These started to engage in more active operations. Soon the matter reached the U.S. Supreme Court which proceeded to knock down the passive trusts along with the active trusts. The Court said in effect that if an unincorporated association had certain indicia of a corporation, such as continuity of life and centralized management, the association would be taxable as a corporation.

A few years later, in the late 1930's, the "mutuals," the funds which hold stocks and bonds, fought back, and Congress exempted them from the corporate tax so long as their income was passive and they distributed 90 percent of their income annually to the shareholders.

It was not until the early 1950's that the organized real estate industry, led by a few hardy Massachusetts trusts which had managed to survive the corporate tax, decided to fight back. It found a champion in Congressman EUGENE KEOGH, Democrat of New York, who not only sponsored the legislation but fought for it consistently until its enactment. His ally and colleague in the effort was the late Congressman Dick Simpson, Republican of Pennsylvania, who time and time again sought a kindlier reception for this bill by the Treasury.

It took almost 7 years to convince the Treasury and the Congress that the "passive" real estate investment trust should also be exempt from the corporate tax under the "conduit" theory—that is, where the trust is merely the conduit through which money passes from the property to the investor.

During the legislative activity on this bill, which became law last September, the Housing and Home Finance Administrator conveyed to the Treasury Department the view that the trust could become the weapon for pooling the savings of small investors for urban renewal. At that time, you will recall, the Budget Bureau was doling out FNMA special assistance funds with an "eyedropper," and the housing agency officials were scrambling for the magic word which would bring private enterprise into urban renewal without the bait of FNMA special

assistance, which, although you may disagree, is nevertheless a form of direct lending.

Now as to the specifics of this new device.

First, I must warn you that this is a most complicated measure, and I am forced to limit my remarks to its essential elements. This satisfies my own limited knowledge and also feeds the ennui with which all mortals must contend in meeting the challenges of the late afternoon.

Under the act, real estate investment trusts are defined as unincoporated trusts or associations which (1) are managed by one or more trustees, (2) have transferable shares of beneficial interest, (3) are a type of organization which would be taxed as an ordinary domestic corporation in the abscence of the new law. This means that the trust or association must have the indicia of the corporation; continuity of life, limitation of personal liability, transferability of shares, etc.

To emphasize the objective of the bill to encourage the pooling of small savings, the Congress provided that the beneficial ownership must be held by 100 or more persons and that 5 or less persons may not directly or indirectly own more than 50 percent of the trust. The trustees or managers of the trust must elect to be taxed as a real estate investment trust and the trust may not hold any property primarily for sale to customers in the ordinary course of its trade or business.

It doesn't make any difference that property has not been sold after it has been held "primarily for sale * * * in the ordinary course of * * * trade or business." The essence is in the manner in which it is held. Frequency of sales and purchases, for example, is evidence of "holding property" as a dealer.

A realtor who organizes a trust could arrange for one or more of the investors (three would be preferable) to be trustees, and these should be individuals with experience in real estate.

The trustees are those whose faces will be turned toward the public. They must inspire confidence in the investing public or the trust will be left "holding the bag" of unmarketable shares.

These trusts will be required to file a registration statement and prospectus (which becomes in essence the contract between the shareholders and the trust) with the Securities and Exchange Commission if the offering is to be made in interstate commerce. Interstate commerce has a very broad meaning; i.e., the shares are offered to more than 25 persons presumes interstate commerce; the trust uses the mails; shares are sold (even without knowledge of the trust) by a shareholder to another outside the State. Intrastate offerings have a very fragile basis, and trusts should contemplate registration with SEC under the Securities Act of 1933.

On April 11 the Securities and Exchange Commission issued a new form which set forth the requirements of real estate investment trusts, syndicates, and other incorporated or unincorporated groups making public offerings of securities, and who are primarily concerned with holding real estate for investment. The reason for the new form was to satisfy the requirements for adequate disclosure—the SEC wants to make sure that the investing public will be able to make an informed judgment, on the basis of complete disclosure as to the promoters, the investment policies to be pursued, self-dealing, etc.

Our association welcomed these rather strict disclosure requirements because many of our people have long memories, memories which go back to the disaster of the late twenties when an uninformed public lost millions in nonexistent real estate equities and guaranteed mortgage certificates which guaranteed only disillusionment.

We visualize such real estate investment trusts being organized in a community to provide the equity capital for redevelopment of an urban renewal area, provided the trust will be able to acquire the land for multipurpose use. For example, the relatively low yield on an FHA-insured multifamily project would have to be balanced with the higher yield on a shopping center or other commercial and light industrial facilities.

Let us take this thing through a few of the required steps.

The redevelopment agency in city A is soon going to have cleared land ready for private redevelopment pursuant to an approved urban renewal plan. The plan provides for multifamily projects and a shopping center. A realtor, builder and banker organize a real estate investment trust for the purpose of negotiating for the acquisition of the property for redevelopment.

Because of the reputation of the participants in the community, and because of the opportunities to be afforded the small investor to own a part of the redeveloped area, the redevelopmfent agency negotiates for the sale or long-term lease of the land to the trust, provided that by a certain date the trust's offering has cleared the Securities and Exchange Commission and the offering has been underwritten by reputable underwriters.

The trust files a registration statement with the SEC for an offering of 500,000 shares at $5 a share. The registration statement discloses all the information necessary for the investor to make an informed judgment, including copies of the trust instrument, trustee regulations, contracts for the purchase of the land, contracts for the construction, FHA commitments, leases to the tenants, management contracts, contracts with the underwriter, and so forth. Much of the information contained in the registration statement is included in a prospectus which will be disseminated to prospective investors and which represents essentially the contract between the trust and the shareholder. An underwriter will either take the entire issue, or will try to sell it on what is known as a best-effort basis.

Assume the trust's entire offering is underwritten and this makes available $2.5 million. By a provision in the trust instrument, the money is to be invested in Government bonds which are liquidated as money is needed for construction, etc.

The trust properties will of course be mortgaged, the multifamily projects probably by FHA. Mortgaging the properties will permit the high leverage which will make the $2.5 million do the work of four or five times that much.

Once the projects are completed, the trust, in order to obtain the tax exemption, must contract out the management of the properties to an independent contractor. Several rules are set forth in the act to make sure that the trust's income is passive—that is, that it does not engage in the active business of managing real estate.

We are hopeful that a trustee, who is experienced in the field of real estate management, may also be the independent contractor who manages the trust properties so long as the trustee does not own more than a 35-percent interest in the trust. This 35-percent rule is contained in the act and is designed to reflect arm's-length transactions between the trust and the independent contractor. Unfortunately, the Internal Revenue Service in its proposed regulations is attempting to rewrite the law so that a trustee may not be an officer or have a proprietary interest in the management firm. We are hopeful that the IRS will recede from this position, because the result would deprive realtor-managers of the great incentive in promoting the development of a real estate investment trust.

There are other provisions and pitfalls in the act which, unless the trustees are very careful, might jeopardize the trust's tax exemption. This in effect reduces the beneficiaries' yield by 52 percent. For example, the trust may not own more than a 10 percent interest in any tenant. Because the trust, under the attribution rules of the Internal Revenue Code, is deemed to own the interest of its shareholders, rents may be disqualified for tax exemption. That is why it is most important for the trust to be advised of the interest of any of its shareholders in the tenants' enterprises.

If the trust distributes at least 90 percent of its income annually to its shareholders, the trust will be exempt from the corporate tax to the extent of the income so distributed. The income retained by the trust is taxable. The income received by the shareholders is taxable, unless the income represents a return of capital. This "return of capital" comes into being because of the depreciation rules. It is possible, therefore, during the early years of a project, to find that a substantial portion of the return will be tax free due to the accelerated depreciation which may be taken on new construction.

The trust must in its prospectus advise the investing public that tax exemption will come only after 75 percent of the income of the trust is derived from real estate sources. Consequently, the trust may not qualify as a real estate investment trust under the Tax Code until after the projects, whether they be apartments or shopping centers, are completed and in substantial occupancy. Thus we have a built-in incentive for the trust to get on with the job of redevelopment.

Suppose an investor wants to get his money out quickly. Is there a market for such shares? If not, what happens to the investor; is he frozen in?

These are examples of some of the questions which will plague the promoter. These trusts will be closed-end trusts in that they will make a single offering for a specific amount, and the shareholders will not have the right to insist that the trust redeem the shares on demand. Obviously, such a right of redemption just wouldn't work. The trust would have to fix the value of the shares every day. Imagine doing this on income-producing real estate.

The lack of the right of redemption must be made very clear to the investor, and every prospectus which I have read states this in unmistakable language. However, the trusts generally reserve the right to repurchase the shares, and most trusts will have part of their assets in liquid form so that it could be available for redemption. The act permits 25 percent of the trust's assets to be in cash, government securities, stocks and bonds, and other non-real-estate investments.

However, we believe that in time these trust shares will develop local markets, and ultimately, regional and national markets. Today, the Real Estate Investment Trust of America, which holds properties in 18 States, has its shares quoted on the American exchange.

Now, what is the present status of the Real Estate Investment Trusts Act? The wheels of progress grind slowly, and this act is no exception.

The Internal Revenue Service is considering the recommendations and arguments directed last month at its tentative regulations for such trusts.

While about eight real estate investment trusts have filed registration statements with the SEC, and two are already in business, there is enough uncertainty about the IRS regulations to deter trusts from going ahead with their organization at this time. Then there is the new SEC form which was just distributed and concerning which the

SEC has invited comments on or before May 8.

Again, some of the States have not been too responsive in amending State law to permit the formation of such trusts. For example, I was recently advised that the pending Texas enabling statute would limit a trust's operations to a single county. While this might suit the purposes of urban renewal, it does unduly restrict the trust's ability to diversify its investments as well as tap out-of-State sources.

The California Corporations Commissioner wants the shareholders to have the power of approving, rejecting, or canceling a management contract. The Internal Revenue Service insists that for the trust to be passive and obtain the tax exemption, the trustees must have absolute control over the management contract. So, if the IRS insists on its position—and I believe it should—then the real estate investment trust will not function in California, unless the State corporations commissioner relents.

The Federal Housing Administration has amended its regulations to permit real estate investment trusts to be eligible mortgagors.

There is legislation pending before the Congress to authorize federally chartered savings and loan associations to invest in shares issued by real estate investment trusts organized to participate in urban renewal.

A national association of real estate investment funds has been organized, principally by realtors, and has as its object the development of a code of ethics for promoters of such trusts.

Our own association has organized a committee on real estate investment trusts which met with SEC officials last December and urged that the agency adopt strict rules of adequate disclosure so that the investing public will be able to make an informed judgment.

I hope that in time we will find a real estate investment trust in each community, directing its efforts, its money and its talents toward urban renewal. I know that this will give rise to as many problems as it purports to cure. Urban renewal has arrived—it no longer requires the hardy trail blazer who must enter, with his money, where prudence fears to tread. More often than not, developers compete with each other for this or that parcel of land. The cooperative groups want their share, as certainly do the local public housing authorities, the speculative builder, and the industrial entrepreneur.

As you are pulled hither and yon by the divers interests who sincerely believe that the urban renewal objectives are met best in their product, consider the entity, the real investment trust, which will represent the savings and interest of hundreds of persons in the community. This would make meaningful the desired objective of urban renewal by the community and for the community.

When you go back home, round up a few of your city's businessmen who are interested in urban renewal. You will find some of them in real estate, building, and banking circles, an ideal combination to set up a real estate investment trust.

I hope that you will encourage the development of such trusts so that not just a few, but hundreds of people in your community will own the new urban areas which, as a result of your efforts, will grace the cities of tomorrow.

The Citizen and His Congress

EXTENSION OF REMARKS
OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1961

Mr. DORN. Mr. Speaker, Mr. Alex McCullough, vice president of the South Carolina National Bank, Greenville, S.C., made a very excellent address to the annual congressional dinner of the South Carolina State Chamber of Commerce here at the Statler in Washington. Mr. McCullough's timely speech will be of interest to the entire Congress and to the country:

It has been my pleasure to enjoy a rather close relationship to government from three different viewpoints: as a newspaperman, as an employee of both State and Federal Governments, and now as the officer of a bank.

Citizens who have not served in government often are impatient with the general slowness of its processes. On other occasions—when the results obtained are not satisfactory to individual desires—government is condemned for failing to be more deliberate in its consideration of problems. Although those critics of governmental processes are sometimes right on both charges, they cannot accurately indict government on either count without implicating themselves.

Government is the creation and instrument of the citizens of this country. Its strengths and its weaknesses are qualities and characteristics of the citizens themselves, reflected in their laws, their representatives, and their machinery of government.

Government was not created for the individual, but for the general good.

When individuals or special groups want something or want something done, they complain if government moves slowly. When they don't want somebody else to get something or don't want something more favorable to others to be done, they object to the speed which the machinery of government seems to acquire.

Citizens outside of government find it extremely difficult to be fair and objective when they want something or when they oppose something strongly. Citizens in government—elected, appointed, and employed—experience the same difficulty of being objective. Requests, demands, and pressures from individuals and groups of divergent views and interests make it impossible to please everyone on any issue.

Good citizens and nongovernmental organizations have the responsibility and obligation of knowing the facts and then asking Government only for those things in the general good within the limits of constitutional authority.

Unfortunately, all requests to Government are not reasonable. Many are solely for the selfish gains of special groups and individuals. Regrettably, many such proposals originate in Government.

Therefore, it becomes the duty of fair and objective officeholders to decide their positions on any issue based on the facts and the law, as best they understand them, without fear or favor.

This prescription for citizens and their representatives is simple. However, its use, both inside and outside of Government, has never been unanimous.

If every issue coming before the Congress could be classified as right or wrong, there would be only one remaining problem. That would be who would decide whether any issue were right or wrong. Since the issues cannot be classified as right or wrong, we won't pursue that point.

Quite often the objectives of opposing sides are nearly the same, but the best way to obtain the desired results is the question requiring a Solomon. Surely, a prime illustration of this point is the widely-different proposals for sustaining and expanding the national economy. This is not to say that all the proposals meet the test of being fair and objective; but, certainly, no one fails to agree that growth is desirable. The disagreement arises over the exercise of governmental powers and the speed with which they are exercised.

An additional problem which citizens and their representatives face in most issues is the matter of personalities. Ours was designed to be a government of law and not of men, but men designed the Government, men are running it, and men are supporting it. The element of conflicting personalities cannot be eliminated.

This makes it essential for all of us to place principles above persons—to seek what is right and reasonable regardless of appealing or conflicting personal relationships. Perhaps it is in the area of personalities that the greatest trouble lies. None of us forget past experience and all of us react to experience long after a particular issue has been decided. At all levels of Government, and in international relations, history shows that personalities have frequently overshadowed principles with disastrous results.

For the general good it is important that each issue stand on its own bottom and that we avoid letting personalities become issues. Thus, it is vital for those being represented and those who represent to avoid predeterminations until all the evidence has been examined on every issue. The practical application of such objectivity may be slightly more difficult than my saying it, but worth striving for and keeping as a constant goal.

The day-to-day details of Government which beset the Members of the House and Senate cannot be visualized by those unfamiliar with congressional operations. Duties and responsibilities imposed by the Constitution and by statutes comprise more obligations than any Member can perform without expert assistance. The growth of our Government to its present state of bureaucracy forces our Senators and Representatives, not only to deliberate and legislate, but, also, to serve as auditors on the activities of the 10 executive departments and the multitude of independent agencies.

The Constitution, in article I, section 8, specified 18 powers of Congress. A few other powers were stated in other articles in reference to special subjects. Limitations on the powers of Congress were listed in section 9, in the Bill of Rights, and in several other references.

But, in all their wisdom, the authors of the Constitution did not imagine the bureaucracy of today. The result has been an almost overpowering burden on the Congress, collectively, and upon the Members, individually, with their assistants.

Citizens who feel that consistency is not a virtue of their Representatives, and that inconsistency is characteristic, should apply the same measure to their own conduct in relations with their Congressmen.

The citizen who believes certain principles apply to Government generally—economy for example—should be consistent enough to have the rule applied in his home State as well as in the other 49. A Member of Congress cannot vote "No" on all general ex-

penditures and "Yes" on those beneficial to his own State.

Members of the Congress represent all the people of all the States—political friend and political foe. They cannot escape that responsibility.

Someone has said that "the test of a man's true character is what he would do if he knew it would never be found out." I believe an even sterner test of character is faced each year by the Members of Congress who know that everyone who wants to do so will find out how they voted. No matter how many times a Congressman pleases his constituents, it is the time he displeases them that they seem to remember longest.

I am sure that the eight members of South Carolina's delegation in Washington are aware of the scrutiny which constituents apply to congressional activity. Yea-and-nay votes are noted with favor or disfavor, according to the issue; significance is sometimes found in absences or paired voting.

Those of you whose votes have not consistently coincided with the thinking of chambers of commerce and their businessmen members have received negative reactions, expressed with no uncertainty. But from my own knowledge of letters from home, I must admit that sometimes we businessmen find it easier to complain, and are not quick enough with our praise.

We also spend too little time telling our elected representatives about what we see as the why or why not of a particular piece of legislation. We fail to orient the issue to its effect on our businesses, our communities, the economy of the State. We forget that such facts, if agreed to by members of the South Carolina delegation, can be used in turn by them to influence the attitudes of Senators and Representatives from other States.

Even more time-consuming and often more difficult than legislation are the innumerable "personal services" which have become a part of the Congressman's daily routine throughout the year. The average citizen, and even those who deal with such matters regularly, expect their Congressman's assistance in solving the maze of bureaucratic regulations which they deal with at times. Government has become so big that a citizen without at least an introduction by his Congressman feels insignificant before a bureaucrat. This should not be true and often there is no basis for such a feeling. Nevertheless, proper attention has to be given to the constituent who appeals to his Senator or Representative. Then the propriety of his actions must be considered by the Congressman.

Probably most of those present are familiar with these problems, but what can we do about them?

No one can presume to advise the Members of Congress on their obligations and responsibilities. That is the "long way which they must tread alone" once they have assumed public office.

Neither can any individual or group set the standards for all others. None has a monopoly on facts or wisdom.

However, there are practices which might be better employed by citizens and their Representatives alike to attain greater mutual understanding in dealing with the complicated problems of government.

In all inter-relations, citizens and Members of Congress should first consider:

1. Is it necessary?
2. It is for the general good?
3. Is it fair to all?
4. Can it be done without the power of Government?

We citizen voters back home appreciate the obvious desire of our representatives to keep us informed. You do this through your news releases, your weekly reports to the public, through your individual communications.

On the other hand, it is our responsibility to tell you what we think about current legislative issues such as the minimum wage, aid to education, liberalizing social security, aid for depressed areas, tax reform and secondary boycotts. It is up to us to properly reflect our preference for doing ourselves, in our own way, those things which the minions of liberal bureaucracy would choose to do for us.

Those questions cannot be answered without communication. Communication is not simply the expression of one person's ideas to another. Real communication goes farther than a one-way message.

Government needs more two-way exchanges of facts and ideas to obtain real communication between people and their representatives.

Communication means sharing, and interchange of thoughts and opinions, and finally, making common to all the vital considerations involved in any issue.

Better communication means the people and their representatives would both be better informed. Thus, better communication means better legislation.

Our objective must be constantly to strengthen our communications in the interest of better government for better citizens. We cannot escape the joint responsibility which all of us have.

We cannot disdain our mutual responsibility for South Carolina's economic progress. We at home must be imaginative and resourceful, and you in Washington must be ever-mindful of the deterrent effect of Federal encroachment.

We can do this if businessmen and legislators work together, understand the thinking of each other—remembering always that the constituent wants to be represented, and the legislator wants to represent.

Annual Assemblage of State Civil Defense Directors

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a speech which I delivered today at the annual meeting of the National Association of State Civil Defense Directors held in the auditorium of the National Guard Memorial Building.

SPEECH OF CONGRESSMAN MELVIN PRICE, OF EAST ST. LOUIS, ILL., PRESENTED AT THE ANNUAL MEETING OF THE NATONAL ASSOCIATION OF STATE CIVIL DEFENSE DIRECTORS, WASHINGTON, D.C., MAY 3, 1961

INTRODUCTION

It is a pleasure and a privilege to speak to this annual assemblage of State civil defense directors. I appreciate very much the opportunity you have given me to discuss some of the issues facing our country at this critical juncture in world affairs.

Recent events in Cuba and the highly sensitive developments in Laos, coupled with the stalled weapons test ban negotiations at Geneva, have brought to the American people a deeper appreciation of the continuing Communist threat to the security of our Nation. The thin veil of Communist peace and friendship, so cleverly worn in earlier times, has been replaced by the naked threat of thermonuclear devastation.

This is a grave and sobering matter. Its portent is so grim, in fact, that many refuse to contemplate its true meaning. Others, impressed by the enormity of the threat, are unable to devote rational thought to various possibilities of reducing the threat. For whatever reason, too many have failed to consider the total requirements of national security, nonmilitary as well as military.

As advocates of nonmilitary defense preparedness, I'm sure you and I share a common view on the importance of achieving a balanced active and passive defense program. Beyond that, I'm not so sure we will find ourselves in complete agreement on how we should proceed to improve the passive defense part of our security effort.

It is an unfortunate fact that the concern and the conviction which we share as to the need for a high level of nonmilitary defense, or civil defense, preparedness has not been matched on the part of the general public. Nor, in my opinion, have our military leaders exhibited an appreciation of the essential requirements of civilian preparedness in the event of large-scale military conflict. But there are some signs of change. People are beginning to ask important questions. The military are beginning to reexamine established doctrine. For the first time, we are beginning to ponder the simple question: What happens if all our efforts to deter war are frustrated, either by accident or by a calculated Soviet attack on the United States.

I have an idea that some constructive changes are in the wind at the Federal level of our Government. First, let me say that President Kennedy has been discerning in his choice of a man to pilot the nonmilitary defense program in the years ahead. Frank B. Ellis is a man of intelligence and drive. He has distinguished himself in New Orleans civic affairs and is a standout lawyer and businessman. He attacks problems with determination and diligence. From what I have seen since his appointment, Mr. Ellis has breathed new life into civil emergency planning. I am hopeful that his performance will attract additional talent and new resources to the urgent task of building a realistic nonmilitary defense program for our country. And I'm sure he looks to the members of this audience for valuable support and assistance in this undertaking.

It is not my purpose to second-guess the experts, including Mr. Ellis. But I do have some ideas which I should like to present for your consideration. I do so with the hope that they may be a constructive influence in the formulation of programs and policies equal to the requirements of national survival.

CIVIL DEFENSE AND DETERRENCE

To begin with, let's talk about this word "deterrent." I know of no word which has assumed a more prominent spot in the jargon of military expertise. Advocates of all kinds of deterrents—air, sea, ground forces, and missiles—abound in the services and, I might add, in the Congress. They all have a good case to make for particular projects, and each is motivated by a strong patriotic impulse. It is a pity that the budgetary pie is just so big.

But with it all, we hear only muted voices in defense of home preparedness, and a few strident voices determined to discredit the concept itself.

There is nothing wrong with the concept. On the contrary there is everything right and necessary about civil defense and defense mobilization. Anybody who measures deterrence solely by the strength of our reprisal force has overlooked a danger which could be fatal. A potential enemy ready to accept heavy losses in exchange for a quick victory cannot be discounted. It has happened before. It could happen again. This is particularly relevant in view of our avowed national policy, consistent with our ethical

and moral convictions, of never striking the first blow.

In plain fact, we must show the entire world that we can, and will survive such a blow, that loss of life will be kept to a minimum and major components of our industrial complex will remain viable.

It seems to me that such a posture is essential to protect our own society and our freedom, as well as discharging the obligations of leadership in the community of free nations.

CIVIL DEFENSE EXPENDITURES

And how much do we spend on this mission? With billions poured into military defense—and I do not downgrade these expenditures—we have put nickels and dimes into home defense. Each American paid $230 this year to maintain a modern Military Establishment. Mutual security cost each of us $25. Such burdens must be carried in these turbulent times. But I submit that the 34 cents per capita, which we currently spend for civil defense, is grossly inadequate. It does not, and cannot assure protection for our people, our plants, and our free institutions.

GAPS IN CIVIL DEFENSE PREPAREDNESS

I am certain you get reminders of the voids we must fill as you wrestle with local problems in your daily routine. I think you know, for example, that the construction of family fallout shelters has not reached epidemic proportions in the communities you serve. To be sure, such construction is rare enough to warrant space in most local newspapers. It is certainly not commonplace.

Also, I am sure you view with some apprehension the failure of Governments—Federal, State, and city—to provide shelter in new construction and to modify existing buildings for that purpose. And you wonder, I suppose, how you can be expected to persuade both individuals and industry to make such preparations when Government itself shows no awareness of the need.

I think you are concerned also, by the obvious weakness of our warning system. I am told that nearly half the major cities of the United States do not have adequate warning devices. And even with sirens in every principal target area we have not accounted for the millions of people who live outside the major metropolitan areas. There are pressing needs for increased medical stockpiles, for a more effective radiological defense system, for realistic resource planning and postattack recovery capabilities.

The requirements for an effective and well-coordinated civil defense are seemingly endless, but they are not really endless. They just seem so. The problem looms so large because we have been nibbling at it, and grudgingly at best.

I shall not try to assign blame for this state of unpreparedness. Perhaps it is traceable to the whirlwind surge of events and the eruption of science. In a span of 15 years we have witnessed a revolution in weapons technology of unprecedented magnitude. The lumbering 200-mile-an-hour aircraft and the TNT blockbusters of World War II have been replaced by high-speed aircraft and missiles capable of hitting any part of the world with fantastic destructiveness.

I am aware that shortcomings in nonmilitary defense cannot be attributed entirely to those charged with the conduct of our nonmilitary defense program.

I realize this program has been conducted within the limits of overall national policy, and seemingly in context with the prevailing climate of public opinion. It is natural that a society steeped in the ways of peace, comfortable in its unmatched prosperity, and traditionally optimistic, would find it difficult to address itself to the hard tasks of survival in the nuclear age.

Moreover, no official—no matter how dedicated—and no agency can operate an effective program in the absence of the necessary legislative authority and full executive branch support. The Congress itself must accept at least part of the blame for not taking the initiative and demanding that greater effort be devoted to our nonmilitary defense program.

OUTMODED LEGISLATION

I think it is important to understand that our present civil defense program has been severely handicapped from its inception by a grossly defective statutory base. Its enabling legislation, Public Law 920, is an unfortunate legacy of World War II. It was outmoded at the time of enactment in 1950, some 5 years after the development of the atomic bomb. More than a decade of weapons technology has rendered it completely obsolete.

The fundamental defect of that statute is its basic premise that civil defense is primarily a responsibility of the States and localities. That premise colors every major provision of the statute and was not changed by the amendments of 1958, Public Law 606. Those amendments did change the wording of the policy declaration and some of the restrictions on Federal action were removed but those alterations did not go to the heart of the problem.

In my view we need more in the way of basic legislation than any amendments to Public Law 920 can accomplish. We need to establish a completely new legislative framework which acknowledges that nonmilitary defense is primarily a Federal responsibility and which conceives this responsibility in the broader context of total national security preparedness.

It should be clear that a bomb falling on East St. Louis, for example, would not be an attack simply upon that city, but it would be an attack upon the United States. All of the resources of our Nation should be available not only to deter an attack on our cities but also to help minimize the destructiveness of such an attack and assist in a post-attack recovery effort.

This is too large a task for our States and localities to handle on an individual basis. It is a national problem, and it must be dealt with on a national scale.

Some 4 years ago I introduced a legislative proposal, designated H.R. 4219, which would have repealed Public Law 920 and would have provided the necessary statutory authority for the creation of a national master plan for nonmilitary defense. The key features of this proposal were: A clear statement of primary Federal responsibility; an important supporting role for the States and localities; and recognition of the key measure of shelter protection against the blast, thermal, and radiation effects of nuclear weapons.

LACK OF A NATIONAL MASTER PLAN

The type of national plan of action I am speaking of would conceive of nonmilitary defense as embracing the total complex of activities, other than military, required to prepare our people and our economy against the effects of possible war, to survive and emerge from the ashes of attack, to maintain the continuity of Government and essential production, to proceed toward partial recovery, and then toward full resumption of peacetime pursuits.

In short, the action plan for nonmilitary defense must embrace the broad sweep of civilian activities which must be joined with the military for preparedness, defense, and recovery. It must be a blueprint for survival, and it must not sidestep direct and explicit assignment of responsibility.

We do not at this time have such a plan. It is true that more than 2 years ago the OCDM announced its so-called national plan for civil defense and defense mobilization, and since that time annex upon annex has poured forth from Washington. That plan, which is still in effect, is a good statement of the many functions involved in the nonmilitary defense task, but it is in no sense a plan for action. Its theme is one of suggestion. It does assign broad responsibilities to various sectors of our society, but it provides no yardstick against which the performance of assigned responsibilities can be measured. Matched against an enormous need, the plan's directives are at best exhortations. The vital link between broad planning and concrete action is missing.

IMMEDIATE REQUIREMENTS

Aside from the broad requirements which I have mentioned, there are certain specific things which need to be undertaken immediately.

First, if our State and local authorities and individual families are to carry out substantial efforts in support of our national program we shall need strong Federal leadership and example. We must demonstrate that we are serious at the Federal level before we can expect cooperation at other levels. In concrete terms, this means that we must not only provide incentives for the construction of fallout shielding throughout the Nation but we must also build such protection into our Federal buildings. It means that we must not only encourage the protection of State and local resources, but we must also take steps to protect existing Federal resources. In these and other ways we can convince our people of the seriousness of the problem we face.

Once our people are convinced that we propose to go beyond the paper-planning programs of the past, I am convinced that the resources and public support required for the full development and implementation of a realistic nonmilitary defense effort will be forthcoming.

A moment ago I said that I sense a change in the wind. I believe there is a changing general attitude toward nonmilitary defense in this country. I think the opportunity is here for us to press forward for the first time toward a serious nonmilitary defense effort. It remains now for us to set ourselves to the task.

I know of President Kennedy's personal concern for the type of protection this effort can achieve for our people and our resources. With his leadership, and under the vigorous and imaginative direction of Frank Ellis at the Federal level, I believe it is now possible to move forward at all levels to build a program of nonmilitary preparedness equal to the enormous threat we now face.

This Guerrilla Business—The Need for a Reevaluation

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1961

Mr. COHELAN. Mr. Speaker, Stewart Alsop, in an article appearing in today's Washington Post, has made a strong case for President Kennedy's recent decision to reexamine the theory and practice of guerrilla warfare, and to prepare ourselves in this field.

Mr. Alsop has clearly pointed out the danger to the free world of continued operation under a double standard, and

the requirements which must be met if a guerrilla movement is to be effective.

This is a timely and penetrating article and I urge my colleagues to give it their close attention.

THIS GUERRILLA BUSINESS

(By Stewart Alsop)

What has been happening in Laos, and what threatens soon to happen in Vietnam, repeats a grim pattern. The pattern can be reduced into a simple formula. With Communist support, a guerrilla movement grows until it becomes stronger than the military forces of the country. The Communists then take control, confronting this country with the choice between intervening militarily in a situation where all the odds favor the Communists, or abandoning another nation to communism.

Since the last war, this sequence of events has occurred in North Indochina, in Cuba, and in China itself, with Laos and Vietnam next on the Communists' list. Even where a Communist-supported guerrilla movement has failed, as in Greece, Burma, Malaya, and the Philippines, a very high price has been exacted. In Malaya, to cite one example, a guerrilla force which never numbered more than a few thousand tied down 80,000 British troops for 10 years.

This is enough to suggest why President Kennedy has asked Gen. Maxwell Taylor to reexamine the theory and practice of guerilla warfare. The reexamination is long overdue. No sensible man doubts that sending American forces into Cuba or Laos or some other peripheral country is, to put it mildly, intensely undesirable. But does this mean that all the peripheral countries are to be conquered by indirection, until there is nothing left but an enfeebled Western Europe and a beleaguered North America?

The eventual answer to that question would appear to be yes—so long as we accept what this reporter's brother, writing from Vietnam, recently called the double standard. Under the double standard the Communists are at liberty to arm, supply, and support by all means short of actual invasion any Communist guerilla movement on non-Communist territory. But any attempt by our side to support a resistance movement in Communist territory is an act of war, and must be ruled out.

Surely it is clear that we cannot possibly win the game under such rules, and indeed that we must lose the game in the end. Must we play under such rules?

The answer depends in part on the peculiar nature of guerilla warfare. This reporter had a brief experience in the French Maquis (where he carefully followed Mao Tse-tung's rule that "guerrillas should be as cautious as virgins") and has been fascinated with the subject of guerrilla warfare ever since. A good deal of thought and study suggests that three requirements must be met if a guerrilla movement is to be effective.

First, it must have popular support. In his brilliant treatise on guerrilla warfare (which President Kennedy recently read) Mao Tse-tung wrote: "Guerrillas are like fish, and the people are the water in which the fish swim. If the temperature of the water is right, the fish multiply and flourish."

The temperature of the water is in part controlled by the second and third requirements. The second requirement is that guerrillas must have support from without, if necessary overt and massive, as in the Soviet airlift to Laos. The third is that the guerrillas, and finally the great majority of the people, must be convinced that the guerrillas will win.

The available evidence clearly suggests that there are many places within the Communist empire where the temperature of the water could be right. And it is not true that guerrillas cannot operate against a totalitarian state—Hitler's secret police did not go in for slaps on the wrist, nor for that matter did Batista's. The really difficult requirements for an open society to meet are the second and third.

Where the press is free and the opposition vocal, it is a very tricky business to support a resistance movement in a foreign country. And it is above all difficult for a democratic government to provide a foreign resistance movement with that certainty of victory which finally determines the "temperature of the water."

For our side, the only substitute for the Communists' "doctrine of historical inevitability" is precisely the opposite of the course we chose in Cuba. It is a firm and believable pledge that the whole power of the United States will be used if necessary to prevent the destruction of an American-supported resistance movement.

As this suggests, we ought to recognize that this guerilla business is not a gimmick, or a cheap substitute for national power. If President Kennedy decides to change the rules of the game, a most violent reaction can be expected. For on this subject the nerves of the Communist leaders have always been raw. "We must dread these guerilla tendencies," Lenin shouted in 1919 when there were guerilla uprisings in the Ukraine. "We must dread them like fire or they will leap to our destruction." But while recognizing the dangers of changing the rules of the game, we ought also to recognize that, if the rules are not changed, we shall lose the game in the end.

Crisis in the Hospitals

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1961

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks I include the second of two articles written by Selig Greenberg of the Providence Journal-Bulletin dealing with hospital costs:

CRISIS IN THE HOSPITALS

(By Selig Greenberg)

(This is the second of two articles on hospital costs by Selig Greenberg, writer on medical problems for the Providence, R.I., Journal and Evening Bulletin. Mr. Greenberg has twice been honored by the Lasker Foundation for his distinguished writing on medicine. He won the Associated Press Managing Editors Association Award for his series of articles on the problems of the aged.—The Editors.)

Any searching appraisal of the problem of high hospital costs, which in the past decade have soared at more than four times the rate of the general cost of living, must take into consideration three salient factors.

First and foremost in the picture is the key role played by the medical profession in the functioning of hospitals and in the pyramiding of their costs. Closely related to this is the traditional autonomy, sometimes verging on anarchy, of the voluntary hospitals. Having grown at random rather than by design, these hospitals operate without any effective public controls and continue to expand in a hit-or-miss fashion that frequently makes for wasteful duplication of facilities and services. Further aggravating the situation is the prevailing pattern of health insurance with its built-in incentives toward overuse of hospitalization because of inadequate coverage of diagnostic and treatment procedures on a much more economical outpatient basis.

The combination of these three factors now all too often results in costs which are higher than they should be. There is no getting away from the fact that the kind of medical care made possible by the spectacular progress of medicine is inherently expensive. So it is all the more vital that vested interests should not be allowed to stand in the way of providing good care at the lowest practicable cost.

Organized medicine's party line has long been that the doctors themselves are in no way responsible for mounting hospital charges and that the steady upward spiral is due primarily to the growing intricacy of medical care and to the "hotel" aspect of hospitals, especially their rising labor costs. This is vigorously disputed in two recent study reports in New Jersey and New York. Both studies support the conclusion that the alarming inflation of hospital and medical costs is in significant measure the result of such uncontrolled practices by the doctors as diagnostic admissions to hospitals under the guise of therapy, the countenancing of unnecessarily protracted hospital stays, the indulgence of patients' demands for needles and expensive drugs and sometimes even the performance of unnecessary surgery.

A New Jersey State commission named to investigate the justification for the latest rate increase sought by Blue Cross has reported that an exhaustive analysis "leads one to the inescapable conclusion that medical influences, as they are exerted by doctors individually, in staff and through their professional bodies, are five times as great a factor in the increase in hospital costs as all the other influences the hospitals have to encounter in their services. If a way is to be found to check the rise in hospital costs, the most fruitful line of inquiry would appear to be in the field of medical costs. This seems to be an endeavor which is not within the power of the hospitals but rather must be left to the medical profession."

In New York, where there has been much griping about a succession of Blue Cross premium boosts, the report of a 2-year study by the Columbia University School of Public Health and Administrative Medicine has recommended coordinated hospital planning and far-reaching changes in the health insurance contract structure as essential steps for meeting the challenge of skyrocketing costs.

Among the measures advocated by the Columbia study group to combat unnecessary and overly long hospitalization are insurance coverage of ambulatory diagnostic services and nursing home care, the development of effective mechanisms for reviewing hospital admissions and checking on length of stay, and the expansion of hospital outpatient facilities in order to reduce the use of costly services designed for the acutely ill. The Columbia report, moreover, recognizes that the implementation of these and other economy moves depends on basic organizational reforms in the health insurance and hospital fields. It therefore proposes greater representation of consumer interests on Blue Cross governing boards and development of a State master plan for hospital expansion.

Under domination by hospital trustees and the medical profession, Blue Cross has become little more than a collection agency for the hospitals. It is doubtful whether it can be made to move vigorously toward greater cost consciousness and coverage of a broader range of services without a strong infusion of the consumer point of view. The same holds true of the hospitals, which are not only inhibited by the archaic piecework approach of the present organization of medical practice but often operate without

regard to overall community needs and duplicate expensive facilities and services in a race for prestige or because of competitive pressures by their medical staffs.

A step in the right direction urged in the Columbia report is the establishment of a central State agency, with a subsidiary chain of regional planning councils, to review and license all new hospital construction in order to assure a more orderly and efficient pattern of expansion.

The public builds the voluntary hospitals and supports them—by paying hospital bills and Blue Cross premiums, through taxes and through philanthropy. But it is the doctors who, in large measure, call the tune on how the hospitals are run and what their costs are.

Major components of the hospital cost picture are the frequency of hospitalization, the average length of stay, and the quantity used of so-called ancillary services—such as various diagnostic tests, drugs, and medical and surgical supplies. Doctors control all of these cost factors, which determine the level of Blue Cross premiums. It is the attending physician and no one else who decides if the patient should be sent to the hospital in the first place. It is he alone who determines how long the patient should stay. It is he who decides what the patient should get by way of nursing care, medication, laboratory work, diet, and other services. Physicians play the dominant role in determining the character of hospital facilities needed.

A crucial point to bear in mind is that the people who have the biggest say about hospital matters are for the most part not hospital employees at all. They are private businessmen who use publicly provided facilities for their own business. Medicine is probably the only profession whose practitioners are furnished with workshops at public expense. With the steadily growing complexity of medical science, no physician is now able to provide all of the elaborate and expensive diagnostic and treatment tools he needs for his patients. So the community has pooled its resources in hospitals to furnish the required equipment for the physicians. It is estimated that the average member of a hospital medical staff is being provided, free of charge, with a capital investment of about $70,000. He has the free use of an organization whose maintenance, on the average, costs about $7,500 per bed a year.

Legally, doctors are subject to the authority of the hospital's lay board of trustees, but in actual practice the board's control over them is often highly tenuous. The trustees appoint members of the medical staff after review of their professional qualifications and also name the chiefs of the various services. Within the broad policies laid down by the board, the physicians have their own mechanisms for self-government and self-discipline. The organized medical staff usually performs many functions which make for better medical service. In the better hospitals, the organized staff has contributed materially to raising the level of medical practice by enforcing higher standards. But in many hospitals, particularly the smaller ones, staff controls are weak.

The full impact of the doctor's dominant position in the hospital becomes clearer when it is viewed within the context of the setting in which he operates. Not only are institutional controls over the physician's hospital practice inadequate but the prevailing form of health insurance is wide open to abuse. The temptation to put the profit motive above efficiency is thus often irresistible in view of the doctor's status as a private entrepreneur in competition with his colleagues.

With the revolution in the science and economics of medicine and the mounting concentration of medical services within the hospital, there is an urgent need for a thorough reexamination of physician-hospital relationships. Expert opinion is that the teamwork of group practice within hospitals would greatly increase efficiency and cut overhead costs. There are equal economy possibilities in wider use of hospital outpatient facilities. But the medical profession resists both of these developments as an infringement upon its cherished prerogative to charge what the traffic will bear.

From the standpoint of economy, it would be logical to have a cooperative arrangement among hospitals in the same community for a sharing of functions, so that each institution would specialize in doing the things it can do most effectively and efficiently. The trouble, however, is that no leverage now exists to force decisions in the public interest rather than the interest of the individual hospital and its staff. Substantial savings could be achieved if the handling of complex cases requiring highly specialized skills and elaborate equipment were confined to one or two hospitals, instead of letting every hospital do almost everything. This is particularly true of such intricate procedures as eye, brain, or cardiac surgery. But logic runs into two big roadblocks—the separative interests of hospitals and restrictive hospital staff policies.

Hospital managements are sometimes more interested in the perpetuation and growth of their own institutions than in a balanced health care program. They often suffer from an "edifice complex," pushing for more and bigger buildings and for every new piece of equipment invented, or they are pushed in that direction by their medical staffs.

An even more serious obstacle to a better organization of hospital services is the prevailing staff system. Many doctors have an appointment on the staff of only one or, at the most, two hospitals, and some physicians have no hospital privileges at all. If a doctor were to send a patient to a hospital where he is not on the staff, he would have to turn him over for treatment to another physician who is on the staff there. And in doing so, he would stand a good chance of losing the patient altogether. The result is that the doctor is eager to send his patients to the place where he is on the staff, regardless of whether or not there is sufficient demand at that hospital for the kind of procedures involved to enable efficient use of the necessary equipment and personnel.

The ideal solution would be some system of reciprocal staff privileges to allow doctors to treat their patients in any hospital. But this is easier said than done. There are barriers of professional competition and the strong feeling that anything smacking of an open staff, under which all doctors are granted hospital privileges, would have a disastrous effect on the quality of care.

Theoretically, hospital staff appointments are made purely on the basis of professional qualifications. In practice, however, pecuniary motivations, professional jealousies, and personal prejudices frequently figure in the picture. Staff appointments are sometimes controlled by cliques of established specialties determined to preserve their monopoly and to keep out potential competitors. At other times physicians have been kept off hospital staffs not because of any doubt regarding their professional competence but because they were affiliated with group practice insurance programs or because they were otherwise unorthodox in their views on medical economics. Lack of medical society membership is in itself an automatic bar to hospital privileges.

For a variety of reasons, a considerable number of doctors, mostly general practitioners, are excluded from hospital staffs and thereby relegated to a sort of second-class practice. Since it is extremely difficult these days for a physician to practice up-to-date medicine without the team approach and professional stimulation provided by a hospital affiliation, the question inevitably arises as to why doctors who are not good enough for staff appointments should be allowed to practice at all.

"To keep medical costs within reason," Dr. Basil MacLean, former president of the Blue Cross Association, has said, "we must keep the patient vertical whenever possible. Once we put him between sheets, the bill begins to get out of hand."

Unfortunately, this is precisely what not uncommonly happens under the health insurance programs now generally in effect. Because they are reimbursed only for bed care and not for less expensive ambulatory services, Blue Cross subscribers sometimes resort to needless hospitalization in order to qualify for insurance benefits. Such abuse requires collusion by physicians, since no patient can be admitted to a hospital without a doctor's approval. There is reason to believe that doctors sometimes yield to the whim of patients who want a rest in a hospital at the expense of Blue Cross or hospitalize people because they feel they will be more certain to collect their own bills if insurance covers part of the costs.

"What often runs up cost," one authority has said, "are hospital admissions for procedures that can be just as effectively and much more economically done on an outpatient basis, stays which could be shortened if the preliminary workup were done before and not after the patient is put to bed, excessive use of laboratory tests and X-ray examinations, and lack of sufficient controls to make sure that costly drugs are discontinued promptly when the need for them is over.

Some doctors hospitalize patients for minor surgery or medical care that could be easily rendered in the office. When it comes to laboratory and X-ray studies paid for wholly or in part by insurance, some practicing physicians and many interns and residents shoot the works in the hope that one or two of the tests will make the diagnosis.

While there is considerable disagreement about the extent of improper use of hospitalization, several studies have come up with the conclusion that about 20 percent of hospital patients need not be there at all and could be cared for adequately in outpatient clinics or in nursing and convalescent homes. A large-scale survey made some time ago by the Michigan State Medical Society showed that nearly 1 out of every 5 days spent in hospitals by Blue Cross subscribers was "unnecessary to the recovery, safety, or reasonable comfort of the patient." A study of patients staying 30 days or longer in four Boston hospitals disclosed that 42 percent of these patients, most of them elderly people, did not require continuing active treatment.

Significant is the experience of the Health Insurance Plan of Greater New York (HIP), one of the Nation's largest group practice prepayment programs. HIP covers its members for virtually the whole gamut of medical services, except hospitalization, for which they must take out Blue Cross insurance. A highly interesting feature of this arrangement is that HIP subscribers go to the hospital about one-fifth less often than other Blue Cross members in New York. The reasons for this are fairly clear. HIP patients receive preventive services which sometimes curb incipient disease before it becomes serious. They have the diagnostic work done without extra charge in the plan's own medical centers before they are admitted to hospitals. They are insured for unlimited nursing service in the home and, therefore, are able to go home earlier. And since HIP doctors are paid a fixed annual fee for each subscriber, there is no possible incentive for unnecessary surgery.

Even more striking is a comparison of the hospitalization experiences of California

members of the United Steelworkers of America who are covered by Blue Cross and of members of the same union who are insured by the Kaiser Foundation comprehensive health plan in that State. The union recently reported that its members in California had 1,032 days of hospital care a year for every 1,000 subscribers under Blue Cross as against only 570 per 1,000 under the Kaiser program. The reasons appear to be the same as those figuring in the lower HIP hospitalization rate.

A difference of even a decimal point in the frequency of hospital admissions and in average length of hospital stay can play hob with Blue Cross finances. In my own small State of Rhode Island, an increase of about one-fourth of a day in the average length of hospital stay boosted Blue Cross payments in 1959 by more than $450,000. The Philadelphia Blue Cross estimates that it would save $3 million a year if the average stay of its hospitalized subscribers could be cut by half a day.

Yet to be fully explored is still another area of potential savings by tailoring hospital facilities to the degree of the patient's illness. Valuable lessons are sure to be learned from experiments along this line now underway in a number of hospitals throughout the country. Among the new approaches under study are special self-care units for convalescing patients or for those who are admitted chiefly for diagnostic tests and who can manage without many of the services needed by the acutely ill.

Far too many elderly chronic patients who primarily need custodial rather than professional care are now occupying expensive general hospital beds. Much of this waste could be eliminated with the provision of adequate nursing home facilities.

People are increasingly asking questions about hospital charges and doctors' fees. As costs keep on climbing, they are no longer satisfied with the past assurance that hospitals are nonprofit institutions devoted to the public interest and that nothing can be done to reverse the upward cost trend. They want concrete evidence of concerted efforts to provide up-to-date services at the lowest possible price. They also are demanding more comprehensive insurance coverage for better protection against the financial hazards of illness.

Competent opinion is that the private practice of medicine and the present system of voluntary hospitals are doomed unless health insurance can be made a tool for keeping costs within reasonable bounds instead of the stimulant for inflation it now often is, unless wasteful hospital practices are corrected, and unless insurance can be provided at a price most people can afford. All of this is admittedly a pretty tall order. But the alternative, many authorities are convinced, is a complete Government takeover. This has already happened in most civilized countries in the world. It can happen here, too.

Mr. Robert Riggs

EXTENSION OF REMARKS
OF
HON. JOHN C. WATTS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. WATTS. Mr. Speaker, under leave to extend my remarks, I wish to bring to the attention of the House the distinguished career of one of the Nation's outstanding representatives of the fourth estate.

I speak of the Washington correspondent for the Louisville (Ky.) Courier-Journal, the president of Washington's famed and exclusive Gridiron Club, and the well known political analyst, Mr. Robert Riggs.

A native of Joplin, Mo., Mr. Riggs is a graduate of the journalism school of the State university there. He began his newspaper career in Madison, Wis., with the Associated Press in 1927, and after some experience on the Milwaukee Journal he joined the staff of the Courier-Journal in 1929 as assistant State editor. Through hard work, diligence, and a natural talent which soon manifested itself, he eventually became assistant managing editor, a position he held until 1942 when he came to the Courier-Journal's Washington bureau as correspondent.

Recently elected to his first term as president of the Gridiron Club, Bob Riggs is known through Washington; throughout Kentucky, where he has long been known as a brilliant journalist; and throughout the Nation, where the Courier Journal has for many years been regarded as one of the finest exemples of a working newspaper.

The respect and admiration of his colleagues in the press, a notably competitive industry in which praise is hard come by, is indicative of the acute perception and keen insight into every aspect of the newspaper business which characterizes Bob Riggs. That same insight and perception, when applied to legislative affairs with a talent for separating the wheat from the chaff and simplifying the most complicated legislation into readable and understandable prose, has made Bob Riggs an invaluable asset to every member of the Kentucky delegation. From his first job with the AP in Wisconsin, Bob's talent for seeing into the working mind of an official personality—as evidenced in the chapter he contributed on LYNDON JOHNSON to Eric Sevareid's "Candidates of 1960"—has been praised by his colleagues and his readers.

It is my pleasure to point out Bob Riggs' achievements to this distinguished body, and my privilege to know him. It is my earnest hope that he will continue in a career which has brought pride and glory to his lovely family and his many admiring friends and has been an invaluable asset to the press of America in general and that of Kentucky in particular.

National Radio Month

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. McDOWELL. Mr. Speaker, radio has come to have such a significant and pervasive role in our lives today that we tend to take it for granted.

We are likely to forget that it has grown to its present proportions in a few short decades.

A few remember the old crystal sets they made with copper wire, peanut butter cartons, and a crystal.

Today the radio is a necessity to the farmer and the rural resident. More than 99 percent of all farm homes have a radio and 79 percent have two or more in use.

There is an amusing story told about radio that might give point to the importance of this medium.

It concerns an old Indian brave who achieved wide local fame in his community with his excellent weather predictions. He was consulted by everyone. But one day he was cross and irritable and upset because he could not answer when asked what the weather would be. When he was asked why, he replied, truthfully enough, that a tube in his radio set had gone out.

Radio has, indeed, become the workhorse of agricultural communications bringing news and information as soon as it is available.

Millions of us share, too, the great religious music broadcast throughout the years, and at Easter and at Christmastime, as well as the inspiring messages which are delivered by our leading clergymen of many faiths.

Radio and its sister medium, television, bring music and other programs of the highest cultural level to the family fireside.

We must welcome with deep appreciation the educational radio and television fare and work to have more of such programs broadcast on what is undoubtedly one of the greatest educational mediums in the world today.

No longer is the farmer, his wife, and his children the forgotten people of our era, removed by the barriers of time and distance, from the cultural riches of our civilization.

They share with city folk at the same time and with the same means the rewarding things of life.

Radio thus united us as a people, and constantly knits up the seamless garment of our common aims and aspirations.

And now as we face up to the realities of the space age it will be radio and telecommunications that we will depend on to keep us well-informed hour by hour.

Address by Hon. Frederick C. Belen, Assistant Postmaster General, Bureau of Operations, Marking 100th Anniversary of John Wanamaker, Philadelphia

EXTENSION OF REMARKS
OF
HON. KATHRYN E. GRANAHAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mrs. GRANAHAN. Mr. Speaker, in my judgment it was most appropriate that an outstanding representative of the Federal Government attended and took part in the ceremonies in honor of the 100th anniversary of John Wanamaker, Philadelphia, during the Poor

Richard Club dinner in Philadelphia on April 7 of this year.

Assistant Postmaster General Frederick C. Belen, who directs the giant Postal Bureau of Operations, presented one of the finest, most informative, and most enjoyable addresses it has been my pleasure to hear. I share with other Members considerable pride in Mr. Belen's very well received remarks, since he is one of our very own—having served as chief counsel and staff director of the House Post Office and Civil Service Committee from the time the committee was created until he accepted his present sub-Cabinet post earlier this year.

I believe that Mr. Belen's remarks, which are included at this point in the RECORD, will be of great interest to the Members:

SPEECH BY FREDERICK C. BELEN, ASSISTANT POSTMASTER GENERAL, BUREAU OF OPERATIONS, 100TH ANNIVERSARY OF THE FIRST JOHN WANAMAKER STORE BEFORE THE POOR RICHARD CLUB, PHILADELPHIA, PA., APRIL 7, 1961

I have the opportunity tonight not only to honor a famous Postmaster General, but to bring you a message concerning the postal service in its past, its present, and its future.

Any recollection of the past of the postal service would be meaningless without considering the Philadelphia story that was contributed to the postal service by John Wanamaker in his days as Postmaster General of the United States.

Any consideration of the present and future of the postal service would be meaningless without the contributions of your distinguished Congresswoman, KATHRYN GRANAHAN, who is chairman of the Postal Operations Subcommittee of the House of Representatives.

Any consideration of the future of the postal service would be hollow without a realistic look at the fiscal responsibility necessitated by our present postal problems.

As a Democrat, I was warned by your fine Irish wit John Finnegan that the Poor Richard Club was not named for those who lost their shirts betting on Richard in the last election. I can attribute this sort of joke to Finnegan since he is now in Florida.

But it is a privilege to be here tonight with a group of people, many of whom are associated with our biggest customers, our large mailers, and provide the stimulating atmosphere of differing political views.

In many ways we speak the same language, the language of communications in its broadest sense. I know, as do you, that the basis of the American system of communications, so efficiently handled in its many free enterprise aspects, must always be our American Postal Service.

I have been very much impressed with the way you Philadelphians here have demonstrated your affection for the man who founded one of your greatest institutions.

As have each of you, I have thought back to the days of John Wanamaker in considering appropriate remarks to do him honor this evening. Every day in the office of the Postmaster General the influence of your community on our Postal Service is brought home forcibly to me.

In addition to the picture of President Kennedy, the Postmaster General has five famed portraits in his Washington office. One, of course, is the first Postmaster General, Philadelphia's Ben Franklin. A second shows William C. Barry, Postmaster General under Andrew Jackson and first head of the Postal Service to be a member of the Cabinet. A third is of Adlai Stevenson, first Assistant Postmaster General under President Cleveland. A fourth depicts perhaps our most famous Democratic Postmaster General, Jim Farley.

Mr. Day's fifth portrait bears a brass plate identifying Ben Harrison's Postmaster General, John Wanamaker.

Invariably, in that atmosphere, I cannot help but wonder what John Wanamaker would say to an audience such as this tonight. With his respect for the place of the postal service in American business and industry, I think John Wanamaker would say something like this: "A $900 million deficit. For heaven's sake what are you doing about that?" And I believe he would add, "If I had run my store that way, you wouldn't be listening to any speeches on its 100th anniversary."

Let's look at the postal service today as John Wanamaker might. We speak of a gap between our revenues and our expenditures which is approaching $900 million annually on a budget just short of $4½ billion.

Since we deal in the movement of letters, you might call it our missive gap.

No merchant, no businessman, no Postmaster General, past or present, would look on this situation as anything short of a serious financial problem.

The administration of President Kennedy looks at it exactly that way. The President believes, as do we, that we must face up to hard facts and do it now. The President has made the decision that his administration will generally adopt a budget presented last January by his predecessor. This decision means that we are preparing for the President a request for postal rate increases in the amount of $831 million. This is some $12 million short of the recommended increases which we inherited from the previous administration.

We also believe that the past few years have adequately demonstrated that we can't solve the postal deficit by slogans or fanfare.

Advertisers, large and small, comprise our biggest group of customers. We are the largest outlet for advertising in America today. More than half of all advertising moves to prospective customers through the mails maintaining a $12 billion industry. We recognize that our advertising develops a high standard of living which hinges, in large part, upon that industry and our service to it.

Products valued at $29 billion annually come to the attention of their customers by direct mail advertising. In cities and on rural routes, catalogs stimulate a continuing flow of business for our largest retail establishments. A large part of all American business develops through the advertising and news content of newspapers and magazines.

You can see, when we speak of business mail, we really talk about the basic lines of communications which tie together our entire economy. As you, our biggest customers, utilize us as your biggest outlet, you share with us the responsibility for answering questions that John Wanamaker would pose and which this administration, with equal vigor, must present to the more than 60 million taxpayers who bear the burden of the postal deficit.

I said earlier that we prefer the term "gap" between revenues and expenditures. We have chosen this term deliberately. It implies the possibility of solution from two directions. In our case, the raising of revenues can and will be paralleled by the reduction of costs.

We must look to our customers, particularly our biggest customers, to help us bridge this gap from both those directions. I expect you to ask: "Will these continuing rounds of proposed postal increases ever cease?" My answer to you is that much depends on how closely you can and will work with us in closing the gap from the side of cost reduction.

Let me give you some substantial examples: We are powerless to reduce the peak load period between 5 and 8 p.m. every day. But you can do something about it. We are powerless to predict the variety of sizes and shapes and destinations of mail as we open each mail bag. But you can do something about it. We are powerless to anticipate the times or the dates of large mailings of advertising matter. But you know this well in advance. We must maintain mechanical equipment to handle peak loads though it is out of use many hours of the day. But you could not permit this kind of inefficiency in your own offices.

I am saying, in effect, that much of the answer to cutting costs lies in your own mailroom and in our group cooperation with you in anticipating peak loads, in spreading throughout the day the mailing of your business letters, in anticipating with careful judgment your largest mailing and in programing your mail to make the most efficient use of our facilities to our mutual benefit.

Let me give you one example. Downtown Manhattan normally posted 300,000 pieces of mail into the post office at 2:30 p.m. and dumped 6 million at 5:30. Now, thanks to a cooperative program between the post office and the largest New York office buildings, the 2:30 mail pickup handles 3 million pieces and the cost of handling the mails in New York has dropped $1 million a year.

Our experts in mail movement and your mail rooms have the potential, together, of producing the most spectacular cost reduction in the history of the postal service.

This I submit, must be the basis for any long-range cessation of spiraling mail costs.

There is another big area where the cooperation of business and the Post Office Department can put the breaks on rising costs.

Recently, the Postmaster General invited American industrial, engineering, and research talent to take up the challenge of developing practical equipment to speed mail movement. It is our generally held belief that we need mail processing equipment which would be as much at home in the mail rooms of our large customers as on the work floors of our post offices. This would be a second link in the cooperative cost reductions that will close the gap between income and outgo in the postal service.

Both these challenges I would like to leave with you tonight along with an appreciation of the hard realities which necessitate a revenue increase now.

The President has not chosen the easy road of platitude and preachments but rather the realistic road of fiscal responsibility and sound forceful leadership in Government. This applies to the postal deficit as it does to the defense budget, the crisis in Laos and each other aspect of American life today.

The American people have responded, and responded gratefully to such leadership.

I am confident that the business community and our customers will respond with equal realism, understanding and appreciation to leadership toward a sound fiscal policy in the postal service represented by recommendations which are now being prepared for a postal rate increase.

I am fully aware that my message to you bears little of the humor and gaiety which this occasion might call for. It has instead comprised the hard realities of the immediate future as reflected in the need for more postal revenue. I have brought this message because I believe that John Wanamaker would have done the same.

I will ask you as Philadelphians and rightful admirers of Postmaster General Wanamaker to put yourselves in my position for the foreseeable future when I will be making daily visits to the office of Postmaster General Day. Repeatedly, I will be reminded of this message which I believe John Wanamaker would have wanted presented to you. And now having delivered that message, I

feel confident that the portrait of John Wanamaker will expect me to mentally report "General, I delivered your message to Philadelphia."

The Economic Outlook on the New Frontier

EXTENSION OF REMARKS
OF
HON. DANIEL K. INOUYE
OF HAWAII
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. INOUYE. Mr. Speaker, Mr. Elliott V. Bell, editor and publisher of Business Week magazine and chairman of the executive committee of McGraw-Hill Publishing Co., gave a most thought-provoking address on April 19, 1961, before the 18th annual meeting of the Wine and Spirits Wholesalers of America, Inc., at the Princess Kaiulani Meeting House in Honolulu, Hawaii. Mr. Bell was educated at Columbia University and holds several honorary degrees. He is director of eight corporations and a trustee of eight other organizations including the Brookings Institution and the Committee for Economic Development. He is a member of the President's Advisory Committee on Labor-Management Policy.

I would like to share this thought-provoking address of Mr. Bell with my colleagues:

THE ECONOMIC OUTLOOK ON THE NEW FRONTIER

(By Elliott V. Bell)

My purpose today is to examine with you the current state of business, the Kennedy administration as revealed in its first 3 months in office, and some of the major economic problems that will confront our Nation in the years immediately ahead.

We need not spend too much time on the current recession. It has been in progress for about a year. It has been exceedingly mild. It has followed, to a remarkable degree, the precise pattern that most experts foresaw from the start. It is now clear that we are already at, or very close to, the bottom of the downturn.

Signs of recovery are multiplying. Business has begun to reduce the rate at which inventories are being liquidated. Spending on new plant and equipment, which had been cut back $2½ billion in the past 12 months, is scheduled for at least a moderate improvement later this year.

Expenditures by Federal, State, and local governments are rising. All Government spending on goods and services, incidentally, this year will exceed $100 billion, which is equal to one-fifth of the value of all we produce. Construction is feeling the lift of spring. Good weather, after a rough winter, is bringing cheer to the hearts of auto dealers and producers of durable goods. The stock market, fulfilling its classic role of harbinger of things to come, has been forecasting, ever since the election, either a dramatic business recovery or a great inflation or both.

There are, of course, still many soft spots, but the plus signs exceed the minuses.

I think we can safely say the turn has come; recovery is underway. The big question, of course, is how vigorous and sustained a recovery it will be. On this point, there is considerable difference of opinion.

At the first meeting, last month, of the President's Labor-Management Committee, President Kennedy told us he would not be surprised to see a recovery of business this summer but a continuation of 6 or 7 percent unemployment in the fall.

On the other hand, some business and university economists—probably a minority at this point—think the recovery will be sharp, vigorous and sustained.

My own view is the recession will have clearly passed its turning point within the next month. By June, the forces of recovery will be obvious to all; and by late autumn the revival will be vigorous with gross national product running at a rate of $520 billion or better, compared with a scant $500 billion in the first quarter. On the record 1962 will almost certainly be the most prosperous year in our history thus far. For the moment let's leave it there, while we have a happy thought to hold.

But before we throw our hats in the air, it should be noted that the recession of 1960–61, even when it has ended, will leave behind a haunting legacy of doubt and worry.

The thing that has been really disturbing about this recession is that it followed so soon after the 1957-58 decline. We are apt to think of the business cycle as comprising a complete wave—from a peak of prosperity to a pit of recession and back to a new and even higher peak of prosperity. Indeed, our earlier postwar business cycles did have this neat, orderly and rather reassuring appearance. Not so the recessions of 1957–58 and 1960–61. These two were not only closely bunched together but were actually interdependent.

The fact is we never really achieved full recovery from the recession of 1958. Even in the most prosperous period of 1959 unemployment remained substantial. It is possible that we should think of the entire period extending from the middle of 1957 to the present as a period of quasi-depression analogous to, though happily much less severe than, the great depression of the 1930's when we had several up and down oscillations of the business curve but could not escape from the curse of massive unemployment.

The haunting question is, do these recent years reflect merely the ending of the postwar era with its pent-up demands, inflated credit and inadequate productive capacity; or, are we witnessing a return of the dilemma of the prewar years when chronic unemployment persisted right up to the onset of war?

I want to return to this subject after a bit but first I should like you to look with me briefly at life on the New Frontier under the leadership of our young President from Harvard.

Mr. Kennedy has brought to Washington a surprisingly mixed, but on the whole, admirable team. He has put together a sort of coalition cabinet, with the sensitive posts of Treasury and Defense going to Republicans. For Secretary of State, he picked Dean Rusk, a Rhodes scholar, quiet, scholarly, greatly respected by those who know him. Then he has bracketed the Secretary by two eminent Democratic politicians—Adlai Stevenson and Chester Bowles—each of whom was thought to have coveted the top job. Is this genius or expediency? For Secretary of Labor he picked the smartest labor lawyer in the country, Arthur Goldberg, whose pronouncements and actions since taking office have left some labor leaders a trifle baffled and caused others to call him the "Mr. Republican" of this administration.

Moving with the drive and energy of youth—in obvious contrast to the measured, energy-saving pace of his predecessor—Mr. Kennedy has made a strongly favorable impression on most people. In the course of a brief, highly unscientific taxicab poll I took in Washington recently, I learned that everyone feels much better. They feel like a lot of things that need to be done are going to get done.

That may not be very precise but it is important. Mr. Kennedy has had a salutary effect on public sentiment.

The remarkable thing is that thus far there is very little of a tangible character to support the widespread impression of bold, new action.

In fact, young President Kennedy has met the recession of 1961 almost precisely the way old President Eisenhower met the recession of 1958. There have been no dramatic or drastic measures. On both occasions the White House has turned a deaf ear to recommendations for a temporary tax cut. On both occasions the response was identical. Like Eisenhower, Kennedy said: "We'll wait until April to see whether things improve."

On both occasions April brought the wellnigh inevitable improvement and a tax cut whether or not it would have been a good idea earlier had clearly become outdated by April. Meantime, the prospects are that spending will increase and deficits will rise, although there is as yet, no sign that Mr. Kennedy will achieve in fiscal 1962 a deficit as large as the nearly $13 billion one Mr. Eisenhower piled up in fiscal 1959.

Actually, Mr. Kennedy has turned out thus far to be very much of a conservative. He is obviously aware that the label of big spending and the threat of inflation are political liabilities especially dangerous to Democrats. So he has talked boldly but moved cautiously.

Here's how a Washington wit summed up the administration's performance thus far. He said it reminded him of that dazzling basketball team—the Harlem Globetrotters. The New Frontier team has been passing the ball forward, behind, sidewise and underneath—a brilliant display—but thus far nobody has scored a basket.

The cautious course the President has steered reflects, no doubt, his own normal inclination. It reflects also his appreciation of the fiscal conservatism of Congress, and a recognition that the narrow margin of his election gave him no sweeping or unchallengeable mandate.

Not all of his advisers have been quite happy with Mr. Kennedy's moves to stimulate recovery. One of the most distinguished of them, Prof. Paul Samuelson of MIT, has called the President's recovery program a "placebo program,"—a pill that makes the patient think he is being treated although in fact the pill has nothing but a little sugar in it.

For the coming fiscal year, Mr. Kennedy has budgeted for only about $3 billion more than Mr. Eisenhower had planned. He is budgeting a deficit of only $2¾ billion.

Some of the President's brilliant young braintrusters are concerned whether deficit spending of such modest proportions will give the economy the forward lift they think it needs.

Certainly thus far, and prospectively for 1962, the President's program for stimulating recovery and growth is more modest and conservative than most people realize—a good deal more conservative than the stock market's ebullience would suggest.

Now, it may well be that the President, proceeding by political intuition, may turn out to have been a better—or at least a luckier—economist than his advisers. If this recovery should indeed prove vigorous, if it should carry the economy back to reasonable full employment faster than is now anticipated then, of course, it will be all for the best not to have overstimulated the economy by rapid and massive increases in Government spending on the one hand, or sizable tax reductions on the other. Either course would tend to revise the inflationary pressures that are now suspended, and a renewal of inflation, or even fear of inflation,

would aggravate our dangerous balance of payments position.

This brings me in one easy motion to the third phase of my talk—the interlocking complex of major economic problems which confront our Nation and for which thus far we have found no workable solution.

I have already mentioned one of these problems—the failure of our economy, even at the peak of the last recovery period, to provide enough jobs to employ our full labor force.

You know there has been a fascinating paradox about the latest recession. Every month for the past year or more the total of employed persons has reached a record high for that month. Thus employment in January was the highest for any January in our history. The same was true of February and March, and will, I have no doubt be true for April, May, and June, and so on.

Yet, in each of these months of record high employment, unemployment also rose. workers, largest in number for almost 20 years. Moreover, many of these unemployed had been out of work for a long time and had exhausted their unemployment benefits.

Now, of course, some of this unemployment has been due to cyclical factors—the circumstance that we have been in a recession. But a good part appears to be due to what economists call structural factors.

Structural unemployment is just another name for what we used to call technological unemployment except that it has a broader meaning. It means not merely the unemployment that results when, for example, a textile plant is fitted out with labor-saving machinery and handworkers are displaced by automation. It also means what happens when the old textile plant in New England is abandoned and the new automated plant is erected in North Carolina. It means what happens when homes and factories switch from coal to oil. Coal miners in West Virginia or Pennsylvania lose their jobs. Even if there are unfilled jobs elsewhere, the miners may not be able or willing to move away and learn new skills.

Several easy answers have been suggested for this problem. Certain labor leaders say: Just cut the working week from 40 hours to 30 hours—this will create more jobs overnight. Certain management men have an equally easy answer. Business, they say, has been forced to automate because of high labor costs. Just let labor agree to take a pay cut and there will be more jobs. Well you don't have to be a politician to figure that these solutions are not as simple as they sound.

This particular problem of structural unemployment is inextricably interlocked with others. There is, for example, the broad question of economic growth. There is also the question of whether American goods can remain competitive in the world market. Can we hold our own against the rebuilt, modern industry of Western Europe and Japan with their relatively cheap labor?

This brings us again to the tough nut of our balance of payments. For some years now the total payments that we make abroad—for goods and services, for travel, for investment, for military operation, and for foreign aid—have exceeded the payments foreigners make to us. In the years 1958, 1959, and 1960, we paid out $11 billion more than we took in. This situation became so alarming last year that people began to talk about a possible devaluation of the dollar and gold flowed out of the country in large amounts.

President Kennedy, it should be said, has shown himself acutely aware of the balance-of-payments problem. He gets high marks for making it perfectly clear both during the campaign and after taking office that he means to defend the integrity of the dollar at its present exchange rate with all the resources at his command.

Those resources are still very considerable. Including our gold stock and our rights to draw credit from the International Monetary Fund, they amount to some $22 billion.

The President's strong statements had an immediate effect in stopping the run on the dollar that had started last fall. Losses of gold diminished, and last month we began to regain a little gold.

We have a breathing spell—but we have as yet not solved the problem. We have merely gained a little time to try to find a way out of this and related problems—including technological change, structural unemployment, economic growth, high production costs, and inflation.

It is for this reason that the President has established the Advisory Committee on Labor-Management Policy on which I am privileged to serve.

It is, of course, too early to say whether the 21 members of this Committee will be able to make any important or practical contributions to the solution of this complex web of problems to which the President has asked us to address ourselves.

All of us will bring with us a certain freight of ideas, some of which, I am sure, we will have to throw into the sea before the long voyage is over. Accordingly, I should like the views I am about to give you to be regarded as preliminary and tentative, rather than hard and fast.

The President has set as his target a reduction in unemployment to not more than 4 percent of the labor force. This seems to me reasonable. It is a goal that should not put undue strain on the labor market, or tend to generate new inflationary wage-price spirals. It is also a rate that should permit some flexibility in our system and leave incentive for productive effort on the job. Reasonable as this goal is, we have not achieved it except momentarily since 1953.

The question of how much our unemployment is due to structural factors versus cyclical factors is fundamental to the problem of policy formulation and in no sense a merely academic question. The lag in job formation is, I believe, a consequence of both slow overall growth and rapid technological change. To deal with it we shall need several kinds of weapons in our arsenal.

I would be disposed to put primary emphasis on fiscal and monetary policies to insure that we have sufficient demand to keep our existing resources employed at relatively high rates. Because the balance of payments problem hampers the use of monetary policy on which we formerly relied as our main instrument, this means that more reliance must be put on fiscal policy in insuring that the economy operates at high and stable levels of employment—a condition that is essential to regaining a more rapid rate of growth.

"Fiscal policy" is a term that is often used and seldom defined. By it I mean all of the taxing, spending and borrowing operations that the Government conducts—all of the ways in which the Federal Establishment puts money into the national economy or takes money out of it.

I am impressed by the arguments advanced by a number of economists to show that the fiscal policy we have been following has created a deflationary gap that represents a constant drag on the economy. What this means in plain English is that our tax system is taking such a heavy bite out of total demand that economic recovery loses its drive before a condition of full employment can be achieved. It is estimated that if the country should achieve full production and employment, the tax system would generate a surplus of something like $12 billion over present levels of expenditures. But the tax system is so oppressive that it keeps us from achieving full production. It nips off recovery short of the peak, as happened in 1960, and slows down the Nation's rate of growth.

In theory, there are two ways that this deflationary gap could be closed. One would be to cut taxes. The other would be to increase spending.

Some spending increases obviously are on the way. And this fact seems to have restrained President Kennedy from asking for any reduction in taxes at this time. I am inclined to agree that it is too late now for a temporary tax cut to aid recovery; but I hope this will not mean indefinite postponement of long-range tax legislation.

To achieve longrun growth and maximum utilization of our economic resources, I believe it is essential to undertake a thoroughgoing reform of our tax system, coupled with some reduction in the level of tax rates. And I believe that this task should be commenced at once, without waiting for the economy to go through another frustrating cycle of partial recovery, aborted boom, and recession.

It seems clear to me that it would be both unnecessary and unwise to try to close the deflationary gap by thrusting bigger and bigger spending programs at Congress. Let us spend what we must. But let us not put ourselves in the ridiculous position of spending simply to get back into circulation money that an unduly severe tax system has taken away from consumers and investors.

The problem of tax reform is not a new one. But it is an increasingly urgent one. It was a matter of much disappointment to me as a Republican that during 8 years in office, my party did not even attempt such an overhaul. Now with the Democrats in control of both the executive and legislative branches, the task ought not to be shirked.

I realize that it is already too late in the current session to expect the Congress to produce a major reform bill (although I regret that this job was not given a high priority at the start of the new administration). Possibly we will have full recovery without action on the tax front. Frankly, I doubt it. I am concerned that without a tax cut and tax reform, we may see a repetition of the 1959–60 performance of the economy. And I believe that we can avoid it if the President and Congress will turn their most serious attention to this major national economic task. I believe it should have an absolutely top priority in the next session of Congress.

Aside from fiscal and monetary measures, there are a number of other things that we can do to promote economic growth and stability.

Consideration should be given, I think, to programs for increasing the mobility of the economy—that would lead available workers to the jobs that are opening up and out of the job or industries or regions that are contracting.

The prime weapon in any such program must, of course, be education. Better education in our elementary and high schools, our colleges and universities, can spread the knowledge and skills that increase employment opportunities. Through education also, the young people entering the labor market each year can be encouraged to seek employment in the service industries and elsewhere where demand is increasing instead of looking for work in a declining sector. Existing programs of on-the-job training in industry, apprentice training to give workers new skills, and graduate study programs both for training top new professionals and specialists, and for upgrading people who completed their academic work years ago are needed.

One thing is certain, we must not allow ourselves to get into the way of thinking

of technological change as a hazard, or even as merely a problem to be coped with. On the contrary, paradoxical as it may seem, we need more rather than less of this accelerated scientific and technological progress in order to produce the faster economic growth we must have.

The discovery of new ideas, and the diffusion of those ideas throughout our system is the most important source of growth we have. In this area lies the strength of our system. It is on our scientific, intellectual and technological prowess and progress that the survival of our free political economy now depends.

I have been talking about our major problems largely from a domestic view, but implicit in all we say or do today is the struggle in which we are so deeply engaged between communism and the free world.

The capacity of any country to safeguard its own destiny and to influence nations and events is dependent upon that country's strength and vigor. Only a country with a vigorous, growing political economy can be independent and give leadership to other countries.

In the affairs of nations as of men there comes a time of supreme testing where failure can only lead on to ultimate decline and fall. We are facing such a test today and the outcome is by no means certain. Can free men working together in a free system successfully meet the challenge of a system just as tough, resourceful and scientifically skilled as our own, that is closely planned, disciplined and directed with the precise purpose of surpassing us?

If the confident "yes" we give to that question is to be achieved, we shall have to improve our ways of working together and still competing with each other, of managing our affairs for the national good without sacrificing the individual's rights. We shall need to bring to these years of troubled peace the same dedication and resolve we achieved in war. For the truth is, of course, we are still at war—a war to assure the survival of all that makes life for us worthwhile.

Spreading the Word About America's Dairyland

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. JOHNSON of Wisconsin. Mr. Speaker, Walt Brovald, who edits and publishes the Cadott Sentinel at Cadott, Wis., has long advocated spreading the word about Wisconsin's top dairy products by erecting nonprofit dairy bars at the major points of entry into the State. In an editorial in his paper, Mr. Brovald tells of the encouragement he has received for his proposal from Wisconsin's Governor, Gaylord Nelson. Under leave to extend my remarks, I would like to include this editorial in the RECORD:

GOOD NEWS

We recently wrote to Governor Nelson, advancing the cause of our long-standing proposal that we erect nonprofit dairy bars at major points of entry to our State, where tourists could be treated to glasses of ice-cold milk and chesse samples as a fitting introduction, and welcome, to America's Dairyland

We suggested to the Governor that incorporation of such dairy bars with his own proposal for tourist information centers would seem a natural thing.

His reply to our letter cheered us, and we were happy to note that he himself listed the opportunities for dairy promotion among others in connection with his information centers when he released details of his proposal recently.

He also forwarded our letter to the conservation department, which will operate the information centers under terms of the Governor's generally well-received proposal, and last week we got further encouragement in a letter from a WCD official.

If the information centers become a reality, and we make them dairy product promotion centers as well, we will surely help to spread the name and fame of "America's Dairyland" across the land.

And any means we can use to increase the liking for and consumption of our wonderful State dairy products cannot help but mean additional benefits for our dairying industry, which remains our No. 1 business.

Shallow Good Will

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. DERWINSKI. Mr. Speaker, we will soon be debating the annual foreign good will appropriation, better known as foreign aid, by which we make a blundering gesture to purchase the good will of nations throughout the world. Chicago's American, in an editorial on April 22, 1961, entitled, "Shallow Good Will," points out some of the human problems involved in international good will:

SHALLOW GOOD WILL

The actual value of good will gestures by the United States toward Communist-leaning countries can be judged by the experience of the University of Michigan symphonic band in Egypt.

The band, on a good will mission for the State Department, was sending the customers with "The Stars and Stripes Forever" in Cairo a few days ago, but the music suddenly began to sound sour to Egyptian ears when the Cuban rebels landed and sailed into the Castro forces.

This, said the Egyptian Government, was a United States aggression against Cuba, so there was no official good will for the 94 Michigan students who had come to cultivate good will with music.

A concert at Cairo University was canceled, and so was one scheduled for Alexandria. The U.S. Embassy was notified that the Egyptian Government did not consider it safe for the young musicians to appear in concerts.

The students, having received only the friendliest treatment from people in Egypt, didn't believe anybody really was dangerously mad at them. They offered to risk it, but they were denied the chance.

Good will touring for the United States does seem to be a chancy enterprise. You must always have your steel helmet handy, in case your listeners read something in their papers that they don't like. We wonder if it's worth the trouble.

A Ready Answer to Opponents of Medical Care for the Aged

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

Mr. MULTER. Mr. Speaker, the propaganda parade is on. I suggest that a ready answer to the opponents of medical care for the aged will be found in the following article by Gilbert A. Harrison which appeared in the New Republic of April 17, 1961:

WARD-HEALERS OF THE AMERICAN MEDICAL ASSOCIATION

(By Gilbert A. Harrison)

The American Medical Association may succeed in frightening the Congress away from financing medical care for the aged through the social security system, but no amount of AMA propaganda can frighten away some elementary facts to which the President's program is addressed. For example, of 15.3 million individuals 65 and over who were not in institutions in 1959, 55 percent had an annual income of less than $1,000. Twenty-three percent $1,000 to $2,000, and 9 percent $2,000 to $3,000. Only 13 percent had incomes of $3,000 or more. And these figures include those still working. And in the case of married couples, some of the income which is attributed to the husband goes for support of his wife, who may be under 65. Of 6.2 million families where the head of the family was 65 years of age or more, half had an income of less than $2,830; one-fourth less than $1,620 a year. More startling; of 3.6 million aged persons who live alone or with persons other than relatives, half had incomes of less than $1,010; four-fifths less than $2,000.

How do they get by, even if they get through the year without a day's illness? The answer is that many barely do. The Bureau of Labor Statistics in a study of 20 large cities in the autumn of 1959 concluded that a retired couple in reasonably good health for their age, requiring no unusual medical or other services, and keeping house by themselves in a small rented unit could get along modestly but adequately on a budget ranging from the minimum of $2,390 in Houston, Tex., to $3,110 in Chicago. This, remember, is premised on no unusual demand for medical care. Even so, this absolute minimum in a great many cases is higher than the actual income of aged couples. The BLS also estimated that a person of 65 or over who lives alone could get by, modestly but adequately, with from $1,410 to $1,835 in the 20 cities studied. But the actual median income for single persons in this age bracket living in these cities was only $1,140 in 1959.

Couldn't they fall back on their savings? Some could. But a Federal Reserve Board survey of consumer finances in 1959 found that of some 8 million "spending units" (in families the head of which was 65 years or more) 29 percent had no liquid assets (i.e., bank accounts or savings bonds), 17 percent had $1 to $500 in reserve, 21 percent had $500 to $2,000. And of the aged whose income was under $3,000 a year (70 percent of the total), 47 percent had less than $200 in liquid assets; 44 percent had assets of $500 or more.

From such statistics it is apparent that the affluent society is not the society of a very great many old folks. And when we read the medical statistics, moreover, we are

reading about the aged who do enter hospitals, who see their physicians. We don't know how much suffering, how much neglect is endured privately, with little or no treatment.

We are sure, however, that the number of days spent in a general hospital annually is two to three times as large on an average for persons 65 and over as for younger persons. A national health survey study in 1957–58 found that of those discharged from general hospitals after a short stay, those of 65 or over spent 1,778 days in the hospital (per 1,000 persons) as compared with 764 days (per 1,000 persons) for those under 65. The average length of hospitalization for the aged was 14.7 days; for those under 65, 7.8 days.

But in addition to using general hospitals more frequently and for longer periods than younger persons, the aged make special demands on nursing homes and other institutions which keep patients for more than a week or a month. They likewise need more of the doctors' time. An aged person on an average has 6.8 doctor visits a year. The number for the rest of the population is 4.8. In those families with less than $2,000 a year income (as surveyed from July 1957 to June 1959), 48 percent of the aged members of the family had some chronic condition which limited their activity; the average number of days spent in bed was 16.5 a year. And in families whose income was $7,000 or more, 37 percent of the aged had some chronic illness; the average number of bed disability days was 10.8 per year.

Nor is the picture complete yet. Usually a doctor's fee is higher for a house call than for an office visit, which helps explain a statement by the Health Information Foundation that "private outlays for physicians in behalf of persons 65 or over averaged almost twice as much per person per year (in 1957–58) as for persons under 65—$55 and $29, respectively."

We also know, from information compiled by the Health Information Foundation, that the aged spend over twice as much per person for total medical care in a year as others. (This is what is spent by individuals—not what should be spent. And it does not include the heavy cost of terminal illnesses among those who live alone, or the cost of care for the aged in nursing homes or mental or tubercular hospitals.) For the years 1957–58, the average private expenditure for medical care of those 65 and over was $177; for those under 65, $86.

But even these averages are misleading: They give no true picture of the heavy financial burden of an illness that requires hospitalization. For example, of elderly people who were not married but who were entitled to old age, survivors, and disability insurance benefits in 1957, more than one in seven spent some time in a hospital, nursing home, or other institution, and the median medical costs amounted to $600 for all such beneficiaries. This figure is higher today, for since 1957 the rates for all medical care items have gone up by 14 percent, and rates for hospital rooms have risen by 22 percent. Among the beneficiaries who spent some time in a general hospital during 1957, only 57 percent of those who were married and 38 percent of those nonmarried were able to meet all their medical bills by themselves (over and above any cost met by insurance). Of the rest, some went into debt, a sizable number received help from relatives or other outsiders.

Many of the aged have, of course, some medical insurance. About half of the OASDI beneficiaries who entered a general hospital some time during 1957 had a part of their medical bill paid by insurance. But in many instances the insurance was inadequate; and for some who were insured against hospitalization, either the specific illness was excluded from coverage or the general hospital stay was too short (or the deductible too large) for the insurance to go into effect. Thus, of the aged OASDI beneficiaries who were insured and who went to a hospital during 1957, 16 percent of the couples had no portion of their year's total medical costs met by insurance; and 57 percent found that their insurance covered less than one-half of their total medical bills. Less than half (46 percent) of the aged have insurance against hospitalization costs (compared with 69 percent of the population under 65).

Furthermore, those most likely to suffer the most hardship—the retired, those with low incomes or with major chronic health problems—are least likely to have the advantage of any health insurance coverage. Many private insurance organizations will not even enroll persons 65 or over. To illustrate, as of early 1960, only about two-fifths of the Blue Cross plans accepted initial nongroup enrollment from persons over 65. A study by the National Opinion Research Information Foundation shows that, as of 4 years ago, of those older persons who wanted coverage, 34 percent couldn't afford it and 16 percent had been refused insurance or had it canceled.

THE KENNEDY PROGRAM

How has the administration responded to these facts? It has recommended that some, but not all, of the cost of medical care for older people be financed by contributions to the social security system. The proposal is described this way by the Assistant Secretary of Health, Education, and Welfare, Wilbur J. Cohen (confirmed by the Senate last week by one vote): "[It] would make it possible for the people of this country during their working years to provide for their health needs in their old age. Like the present social security benefits, health insurance protection would be provided as a right that is earned through work." Care would not be free or be a handout. The plan "is based upon a recognition that expensive illness only too often forces the aged after a lifetime of independence to become dependent upon their children or to submit to the humiliation of inquiry into their personal affairs. The health insurance proposal, like the old-age, survivors, and disability insurance program now in effect, would not provide more than basic protection. It would provide payment for the cost of inpatient hospital care (after a deductible), skilled nursing home convalescence after hospitalization, hospital outpatient diagnostic services (after a deductible), and visiting nurse and related health services. The prerogatives of doctors and patients would remain unchanged. The patient would choose his own doctor, who in turn would be absolutely unhindered in practicing his profession."

Specifically, patients would be entitled to 90 days of inpatient hospital care for a single spell of illness at a minimum charge of $20 and a maximum charge of $90. But at no extra cost, the patient would be entitled to another 180 days of skilled nursing home care, and hospital outpatient clinic diagnostic services would be available for all costs exceeding the first $20 for each diagnostic study. Finally, the aged who benefit from this program could have as many as 240 home health care visits in a calendar year. Some 14¼ million persons (out of a total of 17¾ million 65 or over) would be eligible for benefits as of January 1963.

Who pays the bill? The program would be financed entirely by an increase in social security tax contributions of one-fourth of 1 percent each for employers and employees, and three-eighths of 1 percent for self-employed persons, both to be effective as of January 1, 1963. Individual earnings subject to the tax would be raised from $4,800 to $5,000 effective the first of January 1962.

Despite AMA propaganda this can be fairly termed a modest program; it leaves out, for example, any payment from the insurance fund to patients for their physicians' fees, except in very special instances. The patient would have full responsibility for picking his own doctor and his hospital.

But the trade association of the doctors does not see it this way; it sees revolution. The AMA is fighting back with every resource at its command. Last year, the AMA acknowledged spending $72,634.76 on lobbying activities in Washington, but one can be sure that that represents only a fraction of what was spent or will be spent in 1961. Already, members of the House Ways and Means Committee are receiving considerable mail—"most of it running against the bill and coming from doctors and their organizations"—but Congress ain't seen nothin' yet. Beginning the middle of this month, the attack will start in earnest.

The AMA strategy was carefully outlined at a confidential get-together of the association's high command on March 18 and 19 in Chicago. At this meeting, from which reporters were barred, those present were given a complete rundown on the Members of the Senate and House in terms of their likely positions on the President's medical care program. The meeting was told that if the "undecided" vote breaks evenly, the AMA will have the President licked.

PSYCHOLOGICAL WARFARE

This private session was devoted primarily to a discussion of propaganda tactics. A Senator who a year ago had personally assured some of his colleagues that if only they would go along with his very limited medical program (which the Congress adopted) he would be on their side in 1961, made an off-the-record speech in which he said that it was now or never, and that if they could kill medical care to the aged through social security in 1961, it would probably stay dead.

When someone raised the question of whether it was really accurate to call the President's program socialized medicine, he was advised that the AMA's public relations experts had studied this very carefully and found that this is the label best guaranteed to raise the voters' blood pressure.

The AMA breakdown of how the Congress will divide is probably as accurate as any count in advance can be. The odds at present are against Mr. Kennedy. Those Democrats the President needs most in this fight are either on the other side or on the fence. He is getting no help from the chairman of the House Ways and Means Committee.

Quite a variety of propaganda items was previewed in Chicago to be seen later by millions of Americans. There is a "Digest of Information"—eight pages, single-spaced—giving the AMA's arguments against the President's plan. There is a six-page, single-spaced "Selected Statistics Concerning Medical Economics," designed to prove that Americans receive "the finest care of any nation." A special report was given at Chicago by the women's auxiliary to the AMA, outlining what ladies can do: "inform each Member as to the danger of a compulsory medical care program based on a social security tax. This is socialized medicine."

Texts of a canned talk for delivery at community meetings arranged by auxiliary members have been distributed. Specific lobbying instructions are being supplied: "Since each auxiliary member is a voter in her own right it is suggested that the individual letters which the auxiliary members write to Congressmen should be written on the member's own stationery in longhand or typed and signed in her own name rather than that of her husband."

Chicago strategists were also told that headquarters will supply, in quantity, a special edition of the AMA News entirely de-

voted to this issue. In a red-bordered box on the front page of the News, the AMA speaks directly to doctors: "The medical profession bears the threat of this attack, and physicians can't afford to close their eyes and hope that when they open them again the whole unhappy business will have disappeared. They may awaken to the fact of Government medicine. If they are socialized their patients will be socialized as well. Physicians, individually and collectively, must wrest the initiative from the labor leaders and others who are determined to destroy free medicine. * * *"

The AMA has prepared an instruction sheet for district and county medical societies which recommends that: "Physician members must write and initiate a great number of individual letters to the Congress from their own membership and from friends in other organizations." Detailed suggestions are given on how the local medical society can unite "the allied health, professional, and business groups in your community."

They are then told to contact dentists, pharmacists, the farm bureau, chambers of commerce, junior chambers of commerce, manufacturing groups, retailers, local businessmen, etc. And in capital letters doctors are reminded that "the volume of letters and the diversity of interest of the people writing them is the important thing. Personal letters—no form letters. Telephone calls, telegrams, and personal visits are also important. Be sure," they are reminded, that "the Congressman's name is spelled correctly and the letter is properly addressed."

ALONGSIDE LIFE AND HOLIDAY

Not only do most physicians have a Representative and two Senators, however; they have patients. And for them, there is a leaflet entitled (in red) "Socialized Medicine and You," to be placed in the doctors' waiting rooms, alongside Life and Holiday. It is "an open letter to my patients," and begins: "The time has come for all of us to stand and be counted on the question of socialized medicine." In large type we read "Your freedom is at stake." The patient is told that if he agrees "that preserving the freedoms of medical service is vital, then write to your Senators and Congressmen. Join me in telling them that socialized medicine is not for us."

And that's not all. The AMA has special handouts for editorial writers, reprints from Nation's Business, the Wall Street Journal, the Saturday Evening Post, the Chicago Sun-Times, the Chicago Tribune, the Richmond Times-Dispatch. There is also a sample letter to editorial writers for the doctors to copy and mail. There is a communications kit with ad mats for local newspapers. Space is left at the bottom of each ad for the signature of the particular medical society. One is entitled "Socialized Medicine and You," and can be ordered by number from the AMA, Post Office Box 5037, Chicago, Ill. Five sample 1-minute radio or television scripts are likewise available. Simplicity is stressed: "This is [doctor's name]. As a practicing physician, I believe that any American (young or old) who needs medical care should get it. That's why I favor the program of medical aid for the aged enacted in the Kerr-Mills law. (Pause.) But some people don't want this law to succeed. They propose a compulsory program of medical services to the aged covered by social security—regardless of need. To me this represents socialized medicine for the elderly—with Federal control abridging the patient's freedom to choose his doctor, compromising the privacy of the doctor-patient relationship. (Pause.) For more facts, ask your family doctor for the pamphlet titled 'Medical Aid for the Aged.'"

On April 19, a full-page advertisement will appear in 29 major newspapers. The reasons given in that ad for rejecting the President's program are interesting: "As Americans—not simply as physicians—we are deeply concerned about the dangers of socialized medicine. The Socialist Party itself calls it socialized medicine. And we believe they have a more expert knowledge of socialist definitions than do those who describe the social security approach as 'just a method of financing aid for the aged.'"

This compulsory health care program adds up to nothing more than socialized medicine—controlled by a bureau of the Federal Government, paid for by increased social security taxes, burdening both present and future generations. Confined at first to the aged, it would inevitably be expanded to cover all Americans.

"Moreover, when the Federal Government enters the privacy of the examination room—controlling both standards of practice and choice of practitioner—the cost includes loss of freedom. Your doctor's freedom to treat you in an individual way. Your freedom to choose your own doctor. When the physician is socialized his patient is socialized as well." (The AMA will also underwrite "a solid FM radio campaign [to] supplement our national advertising in the metropolitan dailies—reaching millions of citizens whose intelligent support is so essential to us.")

Doctors may order mats of these full-page ads in different sizes and schedule them for local publication to tie in with the national advertising. A second advertisement entitled "Socialized Medicine and You" is ready to go at a later date * * * "if necessary." One-, two-, and three-column mats carrying the AMA's message are available "that can be fitted into the advertisements of pharmacists and other interested retailers." One warns that a Forand-type bill would endanger "one of the basic principles of our responsibility to you. This is a principle expressed in the physician's pledge—'I will hold in confidence all that my patient confides in me'."

None of this is true; none of it is relevant to providing adequate medical care for older people, who are not for the most part getting it and cannot get it through charity or private insurance plans; the references to "compulsion" is a fradulent. For what ails so many of the aged is being compelled to endure illness without proper treatment, or to be dependent on charity or on younger members of a family which is struggling itself to keep ahead of the bill collector.

Mr. Speaker, the full-page ad referred to in the article has already appeared in newspapers across the country.

The inspired letters, as sugested by AMA are arriving.

I intend to answer the stereotyped mail with a copy of this item.

Research Activities in the Field of Dry Edible Beans Flatulence

EXTENSION OF REMARKS

OF

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1961

Mr. FORD. Mr. Speaker, under leave to extend my remarks I include a copy of a resolution adopted by the Michigan State Legislature concerning the problem of flatulence in beans. The bean producers of my State, along with those of all other States, are extremely interested in expanded research on flatulence in beans presently being conducted by the U.S. Department of Agriculture.

This research is of great importance to the bean industry and to those farmers who produce beans for market.

The resolution follows:

SENATE CONCURRENT RESOLUTION 24

Concurrent resolution petitioning the Congress of the United States to accelerate and expand research activities in the field of dry edible beans flatulence

Whereas the State of Michigan has produced an average of better than 5 million hundredweight of beans annually for the past 5 years, which has contributed over $33 million each year to the economy of Michigan and the United States; and

Whereas 5 million hundredweight is approximately one and one-half million in excess of our customary domestic requirements because of an inherent problem of flatulence in beans; and

Whereas a large potential market for increased consumption of beans exists providing the flatulence can be eliminated; and

Whereas increased utilization of Michigan beans would increase the economy of Michigan and the United States; and

Whereas beans are already playing a large role in feeding the hungry and destitute in distressed areas of the United States and will play an important part in the Food for Peace program, which is an integral part of the foreign relations of the United States: Now, therefore, be it

Resolved by the senate (the house of representatives concurring), That the Congress of the United States be urged to expand and accelerate the research on flatulence presently being conducted in the United States Department of Agriculture, Washington, D.C.; and be it further

Resolved, That copies of this concurrent resolution be sent to the Honorable Orville Freeman, Secretary of Agriculture of the United States; the U.S. Senators from Michigan, Senators MCNAMARA and HART; and Michigan Members of the House of Representatives.

Adopted by the senate April 5, 1961.

Adopted by the house April 21, 1961.

FRED I. CHASE,
Secretary of the Senate.

NORMAN E. PHILLES,
Clerk of the House of Representatives.

Administration Policies

EXTENSION OF REMARKS

OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1961

Mr. DEROUNIAN. Mr. Speaker, the Kennedy administration is developing a distinct, if not impressive, personality and the following article by Ted Lewis, which appeared this morning in the Washington Daily News, is typical of the incidents that have developed in recent weeks:

(By Ted Lewis)

WASHINGTON, May 2.—Just when the once exciting Kennedy administration was getting a little dull and stodgy, the Washington

scene has been enlivened by the exposure of some stumblebums among the President's appointees to high office.

The prize for top dimwit among the energetic characters in the new generation Government will, of course, have to wait a full disclosure of all the deplorable facts in the Cuban invasion fiasco.

But on a tentative award basis, the prize can now go hands down to Secretary of Interior Stewart Udall, Arizona's gift to the Kennedy entourage. The crewcut, cocky Udall first flipped his lid last week by brazenly blaming the Eisenhower administration for the Cuban debacle.

He has now compounded that political faux pas—which embarrassed the White House—by a display of stupid overzeal in the sale of $100-a-plate tickets to a Democratic Party fundraising dinner.

We will take his word for it that he only solicited one member of the gas and oil lobby—an "old friend"—but as any smart Democratic Party politician will tell you, the damage has been wrought. It will be hard to erase the impression that Udall's aim was to tap the pockets of the oil and gas industry millionaires generally.

Whether Udall will be the first of Kennedy's official family to go is uncertain at this point. He is, however, considered most likely to fade away, although there are increasing reports that before the year is out some big changes will be made. Even Secretary of State Dean Rusk figures in the "agonizing reappraisal" because of what didn't happen in Cuba and there are reports that the oldest Cabinet member, 63-year-old Commerce Secretary Luther Hodges was tagged first at the White House as the Cabinet member most likely not to succeed.

The harsh fact that the once-smooth Kennedy machine has developed squeaks is probably the most significant development of the so-called first 100 days in office.

There have been not only errors in judgment in the Cabinet but in the Harvard brain trust sector of the White House advisory staff and even among the once dependable public relations advisers. White House Press Secretary Pierre Salinger has been at swords points with White House correspondents from the beginning. It is generally acknowledged that the President has gotten press breaks despite Salinger, not because of him.

ADMINISTRATION'S BIG FEAR IS LOSS OF ITS SPARKLE

What probably disturbs the new administration most in connection with the unexpected personnel troubles is that it is in danger of losing its sparkle. A young President, particularly one with a host of youthful men about him, was confidently expected to generate a feeling of excitement, of a forward-moving administration bent on getting things done with electrifying ease.

The opinion that the administration is becoming dull, if not stodgy, is rather widespread here. In part, this is due to the fact the President has become "overexposed," and by that is not meant overexposure of his personality but overexposure of his ideas.

There is admitted unhappiness over the number of messages he has sent to Congress. He has set a Presidential record of 21 messages to Congress in less than 4 months. Unfortunately, most of them have been pretty dull reading. They have been too long and lacking in that personal sparkle the President is capable of extracting when he has time to sit down and coin phrases and compose fluid sentences.

His ghost writers have been overworked because the President has been tied up with cold war problems. As a result, their compositions have by and large been sorry stuff, heavyhanded and soporific.

TED SORENSEN'S HAND SORELY MISSING FROM SPEECHES

All this is no basic reflection on chief speech writer Theodore Sorensen or others in the ghostwriting stable like Dick Goodwin, Mike Feldman, and Lee White.

Sorensen's fine hand has been missing from most of these endeavors because the President found he had other and more important tasks for Sorensen to tackle—policy problems in particular. The others in the stable are admittedly capable of turning out a well-rounded speech or message to Congress, but need time. And around the White House these days there is plenty of bustle but no time for reflection on a well-turned and snappy phrase.

Kennedy's personnel problems are actually much more complex than the simple one of whether the right man has been found for the right job. There are some grounds for believing that failure to have the right man on the job was at the root of the Cuban fiasco.

The man chosen weeks ago to fill the pivotal post of Deputy Under Secretary of State for Political Affairs was U. Alexis Johnson, a smart career operative. Unfortunately, Johnson was not in Washington during the appraisals of the Cuban situation.

WITH JOHNSON, THINGS MIGHT HAVE BEEN DIFFERENT

Had Johnson been able to give his attention to the Cuban problem, the decision might well have been different. His post is one in which all phases of a policy decision are scrutinized. It has always been a key post in the Department, one which Robert D. Murphy filled for years and which enabled him to take deserved credit for putting into effect many a cold-war-policy maneuver—always at the right place and at the right time.

Where was Johnson when his services and opinions were so vitally needed here? As an expert on Asia, he was in the Far East making arrangements for the recent SEATO conference in Bangkok and for organizing the U.S. stand on Laos.

In hindsight, it would have been far better to have had Johnson here.

Albert L. Colloms: Spanish Amnesty Advocate

EXTENSION OF REMARKS
OF
HON. WILLIAM FITTS RYAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. RYAN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a letter to the editor of the New York Times, published March 1, 1961, by Albert L. Colloms, a respected constituent of mine, and a New York Times editorial of March 3, 1961, commenting upon the condition of civil liberties in Spain with reference to 6,000 political prisoners. Mr. Colloms is now forming a committee to call upon Spain to grant amnesty to the political prisoners.

Mr. Speaker, I also include a column written for the New York Post of Wednesday, March 22, 1961, by Mr. Joseph Wershba, entitled "It Takes Tough Idealism To Soften Up a Dictator."

I commend these items to the attention of my colleagues:

[From the New York Times, Mar. 1, 1961]

SPAIN'S PRISONERS—SUPPORT FOR AMNESTY FOR REGIME'S POLITICAL OPPONENTS URGED

To the EDITOR OF THE NEW YORK TIMES:

During November 1960, an international commission of five lawyers made a personal, on-the-spot investigation of civil liberties, due process, and the situation of the political prisoners in Spain. The investigation made a story meriting front-page treatment in a number of important newspapers throughout Europe. Even ABC of Madrid thought it important enough to run stories for almost 2 weeks.

As the U.S. member of that Commission, which included Richard Turner of London, Angel Bustelo of Mendoza, Argentina; Jorge Jiles of Chile, and José Sancho Miajares of Caracas, Venezuela, I feel that it is time for the appalling situation of the political prisoners and exiles of Spain to be presented to the conscience of the people of the United States.

Six thousand Spanish men and women are imprisoned there. They are of all political persuasions and of none. Their sole crime is differing with the administration.

Many are subjected to outrageous sentences of 20 years or more. Many have been tortured. All have been convicted with so blatant a disregard of due process that the courageous lawyers of Spain are in the forefront of the fight for amnesty within Spain.

BACKING FOR MOVEMENT

Indeed, leading figures in all Western Europe have joined in this movement, motivated by humanity and decency. Personages in the forefront of intellectual life, in the labor movement, in finance, in the professions and the arts are active in committees of their respective countries and are devoting their efforts to amnesty for Spanish political prisoners and exiles.

In Latin America too, this movement is widespread and deep-rooted. I have just returned from Montevideo, where the second Latin American congress for amnesty for the political prisoners of Spain and Portugal was concluded.

Some 480 delegates of 9 countries, representing 270 organizations, were in attendance. Four thousand greetings were received in the 3 days of the conference. The delegates were representative of the best of South America. There were political leaders, some officially representing their governments, political groups were represented, as were intellectuals, workers, professionals, business men, labor leaders and Catholic orders.

A West European conference will be held in Paris in the spring which will be attended by delegates from every country in Western Europe.

It can only be that the present inaction of the people of our country is the result of lack of information. The American people are too sympathetic to be silent about the political prisoners in Spain once they know the real facts of the situation.

ALBERT L. COLLOMS.

[From the New York Times, Mar. 3, 1961]

PRISONERS IN SPAIN

The letter from Albert Colloms printed on this page March 1 and dealing with political prisoners in Spain was a call to the conscience of all of us. Mr. Colloms was the American member of an international commission of lawyers who made an on-the-spot investigation of civil liberties, due process, and political prisoners in Franco Spain.

Among their findings was that 6,000 Spanish men and women are in prison because they disagree with the regime. Many are

serving sentences of 20 years or more, wrote Mr. Colloms, and "many have been tortured."

The facts speak for themselves. They are deserving of earnest consideration for two special reasons. One is that Franco Spain is a military ally of the United States. We signed a treaty—the 1953 Pact of Madrid—with Spain with the understanding, as Secretary of State Dean Acheson put it at the time, that Spain would make "substantial advances in such directions as increased civil liberties." The other reason is that international expressions of concern might help to bring about an amnesty for these unfortunate political prisoners.

[From the New York Post, Mar. 22, 1961]

IT TAKES TOUGH IDEALISM TO SOFTEN UP A DICTATOR

(By Joseph Wershba)

Albert L. Colloms is a gentle and whimsical 57-year-old New York lawyer who normally specializes in dry-as-dust real estate and banking. He was on his way back from legal business in Israel last November when he stopped off in Paris. Someone asked him if he'd like to go to Spain. Life hasn't been the same since for Colloms.

"Previously," he says, "I knew very little about what was really going on in Spain. Sure, I'd heard things were not too good, there were repressions, people were tossed in jail for opening their mouths. But I didn't realize till I talked with Spaniards themselves what a widespread movement there is, calling on Franco to grant amnesty to 6,000 political prisoners."

As a result, Colloms—with offices at 342 Madison Avenue—is now forming an amnesty committee of prominent Americans. "The Ministry of Justice man in Madrid told us there are no political prisoners in Spanish jails," Colloms recalls. "He says they're in for 'crimes against the state.' Well," Colloms observes with a smile, "that's a definition that's hard to beat."

Colloms has become something of an international incident. He's been denounced front page by the controlled Franco press and the Spanish Ambassador in Washington has found it necessary to deny his charges—both signs of the Franco government's extreme sensitivity to world opinion.

On his trip to Madrid last fall, Colloms was accompanied by four lawyers. They talked with families, studied reports by Spanish lawyers, examined indictments and sentences. Colloms' conclusions:

"There are 6,000 political prisoners in Spain. They range from a small number of Communists to a small number of Falangists. Sixty to ninety are still in from the Civil War, over 20 years ago. Two thousand are charged with the sole crime of having been collateral to that war—a family connection, for instance. The rest—the vast majority—are Free Masons, monarchists, unionists, farmers, Socialists, anarchists, syndicalists, students—and people with absolutely no politics at all.

"Their sole crime is that they differed with the administration. And all of them have been convicted with so blatant a disregard of due process that the courageous lawyers within Spain have taken the lead in this fight for amnesty.

"And that's what has to be emphasized," Colloms declares. "It's the Spaniards themselves who are leading the fight—from street cleaner to law professor, they've signed petitions.

"Franco is no humanitarian. He won't grant amnesty out of the goodness of his heart. But he'll do it if it's expedient—if there's enough pressure.

"This movement for amnesty is basically humanitarian," says Colloms, now on his way to Paris for a Western Europe amnesty conference later this month. "That's how I got into it and that's why I want to see an American committee formed. I don't think anyone in Spain likes Franco, but neither do I think he's on the way out. That's the business of the Spanish people—not outsiders. As long as he can keep his government going, he's going to stay in.

"I get the feeling that Spain is a police state. But there's no revolutionary feeling against Franco. You've got three generations in Spain today. The younger generation doesn't know the country once had democracy. The oldest generation doesn't have the push to do anything about it. And the middle generation remembers the horror and the slaughter of the civil war.

"They don't want any more bloodshed. They still tell you stories of how 250 people at one time would be lined up in front of a ditch and machinegunned. Both sides did it. And they still go wild remembering when Franco let the Moors loose; the Moors just tore people limb from limb.

"But while we have no right to tell the Spanish people what to do, I think we ought to speak up for simple decency. Since I got into this thing, I found out we have a 1953 military treaty with Spain, with the understanding that Spain would make substantial advances in such directions as increased civil liberities. Well," says Colloms, "the least we can do is make Franco live up to his treaty commitments."

Colloms, born in Denver, March 10, 1904, grew up in Connecticut, attended Yale and took his degree from Yale Law in 1927. He was with the U.S. Housing Authority from 1938 to 1940, and was in charge of OPA enforcement for consumer goods in metropolitan New York from 1941 to 1945. He and his wife live on Manhattan's West Side. His son Michael, 23, is studying at UCLA for his Ph. D. in chemistry.

Colloms doesn't recall having more than a passing interest in Spanish affairs. "I'm sure I sympathized with the Loyalists in the Civil War," he says, "and I hope I contributed to some milk fund campaign. But I was long out of college when it happened. It didn't stir me as much as it did the young people in the 1930's."

He is a stirred man now.

Dan Ryan

EXTENSION OF REMARKS

OF

HON. WILLIAM T. MURPHY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1961

Mr. MURPHY. Mr. Speaker, it is with great sorrow that I call to the attention of my colleagues the death on April 8, 1961, of one of the great leaders in the civic as well as the political life of the city of Chicago, Daniel Ryan, president of the Board of Commissioners of Cook County.

Mr. Ryan was first elected to the county board in 1923 when he succeeded his father, Daniel Ryan, Sr., who had been president of the board. He served for 34 years as a member, the last 7 years of which he served as president. He also served as chairman of the roads and bridges committee, and for 10 years as chairman of the finance committee.

In these capacities he was instrumental in the establishment of a system of superhighways that now serves the Chicago area; the modernization of the Cook County Hospital and Nurses Home and its research arm, the Hektoen Institute; and also the expansion and protection of the forest preserve district of Cook County.

Mr. Ryan was one of the most powerful Democratic leaders in Illinois and was a close friend of the Honorable Richard J. Daley, mayor of the city of Chicago, and one of his most trusted advisers.

He had a multitude of friends in all walks of life and his many kind and charitable deeds, though he did not seek to publicize them, were well known throughout Chicago.

The sermon given by Archbishop William E. Cousins, of Milwaukee, a close personal friend of many years, at the Holy Name Cathedral, epitomizes Mr. Ryan's philosophy of life. I should like to quote a part of this sermon:

Mr. Ryan practiced to the fullest Christ's admonition to "render, therefore, to Caesar the things that are Caesar's; and to God the things that are God's."

He rendered to Caesar the things that were Caesar's; he rendered to the Government he served a complete, humble, and full allegiance. And he rendered to God the things that were God's in his personal, family, and public life.

Mrs. Murphy and I join his many friends in extending our deepest sympathy and our prayers to his gracious wife, Ruby, his son Daniel III, and the other members of his family.

A Matter of Realism

EXTENSION OF REMARKS

OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1961

Mr. HARVEY of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

[From the Shelbyville (Ind.) News, May 1, 1961]

A MATTER OF REALISM

From time to time in the past we have pointed out that no nation in all history has even approached the generosity of the United States in its relations with the rest of the world. We also have pointed out that our generosity seems to have gained us little in our standing with much of the world. On the contrary, it seems to have purchased us less respect and less stature in the global scheme of things.

The latter fact is brought home to us most forcefully by the verbal beating our country is taking in many places throughout the world in the wake of the Cuban invasion fiasco. This matter alone is enough to convince any sober American that something has been grossly wrong with our foreign relations for a long, long, time.

It is stark fact that our tremendous outpouring of aid—amounting to almost $100 billion since the end of World War II—is either being ignored altogether or is met with cynicism.

While our concern for mankind's freedom should be obvious, it actually is disbelieved in many countries. Most current examples of this fact are Laos and Cuba. In Laos, we

attempt to help people who apparently have little understanding of, or interest in, freedom. And in Cuba we try to aid a people to dislodge a Communist tyranny—and get castigated for our efforts. At the same time, in Great Britain, India, and elsewhere, the tides of Communist-serving neutralism and pacifism run high.

Strangely to us, at the same time the Reds get away with fantastic crime at the bar of world opinion. While they hold hundreds of millions in virtual slavery, and smash the freedom attempts of such innocents as the people of Tibet and Hungary, the Russians are fawned upon. That is not all—the Chinese Communists, whose deeds in assuming and holding power are unspeakable crimes, are seeking admission to the United Nations, and there is much agitation among some of our so-called friends to get them there.

In trying to be kind to everyone, we too often have seemed soft. It appears that we have worried too much about what the world would think of this or that, and as a result we have drifted almost aimlessly into a web that could turn out to be our own destruction.

Perhaps we must realize, first of all, that we are being isolated—not because our way of life is wrong, but because most people just don't understand it. We must do the things that are necessary in dealing with our deadly enemy without worrying unduly over what the reaction may be in Africa, India, or elsewhere. This not to advocate isolationism, but simply to advocate an American foreign policy. It is to say that it is time that we stopped running after the world—that it is time that we started looking at it realistically from our own viewpoint.

We should be willing to help, but only to the extent that the world understands we are attempting to stave off another dark age.

We may expect respect if we act with dignity and aloofness. It is entirely possible that in a cold world and a cold war a certain amount of calculated coldness might be the approach most likely to awaken other countries to a new and true awareness of the real perils as they exist.

Of Law and Liberty

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. DERWINSKI. Mr. Speaker, the contrast between the Communist celebration of May Day and the American counterpart, the celebration of Law Day, is vividly portrayed in an editorial which appeared in the Chicago Sun-Times on Monday, May 1. I submit it for the RECORD as most worthy of study:

OF LAW AND LIBERTY

In Moscow, May 1 is the day for parading military might, a day for Soviet muscle flexing.

In America, May Day, 1961, brings the fourth annual celebration of Law Day—a day set aside to glorify a much different kind of power. In the words of the American Bar Association, originator along with local bar groups of Law Day, the purpose of the U.S. observance is to cultivate respect for the law, remind citizens of their heritage of freedom and encourage rededication to the ideals of equality and justice under law.

The contrast speaks for itself.

It is hoped that Americans today will not only review the freedoms that are inherent under the U.S. rule of law, but also ponder the responsibilities that go hand in hand with these freedoms.

In this connection, we suggest as worthy of contemplation these words by a revered Federal judge, Learned Hand, spoken before more than 1 million Americans on May 21, 1944, in New York's Central Park:

"Liberty lies in the hearts of men and women. When it dies there, no constitution, no law, no court can save it. No constitution, no law, no court can even do much to help it. * * * The spirit of liberty is the spirit which seeks to understand the minds of other men and women. The spirit of liberty is the spirit which weighs their interests alongside its own without bias. The spirit of liberty remembers that not even a sparrow falls to earth unheeded. The spirit of liberty is the spirit of Him who, near 2,000 years ago, taught mankind that lesson it has never learned, but has never quite forgotten; that there may be a kingdom where the least shall be heard and considered side by side with the greatest."

West Germany Also Has Its Communist Fronts

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. SCHERER. Mr. Speaker, the Committee on Un-American Activities, of which I am a member, has often said that the strategy and tactics of the Communist apparatus follow the same pattern the world over.

The bulletin of the Press Office in Bonn, West Germany, contains significant information about the work and activities of Communist-front organizations in that country. It will be of interest to the Members of the Congress to note the striking similarities in the patterns followed by the Communists in Germany and in the United States.

The translation of the article in bulletin No. 30, 1961, follows:

COMMUNIST-CAMOUFLAGED AND AUXILIARY ORGANIZATIONS

During question time in the German Bundestag on February 10, 1961, the Federal Minister of the Interior, Dr. Gerhard Schröder, with the approval of the Federal Minister for All-German Affairs, gave the following answer to the question put by Bundestag Deputy Müller-Hermann, "Is the Federal Government in a position to give a survey up to date of the Communist-camouflaged and auxiliary organizations and their means of publication?"

In the 31st plenary session on June 13, 1958, I gave the House the names of a number of Communist-camouflaged and auxiliary organizations, as well as of certain neutralist and nationalist circles that are pro-Communist. I mentioned in particular: The World Peace Council, the Peace Committee of the Federal Republic of Germany, the West German Women's Peace Movement, the Union of Persons Persecuted by the Nazi Regime (VVN), the Fédération Internationale des Résistants (FIR), the League of Germans (BDD), the German Club 1954, the Democratic Cultural League of Germany (DKBD), the Frankish Circle, the Campaign Community Against Atomic Armament of the Federal Republic of Germany, and the Permanent Congress of All Opponents of Atomic Armament of the Federal Republic of Germany.

Further organizations of this type can be added to this list. I should like to mention the following: The Schwelmer Circle, the Union of Independent Socialists, the German Youth Ring, and the Working Association "Happy Holidays for All Children," and certain concentration camp associations (Auschwitz, Buchenwald, etc.).

I also wish to refer to those organizations with the aid of which communism would like to establish a platform in order to gain a foothold again in the parliaments of the Federal Republic, of the Länder and the communities, and in this way exercise influence on the political life of the Federal Republic. On the Federal level there is the German Peace Union. On the Länder level there are, above all, the German Democratic Union in the Saar, the Democratic Voters' Union in North Rhine-Westphalia, and the Union for Peace and Social Security in Baden-Württemberg.

In quoting this data I have confined myself to those organizations which have developed a greater activity and are frequently mentioned in public. This survey is therefore not exhaustive.

In addition, there are also a number of Communist camouflaged periodicals and papers. By these I mean organs which, without openly professing communism, circulate or propagate trends and aims of Communist policy without any criticism. These Communist camouflaged periodicals or papers include, in particular, the following: Die Andere Zeitung (the Other Paper); Blätter für deutsche und internationale Politik (News of German and International Politics), sponsored by the German Club 1954; Blick in die Zeit (View of the Times), a weekly, sponsored by the Peace Committee of the Federal Republic of Germany; Deutsche Volkszeitung (German People's Paper) and Deutsche Woche (German Weekly), organs sponsored by the League of Germans; Konkret (Concrete), a students' paper; Elan (Elan), a youth periodical; Socialistische Korrespondenz (Socialist News); Die Tat (Action), the organ of the VVN; Münchener Vertriebenen-Echo (Munich Expelees' Echo), sponsored by the West German Refugees' Congress; and Dat Blinkfüer (the Lighthouse), a weekly published in Hamburg.

Tanks and Propaganda Only Dim Poland's Flame

EXTENSION OF REMARKS
OF
HON. WILLIAM H. BATES
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. BATES. Mr. Speaker, rumbling tanks and Soviet propaganda will never extinguish the flame of freedom in Poland, and it is fitting on this day, the 170th anniversary of Poland's Constitution Day, that we should renew our pledge to her people—a pledge to assist in the restoration of her independence and return to the Western family of nations.

I know that it is the constant prayer of thousands of my constituents in the sixth Massachusetts District of Polish

extraction, that their native country will soon be free from its present oppressive yoke.

A champion of human rights, Poland has never been totally crushed because of her indomitable character and creative vitality based on mental, moral and spiritual vigor. The Pole abhors the despot, the tyrant, and the dictator. Men who undertook the task of guiding the Polish nation on the path of social progress, belonged to the most enlightened brains of the 18th-century Poland, and they fought and died for freedom.

Great names and lasting achievements in Polish history speak for themselves and the contributions of great leaders in government, music, arts and sciences bring visions of a great heritage left to mankind.

We are, for vital reason, seriously concerned with the present fate of our Polish friends, even though changing world events may dim our view as we watch communistic developments in Laos, Cuba, and other parts of the globe. Sealed off behind the Iron Curtain, millions of Polish people are virtually imprisoned in their homeland, and there, they enjoy precious few of the freedoms for which they and their forebears fought so gallantly and courageously.

As we cherish our own glorious birthright, let us join with these valiant people in commemorating the inception of their liberty and pledge our help in the realization of their proper place among free nations.

The Polish Government is Communist—but its people are not.

Rumbling tanks and the steady drone of Soviet propaganda notwithstanding, Poland's flame of freedom shines brightly and her march toward independence is certain to succeed.

House Resolution 211—Special Committee on Captive Nations

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1961

Mr. FLOOD. Mr. Speaker, on March 8, 1961, I introduced a measure calling for the establishment of a Special Committee on Captive Nations in the House of Representatives. This measure is now House Resolution 211. There are not sufficient words to express my profound gratitude and personal delight to the more than 20 Members of the House who joined with me in that most stimulating and very enlightening discussion which took place then on the subject of the captive nations—CONGRESSIONAL RECORD, March 8, 1961, "Russian Colonialism and the Necessity of a Special Captive Nations Committee," pages 3286–3311.

The popular response to House Resolution 211 has been so enthusiastic and impressive that I feel dutybound to disclose the thoughts and feelings of many Americans who have taken the time to write me on this subject. These citizens are cognizant of the basic reasons underlying the necessity of the proposed committee. They understand clearly the vital contribution that such a committee could make to our national security interests. In many cases, they know that no public or private body is in existence today which is devoted to the task of studying continuously, systematically, and objectively all of the captive nations, those in Eastern Europe and Asia, including the numerous captive nations in the Soviet Union itself.

Because their thoughts and sentiments are expressive and valuable, I request that the following responses of our citizens to House Resolution 211 be printed in the Appendix of the RECORD:

MARCH 30, 1961.

The Honorable DANIEL J. FLOOD,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: The Ukrainian Congress Committee Branch of Cohoes, N.Y., wishes to congratulate you upon introducing a resolution calling for the establishment of a special permanent Committee on Captive Nations in Congress. Such a committee has long been needed, since the prisoners behind the Iron Curtain have always been eager and wanting to escape from tyrannical hands. To know about the Soviet Union's weaknesses and conditions will be a great advantage to the free anti-Communist world.

The suggested Committee on the Captive Nations would supply the American people and the Western World with information concerning the affairs behind the Iron Curtain. It would also help our Government in formulating its policies toward the Soviet captive nations.

We are writing to our New York State district Congressman O'BRIEN, to uphold your resolution.

Respectfully yours,
THE UKRAINIAN CONGRESS COMMITTEE,
BRANCH OF COHOES,
STEPHAN HAWRYSHKO,
President.
JULIAN BACHYNSKY,
Secretary.

BYELORUSSIAN-AMERICAN
ASSOCIATION, INC.,
NATIONAL HEADQUARTERS,
Brooklyn, N.Y., April 20, 1961.

Hon. DANIEL J. FLOOD,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: On behalf of the Byelorussian-American Association I wish to express sincere congratulations on your introduction of the resolution for the establishment of a permanent Committee on Captive Nations in the House of Representatives.

The Soviet Union's goal is to dominate the world, and the Americans should know it, because Soviet Russia has become a great imperialist peril which threatens all free nations and particularly our country, the United States of America.

Your resolution to create a committee is a great step in the right direction. It would serve as an information center on the enslaved peoples in the U.S.S.R. Our Government needs this information in making proper policies with respect to the captive nations and with respect to the security of the United States.

I am also enclosing a copy of the resolution adopted at the mass meeting commemorating the 43d anniversary of Byelorussian independence on March 26, 1961, at Biltmore Hotel in New York, in which support is given to your resolution.

With personal regards and best wishes, I am,

Sincerely yours,
CONSTANT MIERLAK,
National President.

UKRAINIAN CONGRESS COMMITTEE
OF AMERICA, INC.,
BRANCH IN MINNEAPOLIS,
April 14, 1961.

Hon. DANIEL J. FLOOD,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: The Minneapolis Branch of the Ukrainian Congress Committee of America wishes to congratulate you on your bold and farsighted move in introducing the resolution calling for the establishment of a permanent Committee on Captive Nations in the House of Representatives.

The Soviet Union poses the greatest threat to the United States as well as to the entire free world. It will be of tremendous help for the various agencies of the U.S. Government to be aware of the conditions that prevail in the captive nations under the Soviet tyrannical rule. These nations are ever eager to overthrow their tyrant and in this respect constitute a perennial weakness of the Soviet Union.

The committee would be of great help in informing the people of the world of the state of affairs behind the Iron Curtain and, therefore it would be a powerful tool for combating worldwide Russian propaganda.

We are writing our Congressmen from Minnesota, asking them to support your resolution.

Respectfully yours,
HILARY PAPIZ,
Branch Secretary.

APRIL 21, 1961.

DEAR MR. FLOOD: I am writing to commend you on your understanding and foresight of the true intentions of Communist tyranny.

Your resolution to create a permanent Captive Nations Committee would indeed give hope to the subjugated peoples under communism, and awaken and enlighten Americans to the atrocities committed against the human race by the hand of Russian imperialism.

Sincerely yours,
ANNA BUCZYNSKI.

APRIL 10, 1961.

MY DEAR MR. FLOOD: Our organization, the West Easton, Pa. Branch of the Ukrainian Congress Committee of America, wishes to congratulate you on your courageous and sagacious move in introducing the resolution for the establishment of a permanent Committee on Captive Nations in the House of Representatives.

Our organization will endeavor to convince other groups and organizations to write and commend you on your resolution.

We are writing Congressman FRANCIS E. WALTER asking him to support your resolution.

Respectfully yours,
MICHAEL KOLODRUB,
PETER MILANSWRKE,
(For the organization).

APRIL 11, 1961.

Hon. DANIEL J. FLOOD,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: I, Father Nazarewycz, and the members of my parish would like to congratulate you on your introduction of a resolution calling for a permanent Committee on Captive Nations in the House of Representatives. One of the greatest problems facing this Nation is the Soviet Union, a prison to many nations and peoples. These nations, eager to escape Soviet Russian slavery and despotism, constitute

deep weaknesses for the Soviet Union. It is to our advantage to know and multiply such weaknesses.

A Committee on Captive Nations could serve as a fountain of information and data on various enslaved nations in the U.S.S.R. Such information would be made available to U.S. Government and its agencies. Its main function would be to inform the American people and the world at large on affairs behind the Iron Curtain and assist the Government in formulating its policies with respect to the captive nations.

We have informed our own Congressman, Mr. KOWALSKI, and asked him to support your resolution.

We sincerely hope and pray for this resolution to be passed. May the dear Lord in Heaven guide you in your magnificent work.

Very sincerely yours,

Rev. Father ANDRIJ NAZAREWYCZ.

MARCH 29, 1961.

The Honorable DANIEL J. FLOOD,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: Our organization, the Ukrainian National Association, St. Paul branch, wishes to congratulate you on your bold and farsighted move in introducing the resolution calling for the establishment of a permanent Committee on Captive Nations in the House of Representatives. Needless to say, such a committee is long overdue. One of the greatest problems confronting our Nation today is the Soviet Union, a prison house of many nations and peoples.

We are very grateful for your initiative and hope that every one of our State Congressmen will have the same view and make all possible effort in helping to establish such a permanent committee.

We are writing our Congressmen in the State of Minnesota asking them to support your resolution.

Very sincerely yours,

B. GAMOTA,
President of UNA, Branch in St. Paul, Minn.

BYELORUSSIAN-AMERICAN ASSOCIATION, INC.,
NEW YORK BRANCH,
Brooklyn, N.Y., April 21, 1961.

Hon. DANIEL J. FLOOD,
House Office Building,
Washington, D.C.

DEAR SIR: All of our members would like to congratulate you on your introduction of the resolution for the establishment of a permanent Committee on Captive Nations in the House of Representatives.

We believe that such committee will be of great help in our Nation's policy against the Soviet Union. It also will serve as an information center about many nations enslaved by Soviet Russia. We believe that those enslaved peoples contain a destructive power and are more dangerous to the Russian empire than atomic bombs.

We certainly hope that this bill will be passed by the House of Representatives in the near future.

Respectfully yours,

BAZYL SCECKA,
Secretary.

UKRAINIAN STUDENT
ORGANIZATION OF MICHNOWSKY,
PHILADELPHIA BRANCH,
April 16, 1961.

Hon. DANIEL J. FLOOD,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: The Ukrainian Student Organization of Michnowsky which represents a vast number of university students in America wishes to express its sincere congratulations on your resolution calling for the establishment of a Captive Nations Committee in the House of Representatives.

We wholly support your resolution and firmly believe that such a Committee on Captive Nations in the U.S. Congress would serve the intellectual ends of all the freedom-loving students of the world.

BOHDAN KULCHYCKY, *President.*

ORGANIZATION FOR THE DEFENSE
OF FOUR FREEDOMS FOR UKRAINE, INC.,
New York, N.Y., April 14, 1961.

The Honorable DANIEL J. FLOOD,
New House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: The Organization for the Defense of Four Freedoms for Ukraine, which represents thousands of American citizens of Ukrainian origin, and which embraces 32 branches throughout the United States, wishes to convey to you its heartiest congratulations on your resolution calling for the establishment of a Captive Nations Committee in the House of Representatives. Our organization is dedicated to the preservation of the freedom and independence of the United States, and is deeply concerned with the struggle of the captive nations for the restoration of their freedom and independence, which was destroyed and subverted by Communist Russia during the past four decades.

We are wholly in support of your resolution on the captive nations because we are convinced that the establishment of such a committee would constitute a powerful force for the cause of freedom. It would indicate that the United States is earnestly and seriously concerned with the plight of the captive and enslaved nations behind the Iron Curtain.

Despite the fact that the U.S.S.R. is systematically attacking the United States and its allies and is making steady progress in such countries as Laos, the Congo, and Cuba, the United States is shying away from the issue of Russian colonialism and imperialism, either because it is not aware of the existence of the vast Soviet Russian slave empire, or because of an ill-advised policy of "not to get tough with Moscow." Two years ago, when Khrushchev was making gigantic propaganda successes with the Moslem peoples in Asia and Africa, the Voice of America decided to eliminate the Uzbek-language broadcasts from its services, under the pretext that the VOA was unable to secure an adequate number of transmitters. Such examples of a gross neglect of the captive non-Russian nations in the U.S.S.R. could be cited in many instances.

It is therefore our sincere belief that your initiative and your resolution are dictated by your profound knowledge of the issues at stake. Such a Committee on Captive Nations would become a font of unbiased knowledge and information on each captive nation behind the Iron Curtain. It could make expert and factual analyses on the plight of the captive nations in the Soviet Russian slave empire and then make them available to the executive agencies of our Government. Such a committee is long overdue and you are to be commended for your wisdom and your appreciation of this paramount issue of the captive nations.

Our organization pledges its full and unqualified support of your measure in Congress and will urge other U.S. Congressmen to support your resolution. We believe that your step in establishing such a Committee on Captive Nations in the U.S. Congress would meet with the approval and support of all the freedom-loving peoples of the world, as it would convince them that the United States is fully determined to protect the freedom of all the nations of the world. Also, it would give concrete evidence that it has not abandoned the captive nations behind the Iron Curtain, but is doing everything short of war to bring about their final liberation from Russian Communist tyranny and enslavement.

ORGANIZATION FOR THE DEFENSE OF
FOUR FREEDOMS FOR UKRAINE,
EUGENE LOSINSKY, *President.*
STEPHEN HALAMAY, *Secretary.*

A Railroad's Contribution to Forestry

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. DORN. Mr. Speaker, Dr. Warren T. White contributed greatly to the development of the pulp and paper industry in the South. Dr. White is a graduate of Clemson College, Clemson, S.C., where he received a scroll of honor for distinguished service and an honorary doctor of science degree. The following address was made by Dr. White to the fifth World Forestry Congress held in Seattle, Wash., last fall and attended by 2,000 people from 71 countries throughout the world:

A RAILROAD'S CONTRIBUTION TO FORESTRY

(By Warren T. White, assistant vice president, Seaboard Air Line Railroad)

In the late 1920's the Seaboard Air Line Railroad, one of the principal lines serving the southeastern portion of the United States, intensified its efforts toward building up the industrial economy of the territory served with the view to increasing rail tonnage for its lines.

Careful studies pointed to the conclusion that the greatest potential for the production of increased tonnage lay in the forest resources of the six Southeastern States served by the railroad. Originally, the southeastern part of the United States was one of the finest timber areas in the world. The region was covered with magnificent stands of virgin pine and various types of fine hardwoods extending from the Atlantic Seaboard to the Appalachian Mountain range on the west.

A large portion of the Seaboard system was originally constructed to serve logging and sawmill operations in the Southeast. During the latter part of the 19th century and the first two decades of the 20th century large and extensive sawmill operations characterized the principal developments in the area, producing lumber in enormous quantities from the virgin stands of timber for markets in this country and abroad. For the most part, the mills pursued a cut-out and get-out policy, with no definite plans or efforts by the owners for perpetuating the future growth of the forests. In many instances uncontrolled fires added to the destruction of the forests.

By the end of the second decade of the 20th century most of the virgin timber had been cut and the large sawmills were forced to close down, leaving lumbering operations in large measure to small mills of the portable type. Numerous instances could be cited throughout the southeastern territory where prosperous towns and communities, based on extensive sawmill operations, were left without payrolls or means of support with the closing of lumbering operations incident to the exhaustion of virgin timber supply.

Studies made by Seaboard's industrial department and other interested agencies indicated a highly favorable opportunity for the development of the pulp and paper industry in the Southeast. Basically, it was recognized that the inherent forest resources of the area consisted of fast growing species of timber, fertile soils, ample rainfall and long growing seasons. With adequate fire protection, southern pines were known to reach pulpwood size in from 15 to 20 years and in some instances in even a shorter period of time.

Intensive efforts were made by Seaboard's industrial department, as well as by other organizations and individuals, to promote pulp and paper manufacture in the Southeast. At about this time Dr. Charles H. Herty, famous scientist and humanitarian, demonstrated in his laboratory at Savannah, Ga., that southern pine could be utilized in the production of paper other than kraft or sulphate, and indeed that southern wood could be profitably utilized in the making of various grades of fine paper, rayon, cellophane and kindred products.

Until the mid-1930's the country's main sources of supply for pulp and paper were the Scandinavian countries, Canada, and the northern part of the United States. Although a few kraft or sulfate mills were in operation in the South—a small plant having been built at Roanoke Rapids, N.C., as early as 1909—the pulp and paper potential of the region had scracely been scratched.

In view of this situation, and as a result of intensive promotional efforts, a wave of construction of pulp and paper mills began in the South in 1935. In the short period from 1935 to 1940, 15 large mills were built in the Southeast, most of which were on Seaboard rails. Developments in the industry have continued apace and today a total of 63 pulp and paper mills are operating in the region from Virginia southward to Texas. Total investment by the industry

Until the mid-1930's the country's main mated at more than $5 billion. The annual production of mills in the South now exceeds 12 million tons of paper and board, with expenditures for pulpwood alone running to almost one-half billion dollars.

Prior to the coming of pulp and paper to the South there was relatively little demand for second growth timber. Fires ravaged the forests year in and year out and progress in forestry was slow and discouraging. The U.S. Forest Service and State forest agencies had for many years conducted intelligent, energetic and persistent programs for the elimination of forest fires, for the reforestation of denuded areas and for the promotion of sound forestry practices generally, but there simply was lacking the demand for the timber, and results from these efforts were, in the main, disappointing. As recently as 25 years ago, second growth pine timber could be purchased on a stumpage basis for as low as 50 cents a cord. With markets provided by pulp and paper mills for pulpwood, the stumpage price per cord today will run to $5 and upwards, depending on the location.

The past two decades have witnessed a sharp increase in the drain upon the woodlands of the South, with every indication pointing to even greater demands for timber in the future. In addition to new demands created by pulp and paper mills, timber is being required in increasing amounts for such industries as plywood, veneers, furniture, poles, piling, and lumber.

Seaboard's program for developing the forest potential of the territory served has not been confined to the location of pulp and paper mills. In 1936 a forestry division was organized within the industrial department to work with wood-using industries, State forest agencies, the U.S. Forest Service, farmers and landowners generally in the promotion of sound forestry practices to the end that a continuing supply of timber might be available for all future needs.

It became obvious from the beginning that the problem was one of education, of getting across to landowners generally, and particularly to the small farmowner, that timberlands can be operated profitably on a sustained yield basis.

The Seaboard's first move in its newly launched educational program was the operation of a conservation special train, which was something of a schoolhouse on wheels, and which toured the Southeast for 6 straight weeks in 1942. The U.S. Forest Service, which has been of inestimable assistance to the railroad's program from its inception, was called upon for assistance, and the cooperation of State agencies was likewise enlisted. The conservation special made frequent stops throughout the Southeast, carrying visual demonstrations of the value of fire prevention and other sound forestry measures. The interest and cooperation of Governors, mayors, and other public officials were enlisted. The conservation special was visited by more than 50,000 people.

Another phase of the railroad's forestry work is the holding of forestry demonstrations at strategic points throughout the territory. These functions are scheduled only after exhaustive preparation extending over a period of many weeks, and are participated in by representatives of the U.S. Forest Services, State forest agencies, soil conservation service, vocational agriculture departments, wood-using industries, local businessmen and other interested agencies and individuals. These demonstrations illustrate all phases of sound forestry practices and wood utilization. Scores of these programs have been carried out at strategic points throughout the Southeast during the past two decades with attendance in many instances running to more than 1,000 for a single meeting. It is noteworthy that in every case where these wood utilization programs were conducted there resulted a marked increase in the production and shipment of pulpwood and other forest products from the surrounding areas. Additionally, these demonstrations have resulted in an upsurge of interest on the part of landowners in instituting improved forest practices.

Total forest acreage in the six Southeastern States amounts to 113 million acres, or a little more than 60 percent of the total land area. Farm woodlands, with small ownerships predominating, comprise 57 percent of the timber holdings. There are more than 800,000 such small ownerships in the area.

To engage the active interest and participation of these numerous small owners in instituting sound forestry measures is an educational problem of the first order. Pulp and paper companies and other large owners of timberland have inaugurated their own programs for forestry improvement under the direction of trained foresters. Obviously, the problem of the small farmowner is considerably different.

To meet this situation Seaboard started an educational program with the farm youth of the Southeast some 16 years ago, a movement which has achieved profound results. One phase of the farm youth program involved the inauguration of forestry contests in the various States served by the railroad in which cash prizes ranging from first, second, and third to fourth are awarded to winners under rules set up by the Seaboard's general forestry agent in conjunction with State forest agencies and Future Farmers of America. In addition to the giving of cash prizes to the winning youths, cash prizes are also awarded to the teachers of vocational agriculture in the classes from which top winning youths are selected.

In this program more than 85,000 youths are reached directly every year. The top winners in these forestry contests are taken to Kansas City each fall to the national convention of the Future Farmers of America where the winning youths appear before civic and business organizations to tell of their individual projects and how they have learned the lessons of sound forestry. These appearances before civil groups and other organizations have recently been extended to include other important cities.

The railroad's program includes the publication of a forestry bulletin—the first of its kind in the country—carrying to a readership of 100,000 regular messages on forest conservation subjects.

Interest in forestry in the Southeast was never greater than at the present time. The economic value of the forests to the region can scarcely be exaggerated. The problem of future timber supply continues to be one of education. In a recent address before the American Pulp & Paper Association in New York City, Dr. Richard E. McArdle, Chief, U.S. Forest Service, pointed up the vital aspects of future timber supply in saying:

"I am not predicting a timber famine. I am talking about an adequate supply. It means a conscious effort, however. The decisions you make in the sixties will be irretrievable.

"You are entering a decade of decision as to our long-range timber supplies. Don't let these decisions be made for you by default. Take positive action."

Notwithstanding the marked progress achieved in forestry during the past two decades, it is the opinion of competent authorities that the South realizes only a fraction of its potential in the growing of timber. The U.S. Forest Service has estimated that within the next two decades the country's demand for forest products will be twice that of today. Only with the general adoption of intensive and sound forestry measures can this demand be met. It is the Seaboard's objective through its forestry program to contribute to the fullest possible extent toward the achievement of this goal.

Khrushchev Looks at Neutrals

EXTENSION OF REMARKS

OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1961

Mr. DERWINSKI. Mr. Speaker, we can often learn through the remarks of statesmen throughout the world, even a butcher turned statesman such as Nikita Khrushchev. The Chicago Daily News of April 24, 1961, contained a most penetrating editorial entitled "Khrushchev Looks at Neutrals," which I hope will be noticed especially by our misguided eggheads in the State Department:

KHRUSHCHEV LOOKS AT NEUTRALS

"There are no neutral men." This comment by Nikita Khrushchev, dropped in the course of a talk with Walter Lippmann, explains a great deal about current Russian diplomacy. It also raises a great deal of doubt that any agreement at all can be reached with Russia.

It explains why Khrushchev has demanded a tripartite committee to direct the United Nations Secretariat, and why a similar demand for a council of three is one factor

blocking the nuclear test ban talks at Geneva.

Whether Khrushchev has just reached this conclusion or whether he now, for the first time, feels strong enough to bring it out in the open, we have no way of knowing.

Until last year, Russia concurred in supporting a neutral at the head of the U.N. operations, despite some complaining. The demand for a three-headed monstrosity did not arise in the test ban negotiations until this spring.

In each case, Khrushchev proposed that one representative be picked by the West and one by the Communist bloc, and that the third represent neutral nations. But if there are no neutral men, the proposal becomes a meaningless smokescreen.

The neutral representative, according to Khrushchev, would automatically favor one side or the other and hence become a potentially dangerous partisan. He, too, would have to be neutralized, and Khrushchev has a method for accomplishing it.

His way would be to require unanimous approval of every measure before it could become effective. In short, a lone Russian negative vote would be a veto paralyzing any action of which Russia disapproved.

The idea that "anyone who is not for me is against me" is not exactly new in the world. It crops up everywhere—in labor disputes, in baseball umpiring, and court cases.

But at some point in disputes of any kind it becomes essential to have arbitrators able to see both sides. Khrushchev would seem to rule out any kind of meaningful abritration on the international scene.

It is ironic that this Khrushchev doctrine should emerge just when the Kennedy administration has taken a different policy turn on neutrality. The present tendency in Washington is to regard neutrals with much less suspicion than when John Foster Dulles held sway.

But if the only neutralist acceptable to Khrushchev is to be one he knows to be neutral on his side, some revival of our own suspicions may be in order.

Freeport, Tex., Pilot Plant for Sea Water Conversion Could Prove To Be of International Importance

EXTENSION OF REMARKS
OF
HON. RALPH YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, May 4, 1961

Mr. YARBOROUGH. Mr. President, there is an old proverb which warns that "when you are thristy it is too late to start thinking about digging a well."

As a nation we are not yet generally thirsty for water, but we can seee the day not far off when we must have additional water.

Today we are consuming 60 percent of the Nation's fresh water and over 1,000 cities and communities in recent summers have had serious water shortages. At the present rate of increase in consumer consumption, America will be using 90 percent of all presently available fresh water by 1975.

A one-family house of four people uses 550 gallons of water a day; it takes 37 gallons of water to produce one slice of bread, and 3,700 gallons of water to produce 1 pound of beef.

Our scientists tell us that the real answer, the key to a bold new advance in human achievement, lies in learning how to economically convert sea water into fresh water.

If America can be the first to develop a cheap way to give the arid areas of the world fresh water from salt or brackish water, it will mean invaluable prestige for the forces of democracy. Water which would make the deserts blossom as the rose, would mean food for the hungry millions, and it would dwarf most other technological achievements of recent decades.

Texans are proud that a pilot sea water conversion plant in Freeport, Tex., is scheduled to be dedicated sometime next month. Mr. Frank Carey, Associated Press science writer, recently wrote a highly informative article on the saline water conversion program.

I ask unanimous consent to have printed in the Appendix of the RECORD Mr. Carey's article, which was published in the April 16, 1961, issue of the Abilene, Tex., Reporter-News under the heading "Ways of Converting Salt Water Get Special Study."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Abilene Reporter-News, Apr. 16, 1961]

FREEPORT PLANT IS FIRST—WAYS OF CONVERTING SALT WATER GET SPECIAL STUDY

(By Frank Carey)

(EDITOR'S NOTE.—It's as simple as H_2O: The United States is running out of water. Realizing that, scientists have for years been talking about converting the oceans to fresh water. But now they're not just talking. They're doing something about it.)

WASHINGTON.—President John F. Kennedy, an old PT boat commander and sometime yachtsman, wants to use the seas to meet a growing national problem.

The Kennedy administration has pledged itself to redouble the Nation's efforts to achieve the long-sought breakthrough in converting the ocean's salt waters to fresh.

Since 1952, the Government has had a formal program aimed at economically converting saline water.

Officials of the Interior Department's Office of Saline Water say sensational breakthroughs have yet to be achieved—and that none are foreseen for at least the next few years. They add, though, that progress has been, and is being, made despite a research and development budget which is just about the same as that earmarked for running the Washington zoo.

The Office soon will put into operation at Freeport, Tex., the first of five big demonstration plants planned for various parts of the country. The plants are to produce the first big-league data on the cost of different conversion processes. At the same time they will add nearly 3 million gallons daily to the country's water supply.

These plants cost about $6 million in all. Still more promising ideas are cropping up in laboratories.

It's in this setting that President Kennedy has promised new action and has urged Congress to double appropriations for saline water research and construction.

Impending shortages are such, says a new report by the Senate's Select Committee on National Water Resources, that the Nation may be in real trouble by 1980 unless prompt action is taken. But a report issued by the House Science and Astronautics Committee says the danger may arise by 1970 or before.

The Senate committee puts the figures this way: The United States now uses about 300 billion gallons of water a day—enough to cover Rhode Island with more than a foot of water—out of some 1,100 billion gallons available in streamflow. The demand is expected to nearly double in 20 years, and triple by 2000.

The House committee says only about 50 percent of the water supply is usable, so that in 1980, only about 515 billion gallons a day will be available, against at least 600 billions gallons required.

INCREASED EFFORTS ASKED

President Kennedy plunged into the troubled waters in a special message to Congress calling for increased efforts to conserve and develop all the Nation's natural resources—including water.

He also has asked the National Academy of Sciences to evaluate present research of all the Nation's natural resources.

Authority also is sought for the office to build perhaps five more big plants in addition to those already scheduled for Freeport, San Diego, Calif.; Roswell, N. Mex.; Webster, S. Dak.; and Wrightsville Beach, N.C.; Hawaii and Key West, Fla., are reportedly among sites under consideration.

The just completed plant at Freeport, uses a form of distillation, a modern variation of the age-old process of boiling water. It's expected to produce at least 1 million gallons of fresh water daily at a cost of $1 per 1,000 gallons.

That cost is far higher than the 25 to 40 cents which most municipalities charge for water from conventional sources. But, the Office of Saline Water says its engineers figure that if the Freeport plant, or one like it, were increased to a capacity of 15 million gallons a day, the price would drop to 50 cents. And this would make it economically attractive to places like Key West which already pay $1 or more.

Even in the present plant, they say, the cost ultimately may turn out to be 70 cents instead of a dollar—provided some recent developments at a pilot plant that eliminate distillation-slowing chemicals work out on a large scale.

Officials stress, however, it's not really valid to make comparisons with present rates for conventional fresh water. They maintain that saline conversion costs are going to look better and better as the population keeps growing, costs of conventional water plants go up, and natural water supplies get slimmer.

The plant being built at San Diego, scheduled for completion this summer, will employ another form of distillation known as the flash process. It's also supposed to turn out 1 million gallons a day at $1 per 1,000 gallons.

Still another type of distillation plant at Roswell, N. Mex., will convert brackish water to fresh at an anticipated rate of at least 250,000 gallons a day starting sometime next year.

Let's Woo Castro

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 4, 1961

Mr. DEROUNIAN. Mr. Speaker, the following article in today's Wall Street

Journal by William Henry Chamberlin shows some of the feelings of students at Harvard on Cuba. Because of the great number of Harvard alumni in positions of power and influence in the administration, the article is especially appropriate:

LET'S WOO CASTRO—SHENANIGANS AT OLD HARVARD WHERE YESTERDAY'S IDOLS TODAY ARE TUMBLED

(By William Henry Chamberlin)

CAMBRIDGE, MASS.—Harvard University, which provided so much of the brainpower for the Kennedy administration, has also become a main center of protest against and dissent from the administration's Cuban policy.

A be-nice-to-Castro movement has acquired momentum under the leadership of some Harvard professors and with the support of a small but vociferous minority of Harvard students. A recent meeting in one of the larger university classrooms attracted an audience of 300 to 400 which roared applause for "no intervention" speeches by H. Stuart Hughes, professor of history, and Nadav Safran, assistant professor of government. The meeting sent 127 protesting telegrams to Washington and voted in favor of a resolution calling for a reversal of "the present drift toward American military intervention in Cuba."

The idea developed in the rather lengthy 4-point resolution and in the addresses at the meeting was that, if the United States would only be nice to Castro and restore diplomatic and trade relations, the bearded Cuban dictator would detach himself from the Soviet bloc, and all would live happily ever afterward.

PICKING HOLES

A distinct Harvard versus Harvard attitude developed during the meeting. One of the speakers, Mr. Safran, devoted most of his address to trying to pick holes in the American white paper on Cuba, commonly attributed to ex-Harvard historian and professor, Arthur Schlesinger, Jr. References to an illustrious historian, who was accused of having lost his objectivity when he left the halls of Harvard for the corrupting influence of Washington in general and the Pentagon and the CIA, in particular, drew bursts of knowing derisive laughter.

Mr. Schlesinger once wrote a book entitled "The Vital Center" and now seems to find himself in that spot. His name would scarcely arouse cheers at a meeting of Goldwater Republicans; but some, at least, of his Harvard former colleagues and students regard him as a traitor to the liberal cause because he dealt harshly with the Communist affiliations of the Castro regime in the white paper.

Professor Hughes, a grandson of the former Chief Justice, an advocate of nuclear disarmament, even on a unilateral basis, called for "a few resounding resignations," beginning with Adlai Stevenson, whom he mourned as "a great American who has been reduced to the level of a shyster lawyer pleading a bad case." Hughes also professed sympathy with such ex-Harvard professors-ambassadors as John K. Galbraith in India and Edwin O. Reischauer in Japan, declaring that the President had pulled the rug from under them and made them look like "utter fools" before they had fairly started on their diplomatic tasks.

While Safran concentrated on attacking the accuracy of the white paper and minimizing the Communist affiliations of the influential leaders of the Castro regime, Hughes took the line that it is necessary to live with distasteful foreign governments. He cited the British adjustment to Nasser after Suez, DeGaulle's willingness to come to terms with the Algerian nationalists, and Soviet acceptance as a neighbor of Turkey, anti-Communist and heavily supplied with American military equipment.

This meeting was the climax of a campaign marked by editorials and letters to the university daily newspaper, the Harvard Crimson, which, in the opinion of conservative Harvard alumni, is apt to justify its name. Barrington Moore, Jr., lecturer in sociology, expressed the view that the American-supported landing in Cuba "places the United States squarely in the position of an ancient regime trying to put down by force a revolutionary government seeking to raise the material position of a people who were in substantial measure victims of past American policies."

MR. MOORE'S SUMMATION

Mr. Moore forsakes the traditional restraint of academic language and ends: "Are we not at the point where one should cease mincing words in the alas so frequently graceless minuendo of academic debate, and say simply and brutally, this stinks?"

There is no indication that a majority, or even a large minority, of Harvard faculty and students have been caught up with the idea that Castro could be successfully appeased.

However, some of the arguments that are being used in supporting the pseudo-sophisticated idea of weaning Castro from the Communists suggest that another white paper might be in order.

For instance, it is generally believed among the dissenters from the Eisenhower-Kennedy policy that Castro was driven to make deals with the Soviet Union by the cancellation of the preferential sugar quota and the U.S. embargo on much Cuban trade. But this puts the cart before the horse. It was only after Castro had made large commercial and munitions deals with the Communist powers, confiscated almost all American property in Cuba and placed himself aggressively in the Communist camp that measures of economic reprisal were applied, perhaps a little belatedly.

For the sake of dissenters who are open-minded and of American and world public opinion, a detailed, documented survey of United States-Cuban relations since Castro came into power would be very desirable. The case for the proposition that Castro's commitment to the Communist cause was too strong to be shaken by anything the United States might have done would only be strengthened by a full factual record.

And this might help to decide some wavering minds in Latin America, if not here at Harvard.

The Democratic Party's Dilemma

EXTENSION OF REMARKS

OF

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 4, 1961

Mr. GUBSER. Mr. Speaker, under leave to extend my remarks I submit herewith a thoughtful letter from my constituent, Mr. Henry U. Chace.

Since the first and last paragraphs of the letter are personal, I have deleted them.

The letter follows:

Hon. CHARLES S. GUBSER,
Representative in Congress,
Washington, D.C.

DEAR MR. GUBSER: The news of the past few days indicates that we are entering into a very dangerous period that could very easily mean war. It is certainly true that we cannot long permit a Communist state to exist 90 miles from the Florida coast even if it means military intervention. No matter what we do we cannot make friends of the so-called neutralist nations but at least we can command universal respect for protecting our own security and the democratic foundations of our country and in fact the entire hemisphere. President Kennedy should have everyone's support in pursuit of his aims to prevent any further incursion in this hemisphere of Communist power or influence, but from the point of view of the Republican Party and particularly of conservative Republicans, with reservations. The welfare state legislation now flooding both Houses of Congress according to your newsletter received yesterday, is just as dangerous to our freedom and liberty at home as the importation of communism is from abroad. These measures are a part and continuation of an insidious erosion process to our liberties guaranteed to us under the Constitution that has been proceeding ever since the first Roosevelt (F.D.R.) administration, and if not checked in the very near future will successfully accomplish the abolishment of freedom and liberty at home just as surely as would a takeover by communism from abroad. This is the eternal paradox with which the Democratic Party is faced—to fight communism abroad but create socialism at home. So I say it is entirely inconsistent and Republicans should fight for a consistent policy of freedom and liberty on all fronts. This, I know you intend to do with all your strength but can't the Republican Members of Congress use the paradox to help defeat this infernal socialist legislation. I just can't see how or why American families should be asked to send their sons to fight for liberty, freedom, and the American way of life when we are destroying these very things at home.

Of course the Democrat pat answer is that these measures are for the benefit of all citizens and our retort is that they won't work. Witness 30 years of agricultural controls and farm legislation which simply cannot work in an otherwise free economy and which has resulted in such an awful mess that 8 years of Republican rule couldn't untangle it. The tortured Supreme Court decisions supporting such legislation must inevitably be reversed by another Court at some future time, not too distant I hope if we are ever to return to constitutional Government. In fact the history of the Court itself indicates that this will be done in the future if we do not lose our freedom first. Many of the great minds of the past have commented on this subject in their writings, including John Adams the second President and Thomas Jefferson the third in one of his letters to George Washington.

Adams had this to say in his defense of John Hancock who was a large colonial merchant and shipper when he had violated one of the British laws against the importation of tax free rum from the West Indies. "My client, Mr. Hancock, never voted for it and he never voted for any man to make such a law for him". In England a bill could not become law without the consent of the people. The authors of the act acknowledged this, then got round the point by declaring for consent by construction, by interpretation rather than by vote—a virtual consent. This Adams argued, "is deluding men with shadows instead of substance. Construction has made treason where the law made none. Whenever we leave principles and clear, positive laws, and wander after constructions, we get too far from fact and truth and nature. We are lost in the wild regions of imagination and possibility, where arbitrary power sits upon her brazen throne and governs with an iron scepter" In the light of this statement you can draw

your own conclusions about some of the Supreme Court decisions of the last 30 years. Of course Adams, in later years was a federalist and therefore a member of the party which supported a loose construction of the Constitution. John Marshall as the First Supreme Court Chief Justice supported some of the early legislation including the act creating the Bank of the United States which was a very loose construction decision. Still, in later years the charter of the Bank was allowed to lapse and was not renewed, as by that time it was obvious to most people that the power granted to Congress under the Constitution to coin money and regulate the value thereof did not extend to an actual participation in the banking business in direct competition with private citizens.

Thomas Jefferson had this to say in a letter to Washington concerning various legislative powers granted to the Congress under the Constitution: "The Congress is empowered to lay taxes to provide for the general welfare of the United States; that is to say, to lay taxes for the purpose of providing for the general welfare. For the laying of taxes is the power, and the general welfare the purpose for which the power is to be exercised. They are not to lay taxes ad libitum for any purpose they please, but only to pay debts or provide for the welfare of the Union. In like manner, they are not to do anything they please to provide for the general welfare, but only to lay taxes for that purpose. To consider the latter phrase, not as describing the purpose of the first, but as giving a distinct and independent power to do any act they please, which might be for the good of the Union, would render all the preceding and subsequent enumerations of power completely useless. It would reduce the whole instrument to a single phrase: that of instituting a Congress with power to do whatever would be for the good of the United States; and as they would be the sole judges of good and evil it would also be a power to do whatever evil they please.

"I consider the foundation of the Constitution as laid on this ground that all powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States or to the people."

Very truly yours,

HENRY U. CHACE.

LOS ALTOS, CALIF.

Washington Post Warns of Fear of Freedom

EXTENSION OF REMARKS
OF
HON. RALPH YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, May 4, 1961

Mr. YARBOROUGH. Mr. President, our incomparable system of Government by consent of the governed will work only so long as we retain our basic freedoms of speech, press, religion, and the other guarantees of liberty.

We know that whenever and wherever they can, informed men will be free men. Ignorance and secrecy are the greatest threats to free society.

Believing this, I was strongly impressed with the lead editorial in this morning's Washington Post, which begins:

The saddest consequence of a month of adversity is that some Americans have been led to question the very validity of our free institutions. Some wonder, for example, why reporters should be allowed at Cape Canaveral during the launching of an astronaut. Suppose there is a mishap, they ask, why should the United States humiliate itself in public? Isn't it preferable to follow the quiet examples of publicity only for success?

The Post editorial then goes on with a penetrating analysis of the situation, pointing out:

Ultimately, this country's greatest resource is precisely the fact that its achievements, as well as its failures, are subjected to public scrutiny. Thus we can glory in our victories, and profit from our setbacks.

More than ever, it is imperative to reassert our faith in the utility as well as the morality of freedom. Lincoln: Our defense is the spirit which prized liberty as the heritage of all men in all lands everywhere.

To assure that Americans across the Nation will have the opportunity to consider this excellent editorial, I ask unanimous consent to have printed in the Appendix of the RECORD the aforementioned editorial, entitled "The Fear of Freedom" from the May 4, 1961, issue of the Washington Post.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Post, May 4, 1961]

THE FEAR OF FREEDOM

The saddest consequence of a month of adversity is that some Americans have been led to question the very validity of our free institutions. Some wonder, for example, why reporters should be allowed at Cape Canaveral during the launching of the astronaut. Suppose there is a mishap, they ask, why should the United States humiliate itself in public? Isn't it preferable to follow the Soviet example of publicity only for success?

Let us suppose that President Kennedy were indeed persuaded to take a leaf from Mr. Khrushchev's propaganda book and place a curtain of censorship around the launching. Would the country be better off if a simple press release were handed out announcing that a man had been placed in space, and that some day the Government might tell more about it? Would the Voice of America resound more persuasively in telling the world of an experiment conducted in secrecy and confirmed by White House subalterns?

Or would we be in the position in which the Soviet Union now finds itself? Major Gagarin's feat has been robbed of some of its luster by persistent rumors that others have preceded him, with less fortunate results. There is a Gresham's law in Soviet propaganda. The lies cheapen the truth, dissolve the barrier between fact and wishful fiction, and foster cynicism.

The effect on Russian life is described in a timely article in the current Harper's by Richard Pipes, a member of Harvard's Russian Research Center. In the absence of a free press, Dr. Pipes remarks, the Soviet citizen is "profoundly skeptical" of government claims.

Statistics have been so atrociously manipulated for the past 40 years that they are widely ignored—much as we in this country discount advertising claims.

Many people, especially the more sophisticated, even question Soviet achievements in rocketry and space exploration.

Ultimately, this country's greatest resource is precisely the fact that its achievements—as well as its failures—are subjected to public scrutiny. Thus we can glory in our victories, and profit from our setbacks. If our astronaut succeeds in his mission, there will be no skepticism about our claim. If the experiment fails, the President will find an aroused public opinion to support greater efforts in the race.

Furthermore, the fact that we are trailing the Soviet Union has created a popular interest that cannot be ignored by either the press or the Government. Indeed, agencies of Government have whetted this interest—and did not the Government encourage the astronauts to sell the tales of their adventures? If the administration remained silent, there would be a loss of confidence in both the press and the Government—and a feeling that concealment was protecting the incompetent or masking a disaster.

More than ever, it is imperative to reassert our faith in the utility as well as the morality of freedom. As Lincoln recognized a century ago, our ultimate security does not rest in "our frowning battlements, our bristling seacoasts, our Army and our Navy." Instead, contended Lincoln: "Our defense is in the spirit which prized liberty as the heritage of all men, in all lands everywhere. Destroy this spirit and you have planted the seeds of despotism at your own door." And the first seed of despotism is to deny the people the information that is essential to giving their Government the credit as well as the criticism it may deserve.

Federal Control

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 4, 1961

Mr. DEROUNIAN. Mr. Speaker, there has been a great deal said about Federal spending and Federal control, and here is an editorial, as it appeared in the Wheeling Intelligencer on April 24, that is sensible and factual:

[From the Wheeling Intelligencer, Apr. 24, 1961]

INEVITABLE: CONTROL FOLLOWS PURSE STRINGS WHETHER IN MEDICAL AID TO AGED OR SUPPORT OF PUBLIC SCHOOLS

Secretary Ribicoff, accusing the American Medical Association of misrepresenting the administration's medical care for the aged plan, dismisses as "completely without basis," the warning that its adoption would constitute a step toward socialized medicine.

This has become the theme song of the administration's new campaign for support of a program which threatens to bog down in Congress, an effort of which Mr. Ribicoff appears to have assumed leadership. He hammered on this point in an address before the American Society of Newspaper Editors as he has in several others recently accusing the AMA of "trying to make a hobgoblin, out of a sound and constructive plan designed to remove one of the major causes of economic misery in old age—the frightful costs of illness."

Pointing out that "under the President's bill every person has the right to choose his own doctor and his own hospital, that every doctor will treat his own patient exactly as he does now," Mr. Ribicoff added that doctors must know "the simple fact that this legislation has nothing whatever to do with doctors' bills."

It would be interesting to know, then, inasmuch as it seems to be assumed the medical profession is entirely selfish in its viewpoint, why it is opposing the bill.

The truth, of course, is that Mr. Ribicoff's disclaimer has no more substance than the

equally vehement assertion of those who support the President's aid to the schools bill, including Mr. Ribicoff, that its adoption would not mean Federal interference in school affairs.

Control follows the purse strings. When Congress appropriates money from the tax payments of all of the people to be distributed among lesser units of Government, it lays down the conditions under which this money may be used. It not only has the right and disposition to do this, but the public responsibility to do so. Any Congressman who would vote money to be passed down to a State or a county or a school district or a municipality to be used in whatever way the officials of these units saw fit to spend it, would be unworthy of the position he occupies. No Congress ever has or can be expected to pursue such an irresponsible course. There are and must be strings to Federal grants. And these strings, whatever lipservice to local independence accompanies their attachment, lead back to Washington. It cannot be and should not be otherwise. So if we accept the principle of Federal assistance in support of our schools we must accept the corollary of Federal dictation.

Similarly, when Congress writes into law an all-embrasive, compulsory system of medical care support by incorporating it into the social security system and imposing taxes specifically to finance it, we are deluding ourselves when we see it in none of the characteristics of socialized medicine.

Federal intrusion might appear minimal at first in both cases, but once the course has been set we are blind indeed if we cannot see the ultimate destination.

Governor Rockefeller's Comment on Tax Advantages to Holders of Stock Options

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, May 4, 1961

Mr. GORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter I have today received from Governor Rockefeller together with a statement which he attaches thereto.

There being no objection, the letter and statement were ordered to be printed in the RECORD, as follows:

STATE OF NEW YORK,
EXECUTIVE CHAMBER,
Albany, May 1, 1961.

DEAR SENATOR GORE: Thank you for your telegram. Enclosed is the text of the remarks to which you refer.

As I believe you will agree, no "rebuke" or "reprimand" was intended or implied.

Sincerely,

NELSON A. ROCKEFELLER.

EXCERPT FROM GOVERNOR ROCKEFELLER'S REMARKS AT DEDICATION OF IBM RESEARCH CENTER YORKTOWN, N.Y., APRIL 25, 1961

Stimulation of economic growth has been the central focus of my administration as Governor of the State of New York. An example of the kind of step that I have been trying to take in this State was an act to amend the tax law in relation to employees' stock options, and I'd like to read to you from my message that I made in connection with this last year:

"In passing this bill with but one dissenting vote, the legislature has recognized, as do I, the great significance of employee stock options as an incentive in attracting top-flight management to New York corporations. It is well recognized today that one of the greatest problems of business is to obtain first-grade managerial and executive talent. Businesses weigh this factor heavily in deciding where to locate or expand.

"We cannot expect to induce new industry to locate here, or to encourage existing industry to expand here unless we provide a tax framework reasonably calculated to maintain incentives.

"This expansion of business is essential to creating increased job opportunities in this State."

End quote from my statement of April 24, 1959. I read by the press that a certain southern Senator is advising us in New York State what we ought to do. Maybe he is a little worried about the competition up here in trying to attract some industry away from New York State. But I'd like to say that the results have been increasingly encouraging, here in the State, of this program of encouraging the climate for economic growth.

Mr. GORE. Mr. President, I am sure that Governor Rockefeller intended no patronizing remark when, speaking in New York, he referred to me as "a certain southern Senator." Therefore I shall not, when speaking in Tennessee, refer to him as "a certain Yankee Governor."

I should like to comment for a brief moment on Governor Rockefeller's statement with respect to the New York law, which provides tax advantages to holders of stock options. His statement refers to "employees' stock options." However, the very next paragraph deals with options held by corporation executives. Usually options granted to employees differ greatly from the options granted to the officers and key personnel. It was to restricted stock options and tax favoritism accorded them to which I had addressed my remarks.

Social Security Amendments of 1961

SPEECH
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
April 20, 1961

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 6027) to improve benefits under the old-age, survivors, and disability insurance program by increasing the minimum benefits and aged widow's benefits and by making additional persons eligible for benefits under the program, and for other purposes.

Mr. VAN ZANDT. Mr. Chairman, because of my constant interest and efforts to improve the Social Security Act during my congressional career I rise in support of H.R. 6027 as reported by the House Committee on Ways and Means.

While it is true the pending legislation does not accomplish many hoped for objectives its provisions contain needed improvements to existing law and provide for increases in benefits that will prove helpful to those eligible for them.

Despite the desire for greater liberalization of the Social Security Act it must be borne in mind that Congress is faced with the problem of safeguarding the financial condition of the Social Security fund in considering amendments that extend coverage, liberalize eligibility requirements and increase present benefits. In this connection H.R. 6027 provides for limited liberalization of the present law and increasing benefits the cost of which will be financed by an increase beginning in 1962 of the contribution rates of one-eighth of 1 percent each for employees and employers and by three-sixteenths of 1 percent for the self-employed.

During my congressional career I have advocated reducing the eligibility age to 60 years on an optional basis and have introduced legislation on the subject in the present and in previous Congresses. It is gratifying, therefore, that H.R. 6027 provides optional retirement for male employees at age 62 even though benefits are reduced to 80 percent of benefits accruable at age 65. While I would prefer full retirement benefits at age 62 it is realized that the cost factor had to be taken into consideration in computing the total cost of H.R. 6027.

In considering retirement for men at age 62 it should be kept in mind that such a provision is not mandatory but optional. It has been estimated that the group covered by this optional retirement numbers 560,000. This provision will prove helpful to persons whose health does not permit their employment yet they are unable to meet the exacting requirements for disability benefits under the current provisions of the Social Security Act. Many persons in this category are forced in their economic misery to wait until they reach age 65 to qualify for benefits under the existing law. Therefore, optional retirement at age 62 will prove an economic blessing.

It is a source of regret that it was not possible to secure action this year on revising the requirements for disability benefits. It is evident that such a revision should be made and I am hopeful that consideration will be given to what I consider a compelling problem.

While the House Committee on Ways and Means found it not feasible at this time to further liberalize the income ceiling for retired persons, I am hopeful that consideration can be given the subject at the first opportunity. It is of particular interest that benefits will be increased under the provisions of H.R. 6027 for aged widow's, widower's, and parent's benefits from 75 to 82½ percent of the worker's retirement benefits which according to House Report No. 216 represents a 10-percent increase in benefits for these people. The particular provision will affect a total of 1,525,000 persons.

The increase in the widow's benefit is timely and sorely needed. The average benefit for an aged widow is $57.80 while a retired worker without dependents receives $70. H.R. 6027 would increase the average widow's benefit to $64.

Among the 4,420,000 people to benefit by the provisions of H.R. 6027, 2,175,000 will benefit by the increase of the minimum benefit from $33 to $40 monthly.

Another provision of H.R. 6027 changes the insured status requirement from 1 out of 3 quarters which is required under existing law, to 1 out of 4 elapsed quarters after 1950. This provision will make eligible 160,000 more people than are presently eligible for benefits.

Since my congressional district in Pennsylvania, from a percentage standpoint, has one of the largest railroad populations in the Nation, the effect of H.R. 6027 on persons retired under the Railroad Retirement Act is of great importance. Briefly, beneficiaries under the Railroad Retirement Act will be affected by H.R. 6027 as follows: 156,000 will receive $13 million in added benefits during the first year the revised schedule is in effect. In addition, over 140,000 survivor beneficiaries, mostly aged widows, will receive an average monthly increase of $7. Their additional benefits in the first 12 months will total about $12 million. Finally, the increase in the minimum primary insurance amounts from $33 to $40, and providing optional retirement for men at age 62 will represent $1.4 million in benefits for 15,500 former railroad workers.

As stated previously, we are conscious of the fact that the House Committee on Ways and Means was confronted with the cost factor in considering proposed amendments to the Social Security Act. It is my opinion that H.R. 6027 represents the best possible result that could be achieved and at the same time keep the increase of payroll taxes to a minimum. Therefore, I am in favor of the enactment of H.R. 6027, as I feel the increase in benefits for beneficiaries under the Social Security and Railroad Retirement Acts is badly needed and will at least to some degree prove helpful in the face of rising prices and the evils of inflation.

Legislative History of Bill of Rights of Labor-Management Reporting and Disclosure Act of 1959

EXTENSION OF REMARKS
OF

HON. JOHN L. McCLELLAN

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, May 4, 1961

Mr. McCLELLAN. Mr. President, almost 2 years ago the Labor-Management Reporting and Disclosure Act of 1959 was enacted. In many respects this legislation is supplementary to the Labor-Management Relations Act of 1947.

The enforcement responsibility was divided between the National Labor Relations Board and the Department of Labor, depending on the type of action required. It is proper for the agencies of Government having enforcement responsibilities to prepare legislative histories of the pertinent statutes.

Title I of the Labor-Management Reporting Act of 1959 is captioned the "Bill of Rights." By its very nature, no agency of the Government has enforcement responsibility since action under this title must be initiated in court by individual union members. For this reason, until now there has been no legislative history prepared.

To obtain maximum effectiveness, it is extremely important that rank-and-file union members and their counsel are informed adequately concerning their rights under this title. Congress intended to place within the grasp of these union members the legal means to preserve their rights and, obviously, they will be able to accomplish this better, if they are better informed.

Mr. Stuart Rothman, general counsel of the National Labor Relations Board, has prepared a legislative history of this "Bill of Rights," which is title I of the act. In so doing, Mr. Rothman has performed a valuable public service. In order that the study may be made available to interested attorneys and union members, I ask unanimous consent that it be printed in its entirety in the Appendix of the RECORD, together with the index which accompanies it.

I am informed by the Public Printer that the printing of the article in the RECORD will require 3¼ pages at a cost of $263.25. Notwithstanding that, Mr. President, I ask unanimous consent that it be printed in the Appendix of the RECORD.

The PRESIDING OFFICER. Is there objection?

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LEGISLATIVE HISTORY OF THE "BILL OF RIGHTS" FOR UNION MEMBERS

(By Stuart Rothman)

INTRODUCTION

The Labor-Management Reporting and Disclosure (Landrum-Griffin) Act of 1959 guarantees certain rights of union members in title I, entitled "Bill of Rights of Members of Labor Organizations."

Immediately upon the passage of the act by Congress, the Office of the General Counsel of the National Labor Relations Board (NLRB) commenced the collection and preparation for publication of the documents and debates which constitute the legislative history of the act. The two-volume legislative history that was published by this agency in 1959 [1] indexed by topic and section only that part of the legislative materials relating to the title VII amendments; with few exceptions, the indexes do not cover materials relating to titles I through VI of the act.

Title I, the so-called bill of rights of union members, is not administered by any Federal department or agency; it is enforceable by civil suits instituted by aggrieved union members. In view of this lack of an administrative agency to which the public may look for interpretation of title I—coupled with the absence of any published legislative history of the title—it was considered that the publication of a topical and sectional index, with page references to the NLRB's legislative history, would be a service to the public and particularly to those affected by the title. Such an index has been prepared and is appended hereto.

[1] "Legislative History of the Labor-Management Reporting and Disclosure Act of 1959."

It is rare for any important piece of legislation to be written in such clear, unambiguous language that resort to legislative history is not necessary, or at least appropriate, to determine what the language was intended to mean. In this respect, the bill of rights of union members is no exception.

I. PRELEGISLATIVE ORIGINS OF THE BILL OF RIGHTS

Although, strictly speaking, the legislative history of the bill of rights begins with the consideration of labor reform bills by Congress in 1959, this history is more meaningful if reference is made not only to prior congressional activity in the field, but also to noncongressional consideration and discussion of similar proposals.

Therefore, it may not be too much to say that the 1959 bill of rights was conceived as long ago as 1943. It was in that year that the American Civil Liberties Union (ACLU) published an 86-page pamphlet, entitled "Democracy in Trade Unions," which embodied the results of a survey by the ACLU's Committee on Trade Union Democracy.

The committee recommended a bill of rights for union members which was basically concerned with guaranteeing the right to membership in a union, the right of democratic participation in the conduct of the union, the right to protection against arbitrary disciplinary proceedings, and the right to fair and equal treatment as to placement in jobs controlled by the union.

During the 1947 House Labor Committee hearings on proposed amendments to the National Labor Relations (Wagner) Act, the ACLU submitted a bill of rights as a draft amendment to that act. The proposed amendment was primarily intended to assure "open" unions, regular and fair elections, full accounting of union funds, and protection of union members in their exercise of free speech in opposition to union leadership. Enforcement was to have been vested in the NLRB, which would have been empowered to revoke or condition certifications and to make unfair labor practice findings on the basis of charges brought by union members or applicants for membership.

After the first disclosures of improper union activities by the McClellan committee and related investigations, the AFL–CIO executive council in 1956 and 1957 adopted several "codes of ethical practices," the sixth of which dealt with "union democratic practices."

The ACLU adopted a new bill of rights on March 21, 1958, to comport with its new thinking with regard to problems which had arisen after its 1952 report. Section I of that bill of rights specifically set forth the right of union members freely to speak, publish, and assemble. In terms of the Landrum-Griffin Act, section I of the ACLU's bill of rights bore a close resemblance to section 101(a)(2) of the act, although the ACLU provision was more detailed. Similarly, section VI of the ACLU's bill of rights, relating to due process within the union, appears to have foreshadowed section 101(a)(5) of the act, although the ACLU provision was considerably more detailed than either section 101(a)(5) as finally enacted or the longer versions of that section which were originally proposed by Senator MCCLELLAN. Other sections of the ACLU's bill of rights, dealing with equal treatment by the union and with the right of members to vote and participate in meetings, likewise presaged provisions finally enacted in section 101(a)(1) of the act.

II. LEGISLATIVE HISTORY OF THE BILL OF RIGHTS

The McClellan committee investigations provided the impetus for the enactment of title I. Without these investigations it seems extremely doubtful that there would have been compelling pressure in Congress for any type of legislation relating to internal union

affairs. In March of 1958, the committee made five interim recommendations, one of which was for legislation to insure union democracy.

To carry out the McClellan recommendations, Senator Kennedy introduced S. 3974, the Kennedy-Ives bill, which was reported out by the Senate Committee on Labor and Public Welfare after extensive hearings on that bill and related bills. The Kennedy-Ives bill, however, did not deal with any of the major topics eventually embraced by title I of the Landrum-Griffin Act, and Senator GOLDWATER called attention to this in his minority views. Referring to the most recent ACLU report on the need for a union bill of rights, he criticized the Kennedy-Ives bill for failing to deal with such matters as freedom of speech and press, equal treatment of members, and union disciplinary proceedings.

Senator GOLDWATER's chief bill contained a separate title dealing with "democratic rights of union members and employees" (note the addition of "employees," i.e., nonmembers), the enforcement of which was to be almost completely entrusted to the NLRB.

When the Kennedy-Ives bill passed the Senate but failed to get past the House in 1958, the legislative wheels started rolling again in January 1959, with a new—but similar—labor reform bill known as the Kennedy-Ervin bill. This is the bill which, after complex legislative maneuvers, eventtually became the Labor-Management Reporting and Disclosing Act of 1959.

A. General history of title I

After subcommittee hearings on the Kennedy-Ervin bill and related bills had been closed in early 1959, Senator MCCLELLAN introduced a new and comprehensive bill which included a title I entitled "Rights to Be Guaranteed in Charters of Labor Organizations." The first part of this title dealt with "basic rights" of union members and was, for all practical purposes, the forerunner of the finally enacted bill of rights, although the McClellan version was somewhat longer and more detailed than the final legislation.

In his appearance before the subcommittee, Senator MCCLELLAN stated his belief that every union seeking representation or complaint rights under the National Labor Relations Act, as well as tax exemption, should comply with basic minimum standards set by Congress. These proposed standards, it should be noted, were not limited to protection of the specified basic rights, but extended to other provisions of title I of his bill which covered union elections, certain union funds, union meetings and conventions, and related matters dealt with in other titles of the final act. Also, it is noteworthy that the bill required union charters to contain these various guarantees, a sweeping provision that was finally watered down to a provision merely making inconsistent charter provisions "of no force or effect."

On April 14, the Senate Labor Committee reported out S. 1555 as its version of the proposed labor reform bill, but the basic rights section was not included and the committee majority report implicitly rejected such extensive guarantees of individual rights and intrusions into the internal affairs of unions. The minority, comprising only Senators GOLDWATER and DIRKSEN, protested that the bill did nothing to guarantee certain rights proposed by the ACLU—freedom of speech, press, and assembly; equal treatment of members; and due process in union disciplinary proceedings. The minority implied that it would press further for inclusion of such provisions, but subsequent events made this unnecessary.

During the Senate's consideration of S. 1555, Senator MCCLELLAN offered his "Bill of Rights" as an amendment thereto. This amendment was substantially similar to Title I of his original bill. The chief objection to the amendment, as stated by Senator Kennedy, was that the protection of the rights covered by the amendments were better left to existing State laws, to the Taft-Hartley Act, and to S. 1555. Senator Kennedy also argued that the provision for enforcement by the Secretary of Labor was inconsistent with the elimination of the scheme for Federal enforcement from the civil rights bill. Senator MCCLELLAN replied that the States would be ousted from jurisdiction by the principle of Federal preemption. His amendment was twice approved by a one-vote margin on April 22.

Two days later the Kuchel substitute amendment, a so-called compromise prepared by a group of nine Senators, was introduced and easily passed on April 25. Its main points of difference from the original McClellan proposals were:

1. The substitution of private civil suits for those filed by the Secretary of Labor;

2. The addition of language specifying the ways in which members have equal rights within the labor organization;

3. The addition of qualifying language, making a member's participation privileges in union affairs subject to reasonable union rules and regulations, and of similar language as to the handling of union meetings and members' rights of speech and assembly, thus presumably permitting the union to guard against antiunion activities within the union;

4. Transfer of the provisions relating to the right of candidates for office to inspect membership lists out of the bill of rights and into title IV, dealing with elections; and

5. The addition of a restriction on employer participation in civil suits, apparently intended to prevent union members from "fronting" for employers.

The bill of rights provided in the Senate-passed bill was evaluated and criticized by witnesses appearing before the House committee, which had been holding hearings on labor reform proposals for some time before the Senate passed its bill. As a result, the bill reported out by the House committee on July 23 contained several important modifications of the Senate bill:

1. The term "equal rights" was retitled "rights of [union] members," and these rights were further made "subject to reasonable qualifications uniformly imposed."

2. The section on "Freedom From Arbitrary Financial Exactions" was renamed "Dues, Initiation Fees, and Assessments," and the section was revised.

3. The House bill eliminated from the "Protection of the Right to Sue" section the 6-month time limit imposed by the Senate bill on a union's right to require a member to exhaust "reasonable" internal union procedures before resorting to court action, but a similar limitation was written into section 102 (which provides for private suits to enforce all section 101 rights).

4. The House bill provided that procedural safeguards, such as the requirements of a fair hearing on written charges, would come into play after a member was fined, suspended, or otherwise disciplined (rather than as prerequisites to such disciplinary action), thus preserving the union's right to act summarily against wrongdoing officers or members.

5. The House bill eliminated the criminal sanctions provided by the Senate bill.

After some debate—which throws almost no light on the legislative history of the bill of rights from the House point of view—the House substituted the Landrum-Griffin bill for the House committee bill and passed it on August 14. With respect to the bill of rights, the Landrum-Griffin bill was substantially the same as the original Senate bill, except that it:

1. Adopted the House committee's version of the section on dues, fees, and assessments;

2. Modified the Senate provision for a time limit on union-compelled exhaustion of internal union remedies prior to suit by an aggrieved member, by reducing this limit from 6 to 4 months—presumably to permit resort to the NLRB if necessary;

3. Provided for criminal sanctions, but placed them in the catchall category of title VI, and limited their application to cases involving interference with members' rights by force and violence, or threats thereof;

4. Adopted the House committee's action in transferring to title I the paragraph relating to the unions' obligation to furnish copies of bargaining contracts (and in adopting this action freed the unions from criminal sanctions, in favor of civil enforcement by the Secretary of Labor); and

5. Eliminated from the bill's definition of the term "member," or "member in good standing," a person who had merely "tendered" the lawful requirements for union membership, thereby preserving a union's authority to determine who should be admitted to membership.

The conference report bill adopted the House version of title I in toto. This bill was enacted without change by the Senate on September 3, and by the House on September 4.

1. Section 101(a)(1)—Equal Rights

As originally introduced by Senator MCCLELLAN in his bill and repeated in his "amendment" (which passed by one vote), this section did not spell out in any detail the "equal rights and privileges" to be protected, except that they were to include "identical voting rights and equal protection of the union's rules and regulations"; there was no stated thought of preserving the union's right to make and enforce reasonable rules and regulations. The Kuchel compromise amendment, offered 3 days later, was identical with the provision as finally enacted, including the union's right as to rules and regulations. Senator KUCHEL made no explanation of the choice of rights and privileges set forth, but he did state that the McClellan provision was considered too broad, and that such equal rights as were not specified in the new paragraph were not being thereby taken away from members unless a Federal court determined that it was reasonable for the union to curtail such rights.

Several other Senators, including Senator Kennedy, stated for the legislative history that the enumeration of certain rights was not intended to have the effect of excluding other rights.

After the Kuchel version had been passed by the Senate, section 101(a)(1) was criticized by Senator GOLDWATER, on the ground that it was not sufficiently broad, and by Senator MORSE, on the theory that it unduly projected the "Federal Government" (apparently referring to the courts) into matters already handled by State courts under existing law.

2. Section 101(a)(2)—Freedom of Speech and Assembly

In its first legislative forms (the McClellan bill and amendment), section 101(a)(2) was broken down into two separate subsections dealing, respectively, with free speech and free assembly, both being more far reaching than was the final version. Not only were the detailed provisions which preserved the union's right to reasonable rules absent in the McClellan versions, but also there was included a broad freedom of members from "penalty, discipline, or interference of any kind." The freedom of speech and assembly provisions aroused considerable interest on the Senate floor only after the introduction of the Kuchel amendment, in which section 101(a)(2) emerged substan-

tially as finally enacted. Senator GOLDWATER expressed grave misgivings concerning the retention of the "reasonable rules" proviso because it would preserve the union's right to limit members' rights merely by constitutional or rules provisions. In rebuttal, Senator KUCHEL stated for the legislative history that this was not the intention of his group. When Senator GOLDWATER proposed an amendment having the effect of removing the proviso, several Senators opposed his proposal, and the matter was eventually resolved by deleting six words from the proviso.

3. Section 101(a)(3)—Dues, Fees, Assessments

The expression of legislative intent as to this section was almost nil, despite its length and its potential importance in the practical operation of union membership rules. Senator MCCLELLAN's first version was very brief (in direct contrast with the other subsections, which started out their legislative history by being long and general) and made no mention of intraunion procedures.

Senator MCCLELLAN's amended version was considerably expanded over his original one-sentence provision and foreshadowed section 101(a)(3) as finally enacted.

The Kuchel amendment retained and slightly rephrased the detailed procedures contained in the McClellan version, and eliminated the curb on initiation fees.

4. Section 101(a)(4)—Right To Sue

Both of Senator MCCLELLAN's versions of this clause were somewhat similar to the final one, except that they provided a 3-month limitation on the exhaustion of internal procedures and did not contain the interested employer proviso. Senator JAVITS raised the question whether any time period was necessary, to which Senator MCCLELLAN replied that he did not care what period was specified, provided that it was a definite one and was not so long that a union could obstruct the rights of its members.

At this point, the possible interplay of section 10(b) of the Taft-Hartley Act, which requires the filing of a charge within 6 months of an alleged unfair labor practice, had not been raised. The Kuchel amendment provided a 6-month period, but no explanation was offered and there was no discussion of this provision before its adoption by the Senate.

The House committee modified section 101(a)(4) by deleting the 6-month provision, but the same effect was apparently intended to be accomplished by the inclusion of a similar 6-month clause in the civil enforcement provisions of section 102, which is applicable to all rights. The committee also extended the scope of the employer proviso to prohibit any interference or attempts to interfere with a union's internal affairs.

The very first point discussed by Representative LANDRUM, in introducing the Landrum-Griffin bill as a substitute for the committee bill, was the exhaustion of remedies. The committee bill would have required available remedies to be exhausted before a suit could be filed, provided that the process did not extend as long as 6 months; the Landrum-Griffin bill would have allowed a member to seek immediate court redress after 4 months, in the words of Representative LANDRUM, "without the further delaying and dilatory route of exhausting union procedures," thereby providing "effective and timely relief." Representative GRIFFIN'S analysis of the bill pointed out that the 4-month substitute for the Senate provision was designed to preclude possible loss of the right to file a charge with the NLRB. Opponents of a time limit spoke against it on the ground that common law and union procedures, including appeals to national or international bodies at their conventions, should not be disturbed. Congressman MCCORMACK declared that protection of access to the NLRB was not necessary because the doctrine of exhaustion of internal remedies was not applicable to NLRB proceedings. The House eventually passed section 101(a)(4) in the form proposed by the Landrum-Griffin bill.

5. Section 101(a)(5)—Disciplinary Action

* * * Both of the McClellan proposals on safeguarding against improper disciplinary action were aimed at the same objective as the final law. However, they were considerably more detailed and provided more safeguards, such as more exhaustive internal procedures and the opportunity for independent final review by an outside tribunal. What Senator KUCHEL called cumbersome and unnecessary language therein was pared down greatly by the corresponding provision of his substitute amendment which became section 101(a)(5). * * * The conference report and chief conferees all made clear that section 101(a)(5) was not intended to apply to suspension of a union member's status as an officer of the union.

APPENDIX A.—*Sectional index to the legislative history of the "bill of rights"*

Section	Subject matter	Page [1]

Let's Put Some of the Blame Where It Belongs

EXTENSION OF REMARKS
OF
HON. GEORGE A. GOODLING
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 4, 1961

Mr. GOODLING. Mr. Speaker, yesterday the Congress passed a minimum-wage bill. It has been my contention that the most rabid proponents of this legislation have very little interest in those receiving a low wage. Their interest lies in using the increase in the minimum as a pry to raise those in the higher brackets. This, inevitably, will lead to another spiral of inflation.

Is not it about time we get around to demanding at least a minimum amount of effort from those receiving a maximum amount of pay?

Charges and counter charges have been made regarding our position in the space program. If we are in second place as some suggest and others deny, the reason for any controversy apparently can be traced to those who place self above country. If, in one particular instance, there have been 109 strikes in a 4½-year period, while we are in competition with those who do not condone strikes, it becomes rather obvious why a question of superiority should ever have been raised.

In order that the general public might become better acquainted with additional facts, I submit an editorial appearing in the May 3 issue of the Wall Street Journal as must reading.

The editorial follows:

FEATHERBED IN SPACE

As the United States tries to catch up with the Soviet man-in-space feat, the scandalous story of how union selfishness slows this country's space efforts continues to unfold in Washington.

Hearings before the Senate Investigations Subcommittee, said Chairman MCCLELLAN, have produced "evidence beyond any reasonable doubt" that unions at Cape Canaveral use strikes and work stoppages as blackmail to obtain fantastic overtime pay. In 4½ years, 109 strikes and uncounted slowdowns have occurred at the cape missile site. Making up for lost time has brought weekly paychecks of $600 and up for union workers.

Even at that outrageously inflated wage, some workers aren't delivering an honest day's work. The output of union electricians and other building trades workers at the cape, said contractors, was the lowest they had ever encountered. As a result, one technician testified, the U.S. man-in-space project has been delayed many months.

Unions at Cape Canaveral and other strike-plagued missile sites loudly protest their patriotism and promise self-policing. Meantime, they are lobbying hard for another safeguard for their featherbed. Under the administration-backed, common situs bill pending in Congress, strikes to enforce a secondary boycott at missile sites would be legalized.

Such selfish actions speak louder than any promise of self-restraint. And they help explain Senator MCCLELLAN'S indignant proposal that unions blackmailing the Nation's missile program be outlawed and stripped of their collective bargaining rights.

That is a harsh remedy. But at least it ought to alert the Nation to where union profiteering is putting the country's space program.

Post Office Problems

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Thursday, May 4, 1961

Mr. MONRONEY. Mr. President, as every Member of this body is aware, Congress has devoted much time and attention to the Nation's postal establishment.

One of the most vexatious problems occurs with respect to the proper relationship between revenue and expense.

The present chairman of the Post Office and Civil Service Committee, the senior Senator from South Carolina [Mr. JOHNSTON], and the ranking minority member, the junior Senator from Kansas [Mr. CARLSON], have each devoted a great deal of time and thought to the development of a permanent solution to the problem.

It was thought that the Postal Policy Act of 1958 went far in that direction. However, as we all know, that act has not been applied as intended.

I have in my hand an article by the distinguished columnist, Holmes Alexander, which appeared in the Charleston, S.C., News and Courier. This column discusses the problem in a direct and lucid manner. I think it so well presented by this outstanding columnist that I should like to make it available for everyone to read.

I ask unanimous consent that the article be inserted in the RECORD following these remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POST OFFICE PROBLEMS

(By Holmes Alexander)

WASHINGTON, D.C.—You might find little connection between the Caribbean and the Post Office except that both are taken for granted until there's trouble. Even Lady Chatterley does not keep the Post Office newsy for very long. Only the most dedicated public servants in and out of Congress give the necessary attention to this unrewarding subject.

Postmaster General J. Edward Day, a very personable Los Angeles import, has marched to Capitol Hill for congressional hearings. He has issued the all-too-annual statements about improving service and cutting costs. It sounds depressingly familiar. Yet there is some hope that this may be the year when Government will close one of the less sensational gaps—the one between promise and performance in this executive department which is closer than any other to our everyday lives.

The promise, made many times in various governmental branches, is best summarized in the 1960 Democratic platform upon which President Kennedy was nominated and elected. The Democrats said concerning the Post Office:

"We pledge ourselves to separate the public service costs from those to be borne by the users of the mail."

Most Americans don't know it, but the sale of stamps comes fairly close to paying for mail service. In a letter of last April 14, Mr. Day showed that first-class mail is 99.7 percent covered by revenue, and that airmail is 106.3 percent covered.

Losses seem to occur in second- and third-class mail, but these are often due to hidden factors of public service.

Among other users, the American Newspaper Publishers Association wants to pay 100 percent of just costs, scorning any subsidy. The ANPA's postal committee, headed by Ralph Nicholson of the Dothan (Ala.) Eagle, has tried again with the new Postmaster General (without much encouragement so far) to put across the distinction which is made in the Democratic platform. It is also made in the Postal Policy Act of 1958, which takes the line that strictly public services should be paid for out of general funds from the Treasury and not charged to "any user or class of users" of the mail.

The post office was founded by the Continental Congress to promote unity, education, culture, and business in addition to general correspondence. The service concept has grown until the post office does a huge number of odd jobs for the FBI, Immigration Service, Census Bureau, Civil Service, as well as for individuals (such as below-cost registering of mail) and for groups (such as introducing commemorative stamps).

A Citizen' Advisory Council in the Eisenhower period showed a typical year in which the public service items cost $392 million, while to so-called deficit was $362 million—the giveaway being greater than the shortage.

Some of the less obvious public services often escape notice. The Democratic assumption is that a citizen who lives deep in a canyon or in some crossroads hamlet is just as important to his Government as the metropolitan. He has a right to get and send his mail—but some of the small fourth-class post offices cost from 5 to 10 times more to maintain than the revenue they earn.

The post office should not become a strictly pay-as-you-go revenue unit. Of all Federal agencies, only Internal Revenue and Customs actually "earn" money. But a few hardworking Senators, such as JOHNSTON, Democrat, of South Carolina, and CARLSON, Republican, of Kansas, have tried for years to bring about bookkeeping which shows where the money goes. The public service should be under one heading—actual mail delivery under another heading.

Only with this knowledge before the public will it be possible to get Congress and the administration to set realistic rates for the stamps and other charges to the users of the mail.

Senator JOHNSTON wrote in January to Mr. Day that "assuming a (post office) deficit of approximately $900 million, I would urge at least $300 million set aside as public service and so presented to the Congress."

But bright ideas, in practical matters, have hard going in this town.

Harry Rosenbaum Is Selected To Get Americanism Award

EXTENSION OF REMARKS
OF
HON. ABNER W. SIBAL
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 4, 1961

Mr. SIBAL. Mr. Speaker, under leave to extend my remarks in the RECORD, it is with the greatest pride and pleasure that I include an article from the Bridgeport Sunday Herald of Sunday, April 23, concerning Mr. Harry Rosenbaum, publisher of the Stamford Shopper, Stamford, Conn.:

HARRY ROSENBAUM IS SELECTED TO GET AMERICANISM AWARD

Harry Rosenbaum, publisher of the Stamford Shopper, is often honored as a local prophet, but he steps into distinguished national company Saturday night when he receives the annual Americanism Award of the Connecticut Valley Council of B'nai B'rith.

The distinguished company sharing the annual award in previous years includes former Governor Abraham A. Ribicoff, now Secretary of Health, Education, and Welfare; former Governor Chester Bowles, now Assistant Secretary of State; Mayor Richard Lee of New Haven; Albert N. Jorgensen, president of the University of Connecticut, and Judge Samuel Mellitz of the Supreme Court of Errors.

A large delegation from the Stamford lodge and chapter of B'nai B'rith will be in Loch Sheldrake, N.Y., for the presentation to Rosenbaum, a feature of the 3-day annual conference of the Connecticut valley council, April 28 to 30.

Rosenbaum is profiled in the current issue of B'nai B'rith Times, which relates:

"Harry's ambitions, his unceasing concern has been in matters of social welfare, the contributions he has made in this area over the years warrant the highest praise.

"It is not a new song we sing: His selection as Stamford's 'Man of the Year' in 1958 proved that his work had been highly esteemed throughout the city. A lovely silver-bound Bible, gracing the living room table, is reminiscent of the Mayor's respect.

"Harry is a tireless soldier in a never-ending battle for social justice, good government, and aid to the less fortunate.

"Harry has been earning his livelihood through the publication of a unique little newspaper, the idea of which he conceived years ago.

"Mainly carrying advertisements by local merchants, shoppers' columns and the more recent Shoppertunities pages, the Stamford Shopper & Weekly Mail publishes historical reports about the region, and is an informative source of cultural events of the town.

"Harry claims that his engineering studies taught him a good deal about newspaper layout, and the flair for the written and spoken word seems to come just naturally. Many meetings have been embellished by his wise and witty comments, and his shrewd observations when serving as master of ceremonies are enjoyed by many a group.

"Foremost among his interests in civic improvements ranks the Family and Children's Service of Stamford, a nonsectarian family counseling and adoption agency whose board he serves on, and had presided over for three terms.

"To give of his advice there is a 'tremendously gratifying experience' because 'I have seen it help people,' Harry observes.

"He was president of the Stamford Jewish Center in 1948–50, has been identified with Community Chest and United Fund campaigns for many years, has served on the board of the Stamford community council; he is a member of the mayor's coordinating committee, and chairman of the urban renewal committee of the citizens action council.

"He has helped his Jewish brethren abroad by being consistently in the forefront of United Jewish Appeal drives, has chaired Israel Bond sales, and is proud to be a member of the National Council of American Friends of Hebrew University. In B'nai B'rith he is a regional member of the Anti-Defamation League.

"What, then, created such sensitivity to the plight of others in our age of callousness? It was a difficult childhood Harry experienced, yet suffused with the protection of parental love.

"Paralysis struck his father when Harry was 3 years old. The invalid, two older sisters, and a younger brother were cared for by a pint-sized mother who courageously persisted in conducting the family's umbrella manufacturing business, often working half the night.

At the time when the Yiddish Theater flourished on the East Side, the repair trade meant additional income, and Aunt Belka was there, waiting, on rainy nights. Known as the Queen of Christie Street, she had a patient ear for the tales and woes of her neighbors, and her example probably more than anything else, influenced Harry in his development.

"'Jews Without Money,' a book by Michael Gold, gives a description of this era, and, among other figures, his parents, too, are described.

"At Harry's Bar Mitzvah, the Torah was brought to the house for his father's sake, since he was founder of the synagogue.

"Graduating from high school, Harry worked in the family business. Evenings he took courses in engineering at Brooklyn Polytechnic Institute, and later, accounting at New York University. He knew Addie, whom he met on a fraternity outing, for 5 years before they were married in 1928.

"A sports fan all his life, he played baseball, basketball and was especially fond of tennis until a tactful hint for slowing down was given by Addie's gift of a set of golf clubs on his 50th birthday.

"Together, the two have visited Israel several times, inquisitive of the country's progress, and impressed by social legislation. Tourism then not being as popular as it is today. Harry delighted in showing his pictures to audiences up and down Connecticut Valley.

"Addie is the commuter in the family. She has been teaching at an elementary school in Harlem for the past 32 years.

"At their home in Glenbrook, hand-built bookshelves, family pictures, and numerous citations line the walls of the upstairs den. An impressive array of Judaica in the library off the cozy living room gives Addie cause to whisper in our ear that a dozen books would be bought before he'd indulge in a new suit of clothes.

"Publication of a Book of Psalms was a labor of love for Harry when the 50th anniversary of Congregation Agudath Sholom furnished a suitable occasion for employing his talents. Besides, it netted the synagogue a tidy sum.

"The anecdotes he tells, the 'Harry Golden' chuckles he creates, make the world a friendlier one. He has helped to illuminate some of the darker corners with a candle of his compassion.

"We take special pride when one of our own members is so highly honored."

Centennials of Bayonne and Linden, N.J.

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, May 4, 1961

Mr. WILLIAMS of New Jersey. Mr. President, New Jersey has more than 560 municipalities, each with a deep pride in its history. Some of our communities date back to colonial days; oth-

ers are comparatively recent divisions of old townships and former unincorporated areas.

No matter how young or old these communities are, each has its own record of achievement, its own tradition, its own hopes and plans for future development. We are fortunate in New Jersey to have such rich variety.

Two cities, Bayonne in Hudson County and Linden in Union County, are now ready to celebrate their centennial observances. The pride that residents of those communities feel for their home cities has been captured in two editorials, one in the Jersey Journal of April 18 and one in the Elizabeth Journal of April 19. The accomplishments of those cities are described in heartfelt salutes to each community.

Mr. President, I ask unanimous consent that the editorials be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Jersey Journal, Mar. 18, 1961]

BAYONNE'S CENTENNIAL

Hudson County and New Jersey join in congratulating Bayonne on the 100th anniversary of its incorporation as a city.

The Peninsula community long has played a vital role in the county, State, and Nation. From Revolutionary days to the present, Bayonne industry and commerce have forged vital links to State and National trade that have contributed materially to Hudson's prosperity.

Bayonne today is the home of world giants of industry and the Bayonne Naval Supply Base which have given it a worldwide reputation.

Modern Bayonne can boast of miles of attractive residential streets and business areas, an excellent school system, and a well-rounded society composed of people of varied national and religious backgrounds, living in harmony. All work shoulder to shoulder to make the city a better place in which to work and live. Today, Bayonne is a finer city because of this kind of teamwork.

The hardy pioneers who settled in the southern part of Hudson County laid the groundwork for a fine American community. At great sacrifice they clung dearly to the deep-rooted aspirations that brought them to this new land. In the decades that followed, their successes were marked by the same spirit—a spirit that helped Bayonne prosper through the years.

Today Bayonne takes its place among other American communities that have passed the 100th milestone. Behind it the Peninsula City leaves many stirring chapters of Americana; before it lies a future that can be even brighter if the deep-rooted ideals of its pioneers continued to guide the hearts and minds of its residents.

More than three-quarters of a century ago, the Jersey Journal first began to mirror and assist Bayonne community life.

Throughout the years, it has reported tragedy and happiness in the every-day drama that makes up the ever-changing life of the city.

The Jersey Journal is proud that it has retained a respected voice in community affairs and has given always a sympathetic hearing to the city's problems and trials.

It afforded us pleasure on many occasions to report the glad happenings, but never so much as today when we extend our hand of friendship to Bayonne and its official family on the occasion of this great anniversary.

Bayonne, 100 years young, belies its age with the vigor with which it is now attacking its civic problems today.

On this great occasion, Jersey City joins the rest of Hudson County in saluting a friendly neighbor, Bayonne.

[From the Elizabeth Journal, Mar. 19, 1961]

LINDEN'S 100TH BIRTHDAY

If the founders of Linden had been a little more prompt in declaring themselves free of Elizabeth and Rahway, the city's centennial planners wouldn't have had to work in the shadow of events such as the Civil War centenary.

But even the Civil War observance cannot obscure a community as vital and busy as Linden. The image it projects today is vastly different than the tree-bordered rural haven envisioned a century ago.

It is a bustling city, home to half-a-dozen of the best known names in American industry. It is the biggest taxpayer in Union County and one of its principal employers. Without Linden, Union would certainly diminish in the scale of New Jersey counties.

The city is more than a complex of smokestacks, oil tanks and generating stations, however. It houses 40,000 residents, boasts a fine school system, prides itself on its parks and municipal services, takes satisfaction in one of the lowest tax rates in Union County, and can still point to the groves of trees which gave the town its name.

Linden has something to celebrate in this, its 100th anniversary year.

A Statement on Veterans' Legislation

EXTENSION OF REMARKS

OF

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 13, 1961

Mr. DULSKI. Mr. Speaker, I would like to place in the RECORD the following statement of Mr. Felix M. Putterman, national legislative director, Jewish War Veterans of the United States of America, concerning veterans' legislation:

The Jewish War Veterans of the United States of America, the oldest active war veterans organization in the country, at its 65th annual national convention in August 1960, adopted Resolution 25 entitled "Presumptions for Peacetime Veterans." Pursuant to this resolution, we urge the favorable consideration of H.R. 5933, a bill to amend section 333 of title 38, United States Code, with respect to the application of presumptions in cases of service-connected tuberculosis.

Under existing conditions, the Veterans' Administration has denied service connection to peacetime veterans who are consequently not entitled to presumptive service connection for tuberculosis. If the service had been wartime, the same condition would be allowed service connection found within 4 years of discharge from service. In establishing service-connection status, medical experts recognize a minimal period of inception or incubation of the disease.

Veterans' Administration's regulation 1307 reads as follows:

"For the purpose of VA regulation 1307, active pulmonary tuberculosis diagnosed by approved methods during the fourth year, will be held to have preexisted the diagnosis 6 months in minimal cases, 9 months in moderately advanced cases, and 12 months in far advanced cases."

In section 312 of the Veterans' Act, Congress has allowed a 3-year presumptive period following discharge from a wartime period as one in which tuberculosis if found, can be allowed service connection. On the other hand, peacetime veterans are not entitled to even this limited period despite the fact that section 333 deems it proper, with regard to peacetime veterans, to grant service connection on the basis of "sound judgment."

H.R. 5933, while taking nothing from the wartime veteran, would provide legislative sanction for the findings of medical experts and would entitle the afflicted peacetime veteran to a modest presumption.

The Jewish War Veterans of the United States of America urges the prompt approval by the House Veterans' Affairs Committee of the subject bill as providing a genuinely equitable and fair-minded solution to an extremely vital problem posed by the stark realities of long debilitating illness facing a number of peacetime veterans.

Esther Van Wagoner Tufty—National President of AWRT

EXTENSION OF REMARKS

OF

HON. PHILIP A. HART

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Thursday, May 4, 1961

Mr. HART. Mr. President, it is customary for those of us who represent the various States of the Union to voice our pride in the men and women from our States who are appointed to positions of importance in the Federal Government.

Today I would like to pay tribute to one of Michigan's most illustrious citizens. She is not in a policymaking position in the Government, but she is one of the powers just the same.

Known and admired nationwide as "The Duchess," Esther Van Wagoner Tufty is a member of a prominent, civic-minded Michigan family. But through her own talents and energy she has risen, professionally, to the top ranks not only in the newspaper world but also in radio and television.

At the present time, she is serving as the national president of American Women in Radio and Television. This nonprofit professional organization of 1,600 women working as broadcasters, executives, administrators, and creative personnel in radio and television, is currently holding its 10th annual convention in Washington. As friends of ours we bid them welcome.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the excellent article that appeared in the Northern Virginia Sun of Tuesday, April 11, 1961. It tells the interesting story of Esther Van Wagoner Tufty.

She is fair and able and she asks no special favors.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Northern Virginia Sun, Apr. 11, 1961]

OUR INTERESTING NEIGHBORS: ESTHER VAN WAGONER "TUFFY"—NORTH VIRGINIA'S "DUCHESS" HAS MANY VIEWPOINTS

(By Janet Green)

Esther Van Wagoner Tufty is a woman who lives in a state of constant crisis. Her journalistic career has been filled with continuous excitement. To begin with, she was born during a crisis—the first cyclone to strike Tuscola County, Mich. Coming from a pioneering family that has left its impact in the realm of politics, Mrs. Tufty's tall, blond, regal appearance is characteristic of her father's Dutch ancestry. Appropriately, she is affectionately known as "The Duchess."

As one of the country's outstanding women journalists, she covers politics and international relations from her viewpoint, in the Nation's Capital.

Early in her career, when she had just been elevated to the exalted position of managing editor for former U.S. Vice President Charles G. Dawes' newspaper, the Evanston News-Index, Mr. Dawes is said to have remarked boastfully that he had not only a woman editor, but the only Democrat in the GOP stronghold along the north shore of Chicago running his paper.

During the first week in this new job, the linotype operators went on strike for higher wages. As they left the composing room, they took with them all of the letter "e's"—the most frequently used letter of the alphabet. Undaunted with this crisis, Editor Tufty rushed around Chicago begging, borrowing, and buying all the "e's" she could find.

The paper was published, but in retrospect, Mrs. Tufty says "I wish I had printed it without "e's," for it would now be a collector's item."

She began her news bureau in Washington 26 years ago with a string of 36 Michigan papers. It has developed into a flourishing, well-established bureau, servicing papers abroad as well as in this country. Additionally, she is outstanding on the lecture platform and tours the country under the auspices of W. Colston Leigh, Inc.

Her first radio news show "Tufty Topics" was a series of crises. She recalls the day the Canadian Ambassador was supposed to be interviewed, but at the last minute was called to the White House by President Roosevelt.

What to do?

Undaunted, radio commentator Tufty grabbed her taxi driver en route from her office in the National Press Building to the studio and put him on the air.

"After all, Washington taxi drivers are supposed to be a good news source," said the resourceful Duchess. "He would have sounded better, though, if he had been more used to his new store teeth which caused an odd whistle through the entire interview," she reminisced.

Mrs. Tufty's flair for being on the spot when news breaks paid off when she covered the 1952 Presidential Convention in Chicago as a member of the NBC television staff. She held in reserve one of the then scarce TV cameras for 7 hours—standing by on her hunch that the switch from Taft to Eisenhower would break in a Michigan Caucus. And it did, at 2 a.m.

She had been on NBC's staff at all presidential conventions since that time.

Another exciting crisis: She was the only woman reporter aboard Presidential Candidate Dewey's "Victory Special" train when it was wrecked, and is consequently a member of Tom Dewey's "Castle Rock Survivors Club." In memory of this event, the defeated candidate's autographed photo hangs in a prominent spot on the office wall.

Lord Halifax, British Ambassador to Washington in 1942, set the wheels in motion for another of her crises when he invited the duchess to go to England as a speaker, a consultant on American British relations in the port towns where the GI's were landing, and to broadcast back to America over BBC what was going on in the Battle of Britain from her viewpoint. Her assignment took her to the most dangerous spot, which, of course, resulted in some exclusive news stories. She calls this the most dangerous and yet most rewarding period of her life.

As a foreign correspondent in 20 countries, she has witnessed and reported many critical events. One of the few women to fly the Berlin airlift, her flight was buzzed by the "commies." At this fearful moment it was discovered all aboard had parachutes except the duchess, who was sitting calmly on top of 10 tons of coal being moved by the military aircraft from Weisbaden to Templehof Airport in Berlin.

Foreign Correspondent Tufty has been out of the country every year for the past 20 on news gathering trips. This year she hopes to visit India and Africa. Her elder son, Harold, is cultural attaché at the U.S. Embassy in Abidjan, Ivory Coast; her other son, James, is in the advertising business in Los Angeles. She has four grandchildren.

Named "Viewpoints," because Mrs. Tufty's objective reporting insists there is more than one, the Georgian colonial house in which she lives is on a point overlooking an especially wide part of the Potomac across from Broad Creek, Md., midway between Alexandria and Mount Vernon.

The house has a harmonious combination of elegance and personal reflections of the vivid, varied and active life of the owner. It is livable and most comfortable: "It could belong to no one but Esther," her friends agree.

It contains everything from her grandmother's corner cupboard to a drum from Haiti. Her two twin Japanese procelain pillows, now made into lamps, are in contrast to the bibelots that came from such far-flung places as the Netherlands and "down under" Australia. The 42-foot living room runs the full length of the front of the house overlooking the river. Three sets of glass doors open out into the brick terrace where her many friends from the worlds of politics, government and diplomacy are to be found of a summer's evening having lively arguments on what's going on in the world.

Viewpoints has been opened to the public in the past on the Virginia garden tours when visitors have noted that Mrs. Tufty avoids anything resembling a formal garden. She wants flowers blooming from the first crocus to the last rose of summer. There are always blooms around the lily pond. An extensive rose garden is a favorite. Boxwood surrounds the front lawn and the two prize possessions are planted near the house. One is a gorgeous magnolia, the farewell gift from the local chapter of the American Women in Radio and Television when she retired as president of that group and the Michigan maple that marks the day she moved into the historic home 7 springs ago. She formerly lived in another historic house in Alexandria.

As the national head of AWRT President Tufty is busy planning for their 10th anniversary convention which will be held in Washington at the Statler-Hilton, May 4 to 7. A number of northern Virginians are among the nationwide membership of 1600 who will participate.

How does she combine being the president of a national organization, she is past president of the Women's National Press Club, serve on numerous committees such as the American Newspaper Women's Club, WNPC merger project and on President Kennedy's Committee on the Employment of the Physically Handicapped, with a busy lecture and journalistic career and being the mistress of a mansion on the Potomac?

"I don't combine them, I mix them and the mixture results in a busy, exciting way of life."

Mr. KEATING. Mr. President, will the Senator yield?

Mr. HART. I am delighted to yield to the Senator from New York.

Mr. KEATING. It is my pleasure to join in the tribute to Esther Van Wagoner Tufty. I know that she is a stanch Democrat in her politics. Her father, I believe, was a former Governor of the State of Michigan.

Mr. HART. If the Senator will permit me to make a correction, it was her brother who was a distinguished Governor of Michigan.

Mr. KEATING. Yes. It is true that in all her work she has been extremely fair. She graces the office of president of American Women in Radio and Television. I had the pleasure this noon of meeting with a group of these women, who are present in the city for their national convention. We are glad to have them here. We congratulate them on the leadership they have selected in Esther Van Wagoner Tufty.

Mr. HART. I congratulate the Senator from New York in being so fortunate as having been invited to be with this group this afternoon. I appreciate very much the kind remarks he made with reference to Esther Van Wagoner Tufty.

Where Are the Defenders?

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 4, 1961

Mr. BYRNES of Wisconsin. Mr. Speaker, I have always wondered about the sincerity of the vociferous liberals who profess to be so concerned with the protection of freedom of speech and opinion.

The following editorial from the April 27 issue of the Appleton Post-Crescent is certainly timely and appropriate:

WHERE ARE THE DEFENDERS OF GENERAL WALKER?

Gen. Edwin Walker, commander of the 24th Infantry Division in Germany, has been relieved of his command pending a "complete and impartial" investigation of charges that he has bombarded his troops with ultrarightwing propaganda. The charge was made in a private serivceman's newspaper, the Overseas Weekly. According to this paper, General Walker called Eleanor Roosevelt, Dean Acheson, and Harry Truman definitely pink.

We do not know exactly how far in forcing conservative ideas upon soldiers General Walker is alleged to have gone. Nor do we know under the circumstances, exactly what the Army ought to do about it.

But we are interested to hear what ought to be a violent reaction from the so-called liberals of the country. They are the ones who raised the roof several years ago about a congressional investigation into alleged Red activities at Fort Monmouth. They are the ones who insisted that the "Who promoted Peress?" query was irrelevant. They have

moaned periodically that Federal employees could not be effective in their positions under the harassment into their private activities and their opinions. They are the liberals who have insisted that a man's job, in no matter how sensitive a category, should not in any way depend upon his political affiliations or personal views.

Have any of these liberals, so anxious to leap to courageous defense of those accused of having ultraleftwing tendencies, spoken up for General Walker's right of freedom of opinion? We are still waiting for even one small, grave voice.

Gordon Lowe—Soon a Legend

EXTENSION OF REMARKS
OF
HON. HARLAN HAGEN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 4, 1961

Mr. HAGEN of California. Mr. Speaker, under leave to extend my remarks I would like to call the attention of the House to an editorial which recently appeared in the Tulare, Calif., Advance Register, concerning Mr. Gordon Lowe, who has resigned as director of the Tulare High School Redskin Band.

It is not often that a high school bandmaster achieves such acclaim as Gordon Lowe. As the following editorial will indicate, he is likely to become a living legend in the city of Tulare because of the remarkable achievements of the high school band during his tenure.

Perhaps the highlight of his career was the occasion of the 1957 inauguration when the Redskin Band achieved first place among high schools and colleges in the Inaugural Parade.

The editorial follows:

GORDON LOWE—SOON A LEGEND?

In a community such as Tulare, people come and go through the years, each leaving his mark on the town and its people.

Some are soon forgotten, if remembered at all. The memory of others lingers on for a while, then fades into the shadows. Still others become virtual legends.

One of the latter, we would say, is Gordon Lowe, who yesterday announced his resignation as director of Tulare High School nationally famous high school band to accept a similar job in San Rafael next year.

There will, in all probability, be other fine bandmen to follow in Lowe's footsteps. But to him will always cling the honor of having first put Tulare on the musical map from one end of the Nation to the other.

His Redskin bands have been the most respected high school musical organizations in all of California during the past few years. Other bands have won as many awards or perhaps more coveted (with the exception of the 1957 inaugural parade first prize) awards, but no band in all of the State has been such a unanimous choice of musical men and crowds alike as one which has had the benefit of learning the ropes from Gordon Lowe.

Lowe has been an outstanding success as a musical director and as a teacher of music-minded children in Tulare for the very reason that has brought him criticism in some circles.

He is not an ordinary schoolteacher, not a conformist. He is an individualist, a disciplinarian and a true artist. He is willing to settle for nothing but the best. And in Tulare he has gotten the perfection he demanded year after year because he refused to compromise his music principles.

Lowe has been well rewarded during his stay in Tulare. He has not had to punch a clock; he has been well paid as teachers go; he has had considerable individual freedom which some of his colleagues no doubt have envied. Further, in 1955 he was named Tulare's "man of the year"—an honor bestowed upon only a chose few—and 2 years later the community rallied around him and his band and raised some $35,000 to send the Redskins and their director back to Washington, D.C., to represent California in the inaugural parade.

In return, Lowe has provided Tulare with outstanding bands and, in his own way, he has given a great number of youngsters who might have gone astray a new sense of values through their membership in the band.

Most important, we think, Gordon Lowe has given Tulare something in which it has had a fierce pride. It seems strange to outsiders that a town of almost 15,000 can get so excited over a high school band as Tulare has on numerous occasions over Lowe's Redskins.

But once they hear the band strike up and see Lowe's great showmanship in action, as did 56,000 pro football fans at San Francisco's Kezar Stadium last fall, they begin to wax more than a little enthusiastic themselves, for the Redskin bands under Lowe's direction have not been ordinary bands. They have been the best, and Tulare has never failed to urge the world to appreciate that fact.

What happens now is anybody's guess. Lowe will go to San Rafael to face a challenge that for him is long gone in Tulare. We sincerely hope he will be successful and happy there. We doubt if any place will ever be quite like Tulare to him, but San Rafael, if it understands him as Tulare has, will never regret its choice of a new bandmaster.

Here, we sincerely hope that the high school trustees will not hire just anyone to lead the Redskin bands of the future, that they will choose Lowe's successor carefully and wisely.

Office of the Presidency

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 4, 1961

Mr. DEROUNIAN. Mr. Speaker, David Lawrence, in yesterday's issue of the Washington Evening Star, pointed up some of the deficiencies in the general nature of the Office of President. Since the Cuban debacle was in major part due to inexperienced leadership, it would be well for all of us to examine this subject article very carefully:

FULL-TIME ADVISERS FOR PRESIDENT—TOP POLICY AIDS BELIEVED IMPERATIVE BECAUSE HE CAN'T DO IT ALL HIMSELF

(By David Lawrence)

Is there something wrong with the executive system in America? Or is there something wrong about electing to the Presidency of the United States a man who has had no executive training or intimate knowledge of the workings of the executive branch of the Government? Or is there something wrong in having a transition period of several months between an outgoing and an incoming administration, thereby paralyzing executive planning for the immediate future and causing serious consequences like the ill-fated venture in Cuba?

Answers to these questions are more important today than just how the United States is to help in Laos or what position is to be taken in Cuba. For if the executive office of the Government of the United States isn't functioning efficiently, how can the Chief Executive be expected to act instantly and effectively at a time when a missile or a bomb may be launched suddenly from an enemy area?

It does little good to blame this or that group of advisers—those who had experience in the last administration or the new set who have been brought in from academic circles. With all their earnestness and sincerity, most of the newcomers lack experience in and firsthand knowledge of Government operations at the top level.

What's fundamentally wrong is the executive system. Various members of Congress are spending a lot of time complaining that they should have been briefed on the administration's planning in Cuba. But it is the true role of the Senate Foreign Relations Committee—admittedly a partisan group with some publicity-seeking members always vocal—which needs to be studied, so that it can play a proper but not a meddling part in the field of foreign policy.

There are some Members of Congress who feel they should make the Nation's policy in world affairs. Others feel they should only advise on foreign policy. But, as a practical matter, no Executive can be effective if he has to take into his confidence dozens of persons inside and outside Congress who "leak" information regularly to favorite members of the press.

President Kennedy likes to listen to a variety of views and is to be commended for his patience and restraint. But no amount of conferring with a lot of college professors can give him the maturity and experience he needs to run the high office to which he has been elected. He will be a much better President a year hence, because of actual experience in the office, than he is today. He will learn that too many academicians at his side can bring confusion instead of clarity, and that a diffusion of responsibility can only produce chaos and failure.

The Founding Fathers provided in the Constitution for heads of departments who would be nominated by the President and confirmed with the advice and consent of the Senate. Cabinet government has worked successfully in Britain and in other English-speaking democracies. Although Mr. Kennedy's Cabinet got at the start a lot of publicity as an able body of men, it turns out that this same group is rarely consulted on the broad aspects of national and international policy and that they have become mere heads of their own departments.

What is needed here is a cabinet council that gives full time to counseling the President. The departments can be run by general managers, and the cabinet council could meet every day and give the President advice. If the present Cabinet members aren't qualified to be presidential advisers on broad policy, there are plenty of able men in America who could serve in that capacity. But it is courting disaster to assume that academicians, who have little experience in the operations of Government, can shunt the Secretary of State aside or that decisions can be made with one or two Cabinet officers without the chance for a larger group of mature men to sit down and work out a policy based on principles of enduring strength.

There's much that is wrong in the current operations of the executive system. The so-called Cuban fiasco is but the beginning of a series of failures unless President Kennedy gets rid of most of the "kibitzers" who are running around in circles in the new administration and sets up at his side a cabinet council of men of stature to give full time every day to the task of helping him make national and international policies. He can't do it all himself.

Problems of Aging and Aged

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, May 4, 1961

Mr. WILLIAMS of New Jersey. Mr. President, we on the Senate Special Committee on Aging are always heartened when we see effective community action to deal with any of the many problems facing the aging and aged today. The committee is trying to alert the Nation to a wide variety of these problems—everything from medical care for the aged to job discrimination against elderly citizens.

And, when we see that citizens recognize the need for a service and then do their best to provide it at a local level, we become more certain that there is a growing awareness in this Nation of the social revolution caused by entirely new longevity patterns and new forces at work in industry and commerce.

Within New Jersey, two such efforts may serve as a model for similar action for other groups across the Nation.

One is a "Meals on Wheels" campaign supported by donations and volunteer participation. Hot meals are provided for the elderly and sick confined to their homes.

The other is a campaign begun by the State Division of the Aging to educate older pedestrians on traffic safety.

The important thing about such programs is that they recruit the talents and interests of large numbers of citizens, who then realize that there is so much more to do if we are to deal effiectively with other needs of our senior citizens.

Mr. President, to explain each program in more detail, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD a portion of a letter to me from Matthew P. Boyland, president of the East Orange Meals on Wheels, as well as an article from the Record, Hackensack, N.J., of April 21, 1961.

There being no objection, the excerpt and article were ordered to be printed in the RECORD, as follows:

From Mr. Boylan's letter of April 17:

"Meals on Wheels was created in order to provide hot meals for the elderly and sick of our city who were confined to their homes and had no one to provide them with hot meals. The organization has served more than 130,000 meals to 120 persons in the 2 years since its inception in the fall of 1958. Volunteer teams of teachers and high school students deliver these meals in the late afternoon to those who have requested the service. The money necessary to defray the expense of preparing the meals and acquiring the necessary facilities for their preparation has been donated by various civic groups and by members of the organization. Membership in the organization is acquired upon contribution of $1 and our membership at present is approximately 700.

"Mayor James W. Kelley's Senior Citizen Council has played a large part in the creation of Meals on Wheels. The fact that approximately 17 percent of the population of the city of East Orange is over 63 years of age has created a tremendous interest in the need for facilities and services for this segment of our population. Recognition of this problem has prompted the East Orange Housing Authority to allocate 80 units of housing for a special senior citizens housing project. Moreover the housing authority contemplates the creation of kitchen facilities out of which Meals on Wheels may operate. The interrelationship between the needs of our senior citizens for housing and their need for the services which our organization provide is becoming more evident."

STATE DIVISION OF AGING URGES SAFETY COURSE FOR PEDESTRIANS

TRENTON, April 21.—The State division of the aging wants help from local authorities to educate older pedestrians on the hazards of the automobile.

FINDINGS STUDIED

Mrs. Eone Harger, of Ridgewood, director of the division, addressed the annual Governor's Traffic Safety Conference yesterday.

She said although there was a decrease last year in traffic fatalities, the proportion of over-65 pedestrians killed was up 4 percent.

A study of these victims disclosed that 90 percent of them had never driven a car, Mrs. Harger said.

"They have no understanding of what a car can do. They don't know how long it takes to stop. They don't understand a driver is unable to see a person dressed in dark clothes at night.

She said the division had written a pamphlet alerting older persons to pedestrian dangers. A movie on traffic hazards is also available, she said.

She asked for help in distributing the pamphlet to older persons.

Her address was part of a discussion of the pedestrian problem in traffic safety, moderated by Gerald J. Driscoll of Dumont, chief of the State's Traffic Safety Service.

The conference also heard a request for a crackdown on speeding truck drivers. George G. Traver, executive vice president of the State Safety Council, said "There's a broad opportunity for stepped-up enforcement here."

Hyman Siegendorf, Passaic's director of public safety, discussed his city's 1960 no-traffic-death record. He attributed it to what he called the three E formula: engineering, enforcement, and education.

State Highway Commissioner Dwight R. G. Palmer discussed some of his department's efforts to advance traffic safety.

Center barriers on key highways have almost eliminated head-on collisions, he said.

"On route 4 in Englewood, where 50,000 cars a day use the highway, there were six fatalities in a 33-month period immediately preceding erection of barriers," he said.

"All were due to cars crossing over the narrow island. In the 6 years since the barrier was erected one fatality has occurred. This occurred at a wire-rope barrier section, a design that has been discontinued since 1954," he said.

Gov. Robert B. Meyner opened the conference with a plea for unremitting traffic safety work.

The Government's Responsibilities In Transportation

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Thursday, May 4, 1961

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Hon. Clarence D. Martin, Jr., Under Secretary of Commerce for Transportation, at the 49th annual meeting of the Chamber of Commerce of the United States, Government regulation of business luncheon, in Washington, D.C., on May 2, 1961. This is an address which speaks for itself.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE GOVERNMENT'S RESPONSIBILITIES IN TRANSPORTATION

(Text of an address by the Honorable Clarence D. Martin, Jr., Under Secretary of Commerce for Transportation, at the 49th annual meeting of the Chamber of Commerce of the United States, Government Regulation of Business Luncheon, Ballroom, Mayflower Hotel, Tuesday, May 2, 1961)

It is a privilege to appear before this distinguished chamber of commerce audience gathered here today in Washington for a discussion of the Nation's transportation problems. I appreciate the opportunity you have provided me—and it is a timely opportunity—to outline some of my views on the transportation responsibilities of the Federal Government.

The opportunity is timely for me because I have had several weeks now since I left my business in Los Angeles to get better acquainted with the nature of the Government's responsibilities—and the sobering reality of the difficulties our Nation's transportation system faces.

The opportunity is also timely because President Kennedy has just recently—in his special message to the Congress on the regulatory agencies—outlined the urgent need for transportation policy coordination, and called for "the shaping of attainable goals" in the Government's discharge of its transportation responsibilities.

The opportunity is timely for you because the difficulties our Nation's transportation system faces and the prompt, intelligent solution to those difficulties will be a key factor in the ability of our economy to grow and the ability of our Nation to achieve its goals.

I would like to address myself briefly this afternoon to some of the problems I have become aware of in transportation that indicate the nature of the Government's responsibility.

The United States, under a truly unique partnership over the years between private enterprise and Government, has developed the greatest transportation system known to the world. It has developed a transport system that has nurtured the growth of the world's most advanced industrial and agricultural complex—a system that has distributed the riches of this vast industrial society to every corner of the country and has provided our people with commercial and recreational mobility that makes life in the United States something of a completely different order than life anywhere else on the globe.

Economists have estimated that transportation is directly and indirectly a $100 billion a year business—a major segment of the U.S. economy.

It's no secret that this business is in trouble—real trouble. Under the leadership of Senator MAGNUSON, a Senate Commerce Committee staff recently issued a massive report—a bible, as the Senator has called it—which details these troubles. This is the most recent of a long series of Government and private studies calling attention to the ills of our transport system.

The study raises some difficult questions that businessmen might ask themselves. Why is it that the richest, most advanced society in the world has not solved the problem of getting to and from work efficiently and economically?

Our commuter traffic is choking the life from our cities. Our central cities are being covered with concrete and asphalt—streets, freeways, garages, and parking lots that are eating up the tax base that is the economic foundation of our cities. Mass transit systems are dying from the seemingly endless cycle of higher fares, reduced patronage, reduced service, still further loss of patronage, still higher fares and so on. Transit patrons turn to their autos—and the cities become still more choked. The air of our cities is fouled with exhaust. The death rate on our streets and highways is a national disgrace.

Another question of greatest concern both to the Government and the business community: Why must the common carrier system be in such acute trouble? Investors are losing millions annually in our dying rail passenger services—while unused on our drawing boards are technological improvements that might make short- and medium-haul rail passenger service competitive or even superior to short-haul air services.

Rail passenger services—indeed all common carrier services—are being lost to smaller cities across the Nation, threatening to make ghost towns of our small urban and rural commercial centers.

Our trunk airlines, serving the richest of long-haul passenger markets that were formerly the backbone of rail services, are now operating on razor thin profit margins, too small to attract capital adequate for future reequipment.

Future prospects are as bleak. Common carriers of freight face further traffic starvation with the growth of private and exempt carriage—entirely without regard to the needs of the Nation for a common carrier freight system. The report prepared for the Magnuson committee projected that by 1975—if present trends were to continue unabated—surface freight would move by private and exempt carriage to such an extent as to displace common carriage as the base of the Nation's transportation.

Accordingly, it is clear that there could be trouble ahead for the rails, trucks, and domestic water carriers in the freight field as serious as exists in the rail passenger field today.

Our merchant marine fleet is outmoded and is losing money. Shipyards are idle. And, there is no prospect for immediate improvement other than more and more Federal money. This should not be the only answer.

International air services by U.S. carriers are losing ground to foreign air carriers—and there is no remedy in sight.

Wherever we turn in our transportation system—and the list is far from exhausted—we are in serious trouble, with no comprehensive plan for getting out of it.

What has the Federal Government been doing about it? Last year, for example, it spent $3 billion to build highways—$300 million on merchant marine—$80 million on airlines—over $450 million on airports and airway aids.

Government expenditures for next year will be higher, and more new transportation spending is being proposed every day. For example, cities and their transit systems are in desperate need of assistance—and the major remedy seems to be the Federal Treasury. Our aviation community tells us that a supersonic transport development program is required to maintain U.S. air transport and manufacturing position—and that private capital cannot finance it.

Notwithstanding this Government aid, transportation is still in trouble.

What is wrong with the transportation system? What can be done about it?

Simply stated, the problem is that we don't know where we want our transportation system to take us—and we have no plans for getting there. We have promoted individual transport industries without knowing what job we want each industry to do. Regulation, as we all know, aims only at specific problems of individual industries. We have overregulated and overtaxed some parts of the system with little regard to what is expected of the industry. We have underregulated and undertaxed some parts with little regard to the effect on the whole.

The responsibility for leadership with respect to transportation problems and for development of overall transportation policy within the executive branch of the Federal Government rests with the Secretary of Commerce by statute. This responsibility is great and the statutory power is broad. As Under Secretary of Commerce for Transportation, I intend to do all within my power to help the Secretary discharge this duty in the public interest.

Recent years have spawned study after study to define the problems. In fact, the transportation industry is probably the most studied industry in the country. But with all the studies, we still have not had leadership, we still have not had the semblance of an overall transportation policy or the beginnings of a concrete overall program either for immediate relief or for long-range improvement. In my view, offering such a program is the Government's responsibility in transportation.

We should seriously consider every means to improve generally the position of the common carrier industry. One of the first jobs we are undertaking is the formulation of concrete recommendations for congressional action. Among the specific recommendations we are seriously considering is the granting of realistic tax and depreciation policies for the railroads, along with a declaration that unjust and undue discrimination in State and local taxes on railroads be declared unlawful as a burden on interstate commerce.

The common carrier transportation industry has been engulfed by a wave of rate cutting. Clearly, rate policy should be reexamined.

Looking at the situation as a businessman, it is neither fair nor sound transportation policy to allow the Federal Government to obtain free or reduced rates from common carriers without regard to the regulatory process. The Government in fairness should pay transportation charges subject to the same standards as those governing private shippers.

The tonnage of common carriers, as pointed out earlier, is being taken by private and exempt carriers. Would it not be sound to say that private carriers should remain as private carriers—and not be allower to invade the forhire field. Accordingly, the present exemptions under the Interstate Commerce Act—a virtual crazy quilt—require prompt reexamination.

It is often said that the portion of the Interstate Commerce Act pertaining to motor carriers is probably the most violated statute in the land. More vigorous enforcement of existing law and necessary amendments to the present statute should improve the lot of the common carrier by doing away with operations that either are in outright contravention of the act or are of doubtful legality—those in the so-called gray area.

There should be a clear and definite policy with respect to user charges paid by carriers making use of facilities and services provided by the Federal Government. A policy of assessing user charges for motor and air carriers has been reiterated by President Kennedy in recent messages to the Congress. Serious consideration should be given to extending this policy to other areas.

The long-term solutions to our problems, however, will come from careful planning of the expenditure of Government funds and the careful planning of the use of regulatory powers—planning not just for individual industries, but for the entire transportation system.

We have recently established in the Department of Commerce a task force on transportation policy to make specific recommendations for Government action—aimed at improving the transportation system as a whole—and coordinating transporation policy with the needs of the Nation for economic growth This task force is headed by Wilfred Owen of Brookings Institution. He is being aided by R. Boyd Ladd, Operations Research Office, Johns Hopkins University; Robert C. Lester, former Secretary of the Civil Aeronautics Board; Edward T. Chase, transportation adviser; Carl Feiss, urban renewal consultant; and Robert B. Mitchell, head of the Department of City Planning, University of Pennsylvania.

The urban transportation problem is the first attacked by this group—and, at the President's direction, we have joined with the Housing and Home Finance Agency in the first example of a real coordinated attack on a major transportation problem in a contract for a planned program of action on urban transportation consistent with the needs of our cities.

On merchant marine, on domestic water, on rail, on highway transport, other major efforts are underway and will go forward during the coming year, along with the aviation goals study directed by the President.

It is the comprehensive technique of this program that is important. For example, we will look at the future needs of highway-borne transportation. At the same time we will consider the possibility of reducing the cost of highway systems by technological methods to increase capacity. We will seek to improve highway safety. We will consider further steps to promote containerization and other systems to foster more economical through movement of traffic among different modes.

We will look not only at the economics of air transportation and the Nation's air transport needs—but at ways of improving ground time—both passenger and freight—by exploring alternative ground transport systems and the adequacy of airport location planning in relation to community transportation systems.

Even more important, the task force will approach these diverse industry problems in terms of the competitive roles of the industries. Intead of looking at rail freight, trucking, barge movements, and intercoastal systems separately, the group will consider the land movement of freight—in Commerce Secretary Hodges' words, we will consider "the part that the railroads must play" in an overall system, not just at the railroads as a separate industry. Instead of looking at airlines, buses, and rail passenger service, we will look at the intercity passenger market. Underlying all our efforts will be the search for technological improve-

ments and ways to introduce those improvements into the transportation system.

In short, the entire transportation system—and the transportation needs of the country will be viewed as a single system. It will be viewed as a single system to be developed by government promotional and research programs, tax programs, and regulatory programs—all coordinated to give the country the fastest, most efficient and the safest possible transportation system at least cost to the Government—at the lowest economical rates to the user—and at a reasonable profit to the investors in the private companies that are the foundation of the entire system.

Quite obviously we cannot—and do not expect to do this job alone. We shall look for help and advice to every government agency concerned with the promotion, the regulation, the utilization of transportation. We shall look to the transportation industry. We shall look to the entire business community for help and advice.

To most people, I trust, the job we are setting out to do will be encouraging news. Most of us know that the Federal Government cannot allow its policies to continue to drift—without any central purpose. Inequities in treatment of different modes are not only unfair, but inefficient for the Nation. Waste in Government subsidies—waste in the form of excess capacity—cannot continue in a nation that needs its resources to encourage economic growth. Private capital devoted to transportation must earn a reasonable profit.

Nevertheless, to some people the notion that the Government might act to end the drift in policy will not be well received. Special interests with favored positions are always opposed to change. A case in point: My recent remarks in San Diego on April 8 calling on the Nation's maritime industry to file agreements with the Maritime Board and to live up to them to the letter of the law was received with less than enthusiasm in some quarters, despite our offer to cooperate in solving their problems with the Congress. Any effort to develop a coordinated transportation policy—a rational program for the Government and the public—will make some people unhappy. Of one thing you may be sure, there will be no favoritism in our program save that of the public interest.

The relationship between Government and industry in transportation should not be ended—in fact, it should be enhanced. The Government should take still greater responsibility than it has for the assurance of adequate, efficient and safe transportation services to meet the needs of the Nation.

Our conviction that the Government must develop firm and sensible policies does not mean that we expect any abrupt changes in policy. The business community will be consulted at every stage in our reexamination—as in the case of Secretary Hodges' recent request to the Business Advisory Council to reexamine the broad goals of the U.S. merchant marine. The guiding policy in our efforts will be that stressed by President Kennedy in his speech earlier this year to the National Industrial Conference Board, where he said "there is no inevitable clash * * * between Government and business. All elements in our national economic growth are interdependent"—and I want to stress the word "interdependent." "Each," President Kennedy said, "must play its proper role—and that is the hope and aim of his administration."

Fair Labor Standards Amendments of 1961

SPEECH
OF
HON. PETER H. DOMINICK
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. DOMINICK. Mr. Speaker and Members of the House, every one of us today is being asked to vote on a bill which will have a major impact on all the people of this country. I say this advisedly because you know and I know that although the present act only takes in those companies which have a rather high gross volume of sales, nevertheless, the proponents of this measure have already indicated that they intend in future sessions to have the dollar volume test cut at least in half and perhaps lower than this. This admission means then that it is the purpose of the supporters of this bill to inject the Federal Government into every business in the country regardless of our constitutional and historical concept of government and regardless of location conditions.

I, for one, do not believe that the powers of the Federal Government should be so expanded. Certainly the framers of the Constitution must be having nightmares if they are listening to the proposition that the Constitution authorizes the Federal Government to determine the major operating expenses of every business in the country.

I strongly suspect that this act is unconstitutional but even if it is not, it is a return to the philosophy of the administration that businessmen of this country are so insensitive and so stupid that they are unable to properly handle their personnel problems and to manage their own businesses.

This bill is also being proposed on a humanitarian basis, but the obvious cynicism with which this is promoted can easily be seen when the proponents of the bill, in order to gain votes, have exempted from its provisions the lowest wage group of any in the country; namely, the laundry workers. This was further emphasized by the action of the conference committee in agreeing to take out of the coverage of the existing act employees of cotton gins, obviously for the purpose of picking up some additional southern votes.

I have said before, and I will repeat, that I have no objection to raising the minimum wage in legitimate areas of coverage, whether it be to $1.15 or to $1.25, but it is fundamentally wrong, in my opinion, to go beyond the constitutional authority granted to the Federal Government to control interstate commerce and to inject it into what has been always considered and known as local enterprise and local business.

There is a further point which should be brought up and that is the question of unemployment. We have been told by the administration, and the facts would bear it out, that there is substantial unemployment in many areas. There are a number of people who are now employed who are young or working part time or who are mentally or physically handicapped. Most of these are in serious need of employment at any level not only for living expenses but also in order to be able to show that they are capable of contributing some effort to the overall enterprises of the country. It seems apparent to me that the proposed minimum wage will immediately and sharply hurt these categories; namely, the ones who are least able to help themselves. Instead of improving the unemployment situation this bill will undoubtedly increase the problem. I would also suggest to you that where labor costs are a high item of expense in any business, the effect of the bill will be to accelerate automation. This will, in turn, increase unemployment problems.

As you can see from the foregoing analysis, it is my firm opinion that enactment of this bill will constitute a massive invasion of local rights by the Federal Government in order to give power to a few theoretical bureaucrats in Washington, will accelerate automation to the detriment of union members and nonunion members of the laboring force, and will create sharp distress for the marginal workers who are least able to help themselves. It is for these reasons that I most emphatically and sincerely urge you to vote against this conference report so that a reasonable bill can be produced by a new conference committee.

The DAR Bucks the Tide With Straight Thinking

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, May 4, 1961

Mr. THURMOND. Mr. President, the April 26, 1961, issue of the Edgefield Advertiser, which is edited and published by Mr. W. W. Mims, contains an editorial which voices strong support of that great patriotic organization, the National Society of the Daughters of the American Revolution. The editorial is entitled "The DAR Bucks the Tide With Straight Thinking." I ask unanimous consent that it be printed in the Appendix to the RECORD.

I am a native of Edgefield County, and I am proud of the strong support which the Edgefield Advertiser is giving to the great work of the NSDAR.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Edgefield Advertiser, Apr. 26, 1961]

THE DAR BUCKS THE TIDE WITH STRAIGHT THINKING

The DAR, one of the country's most patriotic organizations, is not one to question whether this country should recognize Red China: That's not in the picture at all. The DAR urges a stepped up support of Nationalist China.

True, it is bucking the tide; it is contrary to the expressed British policy for recognition of Red China. It might be called an "old fogey" slant on world affairs by the trend makers, but it is straight thinking the American way.

Leading politicians and Government officials in the United States hint of the ultimate action of recognition.

The DAR may be old and it may have a bit of long lost past in its resolution of last week in Washington calling for more support to Nationalist China.

But in the American sense it is still straight thinking.

Polish Constitution Day

SPEECH
OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1961

Mr. MARTIN of Massachusetts. Mr. Speaker, I am happy, again this year, to join with my colleagues in this traditional observance of Polish Constitution Day, celebrating the occasion when Poland became a free, independent, and democratic Republic 170 years ago.

It is indeed sad and unfortunate that this day cannot be commemorated publicly by the people who are most concerned with its significance—the people of Poland themselves. They are under the rule of a ruthless foreign dictatorship, whose control is enforced by military might and the oppressive methods of a police state.

So it remains for the people of Polish blood in America and the other areas of freedom throughout the world to publicly observe this occasion and in this they are heartily joined by all lovers of liberty, of all races, who respect the dignity of mankind and who believe that it is the inherent right of all men to live under governments of their own choice.

Who can doubt that if the people of Poland had the power to choose between the foreign dictatorship which now rules the nation and a democratic government under a free election what the outcome would be? Every reasonable person knows the answer to that question. The people of Poland would choose liberty.

It has been well said that the "Polish Government is Communist—but the Polish people are not." The people of Poland are a religious, God-fearing nation. Atheistic communism is abhorrent to them. They have demonstrated this fact at every opportunity.

Even though they cannot observe this significant day publicly, we can be sure the people of Poland commemorate it in their hearts and minds. Let it be known to them that the people of freedom-loving America are thinking of them today and commiserating with them over their servitude.

Even in these dark hours of their sad plight, we can derive encouragement from Poland's history. Numerous times in the past, she has fallen prey to a larger and more powerful neighboring nation but through the indomitable spirit of her people, she has broken the chains of bondage.

May God speed the day when she can do so again.

To Build a Rational City

EXTENSION OF REMARKS
OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, May 4, 1961

Mr. WILLIAMS of New Jersey. Mr. President, Representative FRANK THOMPSON, of New Jersey, challenged the National Housing Conference on March 13 to build "a rational city, a city devoid of racial, religious or even economic segregation."

In the course of his address he also gave vigorous expression to a description of the many irrational forces that now make a chaos out of urban-suburban life in so many areas of this Nation. He asks the Nation to end waste and begin greater efforts for conservation and rehabilitation. He asks for a new appreciation of original thinking about metropolitan problems; he asks us to shake off old, limited concepts.

Mr. President, I ask unanimous consent to have Mr. THOMPSON's remarks printed in the Appendix of the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS BY HON. FRANK THOMPSON, JR., OF NEW JERSEY, MARCH 13, 1961, NATIONAL HOUSING CONFERENCE 30TH ANNUAL MEETING AND BANQUET, HOTEL STATLER, WASHINGTON, D.C.

It has seemed to me in recent weeks that there is in official Washington an air of excitement, a feeling that purposeful changes are afoot. I suppose this feeling is usual in the opening months of the administration of any new President. But from my admittedly partisan point of view, I like to think that something more is afoot than just a simple change of personnel in the Office of Chief Executive. Students of American history say our political habit has been to alternate periods of great governmental creativity with periods of governmental resting. Without getting into the question of whether the past 8 years were ones in which it was wise to rest, I think we can all agree—on the basis of the steady flow of Executive messages from the White House to the Congress if nothing else—that once again we are entering upon one of those creative eras.

The problems facing the 1960's, upon which this new creativity must be brought to bear, are many. But one of the most crucial is the problem of housing. The President, in his message on housing sent to the Congress last Thursday, pointed out that residential real estate, now worth about $500 billion, is the largest single component in the wealth of the American people. Yet this enormous investment is being eroded on every side—by carelessness, by bad laws, by misunderstanding of its nature. It is threatened not only by deterioration but also by wild and disordered growth.

The population of the United States is increasing at a rate which by the year 2000 will bring us to a citizenry of 300 million persons. Current trends indicate that this growth will take place almost exclusively in our metropolitan areas; the United States may be a nation of great open spaces, but in the future we are going to be a city-dwelling people and we are going to have to learn how it's done. The beginning of this shift in living habits has been inauspicious—suburbs have multiplied upon suburbs, sprawling mile upon unplanned mile across our countryside, removing working people ever farther from their places of employment, stealing from the central cities vast segments of the middle-income families which are a principal source of their tax revenue, killing our transit systems with a surfeit of automobiles, and strangling downtown areas in network of traffic-jammed streets.

Nor have the steps taken to correct this situation had the results intended.

Public housing, intended to eradicate the slums, not only has not kept up the race against the spread of urban blight; it has on occasion turned into slum itself.

Freeway systems intended to solve the traffic problems of the inner city have rather merely increased the flow of automobiles downtown, poisoned the air with noxious exhaust fumes, and replaced the already sparse greenery of cities with jungles of concrete.

Title I developments, hailed as a means of restoring portions of the cities' lost tax base, have too often resulted only in depriving innocent people of their homes and businesses and replacing usable buildings with tracts of bombed-out blocks which stand vacant and untaxable for years and finally provide vast profits to private entrepreneurs.

I do not intend these criticisms to be interpreted as an attack on the strategies which have been developed in our efforts to build ourselves rational and attractive communities in which to live and work. I have studied the legislative recommendations of the National Housing Conference, many of which use current programs as a jumping off point, and can say that most of the recommendations I can support without qualification.

But I am troubled by the fact that liberal approaches to the problem of housing America, the type of approach I take these recommendations to be, have tended to become frozen into their own kind of orthodoxy. Obviously existing programs need more money. But also—perhaps even more—we need creative new approaches to these problems.

I'm not an expert on housing problems. I have no completely worked-out set of proposals in my briefcase which I can sell to you tonight. All I have are a few thoughts which may stimulate you, who are the experts, and grow in time into new plans and programs.

First let me remind you of those figures I mentioned in passing earlier. Present estimates are that the United States will grow to 300 million persons in the next 40 years. Since existing housing is inadequate for the needs of our present population, we know right now that in these four decades we must build new dwelling places for at least 120 million people. We know we cannot do this by rampantly destroying existing housing without multiplying our problem manifold.

Americans are the most wasteful people on earth. We are the Nation which devised the throwaway milk carton, the paper plate, the nonrefillable tin can. We have gone further than that, developing the automobile with built-in obsolescence, the furniture which scarcely hangs on to its veneer till it's paid for, the refrigerator, stove and washing machine guaranteed to be out of fashion in 5 years' time. And now we are moving in the direction of the automatically obsolescent house. In Europe, to which so many Americans travel to find the beauty they cannot find at home, there is nothing unusual in finding families occupying houses 300 and 400 years old. On this side of the Atlantic, on the other hand, we are docilely learning the dictum that if a house is second hand it must be inferior and if it's been built more than 25 years it must be getting ready to fall down.

What lies behind this mania for consumption, consumption, consumption? Simple. The belief that high consumption will keep our manufacturers churning out goods and hence counteract tendencies toward unemployment. But once again I remind you—just 40 years from now we are going to need new dwelling units for 120 million new Americans. I tell you we can't afford to let existing housing decay and then be torn down for as yet unthought-of urban renewal plans. In my more nightmarish moments I wonder where those millions of board-feet of lumber, those countless tons of clay for bricks, those endless bags of cement needed just for the houses of that 120 million are going to come from.

No, we are going to have to learn to preserve what we have and build upon it.

We must ponder long and hard before we kill existing neighborhoods. Carelessly uprooting people from a neighborhood in which they have lived a lifetime in order to replace their houses with something better may indeed provide sounder buildings and spruce up the area. But too often it scatters around the city confused and resentful people who vent their justified hostilities upon their new dwelling places and cause more slums.

One time when families moved to public housing developments, they went voluntarily, hoping they were finally getting the break that would permit them to build themselves a new and better life. Now, too often, they go because the place they lived in previously is being torn down and public housing is all they can afford. Construction specifications of public housing units frequently are an insult to the tenants. No doors on the closets, no baseboards on the walls have become symbolic of project living. What wonder is it that projects go sour and decay from the inside out?

Would not the cost be less in the long run, when renewal of a neighborhood seems indicated, to plan it honestly, step by step, with the residents of the area, to carry it out plat by plat with a judicious mixing of vest-pocket low-income projects, privately financed middle- and upper-income units and rehabilitation and retention of the bulk of the existing structures? Then persons necessarily displaced could just move across the street, retaining unbroken their neighborhood ties, and when the renewal job reached completion, could sit back proud in the knowledge that they themselves had made their neighborhood what it was.

Perhaps we should take a new look at the consequences of our taxing systems, devising means of encouraging desirable trends in housing. Do we want homeowners to keep their residences in tiptop shape? Perhaps we should permit tax deductions for home improvements?

Do we want to launch an attack on profiteers in slum real estate?

Perhaps we should change the tax laws to forbid real estate investors from depreciating the same piece of property again and again as it goes from hand to hand. Perhaps we should determine a slum building's value for property tax purposes not on the basis of its worth as a structure but rather on the potential worth of the land it occupies and the rental income it produces.

Let me cite to you an example reported recently in Look magazine of how our present tax laws stimulate the spread of slums. An investor purchased a 6-apartment building in Chicago for $25,000, and with the aid of a little plasterboard and chicken wire he converted it into a 24-apartment structure housing 72 people. Rental collections of more than $1,800 a month enabled him to recover the full amount of his equity in less than 18 months. He was aided in his depredations by depreciation, available only to investors, not to homeowners, and by the tax base on a building with a market value of only $25,000.

Are we convinced that owner-occupied property is generally better maintained than property owned by investors? Then perhaps we would be wise to provide Government insured mortgages on houses of all vintages, not just on recently built ones.

I sometimes wonder if we Americans are not overly dedicated to the principle of ownership of property in fee simple. Perhaps we could make our Government dollars go further if instead of buying properties in entirety before redeveloping them, our redevelopment authorities just purchased selected rights within the affected areas. This type of control would be cheaper than outright seizure, yet more effective than zoning ordinances. For example, it is generally acknowledged that open spaces between built-up areas are to be desired. Yet we cannot by zoning fiat declare that there shall be no subdivision of a given tract of land if its location justifies it. And the cost of buying the section for park land appears to the affected municipality to be prohibitive. Perhaps in this case we should study the possibility of buying not the entire tract but only the right to subdivide it.

Are we concerned that the natural leaders graduate from low-income housing projects leaving a vacuum behind them because their incomes increase beyond the maximums permitted? Perhaps we should consider the possibility of abolishing these income restrictions to residents already in the projects, raising the rent instead.

Do private real estate operators really need that guaranteed 20-percent gap between governmentally subsidized rents and the bottom of the private rental market? Let's find out.

Do our cities need all these freeways? Lewis Mumford, who sometimes seems to be a voice crying alone in the wilderness, has pointed out repeatedly that the foot is the most efficient mode of transportation and urged that our cities be planned for pedestrians.

I don't know what the answers to these questions are. As I said, I have studied your legislative recommendations and found them good. More money is obviously needed for all our housing programs. Special concern must obviously be given to the needs of our older people. Especially, I can salute your backing of the proposed creation of a Department of Housing and Community Development. In such a department I can see some of these problems being considered.

But most especially I want to leave you tonight with a challenge. I want to challenge you to the problem of building a rational city, a city devoid of racial, religious, or even economic segregation. There is no reason for low-income, middle-income, high-income families to live each in their own area. So far as this segregation is caused by custom we can only preach against it. But, surely, if it results directly from our own existing housing programs, we can change the legislation to reverse the trend.

Finally, I would leave with you this quotation from the poet T. S. Eliot, the relevance of which to planning was seen not by me but by Staughton Lynd writing in Commentary magazine:

"When the stranger says, 'What is the meaning of this city?'
Do you huddle close together because you love each other?
What will you answer? 'We all dwell together
To make money from each other'? or
'This is a community' "?

Jobs for the Handicapped—A Community Challenge

EXTENSION OF REMARKS
OF
HON. JOSEPH M. MONTOYA
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 4, 1961

Mr. MONTOYA. Mr. Speaker, I am proud to include as part of the RECORD a prize-winning essay which was written by a 16-year-old New Mexico senior high school student, Claire Marek.

The quality of her work indicates that this young lady thoroughly researched and gave serious thought to her topic, and I am sure you will all agree that this is an excellent essay.

The manner in which she has expressed her views regarding the problems of the handicapped particularly impressed me, and it is my hope that more members of our younger generation become aware of the problems confronting this segment of our citizenry.

The entire State of New Mexico is especially proud of Miss Marek's outstanding achievement, and I hope you will also share in our pride.

The essay follows:

JOBS FOR THE HANDICAPPED—A COMMUNITY CHALLENGE

(By Claire Marek, Albuquerque High School, Albuquerque, N. Mex.)

"Pencils for sale," a feeble voice comes from the weatherbeaten face of the old man sitting against the store wall. His shabby clothes and dilapidated shoes and hat present a sharp contrast to the fashions on the models in the store window above him. Dark glasses over his eyes, an old tincup in his hand, and a white cane lying beside him complete the picture. A shopper, dropping a few pennies in the tincup, so few that it hardly makes a rattle, passes by and remarks, "Why can't they do something about that?" "They" an easy way of passing the responsibility onto that vague group into whose care we place all the problems and mistakes of the world. The "they" should be you, I and all of us in the community where the pencil man exists.

The pencil man is of the older generation. Much has been done for younger people with the same handicap. One seldom sees a middle-aged person in the pencil man's plight. Still—

A young man wheels himself into the huge room furnished with benches and

tables on which various electronic equipment is placed. His eyes are bright and his excitement is quite evident, for this is his second day on the job. A man stops to say "hello" and chat a moment, but at another table, another man speaks to his boss, "Why can't that crippled guy work somewhere else? Why does he have to be near me? I can't do my job right because he makes me nervous."

The Government and the State have done their part of the job well. The man is efficient because the Government has trained him. He has a job. However, the community has failed to complete the work started by the Government. The community must educate the average persons about the ability and efficiency of the handicapped. Some prejudice has been torn down. Young children in school stand a better chance than ever of obtaining jobs. But—

A 5-year-old boy pauses as his instructor shapes her lips to form a vowel and places his chubby hand on her throat. She utters the sound again and again. Then she turns the boy to the mirror and places his hand on his own throat. He tries. The process is repeated until a satisfied smile appears on on the face of the young woman. Then one appears on the face of the boy. Watching through a one-way window, a society matron comments: "This education is fine, and we expect to raise quite a sum in our fund drive, but what good will it all do? Will he ever really amount to anything?"

Progress has definitely been made with the handicapped. Each succeeding generation has a better chance—but these questions: "Why can't they do something about that?" "Why can't he work somewhere else?" "Will he ever really amount to anything?" are asked frequently throughout the United States, and they reflect a broad area of Americans' opinions.

The Federal Government has done much to remedy such situations as that of the blind man selling pencils, in the form of special education programs and facilities for medical treatment. But this rehabilitation and education of the handicapped is worthless unless the community is educated to accept the rehabilitated as truly rehabilitated. Pamphlets can be sent out showing how everyone benefits when the handicapped are hired, for they may serve as contributing members of the community. This information acquaints the community with the efficiency of disabled persons, but does not erase the prejudice entirely. The old adage that "experience is the best teacher" holds true in this respect. The community must experiment with their handicapped by trying them and trusting them. It must be a community effort, for the people of a Minnesota town are not going to help a blind man in an Indiana town; the people of a small Texas city are not going to see that a crippled factory worker makes a "go" of his job, nor that his neighbors accept him; and the people of a Tennessee town are not going to arrange that a little deaf boy in Arizona has a job in 20 years. But, the people of each community can help the handicapped in their own town, and only by this "teamwork" can successful placement of the handicapped be attained.

Moreover, a job involves more than mere placement or position. A job for a handicapped person means being accepted by his fellow workers to the extent that they are able to concentrate on his abilities rather than his disabilities. Americans did not understand it when the Japanese rioters made Eisenhower cancel his trip to Japan. The handicapped person is in the same way puzzled when a job is refused him because of his disability. He wants a job and acceptance, not a job and avoidance.

The little boy working diligently trying to learn to speak, wants acceptance also. Right now, funds from the Government and some from the community are paying for his education. He appreciates this, and will appreciate it even more in 20 years, for it will mean his bread. But now and in the future, he will need more than bread. The friendliness of his community will mean the difference between a drab, lonely, and embittered life and a life of contentment and sharing in the community's privileges and responsibilities. Modern equipment and experienced teachers can fit him for meeting the outside world, but is the outside world a fit place for him?

This question and all the others that have been asked by pitying donators and charitable clubwomen can be answered only by the community. These questions are the challenge that faces each community today. The answer is community cooperation to do something about that blind man on the corner. The community must educate its members against prejudice so that the crippled factory worker is sought after and accepted for his abilities. Finally, the community can prepare its future citizens so that the deaf boy in the special school will some day amount to something.

This, then, is the complete challenge; the hiring of the handicapped devoid of any prejudice. When this challenge is met, each community, each State, and finally the Nation will be a better place for everyone; able and disabled alike, to live.

Failure of Geneva Nuclear Test Talks

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Thursday, May 4, 1961

Mr. BRIDGES. Mr. President, the Washington Post of April 11 contained an editorial which, in my judgment, is worthy of widespread attention.

The commentary, entitled "Three-Headed Monster," examines the poor achievement record of the Geneva nuclear test talks. It not only bares the self-serving reasons behind the Soviet's three-sided inspection proposal but also suggests affirmative action on the part of the United States to bring matters to a head.

I ask unanimous consent that this excellent editorial from the Washington Post be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THREE-HEADED MONSTER

Everything disclosed so far of the Soviet approach to the nuclear test talks at Geneva indicates that Mr. Khrushchev is determined to apply to the inspection machinery the same three-way formula he seeks to impose on the United Nations. That is, he wants to give a veto power to each segment of the tripartite inspectorate now envisaged, so that the Communists could prevent an inspection proposed by Western and neutral members. This is analagous to his plan to replace Mr. Hammarskjold with a three-man U.N. secretariat, and it won't work for much the same reasons.

Such a system would make a complete mockery of inspection. It is totally unacceptable to Britain and the United States. The Western allies have gone very far in a good faith effort to meet Soviet objections and to make an agreement possible if the Soviet Union wants it. The question arises, therefore, of how long it is useful to continue the negotiations at Geneva. For what the Soviet Union really is arguing for is a continuation of the unpoliced moratorium on nuclear tests without agreeing to the necessary control measures.

A case can be made that not until the United States evidenced its determination to intervene militarily in Laos to prevent further deterioration did the Soviet Union show real interest in negotiations for a settlement there. If this is an accurate interpretation of the Soviet attitude, perhaps the Geneva talks are testing the determination of the United States and of President Kennedy. And perhaps what is necessary to produce a change of Soviet tactics is a clear indication that the United States is willing to break off the Geneva talks and, if that seems wise, to resume nuclear testing underground in such a way as to avoid fallout.

There is no firm evidence on whether or not the Soviet Union has been conducting clandestine tests in violation of the moratorium. Opinions differ on whether it would be militarily advantageous for the United States to resume testing of nuclear weapons if the Soviet Union is not in fact testing. But the willingness to take such a step may be important symbolically quite apart from the military value and may indeed be the key to eventual agreement.

Obviously this is not a decision to be taken lightly. There would be enormous propaganda liabilities for the United States even from an underground test unless the justification were very fully and clearly stated. It has not come to such a decision yet, for there is still a possibility that the Soviet position at Geneva will change. An enforceable test ban remains the most practical step that can be taken to prevent the proliferation of nuclear weapons and to build confidence for disarmament. But it may well be that the only way to make Mr. Khrushchev amenable is to show him that the Western allies will not be stalled indefinitely.

Wisconsin's Teacher of the Year

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, May 4, 1961

Mr. WILEY. Mr. President, the American educational system today is one of the most promising and challenging professions.

To pace our complex social-economic-political systems, to meet the evergrowing needs of the future, we will depend, to a large degree, upon teachers who not only instruct, but also inspire, the youth of America.

Recently, Miss Helen Adams, of Cumberland, Wis., was designated the "National Teacher of the Year."

The award was given to Miss Adams, a kindergarten teacher in Cumberland, for outstanding contributions to education in her community.

The award is sponsored by the U.S. Office of Education, the Council of Chief State School Officers, and Look magazine, to help encourage all teachers to aspire to greatness in their chosen profession and to help interest more young people in pursuing teaching careers.

At this time, I ask unanimous consent to have excerpts of a press release by Look magazine, on the National Teacher of the Year Award printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

Miss Adams was selected for the National Teacher of the Year Award after having been nominated for consideration by George E. Watson, superintendent of public instruction for the State of Wisconsin. To be eligible for consideration in the competition, teachers must first be nominated by the chief State school officer in their State. After being observed at work, nominees are then rated by a committee of national leaders in education, meeting in Washington, D.C.

Of the award to Miss Adams, President Kennedy said, "Today, the fate of individuals and nations rests upon education. In a real and immediate sense, the teachers of America hold our future in their hands. Miss Helen Adams is one of those to whom we owe gratitude and support. Her dedication and warmth, her struggle against high odds to become a teacher should stand as an example to future teachers and an inspiration to all Americans."

Miss Adams epitomizes not only high teaching standards, but also the old-fashioned virtues of individual enterprise and initiative. From the time she was 6 years old, the Look article reports, Miss Adams wanted to be a teacher, but she had to overcome tremendous odds before she could realize her dream. Financial circumstances forced her to stop her education after grade school, and for 5 years she worked at various domestic jobs before she was finally able to enter high school as a freshman. Following her graduation from high school, she enrolled in the kindergarten-primary department at Wisconsin State College in Superior. In her junior year, in 1944, she left college to become Cumberland's kindergarten teacher. Five years later, she was struck by polio. For a while, it seemed that she would be permanently crippled, but she fought her way back to complete recovery.

Since becoming Cumberland's kindergarten teacher 17 years ago, Miss Adams has attended summer school to get her B.S. degree at Wisconsin State in 1951 and her master of arts in education from Columbia University in 1958.

Says the Look article: "Cumberland's fierce pride in and devotion to Miss Adams reflect what she has given the town's children for 17 years: a blend of unstinting love and skillful technique that marks a great teacher."

Says Miss Adams: "The best I can do isn't good enough for my children."

In the 1961 National Teacher of the Year awards competition, eight other teachers were singled out for honor roll certificates: Adeline E. Babbitt, a teacher of remedial reading at Kamehameha School for Girls in Honolulu; James DeRose, science head of Maple-Newtown Senior High School, Newtown Square, Pa.; Kenneth H. Easter, head of vocational agriculture at Dos Palos (Calif.) High School; Ruth Lee, home economics director at Teague High School, Teague, Tex.; Mrs. Sherman Lee, Jr., a mathematics teacher at Marietta High School, Marietta, Ga.; Helen Maney, chairman of the citizenship-education department at Geneva High School, Geneva, N.Y.; Mrs. Isabelle Mattson, who teaches the fifth grade in Union City, Mich.; and Brook Peterson, a 25-year-old teacher of English and social studies in Waconia High School, Waconia, Minn.

The A B C's of America

EXTENSION OF REMARKS
OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 4, 1961

Mr. UTT. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I wish to include a first prize winning essay in the Life Line patriotic essay contest, submitted by Mrs. Holly Holmes, of Hawthorne, Calif. The essay is entitled "The A B C's of America." This essay expresses so well the concept of governmental philosophy coincident with that of my own, I feel I would like to give it as wide circulation as possible:

THE A B C'S OF AMERICA

All around us, men are seeking new ideas to preserve world peace. We are told the world is sick and needs our help. But how can we cure the world by causing our own downfall? We could help the world more by strengthening our own country and proving that we have the solution to our own ills. If the real story were told and understood by all nations in the world, people everywhere would want to follow our example.

Our need, now, more than any time in the history of the United States, is to thoroughly understand the principles of Americanism.

We need now, more than ever, to understand that the Communists intend that this country remain in action, not ashes; therefore, their idea is to take it from within. Their frustration in this country, as in no other country, is the Constitution of the United States. They are frustrated because of our 50 separate State governments. The mistaken are for centralization. That simply underscores the necessity for our constant support of our Constitution with its provisions for States rights. Don't let the power over the police, land, ballot box, or any other thing in Government become consolidated. We must keep the Government dispersed, checked, balanced, and unconcentrated. Watch out for one big government, one big business, or one big union, which would monopolize the destinies of human nature. Centralization of powers inevitably leads to the control of wealth.

Under our free enterprise system, our Government does not have an unlimited claim on the earnings of Americans. When a strong Federal Government enacts programs that are not authorized by our Constitution, the money needed to pay for such programs exceeds the Government's rightful claim to our wealth. A centralized, powerful government is a government of men, not of law, and as such, is exactly opposite to our form of government.

We need to understand that this is a country of laws, backed by men and women of good will. Our human rights and equality before the law are without match anywhere. In this country human rights are first, freedom of the individual; second, the freedom to own property, which is the basic religious nature of our philosophy, as opposed to the atheistic concepts of communism.

We need to learn how the mistaken use our very freedoms to tamper with the mainsprings of this republic, how they have divided us through the use of Semantics, so that we are putting each other into labeled categories, often with deep insinuations of disloyalty to our country. We must learn how they abuse the Bill of Rights. The first amendment, freedom of speech, does not entitle anyone to cause riot and panic through words. We need to understand their use of the fifth amendment to protect themselves where it should only be used in criminal courts: their abuse of the 10th amendment, which reserves to the States their own independent governments.

We need to inform ourselves of how the Communists are doing their part to soften the younger generation to a point of "moral decay". With alcohol, narcotics, obscene literature available to our youth, and with much of our movie and TV-fare featuring crime, violence and loose morality, it is time our homes, churches, schools, and government combine forces to convince youth that honest and decent living represent the highest type of intelligence and patriotism. The individuals who are selling this for the dollars in it—do so under the guise of freedom and democracy but without regard for the common good, freedom becomes license.

A strong United States with the will to use its strength is the only obstacle between communism and world domination. Because of this, a subversive arsenal of Communist organizations is working to weaken our will to resist, confuse, promote class warfare and hatred and otherwise disorganize our society. Yet, under court interpretation of our laws, the Government cannot take effective action to counter such tactics. Private groups must fill this gap in our defenses by speaking out for freedom. To counter and block concealed Communist activities requires full knowledge.

We need to realize that a thorough knowledge of our economic system is necessary for clear thinking on this problem. Free enterprise has created a Nation of wants, where other nations have to work for needs. In a free society we have the time to combine natural resources plus human energy, plus tools to produce materials which give life more pleasure. It has been proven down through the centuries that man can create in a free society and that man cannot create in a controlled society.

The first thing we must do is reeducate ourselves in Americanism so that we have the answers clearly in our minds, realize the dangers and remember that the Communists deliberately confuse us about our own system. We then can be more effective.

What is Americanism? It is the right to be an uncommon man. The right to create—to succeed—and to fail. Life has a purpose and meaning to every individual with divine help. Equality means equal in God's sight and therefore equal before the law of the land, but recognizes that our individual differences feed and clothe us and give us the essential material conditions in which our society has progressed.

In short, Americanism is freedom.

Freedom is but an opportunity. We must hold it, feel it, and use it.

We must save our American economic institutions from socialism. Our political freedoms have released the energies and ambitions of the people so that they have produced the highest standard of living ever known in any land. It is this freedom to produce competitively and to keep a part of our production that has made our country the envy of the world. We must testify to our young people about the benefits of the competition all around us. Business success is attained by public opinion and demand in the face of competition. Competition gives you your choice. Competition lets you, the people, decide what you want. Competition and freedom to produce can only be kept in political freedom.

Another thing we must protect from the deadening hand of socialism is the education

of our youth (this cold war is real and the target is youth). Standards and goals of learning must be set. Rewards must be offered. We must have recognition of achievement. Competition in the classroom can be supervised to be as beneficial and as much fun as a football game. It will build strong minds, alert and capable of exploring new fields of knowledge and help advance the progress of mankind. Young people can be motivated to try as hard to excel in learning as in sports and their whole lives will be rich in accomplishment and their ability to serve their Nation intensified.

Our students should receive a clear explanation of the realities of the competitive world we live in and the fact that it is the people who will decide the future. If children are thoroughly grounded in the ideals and accomplishments of America and the thrilling history of how our people struggled to build this freedom, few will ever listen to Communist deceit. There can be no republic in America operating in constitutional liberty to express the will of the people unless we have citizens and leaders who are devoted to the Republic and who have been well taught in their youth all the methods and means of preserving freedom.

Freedom has not always been the natural state of human society. It is an achievement. It is not static. It is a living, moving thing, constantly growing with the movement and development of a people.

We have always depended on youth to pay a heavy price in blood to preserve our freedoms. Now it is from our elder citizens that we must expect the elite shock troops of defense for America in the decisive battles of the cold war.

Know the truth of the ideological greatness of our free Republic and meet the mistaken in forum and auditorium. Know that the American Bill of Rights is a brief but negative document telling our Government what it shall not do.

Our best defense is a good offense.

We must recognize the mistakes which have been made, not necessarily to advertise them, and then we can go on the offensive with commonsense, simple A B C's.

First, educate yourselves in the free-enterprise system. Know why communism failed with our Pilgrim Fathers and the great lesson we learned from them; that we had to have incentive to produce; that we have the right to own, to sell, to buy, and to compete.

Educate others and then go * * * or send informed people with know-how all over the world, to show the people this formula of the uncommon man. We can lift up through knowledge. Truth is fact.

Form youth groups, challenge them, let them learn then watch them go to work.

Watch them build a better America and in so doing, build a better world.

German Settlement in Kansas

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, May 4, 1961

Mr. CARLSON. Mr. President, many Germans were among the first settlers across the border when Kansas was opened as a territory, and during our centennial year as a State, I think it is fitting that we pay tribute to those early German pioneers for the many outstanding contributions they made to the growth and development of our State.

There appeared in the April-May issue of the American-German Review an article entitled "Germans in Kansas," and I ask unanimous consent that it be made a part of these remarks and printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GERMANS IN KANSAS

(By J. Neale Carman)

Before Kansas became a Territory and was opened for settlement in 1854 it belonged to the Indians. The few white men allowed in the area included some Germans, mostly soldiers and teamsters.

The epic of "bleeding Kansas," the struggle for or against slavery, began with the opening of the territory. Many Germans were among the first settlers across the border, and most of them were ardent Free-Staters. "Dutch Henry," Henry Sherman, so the records spell his name, was an exception. He had a trading post in John Brown's neighborhood, and the Browns murdered him. The Missourians intended to make Leavenworth a slave-State town but the large German element which almost immediately established itself there was an important factor in spoiling the plan. The presence of similar elements in Lawrence and Topeka was one reason why those towns soon choked off their neighbors with slave-State sentiments, Franklin and Lecompton. Not all German immigrants, however, liked to be within range of border-ruffian raids, and these formed settlements farther west than any others founded during territorial times; they advanced a third of the way toward the present Colorado line, as much as 150 miles from the eastern border, whereas most settlements in that period were no more than 75 or 80 miles from Missouri. Even these people were stanch unionists. Kansas was not the scene of any major fighting during the Civil War, but there were alarms of southern invasion, and the rosters of the militia companies that speedily formed were well furnished with German names, some among the officers. Kansas Germans also enlisted for service beyond the State.

During the Civil War, although the population of Kansas increased, the German population with the rest, there was a lull in the founding of new settlements. In the 20 years following, 1865–85, settlement spread to the Colorado line. Despite ups and downs, there was in general an ever increasing impetus in immigration until the boom collapsed in 1886.

During these years the German population in the towns thrived. Along the Missouri River, Atchison, Leavenworth, and Wyandotte (this last was the most important of the group of settlements later to become Kansas City, Kans.), as well as Lawrence and Topeka on the lower Kansas River, each had German wholesale grocery houses, German cigar makers, German furniture makers, German breweries, German newspapers, German harness factories, and as social manifestations German churches, turnverein, and German chapters of lodges like the Masons and the Odd Fellows.

Almost all these phenomena were to be found in the town of Hanover, too, on the Little Blue River near the Nebraska border. A line drawn from Lincoln, Nebr., to Wichita, Kans., runs through it. Its founder was Gart Henry Hollenberg (1823–74), a Hanoverian. As early as 1854, Hollenberg, forced by tuberculosis into a sedentary life after wandering over much of the globe and particularly the California gold fields, opened a store on the Oregon Trail. In 1857 he moved it to the junction of the trail and the Overland Road from St. Joseph, Mo. Here the store became known as the Cottonwood Ranch, and during the brief history of the Pony Express was a change house; hence the old wooden building is now a State monument. Hollenberg became a sort of local squire, a beloved leader who collected his countrymen around him. In 1869 he establish the town of Hanover in anticipation of the coming of the St. Joseph & Grand Island Railroad. The railroad arrived in 1871, and Hanover became a division point on it. The town was then prosperous for almost 40 years, though in population did not surpass 1,200. If Hollenberg had lived, it might well have become more important, but his old malady returned, and he died of a hemorrhage at sea on his way to Germany to search for immigrants. There were as many Oldenburgers as Hanoverians among the town's settlers and a very good representation of Westphalians, but the town deserved its name because there were so many Hanoverians in the surrounding countryside. To the east and northeast the district was and is solidly Hanoverian Lutheran, zealous members of the Missouri Synod. The town and the country to the west have their Lutherans too, but they are different: members of the Midwest Synod, the old German Nebraska Synod. Religiously the most important section of the urban population is Roman Catholic, long staunchly German in culture. The German language in Hanover is in a sad state now; only the old are expert in it. If, though, a Missouri Lutheran from Bremen, the next town east, be more than 20 years old, his Low German is fluent. There are a great many German communities east of Hanover all the way to the Missouri River, and for 20 miles south and west of it, with histories not dissimilar.

The presence of Württembergers, Rhinelanders, and people from other provinces along the Rhine, as well as the Hanoverians, Bavarians and some Pomeranians made for a maximum variation in dialects.

As at Hanover, so all over Kansas, the 1870's were important because of the coming of the railroads. The Atchison, Topeka, & Santa Fe and the Kansas Pacific, ultimately to be absorbed by the Union Pacific, had obtained land grants of millions of acres within the State. They accordingly became eager bidders for immigrant groups. The Kansas Pacific appealed in part to Swedes, and so did not attract a great variety of German settlements along its course. It had had certain settlements of Germans from Germany proper, Baptists and Missouri Lutherans, but its great settlements were made up of Volga Germans. The Santa Fe, on the other hand, because C. F. Schmidt was prominent in its land office, concentrated on Germans. Very early the railroad built a branch south from Newton to a newly founded town on the Arkansas River. This was Wichita, whose first inhabitants included William Greiffenstein, in 1869, Greiffenstein, born in 1829 at Frankfurt am Main, had been trading with the Indians for 20 years, latterly in the neighborhood of the future Wichita. For 8 years, centering around 1880, he was the city's mayor, generally well to do and prominent. Wichita, thanks to its own German citizens and to the St. Mark settlement nearby, became a strong Roman Catholic center: from 1887 the See of a diocese. Although its first bishop was an Irishman, almost all his clergy were German, and future bishops bore German names.

A little west of Wichita, at St. Mark, the Santa Fe established or at least encouraged a very strong settlement of Roman Catholic Rhinelanders. Farther west on the great bend of the Arkansas River it set up an area that is called Germania, where Germans of every type moved in. On Germania's edge were two quite strong groups of Moravian Germans, and not far off a settlement of East Frisians. There were numerous other small rural settlements, and the towns along the railroad had their German element too. Specifically, Dodge City was founded in 1872

when the Santa Fe went through, and became a division point. In 1875 Ford County's population was 813: males 626, females 187. Of these, 25 had been born in Germany, including 4 married women and 1 unmarried woman.

The greatest Santa Fe accomplishment in attracting German immigrants concerned neither Roman Catholics nor people born in Germany but Mennonites from south Russia, from the Molotschna River district just above the Crimea. At the end of the 18th century they had left Prussia on the Vistula Delta to enjoy guarantees against military service. In the 1870's the Russians revoked the guarantees, and several thousand Mennonites moved out to Kansas; others went to Canada, Nebraska, and the Dakotas. As a group, they were not poor; they could buy land. They had been wheat farmers in Russia, and they carefully chose an area here that had the same characteristics as their previous lands. In 1874 they began to occupy, and still do occupy, a rhombus of territory with sides 25 miles long. Its center is located some 40 miles north of Wichita. It is good land, and the size of the Mennonite churches testifies to the opulence of the people.

Their beginnings were a struggle, though not so much of a struggle as that of other thousands of Germans who came from settlements in Russia older and more remote than those on the Black Sea. In the 1760's Catherine II had settled more than 20,000 immigrants mostly from South Germany ("Swabians") at the point on the middle Volga that is farthest east. After a fearful struggle they established themselves well, but by 1870 they were outgrowing their holdings and though not pacifists like the Mennonites, they found that the new exposure to military service and its brutalities was nearly as repugnant to them as to the Mennonites. In 1875 several thousands of them began coming to Kansas. They were not rich, but they, too, were wheat farmers, and as particular about their land as the Mennonites were. They wanted black earth—it had to taste right—and all that the Santa Fe offered them was sandy soil. They, therefore, preferred the lands of the Kansas Pacific. In Russia they had been settled in villages either entirely Roman Catholic or entirely "Lutheran," a term which included both true Lutherans and Reformed, and eventually, by conversion, Baptists, and various other sects. In this country, too, the Roman Catholics and the Protestants isolated themselves from each other. The Roman Catholics took land south and east of Hays, at the time a town suspended in space 250 miles west of Kansas City, two-thirds of the way across the State. The heart of the district is some 18 miles square, but the Volgans have spread locally and also established colonies farther west, all the way to Colorado. The same thing may be said of the Mennonites and to a lesser extent of the Protestant Volgans. The Protestant settlements are nearly as large as the Roman Catholic, and east and south of them.

The Roman Catholic Volgans and the Mennonites are the groups which have persisted most faithfully in their use of German dialects. Few know standard German now, but in the heart of the Mennonite district anyone who has come of age is able to handle Low German, and in certain Roman Catholic Volga communities even small children speak Schwäbisch. The internal religious disunity of the Protestant Volgans has made them an easier prey to linguistic Anglicization, and while there are among them some ferocious advocates of the German language, very few of these are young.

Somewhat later than the Volga Germans a settlement of Bukovina Germans established itself in the northwest part of the same county (Ellis). They too increased considerably in numbers; by 1895 there were 1,300. But there were almost four times as many Roman Catholic Volgans, and the Bukovina settlement is dwarfed by comparison.

German settlement, and foreign settlement in general, has been light in the southern part of the State. On the northern border west of the groups discussed with Hanover there is a break for almost a hundred miles. Then there are small groups here and there until we reach the extreme northwestern county (Cheyenne) and the one just east of it (Rawlins). The latter contains a group of Hungarian Germans, which numbered nearly a thousand in 1895. These people came from the lake district just over the border from Austria, near Vienna. Very few could speak Magyar; theirs was a Swabian dialect. Their center is the town of Herndon: the Roman Catholics settled north and west of town; the Protestants south and east. The village itself harbored both. The Catholics as well as the Protestants were an argumentative lot in the beginning, but the dissensions were within each group rather than between the two. Latterly they are in harmony not only with each other, but with their Swedish and Bohemian neighbors, and intermarriage occurs.

The group that interests us in Cheyenne County is squarely against the Colorado line and almost against Nebraska too. In 1895 when immigration was not yet complete, it went on for at least a decade longer—this group was made up of 400 Black Sea Germans. Their settlements in Russia were farther west than those of the Mennonites, somewhat west of Odessa. Their nostalgia for things German is great, but in 1952 their children at the rural church could not understand a minister who explained that "Aller Anfang ist schwer." None of them knew schwer. Yet no community in Kansas is more remote from outside contacts, and almost no German settlements are of more recent origin.

During the hysteria of the World War I years against all thing German, feeling ran as high in Kansas as anywhere in the United States. Even in rural districts solidly German, certain churches and parochial schools were daubed with yellow. In the towns the pressures were still greater. In Kansas, as elsewhere, public urban use of German became almost impossible, and when the hostility died down and church services in German could be resumed, the spark was dim and in most towns it soon went out. Kansas City, Kans., is an important exception. By 1948 it was the only town of more than 4,000 population in which a German sermon could be heard in the Lutheran churches of the Missouri Synod. Up to 1959 St. Luke's Church still provided such a possibility.

Topeka offers another case of the persistence of the use of German in certain neighborhoods. The town as a whole contains a large German element which has shed its German. But the Roman Catholic Volga immigrants of 1875 took up temporary quarters in Topeka, and a few remained there, to be joined in the course of time, by many others (700 in 1895). They clustered together in the neighborhood of the Santa Fe railroad shops, had a church to themselves, St. Joseph's, and carried on with the culture that they had brought from Russia. Particularly their wedding customs and their language impressed this fact upon their neighbors. This culture has been slowly yielding to the waves beating against it. The wedding celebrations are less prolonged and less tumultuous, and German has disappeared from the sermons, but in 1940 students in high school often spoke German at home, and in 1961 on the streets women in the prime of life can still occasionally be heard speaking German to each other.

In Kansas the legislature, the congressional representations, the supreme court, the faculties of the universities, the professional organizations, the student bodies teem with German names. Statistically, in 1895 nearly 60,000 foreign-born Germans lived in Kansas; about 70,000 of their children lived with them. This was about 10 percent of the State's population. I venture to say that now, while the number of those with only German ancestry has decreased, half of the 2 million Kansans have some German blood in their veins.

There Is No Substitute for Seapower, Now or in the Foreseeable Future—An Address by Rear Adm. R. K. James, U.S. Navy, Chief of Bureau of Ships

SPEECH
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. TOLLEFSON. Mr. Speaker, it was my privilege to hear recently an extremely fine and most timely address by Rear Adm. R. K. James, U.S. Navy, Chief, Bureau of Ships, at the annual convention of the National Association of Master Mechanics and Foremen held in the Nation's Capital. What he said, in my opinion, needed to be said during these turbulent and often confusing times in which we live. In addition to the specific comments contained in his address, it included a clarion call to all Americans to meet the challenges of our day. I hope Members of the House will read the speech which follows herewith:

Members of the Master Mechanics and Foremen Association and distinguished guests, the major purpose of any convention is to recognize and analyze the problems confronting the organization, to iron out the areas of difference, and arrive at a general agreement as to the course to be pursued for the future.

I am particularly appreciative of the invitation to participate in your convention because the conclusions you reach here will have a significant bearing upon the mission of the Navy Shore Establishment and the Bureau of Ships during the ensuing year.

Consequently, I welcome this opportunity to place before you a few of my thoughts in the hope that they will help to solidify our thinking and further cement the military-civilian partnership which is so essential to the operation of the Navy, the service to which all of us are devoting our careers.

For almost a century and a half those naval officers responsible for the construction and maintenance of the fleet have relied upon the production skill and management know-how of the predecessors of this association for the accomplishment of their mission.

This working partnership has been a significant factor in the creation of the world's mightiest sea power.

History has already recorded the accomplishments of the past, and while we take a natural pride in and draw encouragement and confidence from this brilliant history, the shoals of the future are our responsibility.

And what is the future of the Navy?

There is no substitute for seapower, now or in the foreseeable future. Nuclear energy,

guided missiles and even the spectacular man in space have not reduced the importance of sea power for the maintenance of our world position.

If anything, the importance of the Navy has increased with each of these scientific achievements.

Oceans can no longer be regarded as barriers behind which a nation can feel secure from an aggressor.

On the contrary, the seas are the highways which bind the world together and those nations which are in a position to protect themselves against aggressors who would deny them the free use of these seaways can maintain their world leadership.

The pages of medieval and modern history are strewn with examples of vigorous nations whose decline followed the disintegration or stagnation of their seapower.

The question then is not the continuing need for the Navy but rather our ability to satisfy the growing demands being made upon our forces afloat and, consequently, upon the Shore Establishment which supports them.

I need not review with this audience the grave crisis facing us in the unsettled world situation and the major role which the Navy Shore Establishment plays in this crisis.

A crisis is a time of grave danger and of great opportunity. Let us be aware of the danger but welcome the opportunity with courage and conviction.

We won two world wars because we had the time to marshal the sheer weight of our tremendous wealth in national resources, technical know-how and manpower and bring them to bear against an enemy which was not our equivalent in these assets.

Today, we no longer bask in the sunlight of these advantages. Time is no longer a protective factor. Many key natural resources are under the control of the opposition and our previously unchallenged leadership in the technological fields is not only being equaled but has been surpassed in at least one spectacular field.

Quite apart from the international situation, there is another potent and vocal force opposing us which is of grave concern to all of us who are dedicated to the support of the Naval Shore Establishment.

I am sure that you have noted the increasing frequency of articles in the daily press clamoring for a reduction in the work assigned to our naval shipyards and for a corresponding increase in work in the private shipyards. We are referred to as tax-free, high-cost naval shipyards in competition with taxpaying low-cost private shipyards. Legislation, with powerful backing, has already been introduced in the Congress, which, if enacted, would drastically curtail the work now being performed in our naval activities.

As an agency of the Government, we are not immune from public appraisal and criticism—nor would I deisre that we were. We can turn this criticism into a strong asset if we accept and handle it with intelligence and vigor.

These are not defeatist comments but only a realistic appraisal of the task which confronts us. We have rested on our past laurels in a spirit of complacency too long. We cannot build and maintain a missile fleet with the approaches and attitudes which produced the 16-inch gun.

Let us first make a soul-searching appraisal of ourselves as managers in a key segment of our Defense Establishment. We need to recognize and appreciate the problem fully before we can take the necessary action.

If our position is not now a satisfactory one, then some changes must be made. The evolution of our Navy from sails to nuclear power was not made without decided changes in the areas of organization and management as well as in the technological fields.

Past changes were a matter of gradual and easy evolution which made their assimilation relatively painless. However, if the management function is to keep pace with the rapid changes in hardware today, we cannot rely upon the gradual process of evolution to bring about the necessary changes.

Resistance to change is a natural human attitude. We are more comfortable amid customary surroundings and procedures. The new is sometimes strange and unknown and we have a natural apprehension for what might lurk behind the untried change.

But, progress is not made without change; not change for the sake of change but modifications to present procedures when we recognize a better way of operation.

In the 2 years that I have been the Chief of the Bureau of Ships, I have been accused, because of the changes I have initiated, of being a disturbing factor. This is the polite language I use in public although I understand there have been many more colorful sobriquets pinned on me.

I know that some of my changes have disturbed some people and I do not evade the responsibilities which are mine alone for the consequences of these changes. But, we are not moving fast enough.

Frankly, I am not satisfied with the limited progress I have made in my own job of improving overall Bureau of Ships management. I, too, am not excluded from the human limitations and shortcomings which plague us all.

But, there is no question in my mind as to what we have to do if we are to meet the international challenge successfully and also satisfy our critics at home.

I have said this many times before and you will hear it from me many times again.

We have got to improve the management of the Bureau of Ships from top to bottom with the ultimate objective of improving the job performance of every member of the Bureau family, both military and civilian, from top to bottom.

The end purpose, of course, is to do our work faster, better and at less cost. You may say that this is not only a preposterous task but one that we have been working on for years. But, have we really worked at it or have we just given it lipservice?

The big difference now is that it must be done. We have no other choice.

I agree that the challenge is great but the stakes are even greater.

We cannot accomplish this massive renovation by talking about it or by wishful thinking. We must make positive moves, step by step, as we recognize the problems and arrive at solutions.

Since it must be done, it can be done and we have already made a start. I speak, of course, of our ships cost analysis panel in which this association played a significant part.

Although in operation only a little over a year, these changes have saved the Bureau of Ships over $138 million. These millions are being used to finance needed work which was not budgeted for. In other words, this is additional work which we are able to do within our current budget limitations.

A significant portion of these recovered funds came from improved operations in our shipyards. While this is already a substantial figure, the SCAP item with the greatest potential savings is just now getting underway, and that is the grouping of our shops. The reports I am receiving from the yards indicate that the benefits which will accrue from this change will exceed our most optimistic hopes.

The grouping of shops is one SCAP item which generated some vigorous but honest difference of opinion between your association and myself. However, I hasten to add that once the decision to move ahead was made, those masters selected as the group heads are proceeding with the difficult task of setting up the new organization, and in many cases ably assisted by those masters heading up the individual shops. I am grateful to you for the splendid job you are doing in this regard.

As pleased as we are with our SCAP accomplishments, we must recognize that this is only one step in the direction of our ultimate goal. However, it is an important step and should encourage us in our conviction that we can move forward if we work together toward our objectives.

I have reserved the most vital and important area demanding our attention until now, and that is the people who make up the Shore Establishment family, both civilian and military.

We accomplish our mission through people, and no matter how dedicated and zealous those of us in this room may be, we will accomplish little unless we provide the leadership and the example to encourage our fellow workers, at all levels, to join us in our resolve for improvement.

All of our employees are dedicated Americans who have proven that they can rise to any occasion when the necessity becomes known to them. The necessity is here.

The cold war and the results thereof are just as real and effective as those of a shooting war. However, a cold war is the more insidious because it lacks the dramatic awakening and national alertness which is generated by a shooting war.

In other words, a cold war permits and even encourages individual and group complacency.

In a way a further handicap is our national history of world superiority. We have led the field for so many years that we find it difficult to realize that our world position is being seriously challenged.

The purpose of General Order No. 21 is to improve the quality of leadership of the military and civilian supervisors of the Department of Defense so as to bring about a massive revitalization of the basic moral principles which are the foundations of this democracy.

General Order No. 21 recognizes a gradual but steady drift away from strong personal convictions and firm commitments to definite courses of action which are traditional in America.

Patrick Henry's "give me liberty or give me death," and Jefferson's "we pledge our lives, our fortunes, our sacred honor," are examples of the type of moral courage which made our heritage possible.

The modern tendency seems to avoid taking a stand or course of action for fear of ridicule, or of offending someone, or being accused of being a flagwaver and oftentimes our immobility is controlled by purely selfish reasons.

We need to generate a grassroots movement to rededicate ourselves to the type of patriotism which made this country the light of the free world in order to meet the challenge at hand—for each of us to make a critical self-appraisal of our own performance to see how we can improve as individuals and as a group.

All of us have benefited handsomely from the wealth of this country. This is our heritage and certainly no one wants to reduce our benefits and blessings. But, as we continue to reap our privileges, benefits and protective rights which our forefathers never dreamed of, but for which we avidly continue to strive, do we give sufficient reflection to the obligation on our part to make an adequate return for these benefits?

Do we give equal concern for the adequacy of our own job performance as we do for the protection of our personal rights and privileges? Do we react to these increased benefits by greater dedication to the job or do we just accept them as a matter of our just due and keep pressing for more?

President Kennedy clearly set forth the principle when he said, "Ask not what your country can do for you but rather what can you do for your country."

Whether we realize it or not, we are now in a contest to prove that a free people, wealthy beyond the fondest dreams of most nations, still has the stamina and courage to resist and overcome the concerted opposition of a way of life completely inimical to our own.

As the leaders of our entire navy industrial complex, we have the responsibility and the opportunity by our own attitudes, job performances and personal example to set in motion an employee revitalization all down the line.

You have a tradition of performance behind you which is shared by few organizations. I am confident that you can add further luster to this tradition by the leadership and example you will provide to all your employees during this time of need.

In closing, let me quote from a recent speech by Secretary Connally to Navy and Marine Corps Officers, and I quote:

"Our tasks are great—our responsibilities no less exacting. Whether we are worthy to stand in the reflected light of those who preceded us we cannot now know. That judgment truly can be made only by those who follow us.

"Let it at least be said of us: 'They understood their task. They accepted their responsibilities, large and small. They were men and women of courage and understanding. And above all, they place country above service and service above self.' "

West Virginia School Boards Favor Federal Aid to Education

EXTENSION OF REMARKS
OF

HON. CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 4, 1961

Mr. BAILEY. Mr. Speaker, the West Virginia School Board Association has endorsed H.R. 4970, and is urging an expansion of Federal assistance to graduate education.

I think it is extremely significant that I have received word of the action taken by the West Virginia School Board Association at about the same time that the Congress has received the request from President John F. Kennedy to express and make permanent the fellowship title of the National Defense Education Act.

As Members recall, the subcommittee, of which I have the privilege of being chairman, sat jointly with the subcommittee headed by the gentleman from Alabama [Mr. ELLIOTT] when the provisions of the NDEA were written. It is, therefore, gratifying to me to have this endorsement of one of these important provisions from the men and women from my own State who are devoted to the cause of education.

The West Virginia School Board Association has adopted two resolutions which will be presented to the delegate assembly of the National School Board Association this week by West Virginia delegates.

As a part of my remarks, I include the text of both resolutions together with a preliminary proposal for Federal assistance to graduate education:

NINETEEN HUNDRED AND SIXTY-ONE DELEGATE ASSEMBLY, NSBA

(Resolution offered by the West Virginia School Boards Association)

Whereas Federal aid to education has existed as a matter of fact since the Land Ordinance of 1785; and

Whereas the national security, well-being and progress of the United States are inextricably tied to the educational attainments of her people; and

Whereas these goals can best be achieved through nationwide cooperative action; and

Whereas the Federal Government alone is in position to implement and underwrite essential action; and

Whereas the West Virginia School Boards Association has approved the principle of Federal aid to education: Now, therefore, be it

Resolved, That the National School Boards Association adopt a position in support of Federal aid to education.

DELEGATE ASSEMBLY, NSBA

(Resolution, 1961, offered by the West Virginia School Boards Association)

Whereas the WVSBA recognizes that persons with graduate training and graduate degrees are in short supply, and

Whereas the public schools are extensively affected by this shortage as reflected in the shrinkage proportion of graduate degrees and baccalaureate degrees, and

Whereas the cost of graduate education is becoming increasingly burdensome to the individual and the insttiution, and

Whereas the graduate education program needs strengthening in all areas including education, mathematics, sciences, fine arts, humanities, medicine, technical, and

Whereas there is a recognized need for a general improvement in the quality of teachers and school administrators, and

Whereas there is a recognized need for increased research in areas presently under investigation as well as explorations into the peripheral regions

Whereas increased enrollments in our colleges and universities, as well as in our public schools, will demand increased numbers of competent, highly trained people to staff the positions created by these increases, and

Whereas in the race for survival our ultimate weapon is continually improved education on an ever-increasing scale, and

Whereas the Federal Government, since its initial participation in aid to education has focused its interest, attention, and support on the development of leadership, and

Whereas the West Virginia School Boards Association has passed two resolutions, one in support of the principle of Federal aid to education, and the other in support of a program of Federal aid to graduate education: Now, therefore, be it

Resolved, That the National School Boards Association support a program of Federal aid to graduate education, and recommend that the Federal Government accept for consideration the following proposal, or one of a nature which, in essence, will help the Nation achieve the objectives described below.

A PROPOSAL FOR A PROGRAM OF FEDERAL AID TO GRADUATE EDUCATION

(Submitted by Dr. Clyde M. Morris, professor of education, West Virginia University; executive secretary, West Virginia School Boards Association)

Under this plan persons who qualify according to terms cited below would be admitted to a graduate school of their choice, subject to approval of the officials of such graduate school. Such attendance would be continuous on a full-time graduate basis for not less than 1 academic year nor more than 12 months subject to compliance with the performance standards acceptable to the particular graduate school in question.

To qualify for such assistance a candidate shall have met the following prerequisites:

1. He shall hold a baccalaureate degree.
2. He shall have had at least 1 year of experience in his field of specialization.
3. He shall be currently employed full time in his profession.
4. He shall have been recommended by at least five persons in a position to evaluate his professional competency and his prospects for academic success at the graduate level.
5. He shall have been accepted by an accredited graduate school for candidacy to a specific graduate program
6. He shall not have received a similar grant from the same source within a period of 5 years prior to this application.
7. He shall agree to return for at least 1 academic year to the position vacated. Failure to do so shall make the candidate responsible for repayment of the grant.

Federal support will be extended to each qualifying person to a degree equal to two-thirds the national annual average teacher's salary computed according to training and experience.

The personnel of every school system [1] in the United States shall be eligible for participation in this program according to the following schedule:

Percent of staff eligible for participation during each year of program

Year of participation	1st	2d	3d	4th	5th	6th	7th	8th	9th	10th and each year thereafter
Percent eligible	1	1½	2	2½	3	3½	4	4½	5	5

During the first year of operations a school system with from 50 to 99 teachers would be eligible to the extent of one graduate candidate. Systems smaller than this would be eligible only in combinations totaling 50 teachers or more.

Personnel employed in other fields of endeavor, qualified in every other respect according to terms herein outlined, shall be selected on a basis proportional to that in which teachers are selected.

In terms of cost to the Federal Government for the support of such a program the following figures are cited:

Estimated cost during the first year:

1 percent of estimated eligible population	23,500
Times ⅔ national average teacher's salary ($3,476)	$81,686,000
Plus ¼ additional increment for summer	$20,371,500
Total	$102,057,500

Estimated cost during the 10th year:

1 percent of estimated eligible population	235,000

[1] System is defined as the fiscally independent unit.

Times ⅔ national teacher's salary (estimated $5,214)	$1,175,290,000
Plus ¼ added increment for summer	$293,822,500
Total	$1,469,112,500

In addition to the grants available to qualified graduate students the Federal Government would provide assistance to accredited graduate schools in order that needed additional facilities, services, and staff might be made available to serve the increased number of graduate students.

Federal aid to institutions with accredited graduate schools will be apportioned according to the number of students enrolled in the federally supported program. The following schedule is suggested:

Year of participation	1st	2d	3d	4th	5th	6th	7th	8th	9th	10th and each year thereafter to termination of aid
Support per student per year	$500	$550.00	$600	$650.00	$700	$750.00	$800	$850.00	$900	$950.00
Plus summer increment	125	137.50	150	162.50	175	187.50	200	212.50	225	237.50
Total	625	687.50	750	812.50	875	937.50	1,000	1,062.50	1,125	1,187.50

Total estimated Federal cost for aid to graduate schools during the first year of the program:

Number of eligible students	23,500
Grant per student	$625
Total grants	$14,687,500

Total estimated Federal cost for aid to graduate schools during the 10th year of the program:

Number of eligible students	235,000
Grant per student	$1,187.50
Total grants	$279,062,500

Estimated grand total of Federal aid to graduate education during the first year of program:

Student grants	$102,057,500
Institutional grants	14,687,500
Total grants	116,745,000

Estimated grand total of Federal aid to graduate education during the 10th year of the program:

Student grants	$1,469,112,500
Institutional grants	279,062,500
Total grants	1,748,175,000

The administration of the program, including the selection of candidates and the disbursement of funds, would be the responsibility of the Federal Government.

It will be borne in mind that these estimates are based on projected figures that may or may not materialize. It is possible that these figures may prove to be conservative.

One of the most desirable features of the plan is its avoidance of the "handout" principle. While individual assistance is given it demands prerequisite evidence of individual effort and achievement for qualification.

Other essential benefits include the following:

1. The strengthening of graduate programs in all areas of study.
2. Improvement in quality of teachers and school administrators.
3. Increased research and further development of pending investigations.
4. General elevation of the educational level of the people of the Nation.
5. Avoidance of the conflict of Federal aid versus Federal control.
6. Avoidance of the matching concept which works to the detriment of poorer States.
7. Provision for the preparation of highly educated personnel who will be staffing our colleges and universities in the future.
8. In the race for survival our ultimate weapon is continually improved education on an ever-increasing scale.

As a matter of interest to those who appreciate this kind of statistic, and in deference to its understandability, the estimated cost of Federal participation in such a program as this during the 10th year, assuming that the 10th year were 1971, would be $29 per pupil enrolled in the public schools.

New Hampshire Editor Is Asset to Community

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Thursday, May 4, 1961

Mr. BRIDGES. Mr. President, an outstanding editor-publisher of a weekly New Hampshire newspaper was recently selected as editor of the week by Publishers' Auxiliary.

Recipient of this well-deserved tribute by the national trade journal of the publishing industry was Mr. Thomas F. Shehan of the Derry-Salem News and Enterprise. I have known Tom Shehan for some time, and I know that the tribute is well earned.

In a recent article about the editor of the week, which appeared in the trade journal, Associate Editor Clifford Holm describes the man who was selected for this honor. I ask unanimous consent that this excellent article, entitled "New Hampshire Editor is Asset to Community," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW HAMPSHIRE EDITOR IS ASSET TO COMMUNITY

(By Clifford Holm, associate editor, the Publishers' Auxiliary)

When he was asked to assess what benefits he has derived from the newspaper profession, Thomas Francis Shehan, editor and publisher of the weekly Derry-Salem (N.H.) News Enterprise said newspapering had led to a "happy, fruitful life."

For Shehan, a man who has ghostwritten bestselling golf books, and whose hobbies include reading, attending the theater, and publishing a monthly magazine for owners, trainers, and breeders of thoroughbred horses, running his weekly newspaper is still his most important and most rewarding job.

A man with a jovial, well-scrubbed appearance, and an enchanting smile, Tom Shehan fits in well in the New England atmosphere he calls home. Derry, with a population of about 7,000, is where he publishes his weekly, which, when he bought it in January 1959, was published along with the Derry Enterprise, a semi-weekly.

"I tried to make a twice-a-week operation out of them," the New Englander says, a tired look of resignation coming briefly to the surface. "But we failed to get enough advertising to justify it. It was not until the end of last year that we combined the newspapers into the Derry-Salem News Enterprise."

Born at Beverly, Mass., on a hot July day in 1911, Tom Shehan recounts nostalgically his seventh-grade teacher, Miss Maud Murphy, whom he still hears from occasionally, advising him to abandon his ambition to become a sports writer.

"She still insists I should have been a lawyer, having said so in those years, too," Tom says.

LEFT ST. JOHN'S PREP SCHOOL

Tom left St. John's prep school "when I recognized I was more interested in newspapers than homework."

With ambition and an unfinished education to offer, Tom accepted the position of sports editor on the now defunct Salem (Mass.) Sunday Tribune. Still only a boy (he was 16), Tom eventually moved on to the Boston Evening Transcript, Boston Evening American, the New York Morning Telegraph, and Miami Daily News.

In the spring of 1941, with a war in Europe raging and each day bringing closer the U.S. entry into the clash, Thomas Francis Shehan and Harriet L. Bishop were married in Danvers, Mass.

After the entry into the war, Tom left New England in exchange for Alaska and Italy, a startling contrast in climate.

"It was while I was covering a sneak raid on Bari, Italy, that I had a frustrating experience," Tom recalls. "I found myself with one other guy; John Frano, an ex-photographer from the Miami Herald, covering the story for Yank, the Army weekly. The city, it turned out, had absolutely no defense; 29 ships had been blown up in the harbor.

"Secretary of War Stimson, during a press conference at the White House, announced the story to the press, while my story languished in a pigeon hole of the censor's desk."

After the war, Tom was scheduled to return to his job as racing steward at Rockingham Park racetrack. It was then that he was offered an assignment as ghost writer for Byron Nelson. Tom accepted and toured with the old pro until Nelson's retirement a short time later.

"Then I transferred my allegiance to Ben Hogan, Nelson's successor, and not only wrote his column for McNaught Syndicate, which had 160 newspapers signed up, but also ghosted his book, 'Power Golf,' now in its 16th printing and still selling."

A member of the board of directors of the New Hampshire Publishers Association, Tom is of the opinion that the newspaper profession "is crowded with people who don't really want to know the joy of working. As for salaries, the minimum has become the maximum with no special rewards for special talents."

Tom, whose biting editorials in the News Enterprise work in the direction of improving the community through action, says that, in his newspaper days, he has found two kinds of newspapermen: "One wants to talk about stories, the other wants to write them."

With three children, the youngest a boy, Thomas F. Shehan, Jr., Editor Shehan looks to the future with confidence.

"We have had the usual problems for a new operation," he states blandly, "but our

business is expanding and we believe we have a good potential here. Incidentally, legend says that Robert Frost had his first poetry published in the News, around 1916."

Ghost writer, horse enthusiast, newspaperman. That's Tom Shehan. And you can feel certain that last appellation has given him his finest hours.

Filth Pays Big Dividends

EXTENSION OF REMARKS
OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, May 4, 1961

Mr. KEATING. Mr. President, I want to call attention today to an article which appeared in the February edition of Father Baker's Victorian, a monthly magazine published by Our Lady of Victory Homes of Charity. This article was written by Alice Ogle and is entitled "Filth Pays Big Dividends." The author discusses in some detail the business of publicizing and disseminating pornography, which has become a truly big industry in the United States.

Mr. President, I cannot understand how anyone with a conscience can knowingly profit from the publication and sales of pornographic literature. I personally believe it is imperative that steps be taken, both private and governmental, at all levels, to stem the growth of this industry.

Miss Ogle refers to certain key examples of large operations profiting from the sale of smut. The illustrations contained in her article should be useful to all who share the conviction that these practices should be the subject of widespread attention and action.

There is no national resource so precious as the energy of our Nation's youth. If this energy is channeled into immoral and unproductive activities, then we shall certainly be doing a disservice both to our Nation and to our youth.

Mr. President, I ask unanimous consent that Miss Ogle's article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FILTH PAYS BIG DIVIDENDS

(By Alice Ogle)

Where I grew up, small boys used to write four-letter words on sidewalks to show how much they knew about life. These were the aberrations of growing up, I suppose. I've never looked upon them as having been depraved. Compared with the filth that has been coming out of California recently, such juvenile obscenity is as innocent as smoking corn silk when opposed to smoking marihuana.

And what has happened in California can happen anywhere so long as people are indifferent and legislative bodies do not stem the filth with enforcible laws against smut. The public deserves protection against the moral pirates at work under the flag of freedom of the press.

CAPITAL OF FILTH

In September 1960, San Francisco was found to be the capital of the biggest, boldest, and slimiest attempt yet made to mass-circulate obscenity in book form in the United States. These books are not handsomely bound erotica sold under counters for from $5 to $50; they are inexpensively printed paperbacks priced to sell for 35 cents and 50 cents to attract youth. They have been selling openly on newsstands and in cigar stores for over 4 years in the United States as well as in certain European countries.

The mayor of San Francisco labeled them gutter trash when they were brought to his attention. Decent men in the bookselling business called them hard-core or black obscenity, explaining that monosyllabic muck that is concerned with one central idea, one theme, one story line, which is sex, sex that is spelled out in intimate how-to-do-it detail, is hard-core obscenity.

THE MAKING OF A SLAVE

This is the sort of thing that John Benedict wrote about in American Mercury, February 1960: Once man is animalized, de-Christianized, psychoanalyzed, debauched sexually, brainwashed into passive acceptance of immorality as the sine qua non of his existence, he is fit only to wear shackles of a slave. And that is exactly what the men who plan obscenity expect will happen.

BIGGEST OBSTACLE

Charles H. Keating, Jr., chief counsel of the citizens for decent literature, in Cincinnati, Ohio, who attributes his fight against smut to the inspiration of the Jesuits, said, "the biggest obstacle to action by legislative bodies is the confusion at the heart of the debate over what constitutes pornography."

What came to light in California, through perhaps the greatest exposé of smut in the Nation up to the present, resulted in a great gain: it should remove the prevalent confusion in many people's minds relative to the difference between "black" pornography and borderline obscene material. Unfortunately, many people have been hoodwinked into condoning "black pornography" under the guise of literary tolerance. The California case against pornographers parading as publishers should disabuse them of their error.

THE MID-TOWER CASE

A highly educated man, Wallace de Ortega Maxey, president of Mid-Tower Publishing Co., educated at the Yale School of Divinity, an active minister for 25 years, who was finally dismissed from his last church in Los Angeles for aiding the Mattachine Society—an organization dedicated to the better understanding of homosexuality—is one of the major figures behind the Nation's flood of lewd paperbacks. His secretary-treasurer, Sanford E. Aday, is an eighth-grade graduate who was convicted of pandering for teenage prostitutes in 1946 and sent to San Quentin for 2 years. Maxey now praises Russia's "men of steel" and described Christianity as a "veritable hodgepodge of puritanical and unnatural inhibitions," while his associate mumbles that the paperbacks are "real life."

Five years ago these unholy two pooled their slim resources to set up a firm called Mid-Tower Publishing Co. in Fresno, Calif. They spread the word around that they were looking for book manuscripts which would stimulate, sustain, and build up lascivious thoughts and desires in readers. An investigator reported, "it wasn't long until they were paying more per word than the Saturday Evening Post."

Matthew J. Meehan, who recently died in St. Agnes Hospital after indictment by an Alameda County jury on charges of conspiracy to violate the States pornography law, was the manager of the firm.

Accepted manuscripts were trucked to San Francisco where a printing firm converted them into books. The firm now declares blandly, "It was just another printing job."

The paperback books bore the names Fabian or Vega or Saber to cover their point of origin. Of all the rotten books produced by this tribe, probably the rottenest, says District Attorney Coakley, was Sex Life of a Cop. "It was read aloud with others to the grand jury. The others were, he said, stunning in their depravity.

Most of the books produced by these men deal with incest, lesbianism, homosexuality, and masochism. They are, say Coakley and his inspector of detectives, "horrible."

Literally tons of these books have been written, made up in book manuscripts at Fresno, shipped to San Francisco and Oakland for printing, and then shipped out all over the country.

Mid-Tower was also involved with a number of girlie magazines that are selling in the large cities of the country. Candida is the latest name of one of their fitted magazines. I saw a copy of one of the issues among other works seized by the district attorney, and I wanted to vomit.

DISTRICT ATTORNEY COAKLEY

One of Coakley's investigators said his guess was that distribution of the paperbacks and girlie magazines ran to 3 million copies every month.

That explains the tentacles of Mid-Tower.

Coakley says the defense attorneys for these men were Hollywood lawyers who specialize in defending smut merchants. He said, "One of them refused to answer when questioned about his onetime Communist tendencies. He leaned hard on the fifth amendment."

READY DISTRIBUTORS

Today, more than 150 independent distributors in the United States handle the Fresno-born books. Elgin, Ohio, and cities in Iowa have been fighting them, but only one city in the United States successfully banned some of them: Cincinnati, Ohio, the hometown of Charles Keating.

In these books, the poetry, the magic, and the beauty of human love becomes animal lust and abnormal depravity. Many San Franciscans asked, after reading reports in their newspapers on this flourishing publishing racket: "Why wasn't it discovered long ago?"

KEATING IN CALIFORNIA

When Charles Keating came to San Francisco, accepting the invitation from the San Francisco League for Decent Literature, he answered that question: "The public is steeped in apathy to the point where many of our children think the abnormal in sex is normal because we are oblivious. Those who would wipe out this cancer sit on their hands."

During his visit to California, he said, "I saw here on your stands more depravity, more filth, and more instruction in sex perversion than in any other place in the country." One newspaper commended him for his honesty; two other screamed abuse at him. These newspapers are as evenly divided on Mr. Coakley's drive against the Mid-Tower Publishing Co.

KEATING admitted that he has said this a hundred times, that the same things have been written and said over and over again with little effect. But he declares that exposes like the one in California are good. "Law enforcement will be successful before a background of public opinion—anywhere."

This was proven in California. Investigators learned that the tentacles of Mid-Tower Publishing Co. reached as far as the busy magazine presses in Los Angeles and Hollywood which specialize in grinding out the "girlie" magazines with the luridly suggestive covers which appear on too many newsstands across America. "These," reported one man, "and the millions of paperbacks originating here provide immense profits, billions of dollars."

But the crackdown came. Police and district attorney's men secured warrants from

judges in every county involved. Raids took place, tons of questionable material were seized, and indictments were aimed at everyone connected with the slimy racket. The Mid-Tower Publishing Co. is now padlocked.

The superior court upheld seizures and warrants despite angry objections from defense attorneys.

Frank Coakley, district attorney of Almeda County, had one of his men read aloud to the grand jury from some of the confiscated matter. The faces of listeners became red and angry.

OTHERS SPEAK

J. Edgar Hoover lauded the "splendid efforts" being made in California, saying: "Our country is plagued by this ugly brand of parasite who commercializes upon the immature judgment and curiosity of youth . . . purveyors of filth have so flooded the market these past years that to find a neighboring newsstand without any samples of it is a rare exception."

In his special statement to local law-enforcement men, Hoover said, "Stiffer legal penalties, particularly in local and State courts, are needed to replace the frequent slap on the wrist given those convicted of this vile trade. And not until longer sentences and heavier fines remove the financial advantages of this traffic will the producers, distributors, and dealers of smut be driven out of this sickening business."

Dr. Karl M. Bowman, one-time head of the psychiatric department of New York's Bellevue Hospital, and now a resident of San Francisco, branded the Fresno trash as "material written solely to stir people up sexually." Dr. Bowman has been conducting extensive studies in California for a report on pornography for U.S. Government publication.

Progress is being made, as these statements clearly prove. Alert now, a tendency to shift away from evading responsibility to an outright admission of guilt is found. Surely that is progress. As Chesterton said, "Men of science are much impressed with the need of beginning all inquiry with a fact. The ancient masters of religion were quite equally impressed with that necessity. They began with the fact of sin—a fact as practical as potatoes."

PROGRESS NEEDS YOU

During a hearing before the subcommittee on postal operations in Washington in May of 1960, Charles Keating described the obscenity situation as it exists today in such a way that he placed responsibility where it belongs. He said: "There is a real, present, and serious problem of obscenity and pornography in the United States. It has a devastating effect upon the people of this Nation, especially—but far from exclusively—the youth. It threatens to pervert an entire generation. It is creating criminals faster than we can build jails to house them, quoting Mr. Hoover. It will accomplish a moral decay wiping out our civilization as has been the case in the history of most of the world's civilizations, quoting Mr. Sirokin of Harvard.

"The presence of obscenity varies widely in form, but permeates our society as a result of unique systems of distribution which force local distributors and retailers to take and sell this cancerous filth in order to remain in business. This, however, is certainly no real excuse for the local outlets.

"The average person in our society knows what and where this obscenity is, but the courts ignore him and his contentions and welfare, catering to a vociferous minority which, skilled in the use and abuse of our laws and courts, manages to inflict upon the substantial majority of Americans the kind of corruption, filth, instruction in perversion, and sick abnormality which is displayed and sold here in Washington, or in New York, Chicago, Los Angeles, Oklahoma City, or anywhere else in the country.

"We have had enough in the way of hearings, talk, and inaction. What we want from our legislative, administrative, and judicial branches of government is freedom—freedom from filth—now."

When Mrs. KATHRYN E. GRANAHAN, committee chairman and Congresswoman from Pennsylvania, asked Mr. Keating, "Do you believe we should have a Federal law dealing with obscenity, as we do for narcotics, which would be stronger than State laws?" He replied "I agree there should be a Federal law. I would like to say, however, that it would be a mistake for the people of the country to abdicate their own responsibility in favor of saying the Congress should pass a Federal law—I think we should continue to work in our own communities and bear our own obligations and responsibilities to eliminate this problem at the grassroots level."

In counties near San Francisco, cases are now pending against a dozen men who have been instrumental in spreading filth from this area. The Mid-Tower Publishing Co. wears a large padlock. The men involved may receive stiff sentences or they may receive light sentences, but it is doubtful, say county officials, that Mid-Tower will again operate in this area.

HYDRAHEADED

When these smut merchants are freed, where will they go? They will go right back to their demonic horror, because obscenity is like Hydra, the multiheaded serpent slain by Hercules in Greek mythology. While one head has been chopped off in San Francisco, two heads will very likely appear somewhere else, that is, until public opinion and adequate laws create a Hercules to strike at the most vulnerable part of the monster—the money motive. Our war against degrading, professional, and lucrative obscenity in publishing is liable to have a long, exhausting, and costly history. The public is strangely apathetic, and laws have many in-built escape hatches. But at least progress is noticeable. Few decent parents in California will ever again be without a nagging fear that their child may be exposed to degrading filth put out by firms like the Mid-Tower Publishing Co. Throughout the Nation, parents are being alerted to the danger between paper covers. They are no longer deceiving themselves. They are beginning to lose their apathy.

Still greater progress would be apparent if every parent in America realized that a child's single contact with pornographic slime can spoil forever the purity of the child's soul and ruin for him the beauty that belongs to human sex in a true setting.

Raritan Arsenal Closing

EXTENSION OF REMARKS

OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 4, 1961

Mr. FRELINGHUYSEN. Mr. Speaker, on March 30 the Army informed me of their decision to inactivate and dispose of Raritan Arsenal in Edison Township, Middlesex County, N.J. Despite three meetings since that time with representatives of the Department of Defense, virtually no information regarding the reasons for this decision has been made available. On the contrary, I believe many arguments advanced to justify the decision were based on insufficient and inaccurate information.

Raritan Arsenal employs 2,600 civilians in an area which already suffers from substantial unemployment. This fact apparently was not considered when the action was taken. I consider the closing most regrettable especially since the missions now handled at Raritan Arsenal are not to be terminated but will be carried on at other facilities.

I am enclosing an editorial from the Daily Home News in New Brunswick, N.J., and one from the Perth Amboy Evening News regarding the closing of the arsenal. They support my contention that to date the Government has not given sufficient reasons to justify the closing:

[From the Daily Home News, New Brunswick, N.J., Apr. 21, 1961]

GOVERNMENT HASN'T PROVED ITS CASE

Despite the Pentagon official's statement that the order closing Raritan Arsenal is irrevocable, we think it's too early to accept that verdict as final.

The outburst of public indignation at the announced closing continues to gain impetus. The campaign of the arsenal workers is eloquent.

But beyond the emotional demonstrations, the facts which are being brought out tend more and more to suggest that the arsenal is a mighty useful enterprise. Certainly the vast printing and publications phases of the arsenal's work can be carried on here, with experienced personnel and modern equipment, as economically as elsewhere. And the move would be costly.

Certainly the arsenal's outstanding warehousing and shipping record belies any suggestion that the operation here is uneconomical.

We can see the missile argument. Maybe the arsenal is not big enough to store missiles safely; and we are not at all sure that the people of the area would like that kind of operation. But we cannot see any new development which suddenly makes heretofore efficient operation here inefficient, or heretofore economical operations here suddenly wasteful.

No one disputes the Government's right to close the Raritan Arsenal for logical reasons. But the Government must make its case plain. So far, it seems to us, the case of those who would keep the arsenal open seems the more convincing. The Government hasn't made its case yet.

[From the Perth Amboy (N.J.) Evening News]

GIVE THE FACTS

If the U.S. Government handles its broad scope of duties with the apparent clumsiness and indifference that has keynoted the confusion surrounding the situation at the Raritan Arsenal, it is little wonder that our prestige has taken a beating.

Last week, a team of representatives of governmental agencies told arsenal employees the plans they have in mind to lessen the impact on the personnel and the affected communities. Their explanations, quite frankly, were unenlightening and in the worst possible taste.

A Labor Department spokesman said that if jobs in the area are not immediately available, unemployment compensation will be put at the employees' disposal. A Commerce Department spokesman left a brochure on how to attract industry into the area as if Middlesex County was remiss in efforts to attract new business.

How can the Government expect these employees to be sympathetic to its order

when its spokesmen babble aimlessly about axiomatic conditions without presenting relevant facts?

Why can't the Defense Department say this?:

"Look, feloiws, we think it is in the best interests of the country to close the arsenal. But perhaps you may have an idea or two worth listening to. Why don't you come on down to Washington and we'll talk this thing over? We don't know that what you say will change our minds but we'll certainly listen to you. And we want you to know just why we have acted as we did."

Would something like this be out of order? We do not think so. We believe that the employees, once briefed on all the factors which led to the decision, will accede to the Government order. They are not unreasonable people. But let them know the facts.

The Public Debt

EXTENSION OF REMARKS
OF
HON. J. ERNEST WHARTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 4, 1961

Mr. WHARTON. Mr. Speaker, an AP release carried by the Washington Star last evening from my home town could set a pattern for our more fortunate citizens that might well be encouraged in connection with our huge Federal indebtedness.

Banker Chauncey Winters, the donor of nearly a half-million dollars to our local municipal corporation, surely ranks high on the list of the Nation's public spirited citizens and through his benevolence, has rendered timely assistance to many local families in the form of much appreciated tax relief. The Star article is submitted herewith:

GRATEFUL BANKER GIVES TOWN $402,200 STOCK

[From the Evening Star, May 3, 1961]

RICHMONDVILLE, N.Y., May 3 (AP).—"Richmondville has been good to me" is Banker Chauncey Winters' explanation for giving this Schoharie County village of 743 persons the equivalent of $402,200 in International Business Machines stocks.

Mr. Winters, a white-haired, 68-year-old bachelor, is cashier and vice president of the independent Bank of Richmondville in this pretty, dairy-belt community 40 miles west of Albany.

A sewer and water project built in 1955 still was awaiting a $300,000 bond issue and the village tax rate seemed about to double when Mr. Winters acted.

He asked Mayor George Davis, "How much do you need?"

The mayor replied that $309,000 would pay the village's debts, including the sewer system bill.

"How about 450 shares of IBM stock?" Mr. Winters countered.

He later "rounded" the figure to 500 shares, with a cash value of $357,000.

Last year Mr. Winters gave the village 100 shares of IBM then valued at $45,200, to build a firehouse.

Mr. Winters said he acquired IBM stock for $7,000 after the stock market crash in 1929. The stock has split several times since then.

"My idea," Mr. Winters said, "was that it had grown to such proportions that I would like to capitalize on it. Not needing it myself, I thought I would apply it to some beneficial purpose. This struck me as good a purpose as any other."

Health Care for the Aged: Profound Issues for America

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 4, 1961

Mr. CURTIS of Missouri. Mr. Speaker, earlier this week I had the privilege of addressing a luncheon meeting of the U.S. Chamber of Commerce's 49th annual meeting here in Washington. The subject of my talk was health care for the aged and how this care can best be provided in America.

This subject, and the legislative proposals that have grown out of it, raise many fundamental questions, profound issues which must be carefully considered by the Congress and the people of this country.

Chief among these is the total cost, not just the dollar cost, but the cost in decreased quality of the medical care for all Americans and the effect upon the dollar benefits under social security, that meeting the particular problem by placing health care for the aged under social security would bring.

I would like, Mr. Speaker, to introduce this speech at this point in the RECORD:

HEALTH CARE BENEFITS FOR THE AGED

(Speech of Hon. THOMAS B. CURTIS, Representative, St. Louis County-South St. Louis, at the health care luncheon of the 49th annual meeting of the U.S. Chamber of Commerce, May 2, 1961, at the Statler-Hilton Hotel, Washington, D.C.)

The new administration's proposal for health care benefits for aged under social security, and other proposals in this and earlier Congresses, have certain features in common. The more important of these are:

1. Use tax money by drawing on the Social Security Trust Fund, not to pay benefits in cash, but to pay for certain specified health and medical care services.

2. Such service benefits would be provided to some people under social security, usually the aged, those 65 and over.

3. Require contractual arrangements between the Federal Government and certain suppliers of health care, which would embody negotiated prices for federally approved services and treatment.

I agree with the moderator on the misrepresentations made about these proposals. Currently, some are saying the administration's proposal is really a very simple one. They say they are proposing merely to use social security as a useful device for collecting money to pay for health care for the aged. They go on to point out that it is the same device used by insurance companies in providing health insurance protection.

The issue is not this simple and advocates of the proposal know it is not. There are a number of issues, profound issues, raising several questions that all Americans should ask, and have the answers to.

For example, has a national need, a national problem, arisen because our present system of health care has failed and thus requires Federal intervention? Is insurance protection against the cost of illness out of reach of most people?

Is the quality of health care and availability of health facilities deficient and declining? Would all aged be provided for without discrimination? Can health care benefits through social security be provided for the aged only, and be stopped at that point? Will the ultimate tax costs of such a program seriously jeopardize the existing social security cash benefit program? Will the costs be no greater than what we now spend through private arrangements, and through local, State and Federal programs?

In answer to such questions, I want to give some of the reasons I am opposed to any kind of health care benefits being initiated in social security, or in any other payroll tax arrangement.

Initiating any kind of health care service benefits in social security for those 65 and over cannot be stopped, I believe, short of a comprehensive health and medical care program for everyone under social security regardless of age. The administration bill, H.R. 4222, for example, will provide certain hospital, nursing home, and home-health services to people 65 and older who are under social security. Within a relatively short time many of these individuals would find that, while they didn't have to go to the hospital or to a nursing home, they nevertheless had costly expenses for health care, such as drugs, other medicines, surgery, and so forth. In other words, they would find the administration proposal did nothing for them. Congress would soon be urged to expand the kinds of services provided.

That bill would do nothing for other social security beneficiaries, such as a widowed mother and her children. If one group of social security beneficiaries, the aged, are receiving this kind of protection, wouldn't it be logical to extend it to younger beneficiaries? And how about those receiving social security disability benefits? Wouldn't it be just as logical to provide the same health and medical care services to them? And who could possibly need them more?

These proposals do not restrict these health care services to those 65 and over who have retired, but would provide them for those of retirement age, even though they may be working full time, perhaps making the best pay in their lives. I feel confident Congress could not long provide any health care service to some people who are working, just because they are at least 65, and deny it to other workers under social security who are younger than 65.

If we once start down this road, the final result is obvious to me. And former Congressman Forand stated in January that after they get their foot in the door, they can then expand the program.

Experience shows that providing health care services on a seemingly free basis inevitably results in overutilization, and thus increases cost. For example, in Saskatchewan, the average hospital utilization rate prior to 1947 for those 65 and over was the same as in this country; 2½ days per year. Today, they have a State-operated program for the aged and the average utilization per aged is 8 days; three times as great. Meanwhile, the U.S. utilization rate for the older people remains about 2½ days.

We can turn to the experience in Great Britain with the national health service program, where the average hospital stay for their population is nearly three times what it is in this country.

Social security health care benefits can jeopardize the financial soundness of our present cash benefit program. The present

program will require 9-percent taxes on payroll by 1969. This is a provided in the existing law. If we start health care service in social security, with its inevitable expansion to all kinds of services and to people of all ages, the tax cost could well be another 9 or 10 percent. Overutilization would further increase costs and tax requirements. I am seriously concerned whether workers and employers will willingly carry the tax burden for the present cash benefits, in addition to another burden of equal or greater size for a universal, comprehensive health and medical care program.

The social security health care benefits proposal will achieve the same results as socialized medicine. Certainly, if any services are to be paid for by the social security system, the Federal Government must see that these services are provided at fair and reasonable costs. Congress is duty-bound to see that Federal funds are spent efficiently. All these health care bills properly include a provision that the Social Security administration enter into contracts with the vendors of the health care services in respect to their charges. It takes little imagination to understand what happens when a Federal bureaucracy gets into the business of setting fees and price schedules of health institutions.

The fact that the Federal Government would not own the hospitals, nursing homes, and so forth, as some claim is necessary for socialized medicine, is a superficial detail. The fact is, we would end up with Federal control of our health care institutions and professions. Call it what you will—at least the Socialist Party in this country has labeled the administration proposal "socialized medicine."

The socialization of medicine will inevitably lower the quality of health care available to all of us. In every civilized nation in the world except the United States, there exists a system of government or socialized medicine. It is no accident that by comparison we excel all these systems in the quality of medical care available to our population. We know that 30 years ago our medical students—in fact, medical students from many countries—flocked to the medical centers of Europe for their education, internship, and postgraduate study. This was before the day that governmental systems were established in these western European countries.

Today, medical students the world over travel, not to Europe, but rather to the United States. I believe there is one reason, and only one reason why this is so. It is because they can come to this country and practice their profession in complete freedom.

In every nation in the world except our own, the ratio of doctors to population is on the decline with all the adverse effects the decline has upon the health and well-being of the population. The ratio of physicians per patient in the United States is remaining steady at about 1 to 750 people. This is despite the population explosion in this country since 1940. Contrast this with Britain, for example. In 1947—the year before they established their national health service program—the ratio was 1 to 877. In 1957, 10 years later, the ratio had declined to 1 to 149 people.

There are other reasons why I believe this type of legislation is bad for Americans, regardless of age. Having social security pay for services provided to people is a step backward. H.R. 4222 would increase social security taxes to raise more benefit money. However, this would not be paid out in cash so each beneficiary could use it as he sees fit to meet his own special needs. Rather, the Federal Government would decide how this money is to be used—for selected hospital, nursing home and other health care. Denial of the freedom to choose would destroy the dignity and self-respect of every beneficiary.

A curious phenomenon to me is to find organized labor in the forefront endorsing this denial of freedom of choice—when I recall why they were equally enthusiastic 2 years ago in their support of the new health insurance program for Federal employees and for all Members of Congress. May I refer you to their committee testimony—and to their pamphlet entitled "Labor Looks at Congress, 1959." Their number one argument in support of this plan was that it preserved individual freedom of choice.

Any compulsory health-care program will snuff out innovation and experimentation for developing better methods of health care. It will also squeeze out private enterprise and voluntary group efforts which have been devising new forms of insurance protection against the cost of illness.

I want to close by emphasizing that this is not a case of being against something. We do have a health-care system in our society today. It is the greatest in the history of the world. We need to get across to the people the various factors that have made it the best.

Make no mistake about it. The supporters of the social security approach have made every effort to cleverly undermine the people's confidence in our present system of health care. They have attacked the integrity of the medical profession, of the drug profession, of our hospitals, of the insurance companies, all the people who are responsible for our present advancements and upon whom we must rely for future progress. They have attacked the integrity of these people, not their arguments, not their facts.

The problem of our older people in obtaining adequate health care is not just a problem of their personal budget. Indeed, the main problem they face is the same problem we all face in the health field. It is the problem of medical science continuing to advance, to find new cures, new drugs, new methods of treating health problems. It is the problem of getting new hospitals, new equipment, new techniques. It is the problem of spreading quality advancement in these areas, quantitatively throughout our society.

When we boil the matter down to where the real needs are, we find they are quite within the capabilities of our present programs to deal with—and not in a degrading way as some of the promoters of the social security approach would have us believe.

By 1970, 12½ million will have joined the aged group. The proportion of the aged with health insurance protection will have increased from 50 to more than 80 percent. I hope we will not establish a compulsory program in perpetuity to deal with a temporary, transitional situation.

Injustice of the Hiss Act

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article from the Washington Evening Star of May 2, 1961. This column points out the obvious injustices of the so-called Hiss Act.

On January 3, 1961, I introduced two bills in the House. H.R. 1033 would amend the Hiss Act so as to exclude all others from the penalty except those convicted of crimes involving the national security. H.R. 1042 would repeal the Hiss Act completely. I think it is time we took action to expunge this legislation, it is unfair and imposes penalties so harsh as to border on the unconstitutional. The article follows:

HISS ACT HARDSHIPS ARGUE FOR CHANGE

(By Joseph Young)

The Hiss Act now on the books is denying annuities to such retired Government civilian and military personnel as the following.

1. The sergeant who while driving a Government vehicle on a scheduled route deviated eight-tenths of a mile off that route. He was court-martialed. On retiring he learned that he would be deprived of his retirement pay estimated as having a lifetime value of $32,495.

2. The employee who was convicted of unlawfully claiming and receiving 195 hours of overtime pay of $347. Although he made full restitution, the employee on retirement is denied an annuity valued at $33,000.

3. The employee who was convicted of stealing a hindquarter of beef from an Army hospital and was fined $250. He is denied a lifetime annuity valued at $31,000.

4. The chief warrant officer who pleaded guilty to several minor Army violations with the understanding that the penalty would not be more than a reprimand and a $400 fine. He has fallen within the scope of the Hiss Act and will lose retirement pay estimated to be worth over $103,000.

What is the Hiss Act? It was enacted by Congress 8 years ago as a result of the outcry that resulted when it was discovered that Alger Hiss, who was convicted of perjury as the aftermath of the sensational charges of Whittaker Chambers that he and Hiss were members of a Communist ring, would be eligible for a deferred annuity at age 62.

The law denies retirement annuities or pensions to any Federal employee or military personnel who has been convicted of a felony against the Government. Although the law was aimed at Hiss, it has resulted in gross inequities and injustices against hundreds of retired civilian and military personnel.

Some of the annuities have been denied for offenses which occurred when the retirees were just starting their Government or military careers. In fact, many of these employees were rehired after their offenses and worked or served 30 or 40 more years with the Government or the military before retiring, only to find out that they were ineligible for annuities or pensions.

Congress nearly amended the Hiss Act last year to end these injustices. However, the bill failed at the last moment to get final approval.

This year legislation again has been introduced by key members of the House and Senate Civil Service Committees to amend the Hiss Act. The bill has the strong support of the Kennedy administration, including the Civil Service Commission, the Budget Bureau and the Defense Department. The General Accounting Office also favors the bill. Incidentally, the Eisenhower administration also supported the bill.

The bill would allow annuities to be paid to all these former employees and military personnel. It would deny annuities only in those cases involving national security factors. Alger Hiss still would not get an annuity.

Say It With Flowers

EXTENSION OF REMARKS
OF
HON. BASIL L. WHITENER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 4, 1961

Mr. WHITENER. Mr. Speaker, in the April 1961 edition of Fibre and Fabric, an outstanding textile trade publication, there appeared a very forceful editorial with respect to the serious effect that excessive textile imports are having on our domestic textile industry.

I feel that my colleagues in the House, especially those from areas in the Nation where textile manufacturing is a very important factor in the economy, will find the editorial to be most interesting. I request that it be inserted in the Appendix of the RECORD:

SAY IT WITH FLOWERS

The textile industry in this country has long been considered expendable by a government seeking to make it the door prize in the marts of international trade. Any opposition to such a greased chute to oblivion has been promptly entangled in governmental doubletalk as some kind of protectionist choir from the bandstand of isolationism. The voices were never looked upon as Americans interested in the industrial strength of their country. Instead, they were brushed off as ants in the pants of those who preferred to sit down on the job of representing the American people and their way of life.

We have a new Secretary of Commerce in Luther Hodges. Here is a former textile executive, the chairman of a cabinet committee studying the textile problem, and he seems to be on our side when he says he is convinced that "Our Government is actually destroying a basic industry essential to our economy and national defense." We say he seems to be on our side because investigating the obvious is something like saying it with flowers. What counts here is who gets them.

We have a few candidates. The likes of Japan, India, Hong Kong, Italy, and others flooding the domestic market with imports. They come from all over the world and the Government knows we can't compete because it made certain we couldn't. Americans are losing jobs, America an industry, and who do you suppose is laughing at us?

There are a number of ways an astute leadership can move this country forward in areas of need. It can recognize a weakness and move to strengthen it. It can survey a strength and take steps to make this strength more formidable. It can also right a wrong which, in the case of the textile industry, has become an industrial weakness forcing our dependence upon foreign manufacturers. We now import more textiles than we export and we have lost half our working force since 1947. Here's where a new frontier can be more than just a campaign slogan unless we intend to import that, too.

There is nothing phony about the textile position. We can do without the windmill of Government oratory, measuring its doubletalk by the pitcher of water. We need honesty and loyalty and action. When we get that we can tell ourselves that the after dinner windmills running on water have ceased to be all wet. They have moved us toward a new frontier for the textile industry.

What Price Glory?

EXTENSION OF REMARKS
OF
HON. DALE ALFORD
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 4, 1961

Mr. ALFORD. Mr. Speaker, I recently called the attention of my colleagues to the shameful action taken against Maj. Gen. Edwin A. Walker because of his patriotism. I now want to invite your attention to an editorial published in the Richmond, Va., News Leader, April 19, 1961, as follows:

WHAT PRICE GLORY?

He was born in Center Point, Tex., in 1909. He grew up tall and straight, a boy 6 feet, 3, who loved horses and soldiering. He went to a military school in New Mexico, finished at West Point in 1931, and plunged at once into the disciplined routine of a professional soldier in peacetime.

His life, at first, was the life of any other second lieutenant in the horse-drawn field artillery: The pungent smells of sweat and stables, the dusty maneuver grounds of Fort Sill, the rumble of caissons along a cobbled street, the swing and jounce of a garrison saddle. Your horses first, your men second, your own needs last. He learned his weapons well: The slim 75, the ponderous howitzers, the clumsy tubular rangefinder of a bygone day.

He was at Schofield Barracks in Hawaii when the Germans went into Poland. Brought back to the States, he participated in the swift transformation of the old horse-drawn units into sleek mechanized divisions. But he had qualities too vital to be squandered in artillery logistics. Commando. That was his art. He became commanding officer of an outfit deceptively known as the First Special Service Force, a crack team of Canadian and American soldiers unafraid of hand-to-hand combat. He had to learn to use a parachute. "How do you put this thing on?" he asked a sergeant. And 5 minutes later he jumped.

He and his men fought their way up the Italian Peninsula, Anzio, the Aleutians, ski fighting in Norway, and a string of decorations to show for it: Silver Star, Legion of Merit, Croix de Guerre, Order of the British Empire.

Briefly, peacetime again: 2 years at Fort Sill, then a tour of duty in Washington, a stint at Sam Houston. But he was a fighter, not a diplomat: They sent him to Benning as assistant commander of the Army's toughest fighters, the Rangers. Then came Korea, command of an infantry regiment, the exhausting, maddening business of fighting an enemy but never quite defeating him.

Back to Fort Bragg, then again to the Far East as senior adviser to Chiang's Chinese Nationalist Army; back again to Schofield; and in a fateful, routine transfer, in August of 1957, to Little Rock, Ark. He was to command the Arkansas military district. It should have been an easy post.

"As an officer of the U.S. Army," he told the students of Central High School that morning in September, "I have been chosen to command these forces, and to execute the President's orders." He locked eyes with the students. A Texan. A soldier. "You have nothing to fear from my men. However, I would be less than honest if I failed to tell you that I intend to use all means necessary to prevent interference with your school board's plan. This is what I have been ordered to do, and I intend to carry out my orders."

That was the last time Maj. Gen. Edwin Anderson Walker figured very prominently in the news—the last time, until this week. After Little Rock, he had been sent to Germany as commanding officer of the 24th Division. There he found the same softness, the same purposelessness, that hundreds of other professional soldiers have found in youngsters raised on the milktoast liberalism that passes for education these days.

So he began to talk tough about communism, and what it is, and how the enemy conceals himself in an ambush of gauzy falsehood. He spoke to his troops of gullible, delicate men, safe at home in soft chairs, polishing their fingernails and coughing gently at strong language. He spoke bluntly of these influential people, the "anti-anti-Communists" whose gentle creed is that we must never be beastly to the Reds, the shrill and mocking men who deride patriotism as "superpatriotism" and love of country as distasteful and embarrassing. His object was to give his troops a "new and vital approach toward anti-communism—a positive approach toward the defeat of Communist subversion of the American way of life." He invited some hard, knowledgeable anti-Communists to speak: Edward C. Bundy and Willi Schlamm. He minced no words himself: Dean Acheson, he said, was "definitely pink."

All this appeared in a paper known as the Overseas Weekly, and we can guess from this distance how it appeared, with sneers, and contemptible little quotes out of context, and a self-righteous editorial along with it. And most disgraceful of all: General Walker had made use of some material from the John Birch Society.

This past Thursday morning, General Walker was called on the carpet by the commanding general of the 7th Army. He was asked for a full explanation. Saturday morning, the New York Herald Tribune blasted him in a lead editorial, published also in foreign editions. Any military indoctrination program, said the supercilious Tribune, "is an extremely delicate operation, particularly when it is directed toward those who would be in the front lines if any Communist aggression developed in Europe. It is repugnant to both the American military and civil heritage to use Army authority in an attempt to shape the political thinking of enlisted men."

Yesterday Maj. Gen. Edwin Anderson Walker, soldier, was suspended from his command. He is not yet 52. He is at the peak of his career as a combat-hardened officer. And the little, soft, spineless parasites of the liberal Left have got him. Thirty years as a first-class fighting man. And what price glory?

Virtue in the Body of the People

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 3, 1961

Mr. MUNDT. Mr. President, the more than 600 prominent Americans who were in attendance at the annual George Washington awards dinner sponsored by the American Good Government Society in the Sheraton Park Hotel of Wash-

ington last Friday were privileged to hear an inspiring and informative address by C. J. Backstrand, president of the Armstrong Cork Co. Because of its historic value and in the hope it will be read by many students and lovers of our American institutions, I am inserting it in the RECORD.

I am informed by the Public Printer that the cost of printing the address in the RECORD will be $202.50. Notwithstanding that fact, I ask that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

VIRTUE IN THE BODY OF THE PEOPLE

(Address by C. J. Backstrand, president, Armstrong Cork Co., Lancaster, Pa., before the American Good Government Society, Sheraton Park Hotel, Washington, D.C., April 28, 1961)

Mr. Chairman, Members of Congress, trustees of the society, fellow citizens, it is a high honor to have the privilege of addressing this distinguished assemblage on the occasion which commemorates the 172d anniversary of George Washington's first inauguration and which honors two statesmen of current times for their outstanding achievements on behalf of good government.

The American Good Government Society makes an important contribution to the national welfare by sponsoring this annual George Washington dinner so that we may renew our understanding, revitalize our faith, and regenerate our zeal for those abiding principles which undergird this Republic—principles which are as valid today as they were in the age of Washington, Adams, Jefferson, and Hamilton. We should review the lessons of history more frequently, but all too seldom do we do so. However, this event assures that it will be done at least once each year.

Although a Californian by birth, I am an adopted Pennsylvanian who has been accorded—almost but perhaps not quite—the status of native after first coming to Pennsylvania 44 years ago and after 34 years of continuous residence in that great State. Because eastern Pennsylvania is part of the hallowed and historic ground over which significant actions in the war for independence were fought, it would seem appropriate tonight to consider one important engagement of the Revolution which was conceived on and launched from Pennsylvania soil—the Delaware crossing on Christmas night, 1776.

The site of the crossing—McKonkey's Ferry, in Bucks County a few miles up the Delaware from Trenton—has been preserved as a memorial by the establishment of Washington Crossing Park, a State park with monuments marking significant aspects of the operation, restored historic buildings, and a memorial building which houses Emanuel Leutze's world-famous painting of "Washington Crossing the Delaware." The park project was brought about by the leadership of a few patriotic and dedicated citizens who sought to preserve the historic area in order to encourage a knowledge of history and an understanding of the significance of the sacrifices of the patriots who made our freedom possible.

While every schoolboy knows that Washington crossed the Delaware and subsequently surprised and soundly defeated the Hessians at Trenton, all too few Americans appreciate the significance of that action. In the considered judgment of competent historians, the American cause was at its lowest ebb immediately prior to the crossing. Had it not been for the glorious victory at Trenton and the subsequent successful action at Princeton, which caused the British to withdraw from most of the Jerseys, American defiance of the Crown would have ended then and there. And there would have been no United States of America.

Some may quarrel with this evaluation, asserting that Valley Forge marked the low point from which American fortunes then rose to eventual victory. And certainly no one should minimize that dark hour of the Revolution when a pitifully small force starved and bled in the snow while Howe's superior forces were warmly and comfortably quartered in Philadelphia only a few miles away. But a review of events leading up to the Delaware crossing and a comparison of Washington's letters and dispatches for the two periods clearly indicate that the days before the crossing were truly the darkest hour.

When the Declaration of Independence was issued in July of 1776, there was wild rejoicing throughout the land. Summer patriots were in full force everywhere. The States were invincible. King George could not possibly cross the ocean with sufficient force to put down the rebellion. And if he should try, a few rugged Continentals and State militia would defeat the King's regulars, and liberty would be won in short order. Such was the temper of the times. Then as now the public sought an optimistic view.

But the British forces, evacuated from Boston in March, had been strongly reinforced with fresh troops and ships. The question was—where would they strike. The answer was not long in coming. Late in August, Howe landed a powerful force on Long Island. The American command was awed by the size of the opposing force and the smoothness with which the amphibious landing was affected.

There followed defeat after defeat accompanied by debilitating retreat—defeat at Long Island; retreat up Manhattan Island with momentary success at Harlem Heights; the successive losses of Fort Washington and Fort Lee with their garrisons and supplies; and then the retreat across New Jersey with an army dwindling by the minute from sickness, desertion and the termination of short enlistments. With customary foresight, however, Washington planned ahead. He wrote to Congress from New Brunswick on December 1:

"I have sent forward Colonel Humpton to collect proper boats and craft at the ferry for transporting our troops, and it will be of infinite importance to have every other craft, besides what he takes for the above purpose, secured on the west side of the Delaware. Otherwise, they may fall into the enemies' hands and facilitate their views."

With an adroitly executed rearguard action which delayed the British and deceived them with respect to the strength of American forces, Washington slowly withdrew to the Delaware, and utilizing the boats, transported his force to the other side. Then only the river and this small force stood as a barrier between Howe and the capture of Philadelphia. Even the river could not be relied upon as a barrier, for if it froze solidly, troops could march directly across.

From Trenton Falls on December 10, 1776, in a letter to Lund Washington, the general graphically described his plight:

"Our numbers, quite inadequate to the task of opposing that part of the army under the command of General Howe, being reduced by sickness, desertion, and political death were obliged to retire before the enemy who were perfectly well informed with our situation, till we came to this place where I have no idea of being able to make a stand as my numbers, till joined by the Philadelphia militia, did not exceed 3,000 men fit for duty. I tremble for Philadelphia. Nothing in my opinion but General Lee's speedy arrival can save it. We have brought over and destroyed all the boats we can lay our hands on upon the Jersey shore for many miles above and below this place; but it is next to impossible to guard a shore for 60 miles, with less than half the enemy's numbers; when by force or strategem they may suddenly attempt a passage at many different places."

It was a desperate hour, indeed. But yet another blow was to fall. General Lee was captured. This, coupled with the knowledge that almost all enlistments would expire by year's end, made Washington's plight seemingly hopeless. Under these circumstances, who but Washington would have decided to attack?

The best evidence indicates the general conceived the crossing and Trenton attack around December 14. His plan was for a force including the Philadelphia militia to cross at Trenton, create a diversion, and block enemy escape southward. Another force was to cross above McKonkey's Ferry and proceed overland to cut off Hessian retreat toward Princeton. Washington's main force of some 2,400 men was to cross at the ferry. However, the forces above and below never made the crossing. But Washington crossed. It was a foul night. The river was blocked with ice and a storm was raging. The crossing was effected in Durham boats, ordinarily used for the transportation of iron ore, manned by Colonel Glover's seafaring men from Marblehead, Mass. The watchword of the campaign was "victory or death," and the immortal words of Tom Paine, who accompanied the American forces throughout the New Jersey retreat, were read to the men shortly after they were written on December 19, 1776:

"These are the times that try men's souls: the summer soldier and the sunshine patriot will, in this crisis, shrink from the service of his country; but he that stands it now deserves the love and thanks of man and woman."

Washington had planned for the crossing to be completed by midnight so his force might arrive at Trenton by 5 in the morning. But weather conditions delayed operations, and it was 3 a.m. before all of the artillery had crossed, and nearly 4 o'clock before the troops took up their march. This made him despair of surprising the town, but he pressed resolutely onward. For those who think the victory was possible only because the Hessians were surprised in their beds still drunk from Christmas festivities, let it be known that the German mercenaries were formed and in the field when Washington's force struck from two directions. The engagement was brief—over within 2 hours. Not a single American was killed and only a handful wounded. The ehemy suffered heavy losses. Colonel Rall, the commanding officer, was killed and many prisoners taken. In reporting the event to Congress Washington wrote:

"In justice to the officers and men, I must add that their behavior upon this occasion, reflects the highest honor upon them. The difficulty of passing the river in a very severe night, and their march through a violent storm of snow and hail, did not in the least abate their ardor, but when they came to the charge, each seemed to vie with the other in pressing forward, and were I to give a preference to any particular corps, I should do great injustice to the others."

In a postscript he added:

"The prisoners we have taken amount in number to 918 of which 30 are officers. We have also got about 1,000 stand of arms and 4 standards and 6 brass pieces of artillery."

The effect of this stunning victory and the action at Princeton a few days later was electric. The American cause had new life, new vigor, and "summer patriots" who had defected to the enemy in his period of New Jersey success came swarming back.

But the cause was far from won. Untold hardships and many misfortunes and reversals were ahead, and no one knew it better than Washington. However, the brilliance of his moves at Trenton and Princeton had saved the flickering flame of liberty from being snuffed out, and equally important, had saved Philadelphia. Its loss at that stage of the war would have been a disastrous blow the cause probably could not have sustained. The city then was not only the seat of government, it was also the chief manufacturing and commercial center on which Washington's army depended. Later, when Howe's forces finally did occupy Philadelphia, the blow was not so severe. The city was a mere shell of its former self—many commercial and industrial enterprises having been moved out during the intervening months.

Further evidence of the crucial nature and importance of the Trenton and Princeton operations was given by Cornwallis, Howe's brilliant and aggressive field commander. At the victory dinner following eventual triumph at Yorktown, Washington proposed a toast to the defeated general. Cornwallis rose to respond as silence settled over the group and said: "When the illustrious part which your excellency has borne in the long and arduous contest becomes a matter of history, fame will gather your brightest laurels from the banks of the Delaware rather than those of the Chesapeake."

The banks of the Delaware. Yes, Cornwallis had known, as had perhaps no one else but Washington, the slender thread by which the fate of the United States hung that cold, stormy Christmas night in 1776.

Washington's role in the war cannot be overstated. To a very great extent, he was the revolution—strategist, tactician, quartermaster, diplomat, and consistent servant of the Republic—all combined in one man. A significant mark of the man, and one which could profitably be the topic of a separate treatise, was his steadfast refusal to usurp powers that properly belonged to Congress. Time and again he was plagued by problems which he could have solved if he had taken the law into his own hands. For example, the lack of food, clothing and equipment for the troops—a constant source of worry to him—could have been greatly minimized if he had chosen to commandeer supplies from the citizens. But he did so only in the most dire emergencies. He also had to suffer with incompetent officers commissioned and sent to him by Congress. His task would have been easier and his troubles diminished had he sacked them and chosen his own. But he did not do so. He deferred to Congress, because to him it was neither consistent nor proper to employ autocratic, arbitrary means to achieve victory in a war for freedom.

Immeasurably valuable though his contribution was in time of war, perhaps even greater was his influence in the years that followed. His calm dignity, sense of justice, and extreme patience in presiding over the Constitutional Convention served to bring dissident groups together and make final acceptance of that great document possible.

The general's virtue was widely recognized and this fact was a potent and influential force in bringing about ratification by the States. Many citizens felt that the powers accorded the Chief Executive in article II were, as Patrick Henry called them, an "awful squint toward monarchy," but some such critics were persuaded to approve by the comforting thought that George Washington—who they knew did not seek kingship—would be the man to put article II into effect.

Perhaps the best judgment that can be made of his 8 years in the Presidency is that he fulfilled the hopes of the friends of the Constitution and spiked the fears of its critics. The friends hoped for a vigorous, forceful executive with enough power to hold the Government together. He fulfilled that hope. The enemies feared that the Chief Executive would take so much power unto himself that the United States would go the way of most other popular governments—straight into tyranny. Such fears were groundless because of Washington's single-minded devotion to the principles of representative government.

Most scholars would agree that his greatest contributions during the period of his incumbency as President were those that derived from his character and integrity, his insight and his strict adherence to constitutional principles. Jefferson later wrote with gratitude that Washington had conducted the new Government through its birth until it "had settled down to a quiet and orderly train," principally by "scrupulously obeying the laws through the whole of his career, civil and military, of which the history of the world furnishes no other example."

Jefferson penetrated to the heart of the matter. How was Washington able to supply the inspiration, courage and leadership to carry the Nation through wartime crises? Why was he so influential in the post-war period? Why was he so universally admired and respected? The answer, simply, is that he was a man of great character and spiritual power—a man of complete integrity, dedicated to the establishment of an enduring government of free men. He made this amply clear in his first inaugural address when he said:

"The preservation of the sacred fire of liberty and the destiny of the republican model of government are justly considered, perhaps, as deeply, as finally, staked on the experiment intrusted to the hands of the American people."

Today—172 years after Washington spoke these solemn words—we find the fate of this noble experiment still reposing in the hands of the American people, and we find our Nation facing grave perils from within and without. A fanatical and conscienceless enemy has served notice that it will not rest until it has the entire world as its domain. The United States is regarded by this enemy as the principal barrier standing in its way.

Though the military threat is great, it is important to recognize that the Communist challenge today is economic as well as military. They have declare allout economic war against us, and currently are attempting by every means to undermine our industrial strength and the stability of the dollar. The Communist strategy is to weaken us economically by luring us into excessive Government spending at home and abroad—and to destroy international confidence in America by singling out our weaknesses and failures and ignoring our strengths and superiorities.

It seems clear that if, as a nation, we are to meet successfully this type of attack, there is urgent need for a greater degree of understanding of the operation of our system, or if you will, a need for a higher level of economic literacy. Unless the general public gains a better grasp of economic fundamentals, public support for the sound policies now so vitally needed will not be forthcoming.

Economic literacy may be defined as full comprehension of a simple principle that our commonsense tells us is true, namely that few things in life are free. Almost all carry a price tag in terms of cost, effort and sacrifice. Furthermore, liberty—individual freedom—is inextricably linked to economic freedom. If the allocation of goods, services and resources is made by the arbitrary decisions of the state, backed by the employment of force of which it has a monopoly, human freedom is inevitably curtailed. On the other hand, history teaches that human freedom and opportunity flourish under the operation of the free market mechanism of our capitalistic society. The facts are clear and the proposition basically simple—yet it is not generally understood.

If we as a people continue to embrace centralist concepts and grant continually greater authority to an all-powerful central government, and thereby lose our freedom, we will have been conquered by our own weakness.

Indeed prophetic were Washington's words in a letter to Lafayette dated February 7, 1788, referring to one of the constitutional safeguards, the division of powers, and setting forth the one essential and critical factor on which its continued existence depends:

"That these powers are so distributed among the legislative, executive and judicial branches, into which the general government is arranged, that it can never be in danger of degenerating into a monarchy, an oligarchy, an aristocracy, or any other despotic or oppressive form, so long as there shall remain any virtue in the body of the people."

"So long as there shall remain any virtue."

"Virtue" here, I believe, was used in the classic sense of civic virtue as known in the ancient world—prudence, the ability to regulate and discipline oneself through the exercise of reason; fortitude, firmness of mind in meeting danger or adversity; temperance, calm self-control; and justice, the principle of rectitude and just dealing of men with each other.

Does this kind of virtue exist in the body of the American people today? Certainly in many it does—in many, I fear, it does not. Perhaps the proportions are not significantly different from those that obtained in Washington's day. And yet observers of the modern scene detect some disturbing symptoms—the increase in crime and juvenile delinquency—the dependence on others and emphasis on security rather than opportunity—the behavior of American captives subjected to Chinese Communist brainwashing in Korea indicating a lack of faith in themselves, a feeling of insecurity, and only a hazy understanding of American institutions—and the indifference of so many to the responsibility of citizenship in failing to participate in Government and to exercise their franchise. This situation exists principally because in our homes, schools, and businesses, we have not sufficiently emphasized and practiced self-reliance, the assumption of personal responsibility, and such other virtues as thrief and industry, and we have failed somehow to develop an understanding of and zeal for American principles to the extent that our enemy has developed understanding, dedication, and zeal for his.

It seems clear that we have a job to do, and it must start with each of us as individuals. We can begin by accepting the personal responsibility to work to revitalize the essential virtues in our homes, our schools, our own businesses, or communities, and generally in the Nation.

In our homes, it is important for us to teach our children the values of personal responsibility, self-reliance and self-discipline, and to set an example for them with our own conduct.

In our schools, we must be alert to the atmosphere in which our children are being educated. We must use our influence to improve that atmosphere and to see that curriculum offerings and teaching methods encourage personal responsibility and accountability, and that emphasis is placed upon the underlying meaning of American principles.

Those of us in business must keep this objective in the foreground for ourselves and

our associates—being personally responsible ourselves and encouraging our associates to be responsible, self-reliant, and accountable for results.

In our communities, we must seek to encourage and support those programs that call for local responsibility and self-reliance as opposed to subsidy support from the State and Federal governments.

And, finally, in the nation we can reaffirm this principle by throwing our support in favor of policies and legislation that promote personal responsibility, and resist those that encourage dependence on government.

Each of us as individuals can do much to help—and we will do it if we accept the challenge as a personal responsibility—the responsibility for doing our part toward bringing about an increase in understanding and dedication to American principles and traditions, and heightened resolution to preserve our heritage for those who come after us. Thus must we assume our own individual responsibility in the fateful struggle for men's minds between the forces of liberty and the forces of totalitarian tyranny—to the end that there always may remain in America a great measure of "virtue in the body of the people."

Smart Young Newcomers Sell Conservative View

EXTENSION OF REMARKS
OF
HON. CHARLES E. GOODELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 4, 1961

Mr. GOODELL. Mr. Speaker, in the May 1961 issue of the respected magazine Nation's Business, there is an excellent article about some of our 58 new Members of the 87th Congress. Many of these Members have already distinguished themselves in the Halls of Congress. They have impressed all of us, I believe, with their intelligence, self-assurance, judgment, and zeal. In my opinion, they have injected vital new blood into some of our hardening arteries in the Congress. After observing these distinguished gentlemen for 4 months, I have a distinct feeling that they may be doing their bit to give the Congress some new and healthier arteries before very long. I am pleased to introduce at this point in the RECORD the text of this fine magazine article:

SMART YOUNG NEWCOMERS SELL CONSERVATIVE VIEW—NEW TREND? OLD HANDS AT CAPITOL BELIEVE THESE NEW CONGRESSMEN SIGNAL SWING AWAY FROM FEDERALIZATION

Lanky, 36-year-old freshman Congressman JIM BATTIN, of Montana, strode into the ornate, high-ceilinged offices of Republican House Leader CHARLES HALLECK one day early in the present session of Congress.

"I want you to know, sir," he said to the conservative veteran GOP leader, "that I will be with you on most issues. But on other issues I won't be, because I'm just not that liberal."

Across Capitol Hill on the fourth floor of the Old House Office Building a few weeks later, 39-year-old DON BRUCE, of Indiana, another new Member of the House, calmly dictated a letter to a labor union leader in his home district. The union chief had urged Representative BRUCE to back the Kennedy administration program to "keep America moving."

"I intend to keep America moving," dictated Mr. BRUCE, "moving in the path of individual liberty and in strengthening the basic constitutional system of Government." He flatly stated that Government should "drastically reduce the entire tax burden and let the honest laws of economics get to working."

Warning your leader you won't always stand with him and writing your constituents that you disagree with them may seem unwise politics, particularly for new members. But Representatives BATTIN and BRUCE don't see it that way. Like many of the 58 first-term Members of the 87th Congress, they have both independence and conservatism as part of their makeup. Not only do they have convictions, but they and many of their new colleagues have the drive and the know-how to sell their beliefs. They are helping inject new vigor into the political cause of free enterprise.

Many new Members of the House in this Congress are sharply conservative in contrast to the 86th Congress when most new Members were liberal. The change is as drastic as has been seen in recent times.

Moreover, some congressional leaders not only predict that the new wave of outspoken young conservatives is the forerunner of many more young conservatives, but also consider it more representative of the philosophy of the Nation as a whole than is the welfare-state doctrine that has dominated National Government programs over most of the past generation.

"Many people say that resistance to radical ideas and the spendthrift schemes in government is growing; I believe this is true," Minority Leader HALLECK told Nation's Business. "Many of the new Members," he said, "were running against these radicals and they pitched their whole campaigns against this philosophy."

Key Democratic conservative in the House, Representative HOWARD W. SMITH of Virginia, also believes conservatism is on the rise. One indication is that he was swamped by letters of praise from all over the country after a recent television program on which he spoke out for constitutional and economical government.

House Republican Policy Chairman JOHN BYRNES of Wisconsin notes, "There has been a considerable rise in conservatism on the college level in the past several years. The conservatives in Congress could be a natural result of this, together with efforts to encourage younger people to participate in politics."

From Representative BRUCE comes this analysis: "I think we have seen the beginning of a philosophical evolution based on dedication to principle. In the recent past we have been seeing government as a false idol. Our bankrupt liberalism has been portrayed as a symbol of all good things. It has tended to erode our spiritual values that are the basis of our liberty. But I think this will be changed."

Another new Member, 32-year-old JOHN ASHBROOK, of Ohio, reports, "The temper of the people is more conservative than you would think." He concluded this after traveling and speaking in 200 cities around the country as chairman of the Young Republicans from 1957 to 1959.

Of the 58 first-term Members in the new Congress, 40 are Republicans; in the previous Congress, 59 of the 78 new Members were Democrats. Though most of the conservative freshmen wear the Republican label, the freshman Democrats also include articulate, self-reliant young conservatives.

One Democratic freshman, for example, was quizzed by the liberal chairman of a major congressional committee as to how he planned to vote on pending issues. At the risk of not winning a seat on this important committee, the new Member refused to commit himself to vote the way the chairman wanted. He lost the committee post.

Another new young Democrat pored over the administration's aid to education bill searching out cloudy phrases in its language that might make it unacceptable to him. He did this in spite of the fact that his State's political leaders were pressing him and other members of his congressional delegation to support the administration bill unswervingly.

Much has been made of the youth, scholarship, and vigor of Kennedy administration officials. It has reinforced the political cliche that links youth with liberalism and age with conservatism. The increasing age of some of the conservative congressional veterans also has served to point up the freshness and enthusiasm of members of the new executive branch. This has tended to draw attention from the youth, vigor, and intelligence that has come to Congress.

The seniority system in Congress makes legislative buck privates of all new Members. But in politics an attractive, persuasive, and sincere figure can begin to stand out and make himself heard rather quickly—as Mr. Kennedy proved.

As for the new Republicans who make up the bulk of the freshmen conservatives, "their influence is being felt already," according to Minority Leader HALLECK. Important committee assignments and wide opportunities to be heard at policy meetings also indicate the value being placed on the new men.

Congressional Campaign Chairman WILLIAM MILLER, of New York, says, "Never before have we had a young group as personable, articulate, and knowledgeable. There are lots of leaders among them."

"It's rather early to judge," comments Representative BYRNES, "but as a group, they seem outstanding in their enthusiasm, talent, dedication, desire to participate and awareness. We have been short on public relations and had difficulties getting across our true image in the past. We believed we were right, but we can't continue to take it for granted that everybody knows why we are right."

This is one reason the GOP policy committee has set up a new Subcommittee on Research to supply new fuel for conservative thinking. The committee is seeking fresh thoughts and information from academic and professional sources on the basic issues of our times.

A memorandum stating the objectives of the unit says its studies are "designed to provide a scholarly analysis of specific problem areas and ways of meeting these problems within the framework of our free enterprise society."

Its work will help supplement GOP policy formulation and may give extra ammunition to both older and new members of the party.

House Democrats are not without conservative organization and strategy. While the so-called Democratic study group, made up of about 70 to 80 House liberals, has developed an informal organization for concerted action and voting on liberal causes, conservative Democrats in the House also have an informal organization. As unpublicized five-man top command of conservative Democrats under Representative SMITH leads southern States-righters in legislative strategy.

The political party lineup in Congress is not nearly as important as the conservative versus liberal split. Although both Representative SMITH and Representative HALLECK deny that a coalition of Republicans and Democrats exists, rollcall votes have shown clearly a bipartisan opposition—formal or not—to excessive spending and welfare state legislation.

Conservative Republicans and southern Democrats now numbering nearly 200 members can be expected to vote the same way on many issues. Liberal Republicans and Dem-

ocrats mainly from the northern or border States or the West also number about 200. Normally about 5 percent of the House is absent on rollcalls. The remaining Members of the 437 total may swing from one side to the other depending on the legislation.

With such a near-even balance in the House, the new conservatives in the freshman class, both Democrats and Republicans, are an important element. This is particularly true since they seem likely to emerge as an energetic sales force for the free enterprise viewpoint.

Though political philosophy can only be fully judged in the light of a history of rollcall votes, many of the new Members' election campaigns, their activities since Congress convened, and their voiced intentions have made them appear promising to conservative congressional leaders.

Here is a closer look at a few of the men—some more conservative than others—who exemplify the new young men in Congress:

JOHN ASHBROOK, lawyer and newspaper publisher, singled out as a key issue of his election campaign the freedom of the individual. "Unbridled national power with a resultant loss of individual freedom and local autonomy would weaken our efforts in the international field," he told the voters. He said he would help guard against "State planners, the economy wreckers, the spenders and the destroyers of local government [who try to] weave a web of socialistic control over us under the guise of solving our problems by removing them from the careful scrutiny of the State and local government officials to the banks of the Potomac."

Representative ASHBROOK is the son of a Democratic Congressman who served the same district for nearly 20 years. The 32-year-old Republican is an honor graduate of Harvard like many members of the Kennedy administration. He studied under liberal Profs. Arthur Schlesinger, Jr., and John Kenneth Galbraith, but was repelled by the theories they espoused.

Mr. ASHBROOK was graduated from Ohio State Law School in 1955. He became active in the Young Republicans organizations on the county, State and National level, heading the national organization from 1957 to 1959. He is publisher of the Johnstown Independent, a weekly paper.

A member of the House Education and Labor Committee, Mr. ASHBROOK has taken a strongly conservative stand on all major issues. He voted against the liberal move to enlarge the House Rules Committee which was intended to dilute the power of the conservatives to delay or block heavy spending, welfare, and union-backed legislation.

He also voted against the bill to extend unemployment compensation benefits for additional weeks and supported a bipartisan move to block so-called back-door spending, which permits Federal agencies to borrow from the Treasury without the traditional review and control of the congressional appropriations committees.

JAMES F. BATTIN, the young Montana Republican, says, "Being labeled as a conservative is not a kiss of death any more. The conservative today is not against progress. He's against disorganized change."

Representative BATTIN believes a trend against Federal intrusion is starting in the country, especially among younger people. "A young fellow some years ago could go into business on $1,000. Today, if you have $1,000, you have to hire a lawyer to see if you meet all the regulations. You have to hire an accountant to set up your books for tax purposes. Pretty soon you don't have anything left for inventory."

Though Representative BATTIN, like many of his new colleagues in Congress, grew up in the depression years, this did not make him distrust the private enterprise system.

"I seek opportunity and resent regulation. I believe I was elected not on promises, but on forwarding the philosophy of less control and more initiative," he told Nation's Business. "I have no quarrel with liberals. My job is to convince people my position is right."

Mr. BATTIN is a lawyer and veteran of Navy duty in the Pacific. He has served as city attorney in Billings, Mont., was a member of the State legislature and was active in State and county civil and political affairs for 10 years before his election.

He is a member of the House Judiciary Committee and the important GOP committee on committees, which determines Republican committee assignments.

DONALD C. BRUCE comes to Congress with 19 years' experience in the broadcasting industry. He has been program director, manager of radio broadcasting companies, and a news commentator. Over the past 11 years, he estimates he has made about 4,500 talks concerning national and international problems.

An Indiana Republican, Mr. BRUCE beat a liberal Democrat for the congressional seat. He serves on the Education and Labor and Un-American Activities Committees.

Years of study and evaluation of everything from the "Federalist Papers" and Adam Smith to news and publicity releases led him to his conservative convictions, he explains.

He sees the great question of our times as this: "Is the United States going into a collectivist state with total dependence on the Government or are we to continue as a free nation, independent and responsible?"

He says that Government should protect the nautral rights of the individual, but that "Government has become the aggressor against our rights in the guise of protecting them."

DAVID HENDERSON is one of many southern Democrats who voted against liberalizing the House Rules Committee on the crucial vote early in the session. Washington is not new to him. The Wallace, N.C., attorney was assistant general counsel of the House Labor and Education Committee in 1951 and 1952. So he is familiar with some of the fundamental issues before Congress as well as the workings of the legislative body. The former Air Force major and county judge came to Congress at the age of 39.

His assignment is the Post Office and Civil Service Committee, but his past staff experience gives him a natural interest in the breadth of problems that come before Congress.

Mr. HENDERSON, who knows a Member must stay attuned to his district to stay in office, reports that after Congress first convened he got telegrams urging him to support the administration, and he feels there will be heavy pressure to bring money from Washington to his area.

But he feels that people will eventually cease their requests for more and more Federal spending. "We can't undertake these spending proposals without the prospect of higher taxes," he says. Lately some of the same constituents who urged him to support the administration pleaded with him to oppose the President's proposal to raise the tax on truckers.

Like most Democrats, Representative HENDERSON will be under some obligation to support the Democratic administration. On some legislation he will undoubtedly go along, but not before he has examined in detail each proposal to make sure it doesn't conflict with his and his constituents' fundamental beliefs.

RICHARD H. ICHORD, 34, is another new Democrat who typifies the independent thinking and high qualifications of this year's congressional freshmen.

The youngest man ever to serve as speaker of the house in the Missouri Legislature, Representative ICHORD has almost a decade of legislative experience on the State level.

"No specific political philosophy fits all cases," he believes. He feels he is not a Jeffersonian Democrat because "this is no longer the agrarian society that influenced Jefferson's thinking, but an urban society." But he believes the Federal Government has gone too far in some fields.

"I'm a little jealous of the powers of the State government," he told Nation's Business. "All our Federal programs should be set up to assure that local government has a part in the workings of the program. Money from the Federal Government isn't money that just comes from heaven, as some seem to think."

A brilliant student, he was graduated from the University of Missouri School of Business and Public Administration with a degree in accounting in 1949. He taught courses in business law and accounting while attending law school and after graduation returned to Houston, Mo., to practice law.

He served on what was known in Missouri as the "Little Hoover Commission," a body that recommended efficiencies and economies in State government as the Hoover Commission did on the Federal level.

Coming from a lead mining district with high unemployment, Mr. ICHORD is particularly concerned with this problem. He believes, however, that "the answer is retraining, not putting people on the relief rolls. It is too easy to create a philosophy in people that the government will take care of them."

Mr. ICHORD, however, does not feel that the administration proposal for adopting a medical care program for the aged under the social security system is socialized medicine as do many of his colleagues.

But with this issue, as with others, he indicates he will study all facets and decide for himself.

He is on both the Interior and Post Office and Civil Service Committees.

HORACE R. KORNEGAY, 37-year-old former prosecuting attorney from Greensboro, N.C. is another Democratic freshman. He, too, refuses to be labeled as conservative or liberal. But he describes himself basically as a Jeffersonian Democrat.

"I don't believe that Government should compete with business," he says, "but with our role in the world today, the Federal Government has to be big, and there are activities that the private citizen can't undertake himself."

He also believes that we should not overspend our income. He says the Federal Government should not "step in and regulate the crossroads store," as has been the potential threat under the broadened coverage of some proposed minimum wage extension bills.

Mr. KORNEGAY favors a temporary Federal school construction bill, but he opposes any Federal action or legislation that encourages pirating of industries from North Carolina. He opposes the concept as well as the threat that the area redevelopment bill might attract some of his State's industry elsewhere. This bill provides loans and grants for establishing industry in labor surplus sections.

Mr. KORNEGAY is on the Veterans' Affairs Committee.

JOHN H. ROUSSELOT, one of the new Republicans, represents former Vice President Richard Nixon's old congressional district.

Like some of his fellow Republicans, he won over a liberal Democrat in a campaign that focused on the fundamental issues of conservatism versus liberalism.

Though he is only 33, Mr. ROUSSELOT's apparent leadership qualities made him the choice of the other first-term Republicans as their acting chairman on party matters.

He received a degree in political science and business administration from Principia College in Illinois in 1949.

He has been in public relations work on the corporate level and was president of John H. Rousselot & Associates, public relations consultants, from 1955 to 1958.

He, too, is no stranger to Washington. He was director of public information for the Federal Housing Administration from 1958 to 1960. In California he had broad experience in Los Angeles County Republican politics and in campaign political organization and publicity work.

Mr. ROUSSELOT was a member of the Republican State central committee in California.

He was vice president of the Los Angeles County Young Republicans and a past president of the Young Republicans of California.

"It used to disturb me in school," Mr. ROUSSELOT told Nation's Business, "that the New Deal was pictured as all virtue. I read and read to find the holes in this facade. I couldn't believe that it was right to discourage creative initiative and to abandon faith in the individual to do for himself."

Mr. ROUSSELOT campaigned hard against Federal intervention in the citizens' lives and against centralized government and its cost to taxpayers.

He broke down every issue where possible to show just what the citizens in his district would pay for any new Federal program.

He believes the ultimate choice for the Nation is constitutional government or socialism.

The conservative has to explain in simple, clear terms what is involved and why he is right, he says.

The assumption that conservatives must come up with constructive alternatives to any program proposed by liberals can be misunderstood, he points out.

The alternative may be no legislation. For example, my positive alternative for Federal money for school construction is free, locally controlled education.

Our philosophy is harder to sell, but when unions or other groups attack us, we'll ask to speak before them. I think people are becoming fed up with big, centralized government. This will make the conservative philosophy easier to sell and we will sell it anywhere any time.

Consumer Credit Trend

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 4, 1961

Mr. MULTER. Mr. Speaker, the following speech was given by the Honorable M. S. Szymczak, member of the Board of Governors of the Federal Reserve System before the American Bankers Association annual National Installment Credit Conference in Chicago on March 21, 1961.

I believe that Mr. Szymczak's remarks are important and will interest our colleagues:

CONSUMER CREDIT TREND

(Speech by the Honorable M. S. Szymczak)

The Federal Reserve System has three principal responsibilities—bank supervision, fiscal agency functions, and monetary policy. Each of these covers a wide field of interest and a large area of activity. All of them have a relationship to credit—especially monetary policy. All of them require much research, for which the Board has a well-qualified staff.[1] Therefore, I feel competent to speak before this conference, but more importantly I am pleased to be here.

First, I should like to say something about the trends that have been in operation in the consumer credit industry for a number of years. Then I should like to see what modifications of earlier conclusions may be suggested by developments of the past few years.

Nothing is more illustrative of the changes in the attitude toward consumer installment credit and the dynamic character of the industry than the rapid increase in commercial bank activity in the field. It is hard to realize now that commercial bank installment loans were negligible until the late 1920's and that not until about 1935 did banks hold as much as 10 percent of all installment credit. By the end of the 1930's, however, the bank share had risen to about 25 percent, and during the postwar period banks have consistently held just under 40 per cent of a growing volume of installment credit. All but about 175 of the 13,000 insured commercial banks now make installment loans. Installment credit constitutes about 8 percent of the total loans and investments of all banks, and the proportion exceeds 10 percent for banks with total loans and investments of $5 million to $100 million. I do not need to emphasize to this group how actively banks have competed for consumer loans over the past 30 years.

DEVELOPMENTS IN CONSUMER CREDIT—1930–55

The rapid growth in commercial bank activity in the consumer credit market over the past several decades has reflected both the changing attitude toward installment credit generally and the ready availability of reserve funds over a substantial part of the period. As expenditures for automobiles and household appliances formed an increasingly important part of a rising level of consumer expenditures, more and more consumers made use of credit to finance the purchase of such items. It was recognized that these were large-ticket durable items for which expenditures were "lumpy" and which would provide services over a period of time. There was increasing acceptance of the appropriateness of consumers' financing purchases of these items by borrowing and repaying their indebtedness as they used them. It was observed that borrowers for the purchase of these items are not the impecunious but are predominantly young, middle-income families who can look forward to increasing incomes over future decades. Moreover, it was noted that these items could be repossessed and, at least in the case of automobiles, resold in an active market.

The rapid increase of bank activity in consumer credit reflected also the availability of a large volume of excess reserves during the 1930's and of Government securities that could be sold at pegged prices in the early postwar period. While seeking outlets for loanable funds, banks made a number of discoveries about consumer loans. First, they learned that consumer loans were sound loans. Even during the depressed 1930's, consumers did a remarkable job of repaying debts. Defaults declined to very low levels during the war and early postwar period.

Second, banks learned that consumer loans are very profitable loans. Most banks have discovered that their consumer credit departments are among their most profitable departments, despite relatively high administrative costs and laws limiting interest charges. Such loans seemed particularly attractive with the excess reserves of the 1930's and the continued low interest rates of the immediate postwar period. They have continued to be attractive, however, despite the higher levels of interest rates and security yields prevailing in recent years.

Banks also discovered that consumer credit was an area with rapidly expanding demand. Again, this was of particular importance when banks had excess funds and demands for other types of loans were depressed. It has continued to be important, however, as more and more banks have come to consider consumer loans an important part of their portfolios. Many banks learned that they could make direct loans to consumers while continuing to supply funds to other types of consumer lenders. I am sure that many, if not most, of the banks represented here make direct loans to consumers, purchase paper from retail outlets, and at the same time lend to retail outlets and finance companies for the purpose of carrying consumer paper.

In the decade following the close of the war the growth in installment credit was particularly rapid, giving rise in some quarters to expectations of continued growth at astronomical rates and in others to fears of a drastic cutback resulting from the high percentage of consumer incomes being devoted to debt repayments. Consumers incurred debt to meet the backlog of deferred demand resulting from wartime shortages. Increasing home ownership and the move to the suburbs together with increased incomes gave rise to the two-car family, which constituted 12 percent of all families by the end of 1955. The rise of new products, such as television, and the improvement of old products were further factors in credit expansion. New types of credit plans permitted the substitution of installment for charge accounts credit, and increased demand for services such as travel and education encouraged the expansion of credit for these purposes.

Installment credit controls were reimposed on two occasions—in 1948 and again in 1950—to moderate expenditures for durable goods and the expansion of credit. The removal of credit controls in each case was followed by an easing of credit terms which both encouraged consumer expenditures and intensified the effect of the expenditures that took place. After a moderation of credit growth in 1954, outstanding credit rose 23 percent in 1955 as automobile sales reached a record high and terms eased sharply further. At the end of 1955, total installment credit was 12 times as high as 10 years earlier and automobile credit was 30 times as high. The ratio of debt payments to consumer disposable income reached 12½ percent in 1955, compared with 3½ percent in 1945. To many it seemed that the demand for consumer credit was insatiable. There seemed also to be an almost unlimited supply of credit as banks and other lenders competed aggressively for business. To many observers it seemed that consumer credit controls were the only way to prevent continued sharp inflationary pressure from increased credit purchases and continued easing of terms.

WHAT HAVE WE LEARNED FROM RECENT DEVELOPMENTS?

In what ways have developments over the period since 1955 modified interpretations of consumer credit trends? Few would suggest that the trends just discussed have been reversed or that the basic quality of consumer credit has changed. I do believe, however, that developments over the last 5 years have taught us some new lessons about consumer credit—or, rather, retaught us some old lessons. I think that recent

[1] Practically all of the data I shall submit here today were compiled by our division of research and statistics. They have been brought together by Miss Mona E. Dingle, chief, consumer credit and finance section.

developments have pointed up the unusual nature of the early postwar period and the exceptional combination of circumstances that made 1955 possible. At the same time, they have emphasized the continued dynamic nature of the consumer credit industry.

What are the lessons that we have learned from developments of the last 5 years? First, I think that we have learned that consumer credit growth at the rate of the early postwar period was an unusual development that is not likely to be repeated under normal peacetime conditions. The rapid increase of credit in that period was associated with the backlog of deferred demand, the small volume of indebtedness at the beginning of the period, far-reaching social and economic changes, and expectations of continued inflation on the part of much of the public. I think that it is now generally recognized that the period 1946–50 was largely a catching-up period. The ratio of debt to disposable income was about the same in 1950 as just before the war. Developments in 1955 reflected an unfortunate combination of record automobile sales and sharp easing of credit terms. Since then we have learned that such a growth rate cannot be sustained. Moreover, we have learned that reductions in consumer credit may take place in periods of recession, and that these reductions are likely to be the greater the more excessive was the preceding credit expansion.

We have also learned that automobile credit is not necessarily the dominant factor in the expansion of installment credit that it seemed in the early postwar period. Expenditures for automobiles have increased less rapidly than many other types of consumer expenditures in recent years. Meanwhile, many of the factors which earlier resulted in such sharp expansion of automobile credit in relation to sales have not been operating to the same extent in recent years. At the end of 1960, automobile credit accounted for about the same proportion of total installment credit as at the end of 1953—slightly more than 40 percent. This was also about the same proportion as in 1941. Personal loans increased from 21 percent of the total in 1953 to 26 percent in 1960, while other consumer goods paper declined from 29 to 36 percent. Before I discuss these developments in more detail, let me mention two other lessons that I believe we have learned from recent developments.

One more lesson that we have learned is that there are such things as delinquencies and repossessions on consumer loans and that these need to be taken into account in administering consumer loan departments. Despite the generally good record of consumers in paying their debts, we have learned that not all consumers discipline themselves adequately and that many will attempt to borrow more than they can service from their incomes. We have also learned that recessions may convert otherwise sound loans into at least temporary defaults. We have learned that dealers that have sold recourse paper can go into bankruptcy, and that lenders can lose money on repossessions in a declining market. I know that a number of lenders are now operating with the highest delinquency and repossession rates of the post war period. Others are spending increased time and money in collecting overdue loans and in screening new loan applications. Many lenders have learned to their regret that injudicious promotion efforts may require a high refusal rate if a rise in delinquencies is to be prevented.

A fourth lesson that we have learned is that consumer loans are affected by limitations of credit supply as are other types of credit. We have learned that loanable funds cannot be made available in unlimited amounts in periods of prosperity and high level demand without encouraging inflation, and that restrictions on the growth of credit affect consumer as well as other types of credit. As long as banks had excess reserves or large amounts of securities which could be sold at pegged prices, and as long as they were actively interested in expanding the proportion of consumer loans in their portfolios, this limitation did not come into play. In the past decade, however, we have relearned the lessons of credit restriction in all areas. Credit restriction appeared at times not to affect consumer loans as banks as well as other lenders competed actively for such loans. As consumer loans have increased in proportion to bank assets, however, banks that have been pressed for funds have restricted expansion in this as in other areas. No doubt many of you were among the lenders who were curtailing promotional efforts sharply, screening loan applications more carefully, exercising caution in taking on new dealer accounts, and upping interest rates on some types of loans a year or so ago. Some of you have also discovered, however, that it may be difficult to apply the brakes on consumer credit expansion if there has previously been injudicious promotion or sharp easing of terms.

CHANGES IN OUTSTANDING CREDIT—1955–60

Having summarized the lessons that we have learned from developments of the past few years, let me review these developments in somewhat more detail, with special reference to changes in automobile credit. In 1955, as you are aware, automobile credit increased 37 percent and other installment credit about 13 percent. The sharp increase in automobile credit reflected in considerable part the record 7.4 million new cars sold. Meanwhile, however, developments were taking place in the market for automobile credit which both made these sales possible and intensified their effect on outstanding credit. The average size note on new car contracts rose sharply as automobile prices increased, consumers upgraded their purchases, and the real down payment ratio declined. The proportion of automobiles bought on credit also increased substantially. Meanwhile, the rise in repayments was moderated by the lengthening of average maturities as first 30- and then 36-month contracts became common.

The continued operation of most of these factors in 1956–57 kept extensions above the rising level of repayments despite a drop of almost 20 percent in new car sales. By the end of 1957 almost one-half of all new car contracts were being written for 36 months. The average size note on new cars was about one-third higher in 1957 than in 1954. The proportion of cars bought on credit rose about one-sixth from 1954 to 1956 before declining slightly in 1957. Automobile credit, however, rose more moderately than other types of credit in the 1956–57 period—an average annual rate of 7 percent, compared with 10 percent for nonautomotive installment credit.

A further sharp drop in automobile sales in 1958 reduced extensions below repayments. Outstanding automobile credit declined 8 percent during the year while other types of credit continued to rise.

Automobile credit extensions picked up with automobile sales in late 1958, but in the period 1959–60 automobile credit rose slightly less than other installment credit—an annual average rate of 12 percent, compared with 13½ percent for nonautomotive credit. The average size note declined slightly as manufacturers failed to increase prices for the first time in several years and compact cars became an important element in total sales. Downpayments and the proportion of cars bought on credit were unchanged. By late 1959, 36-month contracts on new cars accounted for about two-thirds of all contracts, but the proportion showed little further change in 1960. As you are well aware, the much-heralded 42-month contract failed to materialize. The growth of other types of credit in this period, however, was encouraged by promotions, by the adoption of new types of credit plans, and in some cases by an easing of terms. Automobile credit began to decline at the end of 1960, but personal loans continued to increase.

FUTURE TRENDS

What conclusions can you draw from the past with respect to probable future developments in consumer credit It is obvious that whether the early 1961 decline in installment credit will continue will depend largely on changes in consumer demand, particularly for durable goods. I do not think any of you expect a decline of major proportions in consumer credit. On the other hand, consumer credit as such cannot be expected to pull us out of the current recession. When consumer demand revives, however, consumer credit should be a contributing factor to the upswing.

Over the longer run, you would expect a continued growth in consumer credit as population and income increase and new items are bought on credit. You would expect, however, that the rate would be substantially slower than in the first postwar decade, and obviously you would expect periods of cyclical expansion to be followed by moderate declines.

The ratio of consumer debt payments to disposable income may rise moderately from the rate of slightly more than 13 percent which has prevailed since the second half of 1959. The large baby crop of the war and immediate postwar periods will be reaching maturity and setting up homes. Older people will also form an increased part of the population. This group has always accounted for a small part of total consumer debt, but the incidence of debt may rise as an increasing proportion of older people are accustomed to the use of installment credit and continue to have regular incomes after retirement. To the extent that an increase in installment credit reflects rising incomes and an increase in the number of creditworthy families using such credit, it is, of course, no cause for alarm.

Next, you would probably expect new items and the newer types of credit plans to continue to account for an increasing share of total installment credit. The proportion of credit accounted for by the traditional types of household durable goods has been declining for some time. You might question how much further automobile demand can increase, in view of the very high incidence of automobile ownership and the number of multiple-car families at the present time. On the other hand, other types of large-ticket items are becoming an increasingly important part of what Americans consider the good life. You might also expect a continuation of the trend toward the use of revolving credit accounts for making a variety of purchases.

Many of the big-ticket items that are entering into the standard of living of more and more Americans are durable goods like boats and camping equipment. Others are services like trips to Europe and college educations. Many of these services are lumpy in the same sense as purchases of durable goods—that is, they are made infrequently and they involve expenditures that are large relative to consumer incomes. The response of lenders to these new demands has illustrated the continued dynamic character of the consumer credit industry. On the other hand, some of these new types of credit may involve dangers if injudiciously promoted. Acceptance of the widespread use of consumer credit for the purchase of durable goods has been based in part on the fact that consumers were paying for goods as they were using them. I believe that there is a limit to the extent to which consumers can be expected to allocate current income in

payment for purchases from which they are no longer deriving utilities. This danger is likely to be greatest in the case of expenditures that are in fact of a more or less regular nature or are likely to be repeated at intervals shorter than the maturity of the debt. The danger may be aggravated in some of the new types of credit plans that do not require a complete payoff of debt incurred in connection with specific purchases.

Finally, on the basis of recent developments you would expect consumer credit to continue to show more sensitivity to developments in general credit and monetary policy than in the past. In view of recent increases in loan-deposit ratios and in the ratios of consumer loans to total loans, more and more banks will probably find it necessary to restrict expansion of consumer as well as other loans in periods of credit restraint. By the same token, other consumer lenders will also find it difficult to raise sufficient funds for unlimited credit expansion. I do not say that general credit and monetary policy can prevent all excesses in the consumer credit field in the future. I do believe, however, that the apparent insensitivity of consumer credit to general credit and monetary policy in some past periods has been associated in part with special conditions in the financial system and in the economy generally. After recent developments lenders may be less eager than in the past to enter into excessive credit easing or promotions that may be difficult to curb.

As in all things, we have much to learn, not only about consumer credit, but also and especially about its use. Experience teaches discretion. As in life generally, so in this field abuses and excesses have been experienced that were not in the interest of the borrower or the lender and of course not in the public interest. Nobody knows that better than you, and nobody can contribute to the welfare of the consumer credit industry as effectively as you. Your discretion is essential to its sound economic and social contribution.

The Peace Corps

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 4, 1961

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered to the student body at Pennsylvania State University by Milton J. Shapp, president, Jerrold Electronics Corp., Philadelphia, Pa., March 9, 1961:

Peace is a wonderful word.

One of the problems we face though is that each person thinks of peace as something different. The general concept is that we have peace when there is an absence of war. Unfortunately, this is not a true definition. There are many millions of people throughout the world who live lives of drudgery, amidst poverty and disease. They find no peace. Can we say that a mother who watches her children starve has found peace? We must think of peace as it applies to other people as well as to ourselves.

We tend to think of peace as a world order in which we Americans will be the benefactors. When you consider that the United States represents only 6 or 7 percent of the total population on this globe, peace to others might very well be achieved by our elimination as a powerful nation, thereby reducing the possibility of involving the world in a nuclear war. This might bring peace to them, but would be disastrous to us.

If you want to reflect a bit more on this, consider the Congo. We are concerned—all of us—that war in the Congo might erupt and involve us. But the people in the Congo have other concerns. They are starving; they are living in poverty; they have an epidemic. The pictures in Life magazine just a few weeks ago showed the horror of life in the Congo. To bring peace to the Congo, we must not only avoid war, but also help develop the country to give the Congolese a better way of life. So it is in other parts of the world.

BACKGROUND OF THE PEACE CORPS

The idea of a Peace Corps to achieve such a desirable goal is not new. For at least 60 years, there have been programs of this sort advocated in the United States. At the end of the Spanish-American War, in 1901, American soldiers in the Philippines were given the option of demobilizing and returning to the United States or staying in the Philippines to become teachers. Thousands stayed and went into the villages. Many of the present generation of Philippine leaders were trained by these teachers. I think this is a good example of the real benefits our Peace Corps program might bring to the world.

In 1904, a man named William James wrote a book called "Moral Equivalent of War." In this, he stressed the idea of rechanneling the aggressive instincts of youth to useful services, at home and abroad, giving them opportunities to lead purposeful lives.

There have been many private agencies with long, successful records of activities related to Peace Corps work. You are familiar with the American Friends Service Committee, the International Voluntary Service, the Voluntary Services Overseas (a British organization), Operation Crossroads of Africa, which is composed of many American college students, etc. The list is long. The Communist nations have many organizations doing similar work. At the present time in Cuba, for example, there are 180 youths gathered from all corners of the world (from 40 different countries), building a school in the mountains near where Castro started his revolution. The Soviet (and I will cover this in greater detail) has a large corps of young people in training for service in the underdeveloped nations of the world.

Senator Humphrey, Congressman Reuss, Victor Reuther, General Gavin (the new Ambassador to France), Max Lerner, and many others have been writing and talking about this concept for years. In fact, HUMPHREY introduced a bill in Congress in 1960, hoping to establish a Peace Corps. Congress passed legislation that authorized a study of the advisability of such a program, but did not act on the Humphrey bill.

Kennedy was the first President (though at the time he was a Presidential candidate) to endorse such a program. The results were what he hoped they would be—that the idea would capture the imagination and enthusiasm of the American people. This it did, primarily because Americans realize that the Peace Corps is needed in the world today. Its philosophy is consistent with the philosophy that established our country; its moral purposes are quite consistent with our religious goals. The motto, "Youth will be served" is now passe. In 1961 our motto is, "Youth will be of service."

PURPOSE

Let's take a look at the world and the need for establishing the Peace Corps. Two-thirds of the world live in wretched poverty. Three-fourths of the world are nonwhite. The population is expanding exponentially. There are 3 billion inhabiting the earth today, and there will be about 4 billion by 1975 or 1980. In Latin America, approximately 40 percent of the population is under 15 years of age: 50 percent under 20 years of age. This gives an idea of how fast the population is growing.

My generation did one big job. We defeated the Nazis and Fascists in their attempts to enslave the world. But I must say to you students—members of the new generation—we did a miserable job of analyzing and combating the spread of communism. We seem to have taken the easier path. We tried smothering it with slogans and then ignoring it, hoping it would go away, while we pursued materialistic goals. The efforts of the private service organizations and the individuals who attempted to awaken us to our true world obligations were, in a large sense, ignored. We have been content to know that we are the strongest nation in the world, and that other peoples should know that we have no intentions of using our strength for anything except peaceful purposes—our peaceful purposes, namely, to prevent the outbreak of wide scale war. We have deluded ourselves that other people in the world are as eager as ourselves merely to contain communism and that therefore they wait for us to help solve their problems.

Anticommunism has proven bankrupt as a foreign policy. We need a more positive program. The establishment of the Peace Corps is such a positive step.

Today, idealism has become realism and has become identified with our national purpose and with national security. Let's analyze that for a moment. We have observed in the Congo, in Laos, Algeria and other countries of the world that poverty, illiteracy and disease threaten our national security. Communists are entrenched a mere 90 miles off our shores. It was the poverty of the masses in Cuba that enabled Castro to assume power. All our bombs—all our missiles—have not stopped Castro from moving into the shadow of the Kremlin.

THE SOVIET CHALLENGE

Today, belatedly, our military experts are studying what they call the fourth dimension of war which is the mind of man. The Soviets moved in and took Cuba because they captured the mind of man. They are making great inroads in the other nations of Latin America, Africa, and Asia because they are penetrating the minds of men.

My wife and I visited the Soviet Union in the summer and early fall of 1959. To give you an idea of how they are accomplishing this program, I would like to relate what they are doing within their educational system to indoctrinate and sell their people on the ideas of communism. At the age of three, the children are placed in nurseries, where they are exposed to the principles of communism. We visited a grade school on the second day that it was open for the semester. We went into the first grade class with a group of 7-year-old children. The principal, through the interpreter, asked if we had any questions to ask the children. I said yes. "Why are they in school?" It was translated into Russian. Instantly, almost every hand in the room was raised. I pointed to one little boy. He stood up with a smiling face and said, "We are in school to gain knowledge, because only through knowledge can we build strong communism, and we are out to build a better world for all humanity through communism." Down he sat. This was a seven year old child on the second day of his first year in school.

I have often thought what the answers would be if I had walked into any grade of an American school and asked that question. I wonder what answers I might get if I should ask that question in this room tonight? I doubt if there were would be such a clear-cut exposition of American goals.

Later, during our stay in Moscow, we met a young couple who were in their second year of training at the Moscow Institute of Languages. They were studying Swahili. It is a 3-year course. They planned to devote many years of their lives to a service in Africa. He was a sanitation engineer, and she was a nurse. They were imbued with the same spirit of service that our religious missionaries have. Many thousands of such Soviet youths are in training in Moscow, Prague, and elsewhere, learning languages, culture, history, and religions of the countries to which they will go. It is this group upon whom the Soviet is relying to penetrate the minds of men and help win the world for communism.

When we read in our newspapers about "subversive agents" of the Soviet Union causing trouble in poor countries, we must remember that in many cases these are sincere people helping to improve standards of living—working as they see it to "build a better world for all humanity through communism." How the efforts of these dedicated people are used and controlled by their political leaders is a different story.

If we are to have any success in stemming the advance of communism throughout the world, we too must offer a positive program to aid the development of people in the have-not nations. Expert advice and top level governmental assistance such as we have been supplying is not sufficient, because the organization and administrative processes of many of the needy countries do not afford an efficient method for reaching the people. Money by itself will not do the job. Money is like rain to farming. Land may be fertile, but if there is no seed, rain will not bring growth. In fact, too much rain causes erosion, just as too much money spent without preparation and intelligent programs to use it properly, results in extravagance, waste, and corruption. So, we must have a people-to-people program at the grassroots level. And this is the Peace Corps.

AIMS

What will the Peace Corps do? Well, basically the job in the rural areas of the underdeveloped countries is to get change started. In the urban areas, it is to help meet the problems brought about by the changes already underway. The problem is not that these countries have no trained people. They just do not have enough. And, unfortunately, many of their trained people, having been educated, feel that their status now prevents them from going back to be of service to their own people.

The Peace Corps is our tool to raise the standard of living of these nations. Robert Sargent Shriver, the head of the Peace Corps, has outlined five major things that he wants the Peace Corps to do: (1) teaching; (2) health service; (3) working on agricultural and world development programs; (4) working on large scale construction and industrial programs; (5) working in governmental administration.

Education at all levels is the greatest need facing the world today. To start industrialization in Africa, Asia and Latin America, illiteracy must be overcome. Thus, the first and most important job is teaching. I mentioned before how the work of our ex-soldiers helped the Philippines become one of the strongest nations in the Pacific and one of our most loyal allies.

Education is the key to success. Machines may make life better, but it takes education and intelligence to design the machines. We must help the underdeveloped nations by teaching their people first to read and write; then the sciences and skills that will help lift them out of the morass in which they live today.

Red China now has over 200 million children in their schools. You can see what will happen one generation from now when this large number (the greatest mass in history) of educated people start moving throughout the world in diplomatic channels.

As for health projects—fighting malaria, improving sanitation, child care work, even serving as midwives, could be some of the duties of the Peace Corps. In the field of agriculture, many of the methods and standards used in these countries are antiquated even by Biblical standards. We certainly have much to offer to the nations of the world in this respect.

As for working on large-scale construction and industrial projects, we have many workers who can assist with irrigation problems, bridges, roads, factories, and also help train local construction people. At the government level, the training of clerks, typists, and secretaries is essential. It is hard to conceive of the problems involved in running a government where there are few typists to type letters or no trained clerks to file documents.

One of the other projects which will certainly find a big place in the Peace Corps activities will be that of disaster work. You can see the advantages of having many hundreds—or thousands—of trained people ready to move into areas that might be affected by earthquakes, floods, fires, etc.

The operation of Peace Corps should not be considered as a unilateral program. The more we can make it bilateral and multilateral, the greater will be its value. We should be working with other nations on joint projects. More nations will participate with less of a feeling of being regarded as second rate if we make programs reciprocal. We should use foreign exchange students now studying in the United States to help in our training, and also to participate in our projects. We have much to learn by working with these people. Also, this will give other countries a feeling that they are helping us.

OBJECTIONS

The question already has been raised, "Why send so many idealistic and dedicated people overseas, when we have so many millions living in our own slums?" Certainly, this calls for investigation. Already there is thought of using these areas in the United States as training grounds for those who would serve in the Peace Corps.

For the operation of the Peace Corps to be successful, there are many objections to overcome—both here and in other countries. First, strange as it may seem to us, many nations do not want American volunteers. They are fearful of getting caught in the crossfire of American and Soviet relations. Some have no budget to cover costs for housing, travel, administration of the program, and so on. And they have the same problems as we in trying to get money authorized for aid programs. Some governments look askance on allocating funds for a hut or house or even food for our volunteers when some of their own people do not have these things.

Then there is competition with the educated unemployed. There are many thousands of educated people unemployed in countries like India, for example, who may feel that our Peace Corps volunteers are taking jobs from them. (By the way, there is a real advantage to a 2 or 3 year limitation on service. The Peace Corps volunteer has no desire to establish a permanent job, and this can be made clear to the people with whom he is working and training.)

Another difficulty is that needy countries may be unable to work out programs of assignment. The biggest mistake we could make would be to send any group (whether it be two or a hundred) into a country in which the details of handling a specific program had not been thoroughly analyzed and cleared. With the leaders of the underdeveloped countries so busy on day-to-day problems, there is little time for such planning. Yet, without it, little would be accomplished by a Peace Corps group.

In many cases, it is not easy to find projects on which the Government is willing to use volunteers. National pride and sensitivity about their slums may be a deterring factor. This is one reason perhaps that working through the United Nations would be advantageous. National pride would not be affected to the same extent if a new nation were to ask for volunteers through the United Nations. The Peace Corps is already organized to send people directly to a needy country or through the United Nations or through any other agency whose services may be requested by the country involved.

COST OF PROGRAM

There are also objections to overcome here in the United States. Of prime consideration is the cost of the program and the balance of payments problem. It is estimated that it will cost about $10,000 per person overseas. Fortunately, most of this money is for training, administrative costs and supplies which would be spent here in the United States with only a small percentage of it going to a foreign land. So the balance of payments problem is not an important factor. However, Congress is on an economy kick. The Peace Corps is going to cost money, and they have to be convinced of its great value.

I should like to tell a story about an elderly couple who went to Wilmington, Del., and visited Longwood Gardens, a part of the Du Pont Estate that is open to the public. If you have been there, you know how beautiful it is. If you have not, it is worthwhile visiting. The lawn in the springtime is like a billiard table. The garden contains every flower imaginable. The bushes, trees, and birds are magnificent. It is just Heaven on earth. As this couple went through the grounds with the guide, they oohed and aahed all over the place. Finally, after about 2 or 3 hours, they were at the gate ready to leave. The man turned to his guide and said, "Would you do me a favor, please? My wife and I have enjoyed this so much. Please convey our personal thanks to Mr. Du Pont for allowing us to come into this garden. It is so beautiful." Then he turned to his wife and said, "Mary, just think what God could do throughout the world if He only had the capital."

It is going to take lots of money to do this program. But I believe it is a worthwhile service—one of the greatest America has ever undertaken. We must furnish the capital.

We face some problems due to erroneous concepts. There is a connotation in the minds of some that this is another CCC; that we are going to have overseas boy and girl scouts; that this is just going to be a little tea party. Well, I think—and I am certain that the men who are going to run the Peace Corps know—that proper administration and proper planning will overcome those objectons in a few years. The Peace Corps is not going to provide an easy life, but those who participate will find the greatest satisfaction that comes with being of service.

PERSONAL REQUIREMENTS

Probably, for a long time, maybe only 1 out of 10, or 1 out of 20 applicants will be successful in qualifying to serve in the Peace Corps. Let's see what skills are required to become a member of this group.

First, is dedication of purpose. Anybody who joins this organization must truly believe in the brotherhood of man. He (or she) must be dedicated to service. He must have patience and understanding. He must be willing to make a sacrifice for the good of humanity. He (or of course she) must have a knowledge of the language, the culture and history of the country that is being

served; also a good background in our own history and a knowledge of our own culture. He must have ability to work with people; to organize and to carry out projects. He will be the only trained person among many people who have never worked on similar projects before. He must be able to teach, without playing the role of teacher, and to develop a teacher-student relationship that has no implication of a superior-inferior, or privileged-less privileged classification. He must have training in health standards, sanitation, first aid, and also be something of a psychologist. He must pass a rigid physical fitness program, because he will have to stand the rigors of primitive life, eating local foods and living in a manner to which nobody in the United States, except perhaps the Indians on the reservations in the West and in the Seminole sections of Florida, are accustomed.

And then, he must be able to cooperate or to compete, as necessary, with similar groups of Communists who may be working in these countries. I say cooperate or compete, because at the beginning for certain we will be competing. I hope that before too long, perhaps we can cooperate. But as I stated previously, the Communists believe that only through communism can a better world be built for humanity. The first thing they teach is that it is communism that will bring these people a better way of life. Our people must be able to show that we can help people develop a better way of life, and that it is our intention to let each country develop politically as it will. Our Peace Corps representatives will be the salesmen and demonstrators of these concepts.

TRAINING

You folks at Penn State already have some of these skills that are needed, but many others must be taught. At first, training will be available through the Peace Corps. However, plans have already been announced for a training program which will be conducted as part of undergraduate and graduate work at colleges.

Before accepting anyone for training, there will be a very careful screening program. After training, there might well be assignments here in the States on which people can work. Here, many of the misfits can be judged and weeded out before going overseas.

The British who have many volunteers working throughout the world have a training program which consists of only 1 week in England. The balance of training is provided in the countries to which volunteers are sent. They find that letting a volunteer get acclimated to the country while receiving his training in languages, customs, etc., is much easier and has much more impact.

It is presumed the Peace Corps will try all kinds of training methods depending upon what is necessary. The training program is very important. The Soviet people I met were spending considerable time learning languages—including native dialects. When they go into the villages, they will speak like natives and will be accepted, I believe, more readily because of it.

ELIGIBILITY

Who is eligible? Well, anybody who qualifies is eligible. Anyone who has the skills and personality required and who is willing to serve—men and women of any creed, color, or race. Married couples, where both are qualified and willing to serve, will be sent together.

Young people will form the backbone of the Peace Corps for many reasons. Usually, they are not tied down by family. They are not as accustomed to high incomes They will be more interested in the nature of the work rather than in prestige. It is not necessary that they be college graduates, as the needs of a project will determine the level of education and training required.

Then, most important, older people who have overseas experience should be included. They will be needed for administrative posts to help guide the new initiates in this overseas service.

COMPENSATION

Let's take up some miscellaneous things. Pay. This will be approximately the same as the military scale, but the important thing is this: no one will receive more for his work than the equivalent salary of local people doing similar work. There is a good reason for this. To be successful in the Peace Corps, you have to be welcome. You have to live as part of a community. You have to be at the "grass roots."

When I was in Italy during the war, I was drawing $65 a month from my officer's pay. The rest went back home. But my $65 a month was about five times what the average Italian was making and about double what the GI's were drawing. We Americans caused tremendous inflation in Italy with our high pay scale. The Italians greatly resented this. People I knew said that at least under the Nazis they could buy food and other products, whereas we practically ruined their economy with our high wages.

There was a famous cartoon by Bill Mauldin that portrayed this feeling. It showed two GI's—cold and wet, huddled in a doorway out of the rain, but shivering around a GI lamp. A poor, ragged Italian walked by, looked at the lamp and said, "My, you Americans have everything."

We cannot have our representatives who are supposed to be living and working with unfortunate people and developing a "we" attitude, getting higher pay than the people with whom they are working. So the members of the Peace Corps will find it necessary to adapt themselves to the local standards. However, money will be put aside here in the States as a bonus to be paid when each volunteer returns.

LENGTH OF SERVICE

Length of service is stimated to be about 1 to 3 years. Certainly, the amount of training that is required would make it very wrong and expensive to try to train anybody to stay overseas less than a year. It is estimated that 3 years would be the longest that they would want to stay. So, we are talking about 2 years as an average length of time overseas in addition to training time. This training time could be anything from a week here in the States to perhaps a year, depending upon the type of service required, individual background, proficiency in languages, country of service, etc.

The draft status has been a ticklish subject. When Candidate Kennedy first announced the Peace Corps program, he suggested draft deferment for Peace Corps volunteers.

It is not likely though that there will be draft exemption. On the other hand, it is not likely that those who have served in the Peace Corps will be drafted unless there is an emergency. There might be some very good reasons, though, why those who go into the Peace Corps might find it advantageous to sign up for 6 months of prior military service They could use the 6 months to get into good physical shape and to learn skills before going into the Peace Corps. This would avoid the psychological disadvantage of considering those in the Peace Corps as draft dodgers. I think that it is not wise to have a draft-exempt group. But, on the other hand, we should consider the philosophy that obtained during World War II; that each person shall serve according to his capabilities.

We had many people who were draft deferred then, because they were in defense work or on farms. Certainly, if being in the Peace Corps is service to our country (and I am sure this will be recognized more and more in the years to come), then those who thus serve should get the honor that is due them. Perhaps at some future date, the draft situation will not even be an issue.

SIZE OF CORPS

How many will be selected? This year they are talking about 500 building up to about 5,000 as soon as possible.

It is estimated the Soviets have from 15,000 to 20,000 in training now for this service. Some news reports indicate that they have sent 3,000 technicians to Cuba alone in the last 6 months to work in the farm districts, to establish schools, communication systems, to work on newspapers, etc. Because of the influence of these people, it is doubtful that Castro could reverse his policy at this time, even if he so desired.

In Guinea, it is estimated that they have some 2,000 technicians. It is interesting to note that in this little country they are building the biggest printing plant in Africa—a printing plant about a block square—capable of producing Communist literature for all of Africa. Also, in Guinea, they are building one of the world's most powerful radio stations, capable of blanketing the entire African Continent. Once having placed their volunteers in a country, the Communists move with precision.

I visualize that at some date in the future we will have many thousands of our people trained for Peace Corps duty. Victor Reuther has estimated he would like to see 100,000. Some have estimated the need at 1 million. There is no way of telling how large the Peace Corps may grow to be. It is just a matter of how successful it is, how ably the first group demonstrates its value, and then how much money we are willing to spend in relation to what we get for it. After all, in World War II we mobilized well over 10 million to defeat the Nazis.

CONCLUSION

Let me summarize briefly. Our generation may have gotten the world into a greater mess than anticipated, but at least the problems are now clearly recognized. No longer can my generation, or yours, for that matter, shirk national responsibilities, for the results of such inaction may mean the complete collapse of our way of life.

Idealism has indeed become the only realistic course for us to follow. Certainly we are in a much stronger position, morally and traditionally, to practice idealism than are the Communists. Their one advantage over us is the closeness in time of their revolution to the present. This gives their people a closer identity to the aspirations of those who are seeking a better way of life in the have-not countries.

Communism runs into trouble as an ideology and as a governing force when it is imposed on people who have enjoyed any sort of freedom or any degree of living standard. But it has been accepted and implemented successfully by nations whose standards of living have been so poor that the people have nothing to lose by accepting it. It is poverty that we must wipe out. If we permit the Soviet Union or Red China to be the instigating force in the under-developed areas, we are opening the wedge for communism to spread, because then they can show visible proof to the other impoverished nations that their system produces improved living conditions.

The waging of peaceful competition offers a tremendous advantage to the world. The Communists and the free world compete to benefit the people of all nations, rather than to destroy their societies.

This raises the standard of living everywhere. Some people may not choose to identify themselves with us or with the Soviet Union, but like the citizens of Western Europe who gained from the Marshall plan, the impoverished nations in Africa, Asia, and Latin America will have the

strength to remain independent. Then these areas will no longer be breeding grounds for war, and a major step toward achieving a true peace will have been accomplished.

We should adopt as our goal a very simple concept; namely, "We seek to build a better world for all humanity." With this as our expanded creed, we can—I am certain—convince the masses of the world that the forces of freedom that started America's great revolution toward freedom in 1776 are still very much alive.

Thank you.

The Opinion of the 18th Congressional District, New York

EXTENSION OF REMARKS
OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1961

Mr. SANTANGELO. Mr. Speaker, I have the privilege of representing the 18th Congressional District of New York. My area is populated probably by the most heterogeneous group in the United States. Their ethnic backgrounds are Irish, Italian, Puerto Rican, Cuban, German, Hungarian, Czech, Greek, Belgian. It is an integrated community with all races and religions. This area is known as East Harlem and Yorkville. It is strictly urban with few private residences or one-family homes. My district is populated by residents who are paying extremely high rents and extremely low rents. The rentals range from $100 per room per month to $5 per room per month. Included among them are the residents of a great number of low-income public housing projects. Within the past few years because of the great land values and desirability of location, more than 15,000 families have been dislocated in the Yorkville section. In a bulldozer operation, luxury housing has been built and is being built. As a consequence, great hardships have been suffered by residents who have lived within the area for more than a generation.

Many new residents have moved into the section whose viewpoints I have not had the opportunity of ascertaining. Because of the rapidly changing conditions, the viewpoints of my constituents whom I represented in the 85th and 86th Congresses may have changed, and consequently, I may not be aware of their present attitudes.

From 1947 through 1956, with the exception of 2 years, I represented the greater portion of this section as a State senator. I feel that I am close to my people and that their viewpoints are well known to me. However, one of the great political mistakes any public official can make is to assume that he knows at all times the thinking of his constituents. It is necessary, therefore, from time to time to be advised as to the opinions of the constituency as to specific issues. We public officials, after all, are the servants of the people representing them in a republican system where we are accountable for our decisions every 2 years.

In the early part of this year, before legislation was voted upon, I forwarded to all the registered voters in my congressional area a questionnaire. Approximately 10 percent of the voters or 5,000 responded to my request for their opinions, and I am pleased to present the tabulation of the answers to my inquiries. This tabulation was compiled by two collegians from University of Maryland and American University, Henry Hyde and Robert Hardgrove. While many of the results were expected by me, others were a complete surprise and a revelation. The two most surprising results related to the viewpoint of the constituency with respect to Federal funds to private or parochial schools for private school construction and Federal loans for private or parochial school construction. My district is populated by many persons of the Roman Catholic faith, including the Irish, the Italians, and the Puerto Ricans. The great number of my constituency consists of wage earners working in factories, in government, and in industry. Their answers with respect to their viewpoint regarding labor unions was a great surprise.

In view of the fact that most of the new construction with high rentals and luxury apartments are located south of 96th Street, I have had a separate tabulation of the answers with respect to the northern part of my district above 96th Street. The results of the answers to the questions in the entire district and the so-called low rental area and East Harlem section follow:

QUESTIONNAIRE

	Percentage results in entire district		Percentage results above 96th St. at East Harlem section	
	Yes	No	Yes	No
1. Education:				
(a) Do you favor the administration program of providing Federal funds for school construction and teachers' salaries in the discretion of the States' government?	75	25	79	21
(b) Do you favor Federal funds to private or parochial schools for private school construction?	23	77	40	60
(c) Do you favor Federal loans for private or parochial school construction?	43	57	62	38
(d) Do you favor allocation of funds to States on the basis of school population in private and parochial schools as well as on population in public schools?	39	61	55	45
(e) Do you believe that Federal loans to private or parochial schools for school construction and teachers' salaries violate the principle of separation of church and state?	58	42	44	56
(f) Do you favor Federal scholarships of $1,000 based on merit without regard to needs test?	36	64	39	61
(g) Do you favor tax deduction of $1,200 for taxpayer for higher education of himself or dependents?	75	25	79	21
2. Foreign affairs:				
(a) Should economic aid to Europe and Asia and South America be—	*Percent*			
Increased	26			
Decreased	20			
Discontinued	15			
Maintained at present level	39			
(b) Do you believe that recognition of Communist China in the United Nations is inevitable?	54	46	46	54
(c) Do you believe that our support for NATO should be—	*Percent*			
Strengthened	44			
Maintained at present level	47			
Withdrawn	9			
(d) Do you believe that the United States should take—				
Economic sanctions against Cuba	44			
Diplomatic sanctions	16			
Maintain normal trade relations	19			
Economic and diplomatic sanctions	21			
(e) Do you believe our support of the U.N. in the Congo and Africa should be—				
Strengthened with additional financial aid	44			
Strengthened with military forces	26			
Discontinued	14			
Strengthened with additional financial aid and with military forces	16			
3. Foreign trade:				
(a) Do you believe that reciprocal trade agreements with foreign nations should be—	*Percent*			
Continued as is	55			
Revised with higher tariffs and lower quotas for foreign goods	40			
Discontinued	5			
4. Labor:				
(a) Should restrictions on labor's right to picket and boycott under Landrum-Griffin law and Taft-Hartley law be repealed?	36	64	48	52
(b) Do you believe that labor unions should be subject to antitrust laws?	80	20	76	24
(c) Do you believe that secondary boycotts and picketing on construction sites should be declared not illegal?	40	60	38	62
(d) Do you favor increase of minimum wage from $1 to $1.25 under present coverage?	78	22	87	13
(e) Do you favor extending coverage of $1 hourly minimum wage to employees in retail or service establishments grossing $1,000,000 or more annually?	85	15	84	16
(f) *Do you favor legislation granting $1 hourly minimum wage for service employees in hotel, motel, and restaurant establishments grossing $1,000,000 or more?	83	17	86	14
(g) Do you favor Federal funds for depressed areas to stimulate and revive business?	82	18	78	13

QUESTIONNAIRE—Continued

	Percentage results in entire district		Percentage results above 96th St. at East Harlem section	
	Yes	No	Yes	No
5. Social security:				
(a) Do you favor boosting minimum old-age pension from $33 per month to $43 per month?	93	7	98	2
(b) Do you favor permitting men to retire at age 62 instead of 65, the same as women, on reduced pensions?	74	26	81	19
(c) Do you favor raising pensions for widows to 85 percent of husband's pension?	87	13	92	8
(d) Do you favor increase of payroll tax of ¼ percent on employees/employers to finance liberalization of social security benefits?	79	21	82	18
(e) Do you favor legislation granting annually 60 days of hospitalization, nursing care, and surgical expenses for retired pensioners under social security system in lieu of present law which provides that Federal Government will match State expenditures for programs for retired pensioners earning less that $2,500 annually or who are welfare recipients?	74	26	87	13
6. Housing:				
(a) Do you favor Federal program for more public housing for more low-income families?	76	24	82	18
(b) Do you favor Federal program for public housing for middle-income families?	80	20	85	15
7. Rent control:				
(a) Do you favor—	*Percent*			
Continued and effective rent control	55			
15 percent increase for those who have not given 1 increase since 1950	18			
Decontrol of rents	6			
Decontrol of vacant apartments	4			
Continued and effective rent control	17			
Increase for those who have not given 1 increase since 1950	15			
8. Your standard of living:				
(a) Is your income as much today as it was this time last year?	74	26	63	37
(b) Are you now—	*Percent*			
Employed full time	64			
Employed part-time	8			
Unemployed	8			
Retired	20			

With respect to the answers 2(a), 2(c), 2(d), and 2(e), the following are the results of the entire district as compared with the results above 96th Street:

	Entire district	Above 96th St.
2. Foreign affairs:	*Percent*	*Percent*
(a) Increase	26	27
Decrease	20	17
Discontinue	15	18
Maintain	39	38
(c) Strengthen	44	46
Maintain	47	43
Withdraw	9	11
(d) Economic	44	45
Diplomatic	16	15
Maintain	19	25
Economic and/or diplomatic	21	15
(e) Strengthen financial	44	35
Strengthen military	26	35
Discontinue	14	19
Strengthen financial and military	16	11

With respect to the answers of 3(a), the following are the results of the entire district as compared with the results above 96th Street:

	Entire district	Above 96th St.
3. Foreign trade:	*Percent*	*Percent*
(a) Continue as is	55	43
Revise	40	50
Discontinue	5	7

With respect to the answers of 7(a), the following are the results of the entire district as compared with the results above 96th Street:

	Entire district	Above 96th St.
7. Rent control:	*Percent*	*Percent*
(a) Continue	55	63
15-percent increase	18	18
Decontrol	6	4
Decontrol of vacant apartments	4	3
Continue and 15-percent increase	17	12

With respect to the answers of 8(b), the following are the results of the entire district as compared with the results above 96th Street:

	Entire district	Above 96th St.
8. Your standard of living:	*Percent*	*Percent*
(b) Full-time employment	64	51
Part-time employment	8	7
Unemployed	8	19
Retired	20	23

It will be seen, therefore, that the answers to most of the questions are comparable and that the viewpoints held are held without regard to the economic status of the constituency.

President Kennedy has recommended legislation which would promote the economy of our country and increase the purchasing power of the workingman. My questionnaire discloses that two-thirds of my constituency are employed full time whereas one-third are employed part-time or retired or unemployed. This result justifies the viewpoint of our President in moving ahead to solve one of the major problems of the new administration, that is, the purchasing power of the working people in the United States. I am certain that my constituency will draw their own conclusions when they review the results as set forth above.

I thank them for favoring me with their opinions which I requested, and I intend to advise my constituency with the results. Many of my constituents included personal comments, suggestions, and notes, which because of their number, I am unable to answer individually. However, I am at my congressional office at 1484 First Avenue every Saturday afternoon between 1 and 5 p.m., and will be available and more than happy to have them pay me a visit, and to discuss any matter which they would like to personally bring to my attention.

Wall Street Journal Views Mass Transportation

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, May 4, 1961

Mr. WILLIAMS of New Jersey. Mr. President, the Wall Street Journal has just published, in its May 2 issue, a detailed and informative analysis of the commuter crisis, with particular reference to the problems facing the rail commuter carriers.

This is a very worthwhile study and I need not comment upon it, except to emphasize my view that the sum total of the commuter crisis is not just the precarious financial position of some of the railroads.

We would be making a serious mistake to equate the problem solely with the ability of some carriers to provide the service. The real problem is the growing strangulation of traffic congestion and how we can best come to grips with it. It is traffic congestion—and the social and economic costs it imposes—that makes the commuter crisis a national problem, especially in light of the staggering population and automobile ownership projections that have been made for the years ahead in the Nation's urban and metropolitan areas.

The problem would be no less critical were our railroads breaking even or making a little money on commuter service, which most of them are not. Our task is to seek ways to overcome traffic congestion through the development of a better total urban transportation system, using all forms of transportation to their best advantage. That will include automobile, rail, bus,

subway and other modes that we probably haven't even thought of yet.

I would only add that this article adds to the growing awareness of the scope and importance of effective mass transportation in maintaining and improving the economic vitality of our urban and metropolitan areas, which are the economic backbone of the Nation.

Mr. President, I ask unanimous consent that the article from the Wall Street Journal, by David Jones, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AID FOR COMMUTERS: BIG CITY MAYORS, SOME RAILMEN EXPECT HELP FROM UNCLE SAM IN 1961—THEY SEE OPPOSITION WILTING AS KENNEDY BACKS THE PLAN; BUT IT MAY STALL IN HOUSE—WESTERN LINES FIGHT PROGRAM

(By David R. Jones)

WASHINGTON.—Backers of the idea that the Federal Government should provide financial aid to large cities with commuter problems are becoming increasingly hopeful that 1961 may be the year when their dreams finally come true.

The pressure on Congress to bail out out deficit-ridden commuter railroads is coming mainly from eastern railroads and from mayors and other community leaders in large urban areas.

This same coalition was aggressively seeking Federal aid a year ago. However, lack of enthusiasm by the Eisenhower administration for intervention by the Government in what it considered primarily a local problem was a crucial barrier to such plans. Also, many Congressmen, particularly those from rural areas, could find few benefits in the plan for their own areas. The principal recipients of the aid schemes were limited by the nature of the problem to a few metropolitan areas out of the 10,000 cities in the United States. And only abou a dozen of the Nation's 163 major railroads could expect to receive any of the aid funds.

A VOTE FROM SENATOR KENNEDY

Nevertheless, enough support was obtained last year to push a bill, introduced by Senator HARRISON A. WILLIAMS, Democrat, of New Jersey, and calling for $100 million in loan funds for commuter lines, through the Senate. It won the vote of then-Senator Kennedy but died in the House. It was being bottled up in the Banking and Currency Committee and never came to a vote.

Since then, the financial deterioration of the commuter railroads has lent new urgency to the proposals for Federal relief. Yesterday, for example, the Boston & Maine Railroad announced it is considering abandoning all commuter service because of continuing deficits.

Now, proponents of the aid plan claim they not only have the full support of the Kennedy administration but also assurances of backing from leaders of both parties. This, they believe, will be enough to override any remaining opposition by antiaid Congressmen. Although the rail-aid proposal still could hit a snag in the House this year, its backers believe that this would only be a temporary delay and that enactment of the legislation in the next year or two is almost inevitable.

"Two years ago interest in Federal help for commuter railroads was centered almost entirely on the eastern seaboard," says Patrick McLaughlin, a Washington representative of the American Municipal Association. "But now we have west coast cities, like Los Angeles and San Francisco, and even southern cities behind us."

HIGH HOPES

"The cities that would benefit from Federal aid represent a tremendous number of Democratic votes, and if you followed the election returns you know it was the big cities that elected Mr. Kennedy," comments a railroad executive, who says his hopes for passage of the aid legislation are now much higher than they were a year ago.

Senator WILLIAMS has reintroduced his 1960 bill, broadened considerably this time to provide for $325 million of Federal loans and grants for the improvement of mass transportation. Within a few days a special report on the Williams bill is expected to be finished by Mr. Kennedy's aides and presented to the President. According to men who have worked on the report, it will endorse the Federal loan-and-grant idea in principle and recommend that the job of administering the program be given to the Housing and Home Finance Agency.

This is how such a program might work:

The Federal Government would provide long-term loans to public authorities which would be set up in major cities to coordinate and integrate mass transportation of all types in their areas.

The public authorities then would contract with the railroads, buslines, and local transit agencies for commuter services, guaranteeing the carriers against further losses.

The authorities also would build new transportation facilities and purchase new equipment. It would lease the facilities and equipment to the carriers, collect all passenger revenues and use these to pay off the Federal loans. If revenues fail to cover expenses of commuter operations, the public authorities rather than the railroads would absorb the deficits.

Better integration of local transit facilities under the direction of the local authorities might be enough in itself to end the deficit operations of commuter service in some locations, the theory goes. A more likely possibility, according to the backers of the legislation, is that the deficits would be trimmed to the point where they would be small enough to be handled by State and local governments with tax relief and local subsidies.

Additional Federal funds would be made available in the form of demonstration grants, which would enable the public authorities to try out various experimental programs to win passengers back to the railroads. Other grants would be available for research on new kinds of commuter equipment that might cut costs and serve to reduce deficits in the future.

NO COST FIGURE SET

The initial cost of the program President Kennedy is expected to support is still indefinite although a $100 million revolving loan fund and $30 million for research grants—considerably less than Senator WILLIAMS' proposed $325 million Federal appropriation—have been mentioned. There was a dispute within the administration over whether the program should be administered by the Department of Commerce or the Housing and Home Finance Agency. The decision in favor of the latter is regarded by proponents of Federal aid as a favorable sign since, in their opinion, the housing people probably would pursue a more far-ranging approach than the Commerce Department.

Several other Federal aid proposals, not directly tied to the Williams bill, also are being studied in Washington. The Senate Interstate and Foreign Commerce Committee is due to begin hearings later this spring on a staff report recommending $650 million to $800 million in U.S. loans over the next 10 years to ailing commuter lines. This plan was proposed by Anthony F. Arpaia, former Interstate Commerce Commission Chairman, and by the Regional Plan Association, a nonprofit New York area planning body.

And a special Senate study group on transportation policies in January recommended Federal loans to help railroads buy new commuter equipment. This proposal has been endorsed by the Interstate Commerce Commission.

CONTINUED DETERIORATION

The commuter problem is particularly pronounced in the New York area where 8 rail lines link 200,000 commuters with their suburban homes. The New York, New Haven & Hartford Railroad has been teetering on the brink of collapse for months; recently ICC Commissioner Charles A. Webb warned the road may go bankrupt by June despite the plans of four States to give it $6.2 million a year in tax relief.

The Long Island Railroad, the Nation's busiest passenger line with 85,000 daily commuters, is so short of funds that it has been able to meet its weekly payrolls this spring only by means of a deferment of $700,000 in New York City taxes and the receipt of $400,000 from the sale of real estate, according to a spokesman for the road. The Nation's two biggest railroads from the standpoint of operating revenue—the Pennsylvania and the New York Central—also are afflicted with steadily increasing commuter losses.

The commuter problem, according to railroad men, stems basically from the fact that railroads must have crews and equipment available to handle heavy rush-hour traffic then see much of it lie idle for the balance of the day. The eight roads serving New York lost $29 million on commuter service in 1959 and probably more last year. The continued deficits have made most railroads unwilling to sink money into new equipment, and as a result facilities are aging and service deteriorating.

Proponents of Federal aid claim the problem of getting to and from work is spreading because of growing urban traffic congestion. At the moment, the most critical areas are New York, Chicago, Boston, and Philadelphia, where the bulk of the Nation's 500,000 commuters live. But transportation experts say other cities—such as Cleveland, Los Angeles, and Washington—soon will become hopelessly clogged with auto traffic unless new rail facilities are developed to take some of the load off the roads. By 1970, they add, three out of four Americans will be living in metropolitan areas.

TWO BILLION SPENT ON HIGHWAYS

"We're spending $2 billion a year on the Federal highway program and nothing on the railroads," declares Senator WILLIAMS. "The implications of urban traffic congestion are so important to the economy that it's ridiculous to have such a disproportionate setup."

It would be far cheaper for the Federal Government to salvage the sagging commuter lines than to make up for their collapse by building highways, says the American Municipal Association. The association estimates that it would cost $305 million to replace all the commuter cars now in use in New York, Chicago, Boston, Philadelphia, and Cleveland; providing highway space for the equivalent passenger-carrying capacity in autos would cost $31 billion, the association figures.

Not everyone agrees that Federal loans and grants are needed now. Chicago-based railroads, which lately have been turning modest profits on their commuter service, are standing fast against any Federal aid. We don't believe in subsidies," says an Illinois Central Railroad official. We don't feel the Federal Government should intervene in suburban service."

A DIFFERENCE OF OPINION

This attitude of the Western roads has so divided the Association of American Railroads that it has avoided taking any stand on the Williams bill. This naturally weakens the case of the aid-hungry Eastern carriers but is not an overpowering obstacle, they say. The Chicago roads can do better carrying commuters, according to spokesmen for the Eastern lines, because of lower local taxes, more freedom extended by state regulatory bodies to raise fares and a smaller percentage of their total revenue derived from commuter business.

Dwight R. G. Palmer, New Jersey Highway Commissioner who shaped that State's recent plan to give tax relief to railroads, agrees in principle with the Chicago railroaders. "The business of looking to the Federal Government to be all things to all men," he says, is a "weak-kneed approach" by State and local officials who have not exhausted their own efforts to solve the problem. And aids of New York Gov. Nelson A. Rockefeller indicate they would prefer to push ahead to see if they can solve the problem on the State level.

However, eastern railroad officials complain that State and local commuter-aid programs so far have fallen well short of needs. Earl T. Moore, president of the Central Railroad Co. of New Jersey, says that New Jersey's rail aid program will provide the carrier with only $1.6 million to $1.7 million in the fiscal year starting next July 1, against an estimated passenger deficit of nearly $6 million, of which $4.5 million is traceable to commuter operations.

CASE OF THE NEW HAVEN

The ailing New Haven, which has been fighting for State and local subsidies since 1956, complains that over that 5-year period it has obtained only a total of $1.4 million in aid, compared to actual passenger deficits for the period totaling $66.5 million. Although the New Haven now is in line for tax relief totaling $6.2 million a year from the four States it serves, the road's officials say this still isn't enough.

On July 1, communities served by the Long Island Rail Road will take over all station maintenance and New York State will eliminate all remaining taxes on the road's passenger service, for an estimated annual saving of $3.1 million. But company officials say that even with this aid the road will barely break even and that further wage increases could quickly bring a return of big deficits.

One of the most widely acclaimed commuter-aid experiments has occurred in Philadelphia. There, with the aid of a city subsidy, the Pennsylvania Railroad and the Reading Co. have boosted commuter rail travel by 30 percent since 1958 by slashing fares and improving service. But the railroads claim they're losing as much on the service now as before because the subsidy hasn't offset rising costs. Moreover, 9 of the city's 15 rail lines stretch into suburban towns that so far have refused to go along with the subsidy program, further impairing its effectiveness.

BIG INVESTMENT NEEDED

"In view of the limited taxing power and fund-raising resources of municipalities and States, it seems clear that only the Federal Government can finance a large-scale capital improvement program by extension of Federal credit," says David Berger, Philadelphia's city solicitor, who played a key role in the city's rail aid plan.

Stanley B. Tankel, planning director for New York's Regional Plan Association, expresses similar pesaimism about the adequacy of local efforts to solve the problem: "While these current stopgap programs are keeping commuter service alive, they don't do much to promote a future system that would be less costly to operate and could handle increased volume with better service. The real need is for a big investment in physical improvements."

Hunting in South Dakota

EXTENSION OF REMARKS
OF
HON. BEN REIFEL
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 4, 1961

Mr. RIEFEL. Mr. Speaker, one of the many delights of living in South Dakota is the opportunity to take advantage of our unexcelled hunting facilities.

The district which I am privileged to represent is often called Pheasant Capital of the World, and with good reason. Our pheasant hunting is the best anywhere. And any Member who doubts that statement need only ask the distinguished minority leader [Mr. HALLECK], who participates annually in South Dakota's great ringneck sport. His prowess with a shotgun is second only to his legislative prowess, I am told, and I hope to join with him in a foray into South Dakota's pheasant paradise next fall.

The same invitation is extended to all Members of this body. You will find South Dakota hospitality just as marvelous as our hunting.

Appearing in the May issue of the American Rifleman is an excellent article by Wallace Labisky describing the whole gamut of hunting activities in South Dakota. Under leave to extend my remarks in the Appendix of the RECORD, I include that portion relating to upland birds:

HUNTING IN SOUTH DAKOTA

(By Wallace Labisky)

South Dakota hunting includes small game, upland birds, waterfowl, big game, and predators.

Many years ago, when the raw grasslands were being settled, the abundant upland birds were limited to two principal species—the pinnated grouse, also known as the prairie chicken, and the sharp-tailed grouse. Now there are seven.

In 1959 shooting on upland birds spanned nearly 4 months.

LENGTHY PHEASANT SEASONS

South Dakota ring-necked pheasant hunting is characterized by long seasons, realistic bag and possession limits, and uncrowded conditions. The State has never operated a game farm.

The earliest planting of pheasants was in the Sioux Falls area in 1898, followed by others during the next 10 years, all privately sponsored. In 1911 the game department supervised the stocking of 48 pairs of ringnecks purchased with funds raised by sportsmen. The following year the game department itself distributed 200 pairs. During the World War I period, the State spent $20,000 for 7,000 birds. This big release was the clincher.

The first legal shooting was in the year 1919. The pheasants have been going strong ever since, though with occasional setbacks. Severe winter is the ringneck's worst enemy. When prolonged deep snow or ice prevents their scratching through to food, the birds eventually succumb. The hens are usually the first to go. A blizzard, followed by rapidly falling temperatures, can also cause large losses.

The eastern half of the State has always led in pheasants. It is a diversified farming area, with small grains and corn the principal crops. Except for a few counties in the extreme southeast, excellent shooting can be found nearly everywhere. West of the Missouri River, the predominating rangeland supports only a token number of birds. Most exist near the scattered tracts of cultivated land, especially next to creek bottoms.

Pheasant hunting usually begins in mid-October. Legal shooting hours are from 12 o'clock noon until sunset, the same hours which apply to the hunting of all other upland game birds. Nonresident hunters are required to pay $25.50 for a basic hunting license and a game bird stamp. This entitles them to hunt for 10 consecutive days. They may take pheasants and other upland species that are in season while their license is valid. Possession limits vary with species. The necessary coupons for transporting or shipping pheasants are a part of the nonresident license. To legally transport upland species other than pheasant, the nonresident hunter must obtain special coupons—issued free of charge by a game warden.

As in other States, most of the annual pheasant kill is made during the first week of the season. Nearly all the nonresidents hunt then. As a rule, the weather is clear, with frosty mornings and Indian-summer afternoons.

By the end of the season usually only the specialists are afield, but most of them still take limits. A carryover of surplus cockbirds is the rule.

FEW DOGS USED

Few resident hunters use dogs, although good retrievers are always desirable to bring in running cripples, otherwise lost. A popular method is to "drive" a grain stubble, cornfield, or soilbank acreage. A line of guns pushes the birds toward standers on the opposite end of the field. This can yield big kills. South Dakota law prohibits more than 12 guns working as a group.

A small group may work small cover areas such as swales, weed patches, willow thickets, shelterbelts, and trashy fence lines.

The State also offers excellent sharptailed grouse shooting. It is one of the few States that still permits shooting the famous pinnated grouse (prairie chicken), the game bird so plentiful in territorial days that its numbers seemed inexhaustible.

These prairie grouse have habitats so similar that where you find one variety you are likely to find the other. The sharptail tends to favor brushy draws and creek bottoms more than the prairie chicken does. Both like wheat stubbles and cornfields; thus the grasslands near such fields usually offer the highest potential. It is best to take the wooded draws during midday, then the grass and fields during late afternoon.

The main grouse range is west of the Missouri River. East of the river it is restricted to the Missouri Hills, a tier of north-central counties along the east bank of the river.

Fall bird densities depend to a large extent on summer conditions. Drought means short grass cover and, in turn, above-normal mortality among the grouse chicks. Conversely, adequate summer rainfall produces good grass growth which favors hatch survival.

The sharptail is by far the more numerous. The hunting seasons, however, are the same and the bag may consist of either species or a combination. Opening is regularly in mid-September. In recent

years there has been a split season, the second session beginning in October and overlapping the pheasant season. This makes it possible for nonresident pheasant hunters to hunt sharptails and prairie chickens also.

There was a ruffed grouse season in several counties in the Black Hills during 1959. This marked the first legal hunting of ruffed grouse in many years.

A fourth grouse species, the sage hen, inhabits the extreme northwestern prairies—the easternmost limit of the bird's range. This is strictly a wilderness species noted for its ability to survive long periods without water and to subsist chiefly on sagebrush leaves if necessary. Mature sage grouse average 5 to 6 pounds; young-of-the-year have the weight of a cock pheasant.

Sage grouse hunting in South Dakota is not an annual affair. There were seasons in 1945 and 1955, and again in 1959 when, in mid-August, Harding County was opened to shooting for 4 afternoons with a bag and possession limit of two birds.

HUNGARIAN PARTRIDGE

A second introduced game bird has been providing shooting for several years. This is the Hungarian partridge, a native of Europe.

Unlike the ring-necked pheasant, the Hun is monogamous and notably prolific. It has been said that under favorable conditions a pair of these partridge may raise up to 40 young each year.

Introduction of the Hun, probably prompted by successes in Canada, began in South Dakota in 1923. By 1941 the State had expended approximately $33,000 for 3,000 pairs which were released in various areas. The first open season was held in 1938 in the hilly northeastern counties of Marshall and Roberts. The partridges there are bagged incidental to pheasant hunting. The main partridge area is now the extreme north center of the State.

West of the Missouri River the Hun ranges the same kind of habitat as the sharp-tailed grouse, and the seasons there are the same. East of the Missouri the partridge season is concurrent with the early part of the pheasant season.

Attempts to establish a third exotic species, the chukar partridge, have thus far met with no success. The most recent was made in the spring of 1960 when 150 chukars were released in the rugged Cave Hills of the far northwestern corner of the State. Hunters and biologists are optimistic about this stocking, since the habitat of the area closely corresponds to the chukar's original home.

Newspaper records of pioneer times indicate that quail were then numerous enough on river bottom lands to provide some shooting, principally in southeastern and south-central areas. It was only recently, however, that the legislature placed the quail on the game bird list, and the first open season in the State's history of game management was held during the fall of 1959.

South Dakota has little future as a quail State; its winter weather is too severe. But from time to time huntable numbers do build up after a series of mild winters, mainly in the seven extreme southeastern counties. Rather than permitting these birds to fall prey to deep snows and subzero temperatures, hunters will now have the opportunity to harvest them.

MOURNING DOVE PROTECTED

Most resident shotgunners agree that there is only one thing lacking in South Dakota's upland picture—the mourning dove is still classed as a songbird. The State contributes substantially to the annual dove crop. Doves nest in large numbers in the eastern half of the State with its many farm woodlots and shelterbelts, and most of them bring off at least two broods. Heavy migrations from more northern breeding areas move through in early autumn.

Further information on South Dakota hunting regulations may be obtained from the department of game, fish, and parks, Pierre, S. Dak.

Support of the Navy FRAM Program

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 4, 1961

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement I have presented to the Defense Subcommittee of the Committee on Appropriations in the House of Representatives in support of the Navy FRAM program. The statement follows:

The continuing crisis in Cuba has again made us aware of the importance of the U.S. Navy in protecting vital American interests. Yet, the material condition and readiness of that navy, upon which we are so dependent, leaves a great deal to be desired. Indeed, as far back as 1958, the Blewett committee reported that "the U.S. fleet is not in an acceptable state of readiness; for the fleet of a leading naval power, its material condition is deplorable."

This situation is not the fault of the Navy which has been struggling for years with ships and equipment that are old, worn, and weary. The fault lies, rather, with our unwillingness to appropriate adequate funds for necessary periodic maintenance and overhaul of existing vessels and for construction of new ships.

Our failure to replace aging ships is resulting in a navy which is fast becoming obsolescent. The Blewett committee reported that 85 percent of the ships in the combat fleet in 1958 were more than 10 years old. At our present rate of new ship construction, by the end of 1963 more than two-thirds of our combat fleet will still be over 10 years old. Hulls are weakened. Machinery breaks down too frequently. Spaces are inadequate for new needs. Weapons are outdated. And the morale of our servicemen is affected accordingly.

The normal problems of obsolescence have been greatly intensified by the relentless operation of these ships over the past few years. Through a combination of inadequate funds for maintenance and almost uninterrupted operations, our ships have been badly worn out. An automobile must be tuned occasionally. It must be sent to the garage for preventive maintenance from time to time. There has been little or no opportunity to do this with our aging Navy. The effect was demonstrated by a survey of 170 ships which showed 61½ percent of them to be in unsatisfactory condition; i.e., unable to carry out the operational functions for which they were designed.

To meet these problems, the Navy has formulated the FRAM program—a program of fleet rehabilitation and maintenance which is designed to give added periods of effective service to existing ships through extensive modernization and overhaul. This work, carried on primarily in our naval shipyards, involves the rehabilitation of hull and machinery, modernization of weapons, and installation of the latest combat equipment.

However, even this essential and economical program was slashed by the previous administration. Originally, the Navy proposed to modernize 67 surface ships in fiscal year 1962. This was cut by about one-half to 35. President Kennedy has asked the Congress for funds sufficient to increase this number to 45. For less than $24 million we can change into modern fighting ships 10 tired World War II ships inadequate for today's task and subject to frequent breakdowns. This increase in the FRAM program would also serve to maintain the work level at naval shipyards like the Brooklyn yard where fluctuations present a recurring threat to the jobs of workers.

FRAM is not a permanent substitute for new construction, but it is a proven way to get 5 to 8 years of additional effective service to ships which would otherwise be virtually useless. Properly programed, it is also a way to spread out the obsolescence of our ships. This will make it possible for us to avoid in the future the situation created today by the block obsolescence of World War II ships.

To meet the overwhelming burdens and responsibilities created by crises in Laos, Cuba, and in the Congo, the Navy must have effective, modern ships to do the job. The issue is not whether we can afford $23.7 million in fiscal year 1962 for the FRAM program. The issue is whether we can afford not to have the modernized ships it would give us. I unqualifiedly support the President's request for these additional funds.

Address of Maj. Gen. James T. Cantwell, Chief of Staff, New Jersey Department of Defense

EXTENSION OF REMARKS
OF
HON. DOMINICK V. DANIELS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 4, 1961

Mr. DANIELS. Mr. Speaker, it was my pleasure last Sunday to participate in the 30th annual Americanization Day celebration sponsored by the Captain C. E. Fisk Post, Veterans of Foreign Wars, of Jersey City, N.J.

This event is traditionally organized by the Captain Fisk Post, which is well known throughout New Jersey for its leadership in patriotic endeavors.

The celebration began with a stirring parade, in which patriotic groups from all parts of the State and elsewhere participated. It culminated with a parade review in Pershing Field, where a number of community leaders paid tribute to the parading units and to the ideals which they honored that afternoon.

I should like to call to the attention of my colleagues the remarks which Maj. Gen. James F. Cantwell, Chief of Staff, New Jersey Department of Defense, and Rear Adm. Frederick L. Hetter, commanding officer, Naval Supply Depot, Bayonne, N.J., made on that occasion.

ADDRESS OF MAJ. GEN. JAMES F. CANTWELL, CHIEF OF STAFF, NEW JERSEY DEPARTMENT OF DEFENSE, VETERANS OF FOREIGN WARS, AMERICANIZATION DAY OBSERVANCE, JERSEY CITY, N.J., APRIL 30, 1961

From time to time it is well for us to pause and reconsider those things which, in the past, have made America a great country. We can therefore, be thankful that an organization such as the Veterans of Foreign Wars reminds us each year to think about these things.

We are sometimes prone to get carried away by our daily activities and the rush of

events, and forget that there are higher values in our lives. And we forget too, that these values must be cared for or we will lose them. As has been said so often and so well, "Vigilance is the price of liberty."

We know that today two ideologies stand face to face; each waiting for the other to fall before it. On the one side is the democratic ideal of individual freedom sustained by a government of laws. On the other, the totalitarian and godless political and economic system which we identify with the name of "communism."

We of the free world have made every effort, in good conscience, to live in peace with the Communist world. We have made mistakes in our dealings with that world. But, believe me, our mistakes were due largely to our good will. But also, and this is very important, neither have we understood the true nature of the Communist system. Especially, we have not understood that communism has never changed and will never change its ultimate objective, which is to remake the world into one Communist state.

Forty-two years ago Lenin said that Communist and Democratic countries could not exist side by side. One or the other must be overcome. He then put forth a plan for world revolution which to this very day has not changed in its basic objectives.

It is to this plan for world conquest that we can trace most of the troubles occurring in the new nations of Africa and Asia and the Caribbean.

While it is true that the appearance of communism seems to change almost from day to day, its substance does not change.

Communist leaders have said clearly enough that they will do anything to further their cause, even to making a show of friendship to democracy. They change their tactics to meet changing situations, they call for peaceful coexistence, they make friendly gestures. But we must not be fooled. Communism does not change; it cannot change without destroying itself. And the objective remains to conquer the whole world; by any means available.

We find subversion and Communist Parties in all countries. We find that these are controlled from Moscow. We find communism infiltrated into labor and industry, education, communications media, armed services and government, and, eventually, we see the attempt to destroy constitutional liberties.

These things have been accomplished successfully in many countries in Europe, Asia, and South America. We may rest assured that the Government and people of the United States are no less a target. Let us not forget that they promised to bury us.

As long as we remember these things we can hope to remain unconquered and free.

However, knowledge and the determination to resist the Communist ideology are only the necessary starting point. We must give deep and careful consideration to the fact that Russia and her satellites are strongly armed with the most modern weapons of war; that the economy of these nations is directed primarily to building up and maintaining armies, navies, and air forces.

At the present time they do not choose to use all-out war to extend their conquest of the world. They are doing well enough through subversion, infiltration, and localized fighting such as we have presently in Laos.

There is a good reason for this choice. The United States is too strong for them to attempt an all-out war. The odds are still not entirely in their favor.

It is self-evident that the people of the United States are a peaceloving people. We have extended the hand of friendship to all nations—even our former enemies—and still extend it.

You will pardon me if, with some pride, I declare that the men and women of the Armed Forces are doing more than any other segment of the American people to maintain the peace. I know that theirs is a constant endeavor toward this end. I know of no one in uniform who desires to achieve national objectives by means of war.

As I indicated a moment ago, the cold war continues cold because America and the free nations cannot be safely attacked—they are too strong right now.

The lesson is obvious. We must maintain our Armed Forces at a peak of strength and efficiency, armed with the latest and best in weapons systems and backed by a trained and ready Reserve, until the normal and peaceful methods of diplomacy can attain a reasonable degree of lasting peace and security among nations.

So long as the Communist bloc of nations, under the leadership of Moscow, maintain their policies of hate and their belligerent attitudes toward the free world, so long as subversion and infiltration threaten our liberties, so long must we maintain strong military forces in being.

But, military strength alone is not sufficient. Indeed it can lead to a dangerous state of complacency. How well we remember France's maginot line. It could not be breached, it was impregnable, it was to be the salvation of France.

It was breached however, and overrun, and France fell to a conqueror because that military might was not backed by people who wanted freedom hard enough to sacrifice for it. They left their defenses to a wall of concrete and metal and to soldiers who had neither inspiration nor will to fight. And the same will happen to any military force not backed by the spiritual and moral strength of the people.

This is the lesson of the Americanization observance of the Veterans of Foreign Wars. It reminds us that we have responsibilities which we cannot throw off to someone else. It reminds us that the enemy we face is fighting God and the goodness of His creation.

There is nothing new or radical in this observance. It serves to recall to our minds our national heritage of fraternal good will and dependency on God and that there are values above the personal, the material and the economic, which we call morality, patriotism, dedication to principle.

Our Founding Fathers knew this. They established this "Nation under God" and they acknowledged that our rights come from Him and not from a government or political ideology.

As a member of the Armed Forces, I can give you but one thought to carry with you. Our soldiers and sailors and airmen cannot be stronger than the people from whom they are drawn. If the people are strong in their convictions, individually and collectively, the Armed Forces will be strong, too. The strength of weapons united to the strength of character in each individual will maintain our country free, and, with her, the people of all other nations who want and appreciate freedom and peace.

Thank you.

ADDRESS OF REAR ADM. FREDERICK L. HETTER, S.C., U.S. NAVY, COMMANDING OFFICER, NAVAL SUPPLY DEPOT, BAYONNE, N.J.

It is always a pleasure to join in the observance of Americanization Day.

When you think of it, you realize that we are all honoring our forefathers. The original inhabitants of this country were the Indians. All others are either immigrants, the sons and daughters of immigrants or descendants of immigrants.

If you give a lot of thought to the matter, you will realize that this country is so great simply because of immigrants.

It takes a considerable amount of determination, courage and character for an individual or a family to leave the land of its birth, and set out across the ocean for a strange country where the people speak a different language.

These people were strong. They were not content to ride along on the tide in their native lands. They knew what they wanted, and went after it despite knowing that the road would be very rough.

Youngsters growing up today in America are in about the same position as their immigrant forefathers, except in a different line.

Our country is being challenged daily by a foreign power that regiments its schoolchildren. Courses of study are set up and the children must apply themselves. In that way, the state plans years ahead on the number of physicists it will have, the number of chemists, engineers, and others.

Perhaps some of the chemistry students would rather be studying engineering. But they have no choice.

Here things are different. A boy or a girl can become almost anything that they wish if they try hard enough. It is easy for a youngster to quit before he starts. There are many excuses available: not enough money at home; no time for study; difficulties of gaining entrance to schools, and many more.

But these are just excuses. They are not valid reasons why any youngster must miss out on a good education.

If you want an education strongly enough you will get it.

Your forebears could have stayed in their native lands. They could have found suitable excuses for staying. But they were not looking for excuses. They wanted to live in a free country where an individual's only limit was himself.

That is why this country is so great. We got the best.

It is now the duty of the descendants of these great immigrants to make themselves the best in the world.

We live in an age of science, space travel, automation.

I am sure that a very high percentage of our grammar school pupils would like to work on rockets and missiles. This requires a scientific background.

But I wonder how many of them are willing to put in the many hard hours of study in mathematics, physics, and related subjects. Much of this study is drudgery. But it is necessary. It is the foundation of careers that are adventurous and fascinating.

Do you youngsters have the determination to plow through the difficult and dull? Do they want to be leaders?

I know that most of our young people are interested in space travel. That evidence is too well publicized to be missed. A glance into the front window of a toy shop shows that interest in space starts very early. Also, high school science fairs produce more exhibits connected with space than most other fields.

These facts prove that our younger people have the interest. The important thing is: Do they have the determination?

We need trained minds to keep this country great. It is the duty of our younger generations to improve themselves. Make themselves the best anywhere. In doing this they carry on the noble example of their courageous predecessors, many of whom arrived with all their possessions carried in a paper bag.

They may have arrived steerage class, but they have been first class ever since.

Let's all travel first class.

Buffalo Evening News Reporter Ed May Wins 1960 Pulitzer Prize

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 13, 1961

Mr. DULSKI. Mr. Speaker, I am very pleased that a member of the staff of the Buffalo Evening News, Buffalo, N.Y., has won a Pulitzer Prize.

I would like to insert in the RECORD the following editorial and article that appeared in the May 2, 1961, issue of the Buffalo Evening News:

PULITZER FOR ED MAY

Once again we have the pleasant opportunity to congratulate a fellow member of the News staff on the receipt of a Pulitzer Prize. Three years ago Bruce Shanks won the prize for editorial cartoons. Now Reporter Ed May has received an award for local reporting.

Mr. May's winning articles, "Our Costly Dilemma," represented as penetrating a study of public welfare problems as was ever attempted by an American newspaper. They were the product of 6 months of research and reporting, including 3 months' service by Mr. May as a caseworker for the Erie County Welfare Department.

The outstanding merit of "Our Costly Dilemma" won instant acclaim here and elsewhere in the Nation. The series triggered a comprehensive reform program that is still underway—and still bringing beneficial results—in the Erie County department. Other newspapers carried the articles through the Associated Press. The News has complied with hundreds of requests from welfare authorities and others for reprints. The series' findings and conclusions have had an impact and an influence on public welfare throughout New York State and beyond it to other parts of the country.

The Pulitzer Prizes have served for nearly half a century as a measure of merit for creative and cultural contributions in many fields. For newspapermen everywhere they are especially significant as a yardstick of journalistic skill, enterprise, and devotion to public service. We are proud of the professional craftsmanship and energy that has earned for Mr. May his richly deserved honor and has brought to the News, and all who contribute to its quality, the happy distinction of two Pulitzer Prizes within the brief space of 3 years.

NEWS REPORTER ED MAY WINS 1960 PULITZER PRIZE—SECOND MEMBER OF STAFF IN 3 YEARS HONORED—WROTE SERIES OF ARTICLES ON WELFARE PROBLEM

A 1960 Pulitzer Prize for excellence in journalism has been awarded to Edgar May, Buffalo Evening News general assignment reporter.

The award, announced Monday, was for local reporting and is in recognition of Mr. May's work on a critical series of articles on the public welfare program in Erie County and New York State.

It marks the second time in 5 years a member of the Buffalo Evening News staff has won a Pulitzer prize—most coveted honor in journalism.

Bruce M. Shanks, News editorial page cartoonist, won a Pulitzer Prize for 1957. His cartoon, "The Thinker," was published on August 20 of that year. The cartoon pointed up the problem of labor racketeering.

Mr. May's articles were published in the News last summer under the series title, "Our Costly Dilemma."

WAS UNDERCOVER MAN

The 31-year-old reporter, who joined the News staff April 7, 1958, served as an undercover man to do the basic research that made the welfare series possible. He ostensibly left the News staff and took a job as a caseworker for the Erie County Department of Social Welfare.

Using his personal experience as a caseworker and facts uncovered during 6 months of research by News staffs in Buffalo and its Albany and Washington bureaus, Mr. May also interviewed recognized welfare authorities and made a careful study of private surveys of welfare agencies of the State.

The purpose of the series was announced at the outset as being to direct community thinking toward shortcomings of the welfare system and generate a grassroots demand that welfare be confined to the needy and dispensed with greater concern for the taxpayer.

NEWS CITED BY AP

That it achieved this purpose was evident even before the final article in the series was published.

Schools giving courses in social welfare and the welfare departments of various political subdivisions as far away as Texas requested reprints of the articles, which were made available by the News in convenient form.

The Associated Press awarded a citation to the News for making available for general distribution a five-part condensation of the series and praised the thoughtful, probing stories that won prominent display in newspapers throughout the State.

Letters praising the series were received from editors, State legislators, welfare officials and workers and from citizens in all parts of the State.

STUDIED BY COMMISSIONER

They contained such phrases as "a splendid job; a fine piece of work; admirable thoroughness; purposeful job of reporting; real public service; well documented and very revealing; outstanding service in presenting in an unbiased manner so many facets of this problem."

The Erie County citizens welfare advisory committee noted that the articles had been of great value to it because of factual content and practical presentation.

After a careful study of the articles, Erie County welfare commissioner Paul F. Burke submitted to the county board of social welfare a comprehensive 34-point plan for operation of his department.

CASELOAD DROPPED

Subsequently more caseworkers were added to the departmental staff, salaries were increased in amounts up to $300, and there was a general awakening of public interest in the welfare operations.

Although the series was not directed in the first instance at fraud, more vigorous prosecution of cases of welfare fraud and a general tightening of regulations were collateral results of the series. The welfare caseload dropped to th lowest point in 2 years.

Mr. May was born in Zurich, Switzerland. He was graduated from Northwestern University with the degree of bachelor of science, journalism, in 1957. Previously he had worked as a reporter on the Bellows Falls, Vt., Weekly Times and the Fitchburg, Mass., Sentinel.

WON PREVIOUS AWARDS

He served 6 months in the infantry and 18 months in the Public Information Office of 5th Army Headquarters, Chicago, 1953–55. He is a member of the American Newspaper Guild and Kappa Tau Alpha, journalism honorary society.

In 1951, Mr. May won an award from the New England Weekly Press Association for the best feature story. In the following year, he won from the same organization awards for the best news story and the second best news feature.

As acting editor of the Bellows Weekly Times in 1952, he received an award for the best weekly paper in New England. In 1959 he won the Walter O. Bingham Award of the Buffalo Newspaper Guild.

His mother is Mrs. Renee May of Pittsfield, Mass. A sister, Mrs. Arthur Kunin, lives in Burlington, Vt.

House Resolution 211—Special Committee on Captive Nations

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 4, 1961

Mr. FLOOD. Mr. Speaker, on March 8, 1961, I introduced a measure calling for the establishment of a Special Committee on Captive Nations in the House of Representatives. This measure is now House Resolution 211. There are not sufficient words to express my profound gratitude and personal delight to the more than 20 Members of the House who joined with me in that most stimulating and very enlightening discussion which took place then on the subject of the captive nations—CONGRESSIONAL RECORD, March 8, 1961, "Russian Colonialism and the Necessity of a Special Captive Nations Committee," pages 3286–3311.

The popular response to House Resolution 211 has been so enthusiastic and impressive that I feel dutybound to disclose the thoughts and feelings of many Americans who have taken the time to write me on this subject. These citizens are cognizant of the basic reasons underlying the necessity of the proposed committee. They understand clearly the vital contribution that such a committee could make to our national security interests. In many cases, they know that no public or private body is in existence today which is devoted to the task of studying continuously, systematically, and objectively all of the captive nations, those in Eastern Europe and Asia, including the numerous captive nations in the Soviet Union itself.

Because their thoughts and sentiments are expressive and valuable, I request that the following responses of our citizens to House Resolution 211 be printed in the Appendix of the RECORD:

HENRY REGNERY CO.,
Chicago, Ill., April 26, 1961.

Congressman DANIEL J. FLOOD,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: I understand that you have introduced a resolution creating a special House Committee on Captive Nations. As chairman of the Chicago Committee for Captive Nations Week, may I commend you for introducing this legislation, and take this opportunity to express the hope that the committee is established.

It seems to me to be clear that our best allies are the people of the captive nations, and that the best way to bring this fact home to the American people, and to let

the captive peoples know that they have not been forgotten is through such a committee as you have proposed.

Sincerely yours,

HENRY REGNERY,
President.

UKRAINIAN CONGRESS COMMITTEE OF AMERICA, ELMIRA BRANCH,
Horseheads, N.Y., March 25, 1961.

Hon. DANIEL J. FLOOD,
House Office Building,
Washington, D.C.

DEAR SIR: The Elmira branch of the Ukrainian Congress Committee of America wishes to congratulate you on your move in introducing the resolution calling for the establishment of a permanent Committee on Captive Nations in the House of Representatives.

These nations constitute a perennial weakness in the Soviet Union. It is to our advantage to know these weaknesses and work to multiply them.

We are writing our Congressman and Hon. KENNETH B. KEATING asking them to support your resolution.

Very sincerely yours,

WALTER PETRIWSKY,
Chairman.

BYELORUSSIAN-AMERICAN ASSOCIATION, INC.,
Hawthorne, Calif., April 26, 1961.

Hon. DANIEL J. FLOOD,
U.S. House of Representatives,
House Office Building,
Washington, D.C.

DEAR SIR: The membership of this organization and myself wish to express our wholehearted support for your proposal to form a House of Representatives Committee on Captive Nations which we consider to be a right step in dramatizing the situation of national slavery and colonial oppression and exploitation of the various peoples under Soviet domination. We believe that the committee will serve a good purpose by collecting and presenting to the American people and the whole of mankind the abundant evidence that the Soviet Union is practicing the crudest kind of colonialism in regard to all non-Russian peoples of the Soviet empire and the satellite countries.

Our reasons for supporting the proposal are as follows:

1. While the West is breaking up empires, giving freedom to more and more peoples, th Russian Communists are building one, reaching out for more and more, right to our doorstep.

2. While posing themselves as champions of all colonial and semicolonial peoples under Western domination and hypocritically preaching freedom and self-determination for these peoples, the Russian Communists are hard at work in trying to deprive the non-Russian peoples of the Soviet empire, which became victims of Russian imperialist conquests, of their national identities and finally to wipe them off the map as national entities.

3. While accusing this country of warmongering and imperialism, Khrushchev shamelessly calls for "liberational wars" and claims the right for the Soviet Union to assist (and stir up, of course) any uprising anywhere in the world, which might advance supremacy of Russian communism.

This country, unfortunately, has not come up with a solution for stemming this Russian tide. The Congress made a good start in 1959 by passing a resolution Captive Nations Week. Khrushchev's reaction to this resolution has showed that the captive nations are a weak and vulnerable spot in the structure of the Soviet empire. (Captive nations are a weak spot in any empire; that is what causes empires to disintegrate as history has proved it so many times.) But Western cold war strategists, for some obscure reasons, refuse to exploit this Soviet weakness. By exposing the Soviets for what they are, much of the wind will be taken out of the Soviet sails. The proposed committee could do a lot in this direction.

Sincerely yours,

JOSEPH P. ARCIUCH,
President.

CENTRAL COMMITTEE OF UKRAINIAN ORGANIZATION,
Brooklyn, N.Y.

Hon. DANIEL J. FLOOD,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: Our organization wishes to congratulate you on your bold and farsighted move in introducing the resolution calling for the establishment of a permanent Committee on Captive Nations in the House of Representatives. Needless to say, such a committee is long overdue. One of the greatest problems confronting our Nation today is the Soviet Union, a prison house of many nations and peoples. These nations are ever eager and wanting to escape Soviet Russian slavery and despotism.

A committee on the Captive Nations would serve as a reservoir of information and data on the various enslaved nations in the U.S.S.R., which information could be made available to the U.S. Government and its various agencies. Its main function, however, would be to inform the American people and the world at large on the state of affairs behind the Iron Curtain and assist the Government in formulating its policies with respect to the captive nations. We are writing our Congressman, Mr. ANFUSO, asking him to support your resolution.

Respectfully yours,

PETER DUBORVEKI,
President.

JOHN MAKAR,
Secretary.

APRIL 25, 1961.

DEAR MR. FLOOD: I have recently noticed that your resolution, House Resolution 211, which calls for the creation of a Captive Nations Committee, is presently before the Rules Committee. I wish to express my full support of this resolution.

I believe your resolution is a step in the right direction in overcoming the evils of communism and helping the captive peoples behind the Iron Curtain. I believe this resolution will have the full support of the American people.

Sincerely,

JAMES L. MANLEY.

AMERICAN-UKRAINIAN CITIZENS CLUB,
Stamford, Conn., April 12, 1961.

DEAR CONGRESSMAN FLOOD: Our organization, the American-Ukrainian Citizens Club of Stamford, Conn., wishes to express our congratulations to you. We are glad to know that you were farsighted and bold enough to introduce the resolution for the establishment of a permanent Committee on Captive Nations in the House of Representatives. We hope that this resolution will be acted upon due to your efforts.

We believe that such a committee would do much for all freedom-loving people that are enslaved, especially those behind the Iron Curtain. This committee would also help to keep Americans informed of the plight of these people and countries.

Again you are to be congratulated on your farsightedness and wish you luck with it. We are writing our Congressman SIBAL, expressing our views and asking for his support of this resolution.

Very truly yours,

——— ———.

MARQUETTE UNIVERSITY,
Milwaukee, Wis., April 26, 1961.

Congressman DANIEL J. FLOOD,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN FLOOD: The Slavic Institute of Marquette University wholeheartedly endorses House Resolution 211 dealing with the establishment of a special Committee on the Captive Nations.

Our institute has championed the cause of the captive nations since its organization 11 years ago and feels honored that the idea has been dignified by your resolution.

We hope that the bill will meet with the unanimous approval of the House of Representatives.

Very sincerely yours,

ROMAN SMAL-STOCKI,
Director.

ALFRED J. SOKOLNICKI,
Secretary.

UKRAINIAN NATIONAL HOME,
Willimantic, Conn., March 29, 1961.

Hon. DANIEL J. FLOOD,
New House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: The members of the Ukrainian National Home of Willimantic, Conn., in the name of their president, wish to congratulate you on your presentation of a resolution to the House of Representatives, calling for the establishment of a permanent Committee on Captive Nations.

A Committee on the Captive Nations would furnish basic information and data on the various nations in the U.S.S.R. It would inform the world at large and the American people on the state of affairs behind the Iron Curtain and aid the Government in forming its policies with respect to these nations.

We are writing to the State of Connecticut's own Congressman KOWALSKI, asking him to support your resolution.

Sincerely yours,

JOSEPH RUDKO,
President.

BYELORUSSIAN-AMERICAN ASSOCIATION, INC.,
New Brunswick, N.J., April 24, 1961.

Hon. DANIEL J. FLOOD,
House Office Building,
Washington, D.C.

DEAR SIR: On behalf of the Byelorussian-American Association in New Jersey I wish to express sincere congratulations on your introduction of the resolution for the establishment of a permanent Committee on Captive Nations in the House of Representatives.

The Soviet Union's goal is to dominate the world, and Americans shall know it because Soviet Russia has become a great imperialist peril which threatens all free nations and particularly our country—the United States of America.

Your resolution to create a committee is a great step in the right direction. It would serve as an information center on the enslaved peoples in the U.S.S.R. Our Government needs this information in making proper policies with respect to the captive nations and with respect to the security of the United States.

With personal regards and best wishes, I am,

Sincerely yours,

SERGIS HUTYRCZYK,
President.

WILLIMANTIC, CONN., *April 3, 1961.*

Hon. DANIEL J. FLOOD,
New House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: Our organization, the Ukrainian Youth Association of Willimantic, Conn., wish to congratulate

you on your introducing the resolution calling for the establishment of a permanent Committee on Captive Nations in the House of Representatives.

We have also contacted our Congressman, Mr. KOWALSKI by letter, and asked him to support your resolution.

Sincerely yours,

GEORGE TUSKEWICZ,
President.

A Look at John Birch

EXTENSION OF REMARKS
OF
HON. JOHN H. ROUSSELOT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 4, 1961

Mr. ROUSSELOT. Mr. Speaker, many news sources have not objectively reported the facts concerning the John Birch Society. As a member of the society, I am anxious that it receive a fair and just hearing before the American public. I think the following editorial from the San Marino Tribune, the leading newspaper of San Marino, Calif., will interest those among us who want to know the truth about the society. Under unanimous consent, I insert this editorial in the Appendix of the RECORD:

A LOOK AT JOHN BIRCH

Why is it that partriotism is put on the defensive in the eyes of good Americans? Why do Americans question the motives or tactics of those whose only objective is the scourging of Communist influence from the American scene? Who turns American against American when the success of world-wide communism is concerned?

Is this attack on patriotism foreshadowing the day when patriots will be called conspirators against their own government, and placed under some sort of custody?

In every country where communism has taken over, the patriots were first considered controversial and later banded as conspirators against their government as it fell under the control of Reds. It happened in Cuba, which isn't very far away, and it could happen in America.

A favorite and effective tactic is to aim a smear campaign at anyone who is anti-Communist—discredit his political stand by lies or distortions, and destroy him by public censure. Those who use this tactic never answer this man's initial charges, nor do they ever replace him with another effective anti-Communist program. Their program is to smear and destroy.

The John Birch Society is getting a healthy start throughout the Southland and throughout the foothills. A program of positive, patriotic action, it has already attracted the usual smear. Some people who who have never tried to oppose the Communist threat, and some who have never recognized the Communist threat that now stands at their doorstep, are trying to discredit this group without knowing of its intents, its purposes, its methods. Some of them are becoming the unthinking tools of forces who oppose the John Birch movement because it is anti-Communist—a sobering thought.

The John Birch Society is a challenge to Americans. It shows them through films and speeches what the advance of communism has been. It recalls to their minds what they already knew but have forgotten—the events of recent history that have led America to the brink of disaster. It invites Americans to join in an effort to turn the tide.

There is no coercion in this movement; there couldn't be.

There are two forces operating in our world today, capitalism and communism. The John Birch Society is on the side of capitalism. It is frankly pro-American, pro-capitalist, and anti-Communist. There isn't the slightest doubt of its position. Lined up against the society and others like it are the Communists, the pro-Communists, the "do-nothings," the "let's-don't-rock-the-boaters," the "surrender is better than death" tub thumpers, and the anti-anti-Communists. This is quite a group; its program for anti-Communist action is no action at all; their syllabus could have been written by Lenin.

The John Birch Society has one more theory that its detractors refuse to recognize: They feel that the ordinary American has enough sense to make up his own mind.

Before you allow yourself to be stampeded by the critics, investigate the John Birch Society. A growing number of Americans have done so, and a growing number have joined its movement toward fundamental American constitutional government. The fact that they are under fire, is proof of their effectiveness.

Crop of Confusion

EXTENSION OF REMARKS
OF
HON. CHARLES RAPER JONAS
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 4, 1961

Mr. JONAS. Mr. Speaker, under leave to extend my remarks in the Appendix, I include an editorial published in the April 18 issue of the Burlington (N.C.) Daily Times-News.

This editorial indicates that the activities of the Department of Agriculture are not escaping attention of the folks down home:

CROP OF CONFUSION

President Kennedy remarked the other day that he hoped farmers would join up with his new voluntary feed grain plan, thus assuring themselves of a good support price and enabling the Government to save money on the farm program.

But the Department of Agriculture isn't content merely to hope that farmers will volunteer. The Commodity Credit Corporation (a Government arm) has been busily dumping corn on the market to drive the price down and frighten farmers into volunteering. This brought about "the sharpest March decline in 13 years," the Wall Street Journal reported.

Thus the farmer is warned to sign up for supports at $1.20 and for acreage curtailment or try to survive in a market where the CCC has proved it can keep the price of corn down around $1.05.

Already, about 80 percent of Illinois farmers and about 60 percent of Iowa farmers have seen the handwriting on the crib wall and signed. What else could they do?

But how about the second part of the administration plan—reducing the cost of the farm program to the Government?

The administration's March revision of the budget ups the spending of the Agriculture Department by $658 million—the largest increase outside the Defense Department.

Meanwhile, the National Farmers Organization is in the midst of a drive to hold cattle off the market to drive prices up, and it claims some success.

If the meatpackers were to do the same thing, they'd be in line for prosecution under the antitrust laws.

Those who profess to see silver linings in the cloudy farm policy picture today must be overlooking some of the realities.

Poland's Constitution Day

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. ROOSEVELT. Mr. Speaker, it was my intention that these remarks commemorating Poland's Constitution Day be included in the RECORD on the appropriate anniversary day which was yesterday, May 3. Unfortunately, I was called away from the floor before I had an opportunity to include them. It does not lessen my appreciation of Poland's continual fight for freedom.

In the lives of all nations there is always one day that more than any other symbolizes the national spirit. For Poland it is her Constitution Day, celebrated on May 3 for 170 years this year.

Poland's Constitution Day commemorates the Constitution of 1791. In that year Poland made a great, almost convulsive effort to free herself from an outmoded political and social system. The "4 years' sejm" or Parliament, led by men of great force of character and capacity, adopted the Constitution we celebrate today. It converted Poland into a limited constitutional monarchy, with ministerial responsibility and biennial parliaments. Invidious class distinctions were abolished. The humble townsman might now own land, or enter the ranks of state or church, privileges formerly open only to the gentry. The protection of law was extended to the peasants, and serfdom was mitigated with a view to its eventual abolition. Absolute religious toleration was proclaimed, and provisions for periodical reform by subsequent parliaments were also embodied in this Constitution.

But this most liberal and progressive document was to be short lived. Some magnates who could not accept the new order of things sought Russian assistance, and Catherine the Great was only too happy to oblige. Prussia, a supposed ally, left Poland in the lurch. Betrayed but not broken, the tiny Polish Army put up a spirited resistance, but eventually the struggle was lost, and the second partition of Poland took place.

But neither that partition nor the subsequent travails through which Poland was to pass have ever been able to kill the spirit of liberty which lives in Polish hearts. That historic truth is being rediscovered by Poland's Communist masters today. Poland's Government may be 100 percent Communist, Poland's people are not. Poland's Government may adopt policies hostile to the United States, but Poland's people are friendly.

Indeed, if a free plebiscite were to be held today can there be any doubt that Poland would opt for the West?

To keep this spirit of liberty alive it is only fitting that we in the United States should commemorate this great anniversary of Polish freedom, and take this occasion for renewed expression of our faith that Poland will once again be free.

Loyalty Day, 1961

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting editorial which appeared in the National Tribune, Stars and Stripes issue of May 4, 1961.

LOYALTY DAY, 1961

A number of years ago the Veterans of Foreign Wars conceived the idea of designating May 1 as Loyalty Day. The idea was to counteract the blatant propaganda put forth by the Communists around the globe on that particular day.

So, over the years Loyalty Day has been one of consecration to democratic principles which are so much a part of American life. It provides an opportunity for Americans to rededicate themselves to the democratic ideals set up by the founders of this Nation 185 years ago.

Loyalty Day serves a high and useful purpose. In its promotion of the idea the VFW adopted this slogan, "Loyalty, Our First Line of Defense." It proceeded on the premise that only through the loyalty and faithfulness of our citizens can this country retain not only its democratic ideals and principles but its position as a leader of the free world.

We are dutybound as citizens to counteract subversive influences and fight communist infiltration on every front. Ours is a land of many freedoms and it is ironic that traitorous Communists in this country were able to secure a substantial following because they took full advantage of the rights and liberties granted under the American Consttiution. Because of these privileges they were provided a chance to conspire against the Government which had given them an opportunity to express themselves without fear of reprisal.

We must impress upon our citizenry that they are a part and parcel of the greatest and most democratic government in the history of the world. The United States of America as a government is dedicated to personal and religious freedom regardless of creed, color or social station.

Democracy thrives upon full and complete knowledge and understanding. We must be strong in our determination to preserve our priceless heritage. It is worth an all-out effort on the part of every American to live up to the precious freedoms which thousands of men have laid down their lives to preserve.

In his definition of democracy, Abraham Lincoln once said, "As I would not be a slave, so I would not be a master. This expresses my idea of democracy," and Lincoln added, "Whatever differs from this is no democracy."

Polish Constitution Day

SPEECH
OF
HON. JOHN S. MONAGAN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. MONAGAN. Mr. Speaker, on May 3, 1791, just a short 2 years after the United States adopted its Constitution in 1789, the Polish Diet by unanimous and solemn vote enacted Free Poland's Constitution, kindling a flame of freedom that still burns brightly in the minds and hearts of a freedom-loving people.

Yesterday was the 170th anniversary of the Polish Constitution, and we rise in tribute to this anniversary and also to honor our Polish-American citizens who sense so deeply the blessings of a free land. For while the anniversary of Poland's Constitution Day finds that nation dominated by Communists, its people are still loyal to the ideals that initially whetted their appetite for independence and sovereignty.

Connecticut, my home State, and the Fifth District, which I represent, are privileged to have many fine citizens of Polish ancestry. I take pride in joining with friends and descendants of Poland, wherever they may be, in commemorating this day, because I can attest to the vital role they have played in the enrichment of my district, the State of Connecticut, and the Nation.

The best efforts of their Communist rulers have failed to destroy the spirit of the Polish people; nor have they been able to stamp out the characteristics of nationalism, religion, and love of personal liberty which have symbolized the Polish people since 1781.

These were attributes long recognized in men and women of Poland who won world renown and this Nation's admiration or gratitude for accomplishments in the military, scientific, medical, and musical fields they championed. I refer to Copernicus, Madam Curie, Chopin, Paderewski, John Sobieski, Casimir the Great, Kosciusko, and Pulaski. Poland has contributed enormously to the civilization and cultural heritage of the West. Our debt is great to Kosciusko and Pulaski, who contributed immeasurably to the achievement of our own independence.

Men who undertook the task to guide the Polish nation on the path of social progress belonged to the most enlightened brains of 18th-century Poland. They were inspired by the ideals of the American Declaration of Independence and influenced by the French proclamation of the rights of man and citizen. The principles laid down in the May 3 Constitution survived while Poland was struggling for independence and were referred to in the constitutional laws of the reborn Polish state after World War I. The present plight of Communist domination does but reaffirm the attachment of the Poles to their historic charter of 1791.

I hope that by these observances and commentaries we may bring inspiration and assurance to men and women who love liberty, that the yoke of oppression need not be eternal, and that, in the words contained in the Polish national anthem, "Poland is not lost forever, while our lives remain."

Government-Sponsored Security: You Can't Take It Or Leave It

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 4, 1961

Mr. CURTIS of Missouri. Mr. Speaker, on Wednesday, May 3, the Washington Daily News carried a Scripps-Howard article and an editorial on the sale by the Internal Revenue Service of the work animals of a Pennsylvania Amish farmer, a sale to permit the Government to recover unpaid taxes to provide for the old-age security of the individual. This farmer's present security—the animal power he needs to make his living—is taken from him to pay taxes for a program which he, and others of the Amish sect, wish not to participate in. In the name of welfare for this individual, this individual's welfare has been sacrificed.

To help return our social security system to a sound basis, I have offered a bill, H.R. 4817, to make it optional, allowing the individual to make arrangements for financing his retirement as he wishes, within certain qualifications to assure that the program will be sufficient. I offered this as an amendment to the recently passed Social Security Amendments in the Ways and Means Committee and, had it not been barred by a gag rule which I opposed, I would have offered it for the consideration of the House, so that it could work its will as promised by the leadership when the Rules Committee increase was voted.

I place this article and editorial in the Appendix of the RECORD under the unanimous consent of my colleagues:

AMISH FARMER REFUSES TO PAY—INTERNAL REVENUE AUCTIONS OFF THREE HORSES

PITTSBURGH, May 3.—The Federal Government auctioned off three horses belonging to a Pittsburgh area Amish farmer who refused to pay social security taxes because his religion forbids saving for old age.

Valentine Y. Byler owed $308 and his horses brought in $460.

Out of that $460, the Government will pay the back tax bill and expenses—insurance on the horses' lives, the cost of transporting them from the Byler farm at New Wilmington to the auction site, plus the bill for boarding them at a barn.

Mr. Byler will receive anything left over.

PURCHASED

Mark Andio, a Youngstown, Ohio, horse dealer, purchased Mr. Byler's three Belgian

work mares May 1 to climax the Government's attempt to collect social security taxes from the farmer.

The Internal Revenue Service, which is charged with collecting the tax, estimates there are more than 250 other Amish families in the same area who also are refusing to pay the levy.

The Amish sect is an offshoot of the Mennonites, the so-called plain people who emigrated to America in the late 1600's to escape religious persecution in Europe.

If anything even plainer and more fundamental than the Mennonites, the Amish believe the Bible and an enlightened conscience to be the final authority in all things.

The Amish farmers dress in either brown or blue work clothes, adopt beards once they are married, shun violence, keep to themselves and do all work in the fields with horses. Their religion also forbids the use of tractors as well as other mechanical aids.

SAME STEPS

W. K. Shaw, a regional IRS officer, intimated the Government may take the same step against other conscientious objectors to the payment of social security taxes.

This would be done even though Uncle Sam in effect is taking away an Amish farmer's means of earning a living when he seizes the farmer's horses since tractors can't be used.

An IRS district collection manager said Mr. Byler was singled out to have his horses sold "because he was one of the more aggressive, uncooperative taxpayers in my area."

The Government placed liens against Mr. Byler's horses in June 1959 and decided to proceed with the auction after subsequent negotiations failed to elicit payment.

THE STUPIDITY OF THE LAW

You don't have to go behind the Iron Curtain to find an example of heartless and inhuman use of the power of government against the individual citizen. You need go no farther than New Wilmington, Pa.

It was there that the power and the majesty of the Federal Government was invoked to show one Valentine Byler the necessity of conforming to the dictates of the Central Government.

Mr. Byler is a member of the Amish sect, a frugal, farming people who use horses instead of tractors.

Furthermore, their religion forbids them to make war or to accept anything from government. In case of need, they take care of their own.

Among other things the Amishman won't touch is the social security system. But the Government contends that, as self-employed farmers, they are obligated by a 1955 law to pay 4½ percent of their gross earnings into the social security fund, even if they never draw a nickel's worth of benefits—which no Amishman would do.

So the regional Internal Revenue Service selected Valentine Byler as the first candidate for punishment because he didn't pay his social security taxes. It seized three workhorses on a lien of $303. They were sold for $460, with the surplus above the lien, insurance and transportation costs to be turned back to Mr. Byler. Similar action is planned against other members of the Amish sect.

This action by IRS is in accord with the law. It is also nuts. There is room in this country for honest dissent and the law should be changed to provide for exceptions. It is obviously unjust that the Federal Government should seize the means of livelihood of these peaceful Amishmen in an effort to dragoon them into a forced welfare system—which, incidentally, they don't need. Amishmen know how to take care of themselves, both individually and as a group; an old-fashioned American trait antedating the so-called social security system.

Anti-Back-Door Spending Progress

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1961

Mr. PELLY. Mr. Speaker, great progress is being made toward the elimination of the back-door spending device. By this, I mean information is reaching the public regarding the laxity of Congress in requiring justification for public expenditures. Likewise, the public is learning that the Representatives in the House are bypassing the provision for an annual review of all spending programs.

The progress I refer to is due to dissemination of information by organizations interested in sound fiscal procedures and also by newspapers that carry this message through their editorial columns.

A fine example, Mr. Speaker, of such an editorial appeared on May 2 in the Baltimore Sun, and under unanimous consent, I include this editorial following these brief remarks:

BACKDOOR SPENDING

One section of the depressed areas bill that the President signed yesterday has large constitutional implications. It is the part that provides a $300 million loan fund to be advanced directly from the Treasury without specific appropriation by the Congress. The loans would be made available for rehabilitating sagging factories, improving public services, in general for outlays increasing employment in the assisted areas. The purpose is all to the good, but the method of raising the money is well worth a second look.

Backdoor financing, to give this new practice the name invented by its critics, began before the New Deal. In Mr. Hoover's term the Reconstruction Finance Corporation—first large-scale government intervention to reverse economic downturns—was financed by direct drafts on the Treasury. The rationale then advanced, however, is not often heard today. In 1932 it was argued that since the RFC would make loans, and since loans are repayable, there would be no net expenditure of public money. So, in strict logic no congressional appropriation was necessary.

But as steady use erodes any loophole, so the backdoor financing loophole has been widened until the old limitation to repayable loans has long since declined. The Commodity Credit Corporation, for instance, is financed by backdoor access to the Treasury. True, the CCC poses as a bank advancing funds on farm produce deposited as collateral. But in fact the loans are payments and the so-called crop collateral is actually surplus purchased to hold up prices. Public money is spent—very conclusively spent—without detailed congressional appropriation. That some of the surplus may later be closed out at firesale prices does not alter the fiscal facts.

The main reason parliaments were invented in the first place was to impose taxpayers' control over what was done with tax money. The idea was that the people who paid the revenues would send representatives to the capital empowered to say how they could be spent. For various contemporary reasons there is a rising impatience with congressional control of the purse, and a notion that in fact various executive agencies know better how to dispose of public money than the elected representatives of the people who provide it. This is a notion which, if defensible at all, needs skeptical examination every time it is advanced.

Time To Stop Running to Washington

EXTENSION OF REMARKS
OF
HON. CHARLES RAPER JONAS
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 4, 1961

Mr. JONAS. Mr. Speaker, under leave to extend my remarks in the Appendix, I include an editorial published in the April 19 issue of the Observer-News Enterprise, of Newton, N.C.

This editorial should be required reading for those who are turning more and more to Washington for the solution of local problems. It clearly demonstrates what can be accomplished by the home folks if they use the initiative, resourcefulness, and determination practiced by their forefathers.

The editorial is as follows:

TIME TO STOP RUNNING TO WASHINGTON

One of the great, continuing issues of the time in this country has to do with the role the Government plays, or should play, in local problems and affairs. Without going into all the pros and cons involved, one thing can be said with certainty: "We now look to the Central Government for all manner of services and aids that were totally unknown a comparatively short time ago." And the cost of these has become staggering over the years.

It is argued that only the Federal Government has the resources to deal effectively with a lengthy list of local difficulties. And it is true that Washington has long provided aid and succor when disasters, such as floods and tornadoes, have struck various regions. However, in late times, local governments and local groups have turned almost automatically to Washington and to the Federal Treasury for troubles that are simply not in the disaster category and that, in a previous era, would have been dealt with at home.

The question, of course, is just how necessary Federal aid for certain purposes is—and whether or not the local community could solve most of the local problems if it only tried. A publication of the Chamber of Commerce of the United States casts a revealing light on the matter. It tells the story of Fort Smith, Ark., which, in 1959, became what is known as a depressed area.

Cause of the trouble was the closing of a major army base on the city's outskirts. The GI's who had spent freely disappeared. With them went a thousand civilian jobs. The area lost 6,000 of its population. Numbers of businesses went to the wall, and for sale and for rent signs appeared in hundreds of dwellings.

But Fort Smith did not go hat in hand to Washington for help. Instead, local leaders decided to do the needed job with local

energies and resources. The chamber of commerce was revitalized and given additional financing, and its industrial development program was completely overhauled. A 100-man committee was organized into teams to inventory the area's tangible assets.

Surveys were conducted to gather the material that would make Fort Smith attractive to prospective industry. It was shown that operating costs were lower than in many other places; that good municipal services were available at moderate tax cost; that the school system was excellent; that there was an abundance of the necessary natural resources; and so on down an impressive list. Then, whenever the opportunity presented itself, industrial location teams, armed with their inducements, pleaded their case before the executive officers of industries.

The program has been an outstanding success. Last year 1,188 new jobs came into being in the city—more than were lost when the army camp closed. The year also witnessed the coming of seven brandnew industries and 22 major industrial expansions, accounting for a capital expenditure of more than $18 million.

The chamber's report observes, "Disdaining any kind of Federal aid from Washington, Fort Smith's business leaders declare: 'We're a city on the move. There's no limit where we can go'." It seems only fair to say that many another community could do as much when trouble strikes, instead of asking Uncle Sam to take care of everything.

Polish Constitution Day

SPEECH
OF
HON. ANCHER NELSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. NELSEN. Mr. Speaker, yesterday was the 170th anniversary of the Polish Constitution. The same spirit of democracy which the Polish people expressed in their constitution 170 years ago is the central theme of our American heritage and way of life, and this common dedication to the rights of man under God has been strengthened here in our country by the presence among us of the many thousands of American citizens of Polish origins.

The Polish people of the Second District in Minnesota are fine people, and I am happy that I can speak for them to bring their greetings to their fellow men throughout the United States in observance of the Polish Constitution Day. They are proud of their heritage and their common bonds with freedom-loving people all over the world, and their only regret is that they cannot look to their motherland as an independent nation enjoying its rightful place among the family of free and independent nations. Poland has been subjected to one invasion after another since the adoption of her republican constitution on May 3, 1791, and has not known the blessings of liberty except for a brief period of time between World Wars I and II.

It is amazing to me to realize that the spirit of the Polish Constitution still lives in the hearts and minds of the Polish people after these many long years of invasion and subjugation, and in a world torn today by the Communist-inspired cold war we can all take increased dedication to the cause of liberty from the inspirational example of the Polish people.

Some Merger Misgivings

EXTENSION OF REMARKS
OF
HON. WILLIAM H. BATES
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 17, 1961

Mr. BATES. Mr. Speaker, more and more, those of us who are interested in transportation are becoming concerned with the apparently unplanned or uncoordinated rash of rail mergers which are cropping up. We all want to have the best possible transportation system in this country over the next few years. This requires that rail mergers must be based on a comprehensive plan, not just thrown together for reasons of financial expediency.

In a recent issue of Trains, its editor, David P. Morgan, presented the views which many thoughtful observers of the railroad scene have been feeling. May I, therefore, call this editorial to the attention of our colleagues:

SOME MERGER MISGIVINGS

What follows is not intended for the aid and comfort of those who oppose all railroad mergers, per se. Indeed, it is precisely because mergers make sense that we are distressed at the industry's failure to follow St. Paul's injunction (1 Cor. 14: 40): "Let all things be done decently and in order." Instinct ought to warn us that some sort of ICC master consolidation plan is not the answer; there's too much Government in railroading as it is. But surely there should be a greater communion among the carriers themselves. There is scant evidence in the following items to indicate that the roads involved think of themselves as members of an interdependent industry:

The most critical area of U.S. railroading and hence the region in direct need of consolidation savings—New England—is without a merger plan. The roads there attempted and defaulted on a merger, mainly we gather because the various security holders involved could not decide which line would go bankrupt first. It is difficult to reconcile the fact that certain New England roads are home owned and others are controlled from Park Avenue or Montreal; and it's obvious that Alpert and McGinnis are beset with passenger woes that no longer bother Maine Central or Rutland. Still, some outsider is going to ask why the good merger patent medicine wasn't prescribed first for the patient nearest death; and what are we going to tell him?

The most obvious thing in 1961 railroad news is that the East is headed for a two-system map composed of (1) Pennsy and its satellites, and (2) everybody else. One unfortunate result is the ungentlemanly Jay Gould-like bidding for Baltimore & Ohio by Chesapeake & Ohio and New York Central. Another regrettable consequence is the plight of freshly merged Erie-Lackawanna, which wants no part of B. & O.-C. & O.-N.Y.C., yet discovers it isn't wanted in the Pennsy camp. (And for that matter, what of the famous and interdependent alphabet freight route which leaves tidewater over B. & O.-controlled Western Maryland, passes through independent middleman Pittsburgh & West Virginia, and winds up on Nickel Plate, which has agreed to merge with Pennsy-controlled N. & W.?) All this maneuvering may delight the financial editors but it proves little for railroad statesmanship and confirms our belief that the Eastern Railroad Presidents Conference should have put out the fire before it began when E.R.P.C. had a chance back in 1959.

Elsewhere: The bittersweet, on-again, off-again romance of Milwaukee and North Western continues to smolder, but assuming it catches fire, what then? Surely no final merger map will find these two comparatively weak grangers able to go it alone. The squabble over whether Santa Fe or S.P. gets Western Pacific is so delicate that neither buyer dares to ask for an outright merger, yet the implications are so profound that 2,000 miles distant we hear rumors that U.P. has bought up 8 percent of Rio Grande common. And there's Coast Line which quite naturally, if unrealistically, wants its cake and wants to eat it too; that is, it wishes to merge with parallel Seaboard without losing control of L. & N., a circumstance everyone in the South from G.M. & O. to Southern, finds intolerable.

Already the brotherhoods have decided to protest all mergers, per se; the Justice Department wants to sit in on the I.C.C. hearings; the Commission itself is beginning to narrow its eyes; and, expectedly, certain Congressmen are clearing their throats and oiling up their mimeograph machines. Which is to say that the railroads are going to have their hands full persuading the public of the validity of mergers without engaging in fisticuffs themselves over the issue.

Poland's Constitution Day

SPEECH
OF
HON. JESSICA McC. WEIS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mrs. WEIS. Mr. Speaker, freedom is the great heritage of mankind. It is the foundation upon which this Republic of ours rests. We cherish the Declaration of Independence because it is one of the classic expositions of man's longing to be free. The Magna Carta and the Proclamation of the Rights of Man are similarly revered. A lesser known but equally important document which follows this tradition is the Polish Constitution of May 3, 1791. The Polish Constitution, adopted on the eve of Poland's partition by its powerful neighbors, has been characterized as "one of the greatest achievements in Polish history." Another historian, speaking of the constitution, concluded:

This heroic breach with the past, this abjuration of the ancient sins, this renunciation of the idolized golden liberty throws an immortal gleam over the last dark years of the Republic.

Today Poland is once again under foreign rule. The Communist dictatorship which controls the country denies the people their right to govern themselves. We in America who have that right have a duty to those less fortunate than we. It is incumbent upon us that we use all our strength and resources to win the

struggle against communism. We cannot afford to slacken our effort even momentarily lest we find ourselves in the position of all too many nations which have fallen under Communist rule. It is fitting that on this the 170th anniversary of the adoption of Poland's Constitution we proclaim to the people of Poland and the world our dedication to the cause of liberty and democracy and our unflagging determination to fight for that cause.

St. Patrick's Day

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1961

Mr. FEIGHAN. Mr. Speaker, by leave previously obtained, I insert in the CONGRESSIONAL RECORD an address I delivered in Cleveland on March 17—St. Patrick's Day:

ST. PATRICK'S DAY

On this feast of St. Patrick, the patron saint of the Irish, we pay homage to our patron saint. We refresh in our minds and hearts the memory of him and of his labors, and catch, if we can, some spark of the love and faith which produced such labors, such fidelity, such zeal in the saint himself, and in the whole Irish nation which followed his footsteps.

From the days of gentle St. Patrick, who brought the light of Christianity to a land even in those pagan days, a civilized nation, to our present time, the Irish race has played a part in world history out of all proportion to their comparatively small numbers. When Christian civilization was all but destroyed by the barbarian invasion of other days, Ireland became the sanctuary and refuge of learning and culture.

The Irish always had a genius for spiritual values. In their entire history they have opposed the false philosophies of materialism which have often distorted men's sense of proportion.

It is more than 1,500 years since Patrick, captured by pagan Irish, was brought to Ireland to work as a shepherd tending flocks on the hillsides. Most of you know the story of Patrick—the long nights on the hillsides he spent, pondering on the pagan blindness of the splendid race of the Gael who were his captors and knew not Christ; the dreams he dreamt that he might one day bring to them the gift of God's grace and the sweetness of His love; his escape, and the long years of study in the seminaries of the continent; his consecration and his return again as bishop to Ireland; the long years of missionary labors among princes and people the length and breadth of the Emerald Isle.

On this feast day of St. Patrick, the patron saint of the Irish, there is great rejoicing in the Christian world. It is also a day for serious reflection on the life and times of St. Patrick and the spiritual values which he brought to Western civilization.

Today Western civilization is in a state of profound doubt. This once dynamic way of life is now gripped with instabilities, fears, and uncertainties concerning the future. From within and from without, the timeless values which mark the character of the Western World are under assault.

The new barbarian has already breached the outer ramparts of our civilization. He has cast the heaviest of chains upon millions of people who have the right to claim a common heritage with us. At this hour he stands without our very gates, awaiting the moment when we shall hesitate or falter in our defenses, thence to strike us a mortal blow. But history has a manner of repeating itself.

Fifteen centuries ago another civilization was put to the test by destroying forces from within and without. The great Roman Empire then represented a way of life guiding the affairs of most of the known world. From within, the Roman Empire had become soft and purposeless, materialism and the pursuit of creature satisfaction had been eating away at the very heart of the civilization. From without barbarian tribes were battering at the walls of the empire, contemptuous of the once vaunted power and glory of the Roman leaders. And Rome fell, the victim of its own weakness, its unwillingness to change from within in order to meet the challenge of the barbarian assault from without.

It was at this crossroads in history that a young man, a former slave and later to be known as St. Patrick, was leaving his indelible mark upon the Irish people. So deep was his spiritual mark upon the once wild and war-like tribes of Ireland that it was not long before bands of his followers left the Emerald Isle to lift the curtain of spiritual darkness which had descended upon all of Europe after the fall of the Roman Empire. The barbarian hordes which flooded over most of known Europe brought nothing with them except power, brutality, despotism, and the pagan code of might makes right. St. Patrick and his teachings thus became the spiritual liberators of Europe, following a long period of darkness.

There are many signs today which indicate that Western civilization may be following the old roads of the Roman Empire—the roads to internal collapse. And the United States is no exception to this trend. The spiritual and moral values which brought greatness to our country have been pushed into the background. New and unbecoming standards and moral values seem to occupy a dominant role in our national affairs. Material values and creature comforts are the order of the day. Personal success is all too frequently measured by the external evidences of material wealth. By one common standard you are judged to be successful if you own a large rambling home in suburbia, two cars, and a private swimming pool. Thus the criteria for attaining success emphasizes what you have been able to get out of your fellowman—not what you have done for your fellow man.

To put it another way, it is said that we are living in the organization age and that the organization man is the key to 20th century success. Now who is the organization man? He is the man who can come closest to behaving like a well oiled machine, built to perform a special, but limited, function. His job is not to think but to follow out standard operating procedures. He must be impersonal and detached. Success is determined by the fewest possible mistakes reflected in his personnel record and the fewest possible mistakes urge the organization man to become a rigid conformist. Such a system drains the individual character from man, thwarts the creative initiative of the individual and produces a mediocrity which hinders progress.

The organization age also produces impersonal policies and the impersonal approach in business and government. The individual becomes little more than a number. In another sense, the people subjected to this system become a faceless mass, to be manipulated and moved about not unlike puppets on a string.

At this moment of economic crisis at home we witness the degrading results, in terms of human values, brought on by the organization age. The unemployed, for example, are nothing but numbers to be jostled about in public announcements every month or so. These numbers become cold and meaningless even when they increase in volume with each passing month. But behind each of these numbers is a human being and in most cases a family, the basic unit of Western civilization. Through overreliance upon numbers, charts, and statistics, a common evil of the organization age, the human factor is submerged. A coldness grips our civilization. The harsh facts of life which move thinking people to action are disguised by statistics.

It is little wonder then that our public life is gripped by doubts and uncertainties. We have strayed a long way from our beginnings. We must not become victims of a system which would make our people a faceless mass.

These signs and many more move me to conclude that we shall not withstand the barbarian assault from without if we do not undertake immediate and far-reaching reforms from within. This is the lesson we must learn from the hard judgment of history.

We hear on all sides that we live in a revolutionary era, that old values have lost their purpose and that even the language we use in expressing these values has lost its impact upon the minds of people. It would do us well to remember on this occasion when we celebrate the feast day of our patron saint that St. Patrick in his time taught a revolutionary belief. It was revolutionary because St. Patrick worked upon the then pagan tribes of Ireland. He taught that man—every man—possessed an individual dignity conferred upon him by God his creator, and that from this dignity came certain rights which were the birthright of every man. So revolutionary were these teachings that they soon converted the entire Emerald Isle.

What St. Patrick taught remains the issue of our time. That issue, stripped of all the confusion which now attends it, can be stated very simply. It is the dignity of man, with all that it implies down through the ages of man's experiences and aspirations. The enemy from without boldly proclaims that man has no dignity, that man is no more than an animal, simply an economic being who will be happy and contented if his physical needs are met. Believing this, the new barbarian feels free to visit all sorts of indignities and inhumanities upon all those who fall under his ruthless rule.

By turning to the life and times of St. Patrick we find the answers to the doubts which beset us, the uncertainties and fears which grip our daily lives. St. Patrick had many virtues in a full lifetime of great accomplishments, but these, in passing review, would serve well our present needs.

Conviction: St. Patrick believed. He made a commitment to spread the message of Christ and his teachings and thus to bring enlightment to his fellow man. Nothing could dissuade him from these beliefs—right was right and wrong was wrong, and there was no in-between in his code of moral values. In our times much of the public thinking is gray in character. That is, it is somewhere at the midpoint between right and wrong, a position which fails conviction and commitment.

A magnificent persistence: St. Patrick possessed a single purpose. He could not be diverted from his course. He refused to accept defeat and never turned his back on discouraging experiences. Nor did he ever tire of the daily burdens he bore.

Selfless devotion to his cause: St. Patrick was never mindful of material gain and was concerned only with what he could give to his beloved Irish people. Disdaining physical comforts, his greatest happiness was found in living the spiritual ideals of

Christendom. How different this is from what we see on all sides today, a spirit of selfishness and pursuit of worldly goods has become a career for too many.

A doer of the word: St. Patrick was first a teacher, but always taught best by personal example and work in his daily life, and his personal example inspired others to believe and to live the good Christian life. He was a doer of the word.

Fearless courage: St. Patrick went among the barbarian tribes of Ireland without the slightest trace of fear and this at a time when the hearty Irish people were inclined to indenture at hard labor all strangers who came into their midst. He entered the high temple of the Druids on command to come forward and present his case—mindful that certain death awaited his failure to convince them of his beliefs. The strength of St. Patrick's fearless courage was endless.

A sense of destiny: St. Patrick knew that he was not born to vegetate and then die like the flowers of early spring. His was a mission ordained among men, and the fulfillment of that mission was his destiny. Conscious always of the immortality of his soul, he instituted a sense of high destiny into his beloved Irish flock. This sense of high destiny has gripped the Irish in every generation. It is this sense of destiny which brings greatness to a people and which has moved our country to its present station among the nations of the world.

As we face the perplexing problems of our time, charting a course to withhold the enemy from without, we must revitalize our civilization from within. What better guidance could we have than the lessons learned from the life and times of St. Patrick. Nothing could more quickly transform Western civilization to its former dynamic status.

Accepting these virtues of St. Patrick, and adopting them into our daily lives, we need have no fear of the enemy from without, and may take comfort in the knowledge that this would soon eliminate the dangers from within our public life. But nothing less shall shelter us from the days of trial that lie ahead. We, in our times, are called upon to prove our faith in those timeless values and principles of Western civilization. Rejoicing in the glorious heritage handed down to us, by the good St. Patrick, we can face the future in the certain knowledge that these evil times shall pass and our way of life will have proved its worth in the test.

A Little Levity

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. ROOSEVELT. Mr. Speaker, once in awhile a little levity is good for all of us. The letter to the editor which appears below is from a recent issue of the Sacramento Bee, Sacramento, Calif.:

INVESTIGATE RECORD

EDITOR OF THE BEE,

SIR: I recently came upon the CONGRESSIONAL RECORD, which I understand is an official Government publication. In that publication was a vicious article attacking the John Birch Society. When a magazine can attack a patriotic organization like the John Birch Society that is carrying freedom of the press too far.

I think the CONGRESSIONAL RECORD should be investigated and if it is found to be un-American it should be suppressed.

W.M.D.

NORTH SACRAMENTO.

Wage Bill: Political Expediency

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 12, 1961

Mr. BROYHILL. Mr. Speaker, as was pointed out on the floor yesterday during debate on the minimum wage bill conference report, the bill is political expediency.

Our colleague WILLIAM H. AYRES, of Ohio, stated:

This bill does not help the really low paid workers of America. The Democrats were more interested in getting President Kennedy off the hook.

Columnist Doris Fleeson has pinpointed the hypocrisy in the bill. The sponsors of the bill should enjoy reading her column printed below:

WAGE BILL: POLITICAL EXPEDIENCY—ENACTED MEASURE CALLED HUMILIATING FOR PRESIDENT TO SIGN, AND INDEFENSIBLE

(By Doris Fleeson)

The minimum wage bill approved by the Senate is an ignoble monument to political expediency which sacrifices workers in greatest need to an effort to pick up conservative Democratic votes in the House. The final agony is that it wasn't even close. The bill passed with 34 votes to spare.

The end product is not one President Kennedy can sign with anything but personal humiliation and gravest misgivings. It will force him to swallow many brave and compassionate words of his campaign and what is worse, to defend the indefensible.

For what his signature on the minimum wage bill in its present form amounts to will be his consent to the thesis that this affluent American society which he heads has the right to dictate fair labor standards but lacks the will to apply them to areas which need them most.

It is a curious kind of standard to raise in a survival attempt to win the underdeveloped and uncommitted nations of the world. Perhaps it could not have happened had not the White House and the country been so absorbed in the cruel problems of Cuba, Laos and France. Generally speaking, little attention has been paid to the august U.S. Senate, logrolling shamelessly in a manner to make the poorest State legislature seem like men of Athens debating with Socrates at the Acropolis.

In instance after instance, the most poorly paid categories of workers were traded off for a few votes, those in laundries and hospitals being the most striking examples. Then, to make the bill look good, the coverage was extended as far as possible in better paid industries. The net is a bill aimed at including the maximum number of workers but the fewest possible employers.

The end figures may sound impressive to the uninformed but more so is the comment of a reported attached to the bill's progress from the beginning. "We've got the people who make $26 a day safely covered; it's the people making $26 a week who are left out."

Old hands in the Senate were comparing the outcome to the situation of President Hoover early in his term when a rampant Republican conservative, logrolling majority presented him the high-tariff classic, the Hawley-Smoot bill. Progressive Republicans publicly begged Mr. Hoover not to sign it but then as now, the major leaders of the Congress were involved in the bill and pressuring it to passage and his signature.

Even those less pessimistic about the importance of the minimum wage bill to President Kennedy concede that the present Congress bears a rather considerable resemblance to the one which had so adverse an effect on the Hoover administration.

Certainly, the kind of trading which has gone on, if extended to all the Kennedy program, would doom it to faint praise. Nor is it a true conservative victory as the principle of Federal control is accepted but its fruits then denied to those who were promised them.

The Democratic Party cannot escape the blame for this one. Its leaders led the fight for the many exemptions when they reached the conclusive Senate-House conference.

Holland's Leadership in Best Tradition

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mr. SIKES. Mr. Speaker, it is with a great deal of pleasure that I call the attention of my colleagues to a very fine editorial appearing in the May 3, 1961, issue of the Florida Times-Union about our distinguished senior Senator from the State of Florida, the Honorable SPESSARD L. HOLLAND, on the occasion of his being presented the American Good Government Society award. The entire membership of the Florida delegation in Congress join me in tribute to Senator HOLLAND. We share his pride in the record he has made during his long service to the people of the State of Florida and to the Nation.

[From the Florida Times-Union, May 3, 1961]

HOLLAND'S LEADERSHIP IN BEST TRADITION

Florida's senior Senator, SPESSARD L. HOLLAND, this week is receiving congratulations not only from the citizens of the State which he represents for the award he has won from the American Good Government Society but also from his colleagues who understand the value of his wisdom and experience in these times of national and international stress. He spoke words on the occasion of the honor accorded him Friday night which call for serious consideration by every thoughtful American.

Senator HOLLAND decried centralization of government, declaring that the trend in that direction is one which is a threat to the rights and needs of States, communities and individuals. The clear vision which enables Florida's senior senator to see the magnitude of this threat has its source in the broad background of his experience and seasoned leadership.

Senator HOLLAND has given 44 years of his life to work performed in behalf of his fellow citizens, a record of public service which includes combat duty in France during World War I. Thereafter in succession, he served as prosecuting attorney, county judge and State senator of Polk County, of which he is a native.

He will long be remembered as World War II Governor of Florida during 1941–45, particularly by servicemen of this State who took courage from his personal visits to their training sites in the Louisiana maneuver areas.

Senator HOLLAND distinguished himself in the work which he did to vouchsafe to the people of our State and the Nation the Everglades National Park and the 17-county central and southern flood control district.

The fact that he was a leader in the battle for the passage of the tidelands law was noted in the scroll presented him in connection with the award, a part of which is quoted: "his notable contributions to the American constitution system include the farm credit acts which are moving into private ownership all institutions of the farm credit system, and the vital restoration to the coastal States of rightful ownership of undersea lands within their historic boundaries.

On this tidelands issue he was the leader in the Senate and before the Supreme Court of the United States.

Leadership demands respect for the people who are being led if this sentiment is to be reciprocated. It is a two-way street, and the fact that Senator HOLLAND has been returned to Washington time and again demonstrates that he exemplifies this relationship in the best tradition.

But leadership requires more. It demands that the person doing the leading set an example, and it is in the discharge of this function that Senator HOLLAND is drawing attention throughout the Nation to himself and the State he ably represents.

Protection for the American Consumer

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1961

Mr. ANFUSO. Mr. Speaker, on March 28, 1961, I introduced a resolution calling for the creation of a House Select Committee on Consumer Problems. Its purpose would be to conduct studies and investigations regarding the administration of Federal laws relating to consumers, the extent to which Government agencies adequately serve the needs of consumers, and to assemble facts and information on consumer problems to aid Congress in enacting remedial legislation.

In a statement in the RECORD at the time I introduced my resolution, House Resolution 240, I stated as follows:

Think of all the instances that have come to light in recent years involving price rigging, fraudulent advertising, low standards of purity and wholesomeness of food and other articles, misleading labeling, deceptive packaging, misrepresentations in manufacturing, and other ways to deceive the American consumer. This requires not only continual study and investigation, but also careful overseeing by Congress. It is time to stop making an easy victim of the consumer and to see that he obtains his dollar's worth in the marketplaces of our Nation.

I would like to see Congress take the lead in protecting the consumer, but unfortunately no action has been taken as yet on my resolution. The public, however, is clamoring for action. As more and more deceptions are uncovered, consumers everywhere are becoming thoroughly disgusted with the methods of certain unscrupulous business people and are beginning to turn to State legislatures for protection. An example is the situation which has arisen in New York.

A group of public-spirited New York State legislators has launched a campaign which, I believe, merits widespread attention, as their efforts will affect millions of consumers.

In the forthcoming session of the State legislature, a bill will be introduced to create a joint legislative committee on consumer protection to study overall textile performance with a view toward adoption of consumer labeling safeguards.

The joint sponsors of the measure are Assemblymen Max M. Turshen and Irwin Brownstein, of Brooklyn, Aileen B. Ryan, of the Bronx, Alfred D. Lerner, of Queens, and State Senator Frank J. Pino, of Brooklyn.

These State legislators, responding to hundreds of consumer complaints, are particularly concerned with clothing which is subject to undue shrinkage. They have noted that no law currently exists to require that clothing subject to this defect be properly labeled.

As a result, consumers—many of whom operate on a tight budget—are uninformed with regard to the type of performance they can expect from a particular garment. All they are told is the content.

It has been estimated that millions of dollars of clothing are dumped on the market each year which is subject to shrinkage, and can be worn only a few times. A few cleanings, or exposure to rain, will often render the garment useless.

This situation registers its severest impact on middle- and low-income families, who must spend hard-earned dollars carefully at a time when the spiraling inflation does not allow for needless financial losses.

The proposed committee on consumer protection would conduct a year-long study of overall textile performance.

At the end of the study the group would present its findings to the State legislature, along with recommendations for the adoption of minimum performance standards and labeling safeguards, particularly in the area of shrinkage.

This worthy program has aleady elicited widespread community support. In fact, the million-member Central Trades and Labor Council of New York City and the Union Label Trades Council, with 200 member unions, have indicated their whole-hearted support of this effort.

In connection with this legislative drive, the National Institute of Dry Cleaning has joined with the Textile Refinishers Association and Better Fabrics Testing Bureau in a study with the following objectives: First, to determine the shrinkage characteristics of unsponged woolen fabrics in repeated drycleanings; and second, to devise a laboratory test method by which the shrinkage propensities of a woolen fabric can be accurately determined by laboratory inspection.

The problem of clothing shrinkage after cleaning has existed for many years. I believe the program I have discussed here will be of great significance in correcting an inequitable situation.

Mr. Speaker, I think, however, that this is a national problem and should be looked into on a national scale by the Congress. Early adoption of my resolution will be an effective step in this direction.

Statement Signed by Members of the Faculty and Staff of Swarthmore College

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Monroe C. Beardsley, department of philosophy, Swarthmore College, enclosing copy of letter to Hon. FRANCIS E. WALTER and statement signed by members of the faculty and staff at Swarthmore College:

SWARTHMORE COLLEGE, DEPARTMENT OF PHILOSOPHY AND RELIGION,
Swarthmore, Pa., April 30, 1961.

DEAR REPRESENTATIVE ROOSEVELT: Though we are not in your constituency, we would like to find some way of indicating to you our admiration for your courage in leading the effort against continuation of the HUAC. Conceivably the enclosed list of signatures to our statement opposing the HUAC may be of some use to you (I enclose also a copy of my letter to Representative WALTER).

Sincerely yours,
MONROE C. BEARDSLEY.

SWARTHMORE COLLEGE,
April 30, 1961.

HON. FRANCIS E. WALTER,
House of Representatives,
Washington, D.C.

DEAR REPRESENTATIVE WALTER: I have the honor to transmit to you a statement opposing the House Committee on Un-American Activities, signed by 54 members of the faculty of Swarthmore College, and by 16 others on the staff. Many of us have been concerned about the committee's conduct, but were spurred into public opposition by seeing the film Operation Abolition. We cannot help feeling grave doubts about a congressional committee that would lend itself to the sponsorship of a film containing such distortions, and making such a sweeping and undeserved attack on the patriotism, intelligence, and sincerity of college students. By sending this signed statement to you, and, through you, the committee, we wish to make it clear that by no means everyone who is critical of the committee is either a Communist or a Communist dupe.

We believe that the harm done by the committee can best be prevented by its elimination or its drastic redefinition. But, since its existence has been prolonged for another year by House appropriation, may we respectfully urge you to use your great influence in the direction of caution, fairness, and reasonableness in the committee's conduct of hearings, its publications, and its public announcements.

Sincerely yours,
MONROE C. BEARDSLEY,
Department of Philosophy,
Swarthmore College.

STATEMENT OPPOSING THE HOUSE UN-AMERICAN ACTIVITIES COMMITTEE, SIGNED BY SEVENTY MEMBERS OF THE FACULTY AND STAFF OF SWARTHMORE COLLEGE

APRIL 29, 1961.

(The statement below was circulated among members of the faculty of Swarthmore College, 54 of whom have signed it. Their names and departments are listed below. Sixteen other members of the college staff have signed the statement; their names are also listed. The signed statements are in the possession of Monroe C. Beardsley, department of philosophy.)

In our opinion, the House Committee on Un-American Activities, by its chosen methods of operation, has made itself into an institution that is more dangerous to independent-thinking Americans than to subversive un-Americans.

1. The committee has confined itself almost exclusively to inquiry into the beliefs and associations of individuals. Such inquiry directly violates the most fundamental principles of liberty.

2. The committee, by its methods, and even by its very existence, discourages free association and the free exchange of ideas. It has itself become a dangerous threat to every variety of freedom, including the freedom of the teacher and scholar to think for himself and to speak the results of his best thinking.

3. The committee's chief procedure has been, and is, what it calls "exposure": that is, publicly condemning without the formality of a trial, and often without a hearing, people whom it suspects of wrong opinions, associations, or actions, but whom it cannot prove guilty of any crime by responsible legal evidence. To humiliate, and to incite others to persecute, those who have a right to be presumed innocent, is immoral; and it abuses the power of legislative inquiry.

4. The committee has repeatedly violated the principles of due process, by denying the accused the right to face and examine his accusers, and by enacting de facto trials without the traditional legal restraints.

5. The committee has constantly worked to undermine the American citizen's dedication to the preservation of his civil liberties. In its recent film, Operation Abolition, the committee has unmistakably implied that civil liberties are only a mask of subversion, and that anyone who opposes the committee is either a Communist or a Communist dupe.

In the face of such a general attempt to silence all open and rational discussion of the question of how communism is to be dealt with, and how it is not to be dealt with, we believe that it is our duty, especially as teachers, to speak out against the committee. We join with groups of concerned citizens throughout the country, professional, religious, labor, political, and social, that have urged the House of Representatives to abolish, or at least to curb, its Committee on Un-American Activities.

Gen. Milan Stefanik (1880–1919)

EXTENSION OF REMARKS
OF
HON. JAMES E. BROMWELL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 4, 1961

Mr. BROMWELL. Mr. Speaker, 42 years ago today Czechoslovak people lost one of their most gifted and gallant sons in the untimely death of General Stefanik. This born soldier and gifted leader is not as well known as he deserves to be. At the beginning of the First World War he was serving in the French Army, and thus had come to know French statesmen and men of public affairs who were later to champion the Czechoslovak cause. In this connection the part played by General Stefanik was of utmost importance, for it was he who facilitated the difficult task of Thomas Masaryk in France. Through his contacts he introduced Masaryk to influential French leaders whose help in the creation of the future Czechoslovak Republic was quite indispensable.

General Stefanik played an equally important role in bringing about harmony and union between the Slovaks and Czechs, thus contributing immensely to the formation of the Czechoslovak Republic. It is not by mere accident that he, with Masaryk and Benes, is credited in forming the great Czechoslovak triumvirate. In recognition of his devoted and signal services for the Czechoslovak cause he was made Minister of National Defense in the first Government of the Czechoslovak Republic. In his tragic and untimely death in an airplane accident on May 4, 1919, the Republic suffered the irreparable loss of its most gallant and gifted soldier. On this 42d anniversary of his death I join my Czechoslovak friends in paying tribute to the memory of this distinguished leader of his people, this gallant soldier of freedom and democracy.

New Medical and Biological Applications of Atomic Energy

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 4, 1961

Mr. VAN ZANDT. Mr. Speaker, on May 3, 1961, at Erie, Pa., it was my privilege to deliver the following address on the subject of "New Medical and Biological Applications of Atomic Energy" to the graduate seminar of the American College of Surgeons, northwest Pennsylvania chapter.

The address follows:

ADDRESS BY JAMES E. VAN ZANDT, MEMBER OF CONGRESS FROM PENNSYLVANIA, BEFORE THE AMERICAN COLLEGE OF SURGEONS, MAY 3, 1961, ERIE, PA.

I appreciate this opportunity to speak to you about some of the new medical and biological applications of atomic energy.

As a member of the Joint Committee on Atomic Energy since its inception in 1947, my interest in this subject has been a continuing one.

Recently, in March 1961, the Subcommittees on Research, Development, and Radiation, of which I am a member, held hearings on the Application of Radioisotopes and Radiation in the Life Sciences.

The purpose of these hearings was to bring the members of the committee up to date on research and development in the life sciences field since 1956. The time at which we last held similar hearings.

Tonight I should like to draw on some of the dramatic facts and figures given to us by the many experts who testified at those hearings and to briefly indicate to you the remarkable progress being made every day in the application of the peaceful atom for the betterment of mankind.

Despite the fact that radioactivity was discovered by man at virtually the same time he discovered X-rays, about 1895, it was not until the atomic bomb exploded over Japan in 1945 that we, as a society, really became conscious of the powerful energy locked in the atom and the catastrophic consequences of its misuse.

Because of this possible misuse, it was essential for some years after the war to gear our research efforts toward the development of atomic weapons so as to ensure our security as a world power.

Gradually, however, we began to devote more of our efforts toward the peaceful uses of the atom.

This development was highlighted by President Eisenhower's announcement in 1953 of the atoms for peace program.

The program was given further impetus by the Congress in the Atomic Energy Act

of 1954 which specifically called upon the Atomic Energy Commission to proceed with all reasonable dispatch in exploring the uses of the peaceful atom.

The program has been successful and today I should like to outline for you some of the many ways in which the lot of mankind has been improved by the atom.

The catalog of achievement is impressive for today we find the peaceful atom at work: (a) In the diagnosis and treatment of disease, (b) in the improvement of crops and agricultural practices, (c) in the study of basic life processes, and (d) in man's continuing effort to conquer space.

RADIATION IN MEDICAL TREATMENT

Let us begin with those things with which you in this audience are most familiar; namely, the medical aspects of atomc energy.

If we could step back in time to 1890 and ask a physician of that day what he needed most to assist him in the diagnosis and treatment of disease his reply might well be, "A way of seeing inside the human body."

He could not have even dreamed that 5 years later, in 1895, Roentgen would discover the X-ray.

This he did somewhat by accident when he happened to place his hand between the X-ray tube and a fluorescent screen.

This view of the bones of his hand startled him.

A few days later when he radiographed his wife's hand she was quite disturbed; the very thought of seeing your own skeleton.

Strangely enough, Roentgen did not report his findings to the physics society of the day but rather to the Physical Medical Society of Wurzburg because he recognized immediately the possible implications of the use of this technique in medicine.

The work with X-rays led the physicists to discover radioactivity in 1896 and by 1902 Madame Curie had isolated a very small amount of radium.

All of you know how the radiations from radium and X-rays have been used for medical diagnosis and treatment.

Between 1900 and about 1940 when research was started to build an atomic bomb a tremendous amount of information was compiled on the hazardous nature of radiation.

This background of information made it imperative that medical science be brought into the Manhattan Project at its start to insure safe handling of the radioactive materials needed to make the bomb.

As a result of these early precautions there have been only four or five deaths from radiation exposure in the history of the development of atomic industry—an outstanding safety record.

Because radiation is known to cause cancer as well as cure it, the atomic energy program very early developed a number of medical research projects to study the medical aspects of radiation.

Today there are six major medical facilities worth millions of dollars with annual operating budgets totaling approximately $9 million.

In addition there is a considerable amount of similar work in medical schools.

The major medical facilities are located at the Brookhaven National Laboratory, the Oak Ridge National Laboratory, Argonne Cancer Research Hospital at Chicago, the Medical School of the University of California at Los Angeles, the San Francisco Medical School and the Lawrence Radiation Laboratory at Berkeley, Calif.

Each of these laboratories has its own special programs with large and very expensive pieces of specialized equipment including X-ray machines, cobalt and cesium radiation treatment machines, electron accelerators and, in some cases, linear accelerators and even nuclear reactors are available for medical treatment as well as for experimental use.

The electron accelerators are proving of particular value for deep penetration treatment with much less damage to surrounding tissue as compared to X-ray and gamma ray treatments.

The linear accelerators provide many different kinds of particles—protons—alpha particles, and some of the heavy atoms.

The laboratory at Berkeley has shown that certain kinds of irradiations are effective in controlling glandular cancers and offer promise in treating other diseased tissues.

The medical nuclear reactor, while still largely in an experimental stage may prove to be extremely valuable in particular cases.

Its effectiveness depends upon the ability of neutrons to induce radiation in chemical substances to produce localized useful effects.

The technique may prove very useful for brain tumors.

It is doubtful whether these enormously beneficial machines would have been developed as rapidly had it not been for the needs of the atomic energy establishment and the impetus of the atoms for peace program.

We can now confidently look to a future in which these machines, after fully proven, will take their place alongside existing conventional tools to see inside the human body and cure its ills.

THE PEACEFUL ATOM AND SPACE TRAVEL

An unexpected bonus has also come from the use and development of these large radiation machines mentioned previously and their use in basic research.

You have read and heard that the first man was launched into space and returned safely by the Russians.

Clearly this offers them a fine bit of publicity to serve as a vehicle for propagandizing the uncommitted nations on the communistic way of life.

You and I recognize, however, that this flight can be likened to the first airplane flight by the Wright brothers at Kitty Hawk in the early 1900's.

We still had a long way to go then and even further to go now before space travel is a reality.

We must not, however, decrease our efforts in reaching our own objectives.

Until about 1957 when Van Allen, a physicist, described two intense bands of radiation which surround the earth radiation was not really considered as a great deterrent to man's space travel.

We know now, however, that these two belts do offer serious radiation problems and in addition that the solar flares caused by nuclear explosions on the sun generate enough proton radiation to be of rather critical concern to space travelers.

It is, therefore, imperative that we learn more about space radiations.

The large accelerators previously mentioned are capable of generating various particles including some similar to the particles found in the cosmic radiation.

By cooperative efforts we can hope to find how better to protect man from these space radiations and thus accelerate his conquest of space, that space far beyond the range established by the Russians in both time and distance in their recent flight.

THE RADIOISOTOPE IN MEDICINE

However glamorous it may be to possess large expensive radiation producing machines, their use is relatively more restricted and in many instances they are even less desirable than the radioactive atom. This is particularly true since the atom is so versatile.

One of the first isotopes to be used in medical diagnosis was iodine 131 which selectively concentrates in the thyroid gland.

With the use of this isotope and special instrumentation now available for scanning the body one can precisely locate the thyroid gland and within limits identify the size and shape of the abnormalities which are present.

Similar techniques have been deevloped using other isotopes which localize in other areas of the human system.

Radioactive isotopes of chronium, iodine, sodium, iron, and cobalt are some of the more valuable elements presently playing an important role in medical diagnosis on the research level.

Much time could be spent listing various other isotopes which are used for specific tests but suffice it to say that there are about 275 which might be used for diagnostic purposes in humans.

The reason these radioisotopes are not presently available for general use is that they are undergoing tests in our laboratories with animals to determine their safe limits before being used in human medicine.

Time should yield these new tools.

Because of recent developments in our laboratories the day when you will be able to use all kinds of isotopes for diagnosis in almost every human, regardless of age or physical condition, is just around the corner.

With the whole body counter, which is simply an enclosure within which a patient is sensitively "counted" for radioactivity, one can detect less than a millionth of a curie of iron-59 in the whole body.

The radiation from this amount of activity is essentially negligible, yet the sensitivity of the measurement is such as to make the radioisotope feasible for diagnosis.

A modification of this instrument to accommodate only an arm, thus reducing the cost some fiftyfold, is even now being used for research studies.

A future in which the radioactive isotope will be used for faster and more efficient diagnosis of disease is certainly close and filled with promise.

It is rather obvious that the isotopes used for diagnosis can also be used in therapy if the isotope concentrates in diseased tissue.

Thus in the case of a thyroid disorder, iodine 131 or iodine 125 is indicated.

In specialized cases of bone cancer phosphorus-32 may be used and and in other instances other isotopes are used, the only difference between the diagnostic dose and the therapeutic dose is one of concentration.

The particular advantage of the isotopic method of treatment over that using the large machines mentioned earlier is that the isotope concentrates in the diseased tissue thus giving a higher dosage to the diseased area than to the normal, healthy tissue surrounding it.

Further studies currently going on in our laboratories will no doubt provide information which you as practicing physicians will be able to use.

In some instances isotopes have been used for implantation into the tumor area to provide a local source of radiation.

The great diversity of isotopes which are available makes this approach particularly desirable since by selection of an isotope giving a particular type of radiation one can irradiate an area as large or as small as desired.

THE ATOM IN AGRICULTURE

In the area of agriculture which is perhaps not so familiar to you, atomic energy has also made major contributions—contributions which can be measured in terms of dollars.

It has been reliably estimated that the use of radioisotopes in agriculture will result in annual savings of at least $180 million per year for the next 20 years or a total of some $3.6 billion.

Fertilizer practices are constantly being improved through the use of tracers.

Thus radioactive atom tracers used in fertilizers can show us how plants take up the various ingredients, where, when, and how they should be applied for maximum effectiveness and the factors which affect leaching and movement through soil.

These improved practices for more efficient use of fertilizers through the aid of isotopes are estimated to save some $20 million annually on fertilizer costs alone.

The additional yields resulting from the improved practices would perhaps double this figure.

Agricultural losses from weeds amount to approximately $4 billion annually and labeled compounds have helped us to understand when, where, and how to apply weed killers for maximum effectiveness.

The use of radioisotopes labeled compounds has led to the development of better compounds for thinning blossoms on fruit trees resulting in the production of better fruit and in the prevention of fruit drop.

Their use has also led to better defoliants for cotton and to the development of compounds which actually increase yields under otherwise ideal conditions.

Isotopes have helped the plant pathologist to understand how plant parasites invade the roots of tomatoes and other plants; how microorganisms cause rot and wilting and how these pests enter the plant to do their damage.

They have also helped to develop better control measures for the eradication of these pests.

Atomic energy has led not only to the development of better agricultural chemicals but also to the faster approval of these materials for introduction into the world marketplace.

As you know the Congress some years ago passed the Miller bill which required the manufacturer to establish safe limits for residues left on food crops after treatment with agricultural pesticides.

This is the "no cranberries for Thanksgiving" story which you will remember 1 or 2 years ago.

The Miller bill requires that the concentrations of these hazardous chemicals must be below some certain level in the food item before the food can be sold.

Often it has been completely impossible to determine these levels of the residue without the use of radioactive compounds.

Through their use the industrial companies have been able to "clear" compounds with the Food and Drug Administration much quicker and much more economically.

Radioisotopes have been of great value in determining what happens to plant pests from season to season.

For instance the cotton boll weevil which causes an enormous annual loss in the South was labeled with radioactive Cobalt-60.

With the aid of a Geiger counter he was tracked "bird dogged" if you will, to his hiding place in the trash at the side of the field.

By simply burning the trash at the end of the season the usual spring reinfestation by this pest could be prevented.

Studies with farm animals using isotopes have led to better feeding practices; practices which have often led to better nutrition of man himself.

Thus by radioactive tracers of different food products which the animal eats it has been possible to determine the availability of minerals from particular compounds, the availability of vitamins, proteins, and other essential factors under many conditions of feeding.

Various disease agents such as viruses; bacteria, hook worm, etc., are being studied with the aid of isotopes as are the ways in which milk, meat, eggs, etc., are formed by the animals.

RADIATION IN AGRICULTURE

External radiation itself has been used directly in the agriculture sciences.

Two specific cases warrant special mention—the control of insect pests and the development of useful plant varieties.

In both of these instances the work could have been done with X-ray machines but it took the glamour of atomic energy to provide the positive accomplishment.

One of the most striking examples is the case of the eradication of the screwworm fly.

The screw worm, which resembles a wood screw, is a serious livestock pest which lays eggs in cuts and scratches of livestock, particularly our meat animals.

The resulting grub, the worm, causes large sores, poor weight gain, permanent injury, and in some severe cases, death.

This pest did cost ranchers in the southeast alone some $20 million annually.

Those in the southwest lost another $25 to $35 million annually.

Basic research conducted in the early fifty's showed that the male screwworm fly could be made sterile by a dose of radiation from radioactive cobalt-60 which still permitted him to compete with the untreated males for the female population.

The peculiar thing about the screwworm which made it seem possible for eradication was that the female screwworms mated only once, laid their eggs, and then died.

If she happened to mate with a sterile male then none of her eggs would hatch and thus eradication would be completely after only a few generations.

It now is known that such habits are not required but this habit led to the development of the technique.

Field tests conducted on the West Indian island Curacao showed that the insect could be completely eliminated from geographically isolated areas when the numbers of sterile males introduced into the population was sufficiently large.

This success on Curacao led the Florida Livestock Board and the U.S. Department of Agriculture to start releases of sterile males in southern Florida in 1957.

By early 1959, some 18 months later, not a single fly remained.

Three billion flies had been released over a 70,000-square-mile area by 20 airplanes at a cost of about $8 million.

Considering that the annual losses in Florida and southern Georgia amounted to almost $20 million this was a noteworthy achievement; in fact $12 million in the bank after the first year.

This sterile male technique offers tremendous possibilities for the future and programs are now underway to develop methods to eradicate the Mediterranean Fruit Fly, the Melon Fly, and the Oriental Fruit Fly.

Our Government is also interested in eradication of the Olive Fly which makes olives unfit for either oil production or use in Martinis.

Only the future will tell us of the success of this technique in effecting biological control of these insect pests.

Another area in which there have been almost revolutionary advances as a result of atomic energy is plant genetics.

It has been known for many years that radiation causes alterations in the hereditary materials; that is, causes mutations and plant geneticists have used the radiation technique to produce new varieties uniquely suited to particular conditions.

For instance, a new bean variety, called Sanilac, uniquely suited to grow in Michigan saved the farmers $4.5 million in 1959 when only one-third of the acreage was planted to this variety.

In 1961 it is expected that most of the acreage will be so planted with possible savings of over $12 million.

A new variety of oat which is resistant to crown rust has been developed in Florida.

A new variety of peanut which yields more and is also easier to harvest mechanically has been developed in North Carolina.

In spite of the great advances measurable in terms of dollars which have come to man from the developments cited previously, one area in which the atom has contributed most is that of basic research, both in life and physical sciences.

Without the use of the isotope as a tracer many life processes now well understood could perhaps never have been understood.

Through our understanding of basic life processes we will be able to contribute to man's welfare, his longer and happier life.

In summary you and I can look to the future with its many benefits from atomic energy.

We are at this time only scratching the surface of its vast potential.

Many of you present can assist in helping us to reap these benefits since you are aware of what the problems are in your field and can point out most effectively where atomic energy will be most helpful.

In an age where the glamorous and the spectacular in scientific endeavors seem to preemp man's attention, the very solid accomplishments in the peaceful uses of atomic energy should not be overlooked.

I am certain that when the scientific history of our times is written it will be noted that, in our age, the peaceful atom helped to unlock the mysteries of the universe and to provide a better and more abundant life for mankind.

Polish Constitution Day

SPEECH
OF
HON. ALEXANDER PIRNIE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. PIRNIE. Mr. Speaker, May 3 is celebrated as Polish Constitution Day.

The Polish people, like our own Founding Fathers, fought against overwhelming odds to secure the establishment of a parliamentary democracy. The Polish Constitution of 1791 is an achievement of this heroic struggle. Freemen everywhere have a special responsibility to commemorate this historic event, for in Poland, no such celebration is permitted.

Poland's Communist rulers know that promotion of democratic principles will be a prelude to their downfall. The Polish Constitution of 1791 proclaims that the state exists to serve its citizens and to do otherwise is to foster despotism. This is the lesson which freemen have learned to appreciate.

Thus, it is fitting that we recall the stirring words that were penned but 2 years after the ratification of our own Constitution:

All power in civil society should be derived from the will of the people, its end and object being the preservation and integrity of the state, the civil liberty, and the good order of society, on an equal scale, and a lasting foundation.

All freemen will do well to remind themselves of these truths.

Hungary, 1961

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mr. MULTER. Mr. Speaker, I would like to bring to the attention of our colleagues the following article which appeared in the New York Herald Tribune on April 30, 1961.

The author, Gaston Coblentz, has reported the attitude of the Hungarians 5 years after the murderous suppression of their revolt against Moscow. It is fitting at this time that we be reminded of those terrible events:

HUNGARIANS LOOK GRIMLY AT THE UNITED STATES 5 YEARS LATER

(By Gaston Coblentz)

BUDAPEST.—"I can see you but I knew you can do nothing for us."

This is the look that Hungarians today throw at Americans; Americans in Budapest 5 years after the uprising against the Kremlin; Americans in Budapest less than a week after the Cuban fiasco and on the eve of a probable setback in Laos.

Gone from the Hungarians' eyes is the old, lively fellowship. The mood in this city is one of resignation, of getting on with life, a life that must go on somehow in a country that is moving through an important transition from Stalinist communism to a somewhat less repressive but no less odious brand promoted by Soviet Premier Khrushchev.

Within the narrow limits possible under Communist rule, life in Budapest has improved rather than worsened since the Russian army's bloody suppression of the rebellion in 1956.

The sadistic postwar reign of terror operated by former Communist leader Matyas Rakosi has been succeeded by the regime of Janos Kadar, whose name is inseparably linked with some of the most unpalatable acts in Hungarian history, but whose rule is notably milder at present than that of his predecessor.

STILL THE BARBED WIRE

Despite the ballast of his past actions and the odium attached to his name abroad, he is associated today with a trend of events which have made Budapest a somewhat more "liberal" city by Communist standards and which, if continued, may be conducive to resurrecting, in time, the capital's still-shattered morale.

However, this trend has failed to alter the Hungarian people's virtual imprisonment inside the Soviet empire, symbolized by the grim network of barbed wire, watch towers, mines and police dogs that guard the country's western frontier.

It has likewise not raised any hopes that this imprisonment is coming to an end. Hungarians have through tragic experience made a realistic appraisal of the United States inability to help them.

Rumors constantly circulate in Budapest that the Soviet Union may at last withdraw its large garrisons from Hungarian territory, estimated at some 50,000 men.

However, it is lucidly clear to every Hungarian that, were the Soviet forces to withdraw eastward across the Hungarian-Ukrainian border, they would remain ready for a swift return to keep Hungary under Communist control.

The result seems to be that the Hungarian people have submitted to their fate. They look for various improvements in their present situation, but within distinct confines. They believe that a continuing behind-the-scenes tug of war is taking place between the pro-Khrushchev-Kadar forces in the Hungarian Communist Party and the diehard rival Stalinist elements, who have active allies in Moscow and some of the satellite countries.

The Kadar group seems to be winning the inner party battle despite some serious setbacks and its followers talk with dislike of the terror-ridden Rakosi rule from 1948 to 1956. In Communist jargon, they call it a period of "serious errors."

Kadar has also succeeded presumably with Khrushchev's help, in fighting off at least one concerted effort by Stalinists in Moscow, Budapest, and Peiping to revive Rakosis' influence. (Rakosis is in protracted exile in the Soviet Union where he is occasionally seen by Western diplomats at the Moscow Ballet).

The Kadarite liberalization has gradually come into evidence in a number of ways. Followers say that it stems from their having "learned a great deal that we refused to recognize before about adapting communism to the nature of our people."

In part, it has consisted of a switchover from Rakosis' total contempt for the population to a policy that at last makes good food available in a wide variety of restaurants and goes at least some distance toward satisfying the human craving for a decent supply of consumer goods during one's lifetime rather than in the Communist millenium.

The result is the import and sale in Budapest stores of such items as Gilbey's gin, Martel and Courvoisier cognacs, Dior and Chanel perfumes, and the like. They are displayed in the shopwindows of bedraggled buildings on Vaci Street, once an elegant shopping center. The prices are very high, but the goods are there in increasing quantities.

There is also much less nagging of the Budapest population by the government, less overt interference in the minor details of daily life, and a deliberate avoidance of some of the annoyances that helped to build up the explosion 5 years ago.

There is far less browbeating of the population to take part in Communist propaganda rallies and parades. Likewise, it is no longer a burning issue whether every family in the block subscribes to the Communist Party organ.

NEW LOTTERIES

The annual forced subscription to government loans has been eliminated. In their place, Kadar is using sports pools and national lotteries to raise similar amounts of money without arousing resistance. The top weekly lottery prize is 1 million forints ($44,000) for a 3-forint (15-cent) ticket.

A noticeable change has also taken place in the handling of the population by the secret police. In the Rakosi era, denunciation by an informer or a personal enemy made imprisonment and torture a likelihood. This hideous practice is reported to have been generally curtailed. There is also reported to have been an improvement in prison conditions.

Hungarians who persist in accepting invitations from Western diplomats are still warned off by the secret police, but, as a rule, less punitively than before.

FEAR LESSENED

At a diplomatic cocktail party this week a Hungarian newspaper acquaintance told this reporter:

"We have been talking together for 20 minutes. Under Rakosi you know what it would have meant to be seen with you like this in public."

Another Hungarian journalist remarked:

"Under Rakosi I never really went to bed at night without fearing the 2 a.m. arrest. I may be wrong, but I do not go to sleep with that fear now."

However, parallel with this "liberalization" and these limited gains wrung from the Communists by the 1956 revolt, there have recently been three developments of an opposite nature.

First, a still somewhat obscure increase in secret police arrests in Budapest in the last few weeks.

Second, a drive to collectivize the Hungarian countryside against the will of the peasants on a scale never attempted before the revolt. Kadar men assert that this was forced through by the Stalinist faction. They say that Kadar wanted to proceed more slowly, although toward the same goal.

The drive began, almost unnoticed by the outside world, in late 1959 and has engulfed some 90 percent of the arable land. However, there have so far been relatively few reports of physical resistance on the part of the peasants.

Coupled with collectivization, a new assault is being made against the Roman Catholic Church, this time on the parish-priest level, the strongest stratum of church resistance left.

An unascertainable number of priests have been arrested—some estimates are about 150. There are signs that a show trial is being prepared against some dozen of the priests for allegedly distributing subversive Western literature. The literature is said to be mainly a West German book on archeological excavations of Biblical relics.

The 1961 balance sheet is reflected in a trend in Budapest not to think in terms of a few years in discussing possible changes in Hungary's status. People talk now only in terms of longer periods.

"We realize," three different Hungarians said to this reporter with strange uniformity and a strikingly similar gesture of resignation, "that there will be no real change in our lifetime."

Inwood Junior High School

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. ZELENKO. Mr. Speaker, the congressional district which I have the honor to represent is located in New York City. There in harmony live people of all races, creeds, and colors. The schoolchildren, who study in schools which are fully integrated, have been recipients of many national honors.

Under unanimous consent, I insert in the RECORD a copy of a letter which I have received from Mr. Irving Mahl, one of the teachers of Inwood Junior High School. This letter is further proof that under progressive and efficient supervision children of all races, creeds, and colors can study together to become fine Americans.

The letter follows:

INWOOD JUNIOR HIGH SCHOOL,
New York, N.Y., April 20, 1961.

Hon. HERBERT ZELENKO,
New York, N.Y.

DEAR SIR: It is too often that we hear of the bad things that our junior high school youngsters are up to. Newspapers are very prone to stress the sensational news of violence with very little to counterbalance with constructive accomplishments of our children.

Inwood Junior High School is very proud to inform you that for the second year in

succession our school has won the first and second prizes in the poster contest sponsored by the National Conference of Christians and Jews,

At an award ceremony on Tuesday, April 18, 1961, at the headquarters of the N.C.C.J., 43 West 57th Street, New York, N.Y., awards were given to the following children who reside in your district:

Gale McCray, 521 West 182d Street; Dina Tritsch, 558 West 193d Street; Sharon Lewin, 559 West 190th Street; were winners of two $50 bonds and a $25 bond, respectively.

These posters were the culmination of a project which had brotherhood as its theme. The project was especially rewarding because the neighborhood in which our school is located represents almost every race, creed, and nationality. We are proud of this example of the constructive effort on the part of our school, its teachers and the children.

Congressman ZELENKO, I thought you would like to share our pride with us.

Sincerely,

IRVING MAHL.

Wisconsin's Glacial Moraines Should Be Added to National Park System

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1961

Mr. JOHNSON of Wisconsin. Mr. Speaker, Wisconsin's Veterans of Foreign Wars have adopted a resolution favoring the establishment of a national park that would include the glacial moraines located in some 26 counties in Wisconsin, a proposal that I have long supported in Congress. Under leave to extend my remarks, I would like to include this resolution in the RECORD:

RESOLUTION SUPPORTING ESTABLISHMENT OF WISCONSIN MORAINE PARK

Whereas the Department of Wisconsin Veterans of Foreign Wars, has previously gone on record in favor of legislation as well as other means, to create a national park in Wisconsin, from the meandering glacial moraines located in some 26 counties of the State, the nucleus of this area being the Kettle Moraine State Park, and

Whereas, it proposed that this park shall be named, Ice Age National Park: Now, therefore, be it

Resolved by the Veterans of Foreign Wars, Department of Wisconsin, That we again go on record to enthusiastically support this project; and that we urge our Representatives in Congress, the Wisconsin Legislature, county and municipal boards, to work cooperatively towards the conclusion of this proposal.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Mobilization of Republican Resources for the Future

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES

Monday, May 8, 1961

Mr. BEALL. Mr. President, if we are to preserve the two-party system we cherish so deeply, Republicans and Democrats alike must speak out freely on their political philosophies and their goals.

One of the most forthright, forceful, and definitive discussions of the position and aims of the Republican Party was presented recently by Senator LEVERETT SALTONSTALL at a dinner sponsored by the GOP organizations of Baltimore City. Senator SALTONSTALL's address was extremely inspiring and thought provoking, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY U.S. SENATOR LEVERETT SALTONSTALL AT THE COMBINED REPUBLICAN ORGANIZATIONS DINNER MAY 3, 1961, LORD BALTIMORE HOTEL, BALTIMORE, MD.

We are gathered tonight to mobilize our resources for the future, to consider what we've got to do for Republican victories in the months and years immediately ahead, and to dedicate ourselves to the job of doing it. The glamour and the recognition for political effort comes during campaign time. But the rewards come only when the preparation is done thoroughly every day of every month of every year—when the spotlights are turned elsewhere. Politics is not a part-time job.

What is the current status of the Republican Party? What disadvantages do we have to overcome? What factors do we have basically working in our favor?

Nineteen hundred and sixty saw us lose the national elections for President and Vice President. After 8 years of sound performance under President Eisenhower, the Republican Party lost the White House. The House and Senate are still under the control of the Democrats by large margins.

But in losing the White House we won a majority of votes in more than half the States and more than half the congressional districts. We lost the Presidency by 112,000 votes—Vice President Nixon carried 26 States to the 23 won by Senator Kennedy. Nixon won 49.9 percent of the two-party vote and 49.55 percent of the total vote. In the Senate we elected three new Republicans and all who ran for reelection. In the House we find 44 new Republicans—only 3 who sought reelection failed, and we won a net gain of 21 seats. We picked up two more governorships and made a net gain of approximately 300 State legislature seats.

We were beaten in the big cities which dictate the electoral vote. But one of the most striking examples of Republican power is found in our party's performance in winning last fall's so-called independent vote. The Democrats went into the elections with a tremendous advantage over us in the "hard core" party vote—in the number of registered Democrats over registered Republicans. The incredibly close result means that we won this independent vote in a big way.

The fact that Senator Kennedy only won by sixteen one-hundredths of 1 percent in the popular vote leaves him without a clear-cut mandate from the American people. The American voter repudiated neither the 8 years of Republican leadership nor its platform and candidates of 1960. Our party improved its position at the polls following consecutive losses in 1954, 1956, and 1958. As Columnist Roscoe Drummond has pointed out, Senator Kennedy ran behind his party as its strength was receding while Vice President Nixon ran ahead of his party as it was on the upswing.

Now these statistics are of limited value. We didn't win, we lost. We lost a heart-breaker, and we are now, emphatically, the "out-party." But to overlook some of the heartening aspects of the last election would be foolish, particularly when they speak well for the future. The position of the Democrats is not without worry and danger. As Senator THRUSTON MORTON, our national chairman, recently said:

"In many respects I commiserate with the Democrats. They are in an unenviable position. They have come to power at a time when the public mind is strongly influenced by vivid memories and deep appreciation of those good Eisenhower years—years of peace and record prosperity.

"I would suggest that the Democrats will find little comfort or magic in the campaign image which projected them as would-be rescuers of a nation on the brink of disaster. Our ailments must not be minimized. The Nation must be informed, but it need not be informed in a manner which gives aid and comfort to those bent on destroying us. Any balanced assessment of the national economy, freed of political frenetics, will underscore the enduring potency of the great gains which the new administration inherited."

We have great leadership within the Republican Party which over the forthcoming months can clarify its energy and purpose for the benefit of all the people. You know the quality of your Republicans here in Maryland. President Eisenhower has sustained his massive public popularity and respect. Former Vice President Nixon spoke in Greenville last night and appears in New York tomorrow night. Within a week's time, he will also visit Chicago, Des Moines, Detroit, and Columbus. In March alone, Chairman MORTON delivered over 30 major addresses in many areas of the Nation. Senator BARRY GOLDWATER is so much in demand for speaking dates that he is booked up solid for well over a year. The minority leadership of Congress in applying Republican principles to the legislative arena with vigor. And throughout the Nation in State capitols we find strong, dynamic leadership from Republican Governors. Nelson Rockefeller of New York, Mark Hatfield of Oregon, and my own Gov. John Volpe are obvious examples. Let's add right now the name of former Labor Secretary James Mitchell, who has an excellent chance of becoming New Jersey's next Governor in the fall.

So we have strong men of proven capability to lead us, who, through their ideas and their experience, give the broadest possible representation of the American people, men of differing shades of political philosophy united behind the conviction that the Republican Party, in principle, purpose and performance, can best serve the Nation and her citizens.

Finally, the greatest resource of the Republican Party is the American people themselves. This is as it should be. Today American citizens want moderate action by Government. They have demonstrated their alliance with the middle of the road rather than with the far left or far right. They want to avoid extremes, trusting in balanced use of public and private resources. This desire for moderation is best met by Republicans, not by the Democrats. We, as a party, traditionally advocate the creative balance between extremes, steady performance over the long haul, and a close relationship between principle and practice.

Now it has been suggested that the fortunes of our party for 1962 and 1964 lie in two missions: developing strong, attractive candidates and building a strong organization—door to door and street to street, precinct to precinct and town to town. I agree. But I would like to discuss first what is absolutely fundamental to all of this—what we stand for. We must, in a meaningful contemporary context, vigorously demonstrate the vitality, applicability, and long-term validity of our principles, and we must do it right now. The best candidates and the most powerful organization mean nothing unless the beliefs that justify their existence are kept strong and vital and are boldly articulated.

While the ease of communication by telephone, radio, TV, and even through space has brought the world closer together, the greatest practical problem which the Republican Party faces is one of communication. We must make clear to the average citizens of America, the man and woman on Main Street, what we stand for. As Republicans what we need to do most of all is to identify ourselves, as a party, with them in terms of personal interest, economic interest, and national interest. We have not been sufficiently convincing. We have not identified our fundamental nature as a party with their best interests. During a time characterized by the similarity of party platforms, by the desire on the part of each party to appeal to the whole political spectrum, and by the increasing tendency to obscure party arguments by the direct appeal of a candidate's individual personality, we must make clear what we stand for—what we have to offer that the Democrats don't.

Sometimes people ask me what I am, whether I'm a conservative or a liberal. I answer that I'm a Republican. Period. What do I mean by this; what do I regard as the basic differences between our two parties?

First of all, the Republican Party stands for the freedom of the individual—not in

the abstract—but in the real sense. We do not hedge this principle. We do not cover it up with other immediately popular, emotional or more expedient ideas. We believe in advancing the genuine dignity of the individual in the most profound manner, to offer the most thorough opportunity for his growth and advancement physically, intellectually and spiritually.

Our concept of American Government is that it be committed to preserve individual reliance, individual vitality and individual resourcefulness within the framework of a Federal system equipped to deal efficiently with the great national and international problems that give us such anxiety today. The Government simply cannot answer all our dilemmas. If it attempts to play that role, the individual citizen's capacity to solve his own problems, to make decisive judgments with respect to them, will diminish, and soon he will be incapable of participating in the democracy of his society. He will lose his initiative, his energy and his courage, and, above all, his self-respect. Policies, programs, institutions which tend to interpret the role of Government as solving all of the individual's problems for him are first of all impractical, secondly, will gradually imprison him, and thirdly, are just plain disrespectful to the ideal of his freedom.

We think in terms of that individual. The Democrats think primarily in terms of groups of individuals or even the state itself. Real reliance on the freedom of the individual enables us as Republicans to consider more deeply the overall national interest, to disassociate ourselves from special interest groups. Our party has traditionally striven to represent the whole rather than the special interests of various groups, to advance the common purpose over often contradictory and divisive ends. We intend to pursue the common bond for the common good, rather than indulge for emotional gain in hostile in-fighting among classes and categories of people. Such activity saps the spirit of community loyalty, mutual helpfulness, and finally the ability to act in unity as a free people. The Democrats simply do not have as strong or consistent a record in this regard as do we.

Let me emphasize two more beliefs which are closely related to this conviction about individual freedom and which express differences between the two parties rather clearly. One is that the Republican Party emphasizes the principle of voluntary rather than compulsory participation in Federal aid programs, while the Democrats do not. The other is that we stress the concept of equality of opportunity among our citizens rather than the more recent "everyone gets the same deal" tendency to emphasize automatic equality per se, in which our Democratic colleagues frequently indulge.

Now the second major principle that we as Republicans stand for is a government close to the people. I have always liked to think of government starting from the family itself, and moving out to the community, to the State institutions and finally to the Federal level in Washington. The Democrats appear to believe now—though if you read Thomas Jefferson you will quickly find that this was not always the case—that it should work approximately the other way 'round.

The Republican concept of government's role emphasizes that State and local government must remain strong, that unless there is vigor, responsibility and purpose at the levels of government closest to the people themselves there can be no real governing "of, by and for the people." The functions of institutions at the sub-Federal level may certainly change—they should never remain static—but they must always exist. Here we see how the Republican concepts of individual freedom and government by the people are combined for the benefit of all. Without the opportunity to participate in self-government, the individual cannot be alert, informed, and able to influence the course of events about him. Without the presence of State and local institutions which are easily accessible to him, that opportunity is lost.

A related idea to the Republican belief in government close to the people is the conviction that private enterprise must be the ally of government, not its adversary; whereas the Democrats often seem to make private enterprise the whipping boy. We want to move forward to meet the grave new problems before us, and at the Federal level of government, without at the same time undercutting the open, free system upon which we really depend. We believe that this can be done. We believe that it must be done—or else we must radically revise our whole system of life in the United States. This is not to say that we can tolerate the violation of the law by business and industry any more than we can in the case of a labor union or an individual citizen. When business is found in any way lacking in public integrity it must be immediately and strongly called to task.

These two fundamental beliefs, individual freedom and partnership government, must be put across to the people by us who believe in them. It is from these two basic convictions that flow the ideas which have characterized Republican leadership over the past 8 years. From them President Eisenhower drew the policy that problems are not solved by dollars alone and that problems must be approached on a long-term rather than short-term basis, for instance. It is on these two basic convictions that I believe the victory and the survival of the Republican Party depend. We must market them. We must make them real.

How do we do it? Attractive candidates, money, topflight organization. You have good candidates, and you're coming up with more, of young blood. Encourage them. Tonight you are engaged in a money-raising effort. That is essential if your candidates are to win and your work is to succeed. It will succeed if the candidates encourage the workers and the workers have financial backing.

I was a candidate last autumn. Tonight I am here as a Senator from Massachusetts, which as you know is our new President's home State, too. Our statewide organization, which we had been working on for well over a year before the election, was a major factor in my reelection. We had a highly productive volunteer operation with a powerful emphasis on youth and great enthusiasm that did wonders. Other than that I did my best to get around the State as much as I could—again, starting the fall prior to the election to establish early momentum—to meet as many voters and their families as possible. I ran what is referred to as a "positive" campaign, that is, concentrating on my own experience and service and the kind of record I had developed in the Congress. On the other hand, particularly in the last few weeks before election day, I did not hesitate to fight back hard to counter attacks made by my opponent and do some punching of my own when this was clearly called for. Like all campaigns, it involved some fun, considerable exasperation, but above all—on the part of everyone concerned—hard, hard work.

Tomorrow, your good Senators GLENN BEALL and JOHN BUTLER, Congressman MATHIAS, and I will again take up our imperative responsibilities as members of the "loyal opposition." This is a delicate task, which must attempt to strike the dynamic balance between hard criticism when it is called for and solid support when it is merited. Without dissent—which in this case is the minority party in Congress—there is dictatorship. So we must be vigilant on the broadest plane in defense of the national interest. This involves the condemnation of reckless decisions by the administration, the spelling out of better courses, the backing of sound action when it is taken. We must keenly appraise the promises and performance of the Democrats in the official positions of leadership in the executive branch, for our constitutional system demands it.

Above all, the loyal opposition must develop programs of its own, to deal in our terms rather than exclusively with regard to theirs. We cannot strike a clear, dynamic image unless this is done. Many of the new administration's programs on the domestic front are continuations or enlargements of the Eisenhower policies. We can claim credit for these when they are ballyhooed as Democratic accomplishments. But we must move beyond them, building rather than standing on that record, as Dick Nixon has so well said.

On foreign policy, we will largely stand with the President, although never failing to bring our own ideas to bear in counsel with him and his advisers. On domestic issues, where the security of our country is not immediately at stake and where the philosophical differences between us are more striking, we must oppose the administration wherever its programs contradict our principles, and give those principles a new vitality with specific recommendations which embody them. We will not obstruct for its own sake; we will not rubberstamp in any event. I hope that we will be of some help to you here in Baltimore and Maryland in our mutual endeavor. I'm sure you will help us.

Thank you very much.

Decommissioning of the Steamer "Mississippi" and Commissioning of the Motor Vessel "Mississippi"

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1961

Mr. DAVIS of Tennessee. Mr. Speaker, on April 19 last, an event of great historical significance to the Mississippi River occurred in Memphis, Tenn. After 34 years of faithful service, the steamer *Mississippi* was decommissioned, and a new motor vessel *Mississippi* was commissioned in very dignified and colorful ceremonies.

This steamer is operated by the Mississippi River Commission as a work boat. In addition, comfortable accommodations are provided for the necessary inspection trips up and down the river by the Mississippi River Commission.

Present at these exercises were Maj. Gen. Thomas A. Lane, president of the Mississippi River Commission, and one of our most distinguished Army engineers; A. H. McRae, assistanct director of Civil Works for the Mississippi Valley in the Office of the Chief of Engineers, represented that office.

Harold T. Council of Greenville, Miss., spoke as chairman of the executive committee of the Lower Mississippi Valley

Flood Control Association. Mr. Fred J. Mayo of Pascagoula, Miss., president of the Ingalls Shipbuilding Corp., which built the boat, was present and was recognized.

Col. Marvin L. Jacobs, district engineer at Memphis, where the steamer has formal headquarters, presided and introduced these gentlemen whose names I have given.

Three long blasts and one short from the old steamer *Mississippi* was a signal indicating that she was leaving the service of the Army. A like signal from the new motor vessel signified the change in command of the master, Capt. David M. Cook, from one boat to the other. Captain Cook is one of the finest men and certainly one of the most highly respected masters on the river.

It was my pleasure to introduce Hon. Jack Carley, chief editorial writer for the Commercial Appeal, and one of the country's most useful and dedicated citizens. Long has he been known as the voice of flood control and water resources.

Mr. Carley is equally well known as a long-time guest lecturer in the Federal Bureau of Investigation Academy. He has been honored by patriotic and other organizations too numerous to mention.

I have long counted him as one of my most faithful friends and most assuredly one of my most competent advisers. It was left to him to pay eloquent tribute to the old steamer.

Knowing that so many thousands of people will be interested in reading this tribute to the old steamer, I count it a privilege and an honor to include it in the CONGRESSIONAL RECORD.

The address follows:

And so we come to say goodby to this old friend of many happy years—of many, many miles of river journeying—to this good friend of fog and storm—of blue-clad days and starlit nights—of flood and drought, sunshine and shadow—to this friend of all the people in this mighty river's valley.

The words which she cannot speak for herself, we speak for her.

Hers is another tongue understandable only by those who have recognized in her so many of the elements which are a part of the mystery of the river itself.

Steamer *Mississippi*.

There is song in the name just as there was rhythmic melody in the sound of her wheel as it bit into deep water—into mark four water.

Hers is the language of her deep-toned whistle—of snapping tree branches as she tied against a sheltering bank—of a crying infant brought to succor from the flooded wastes into which she sturdily, dutifully pushed her away.

Hers is the voice of a leadsman crying out "no bottom."

Indeed, there was "no bottom" when she picked her folk off the roofs, out of the treetops, off of the levees by the hundreds—by the thousands almost—during the 1937 flood of record.

She has a song, does the steamer *Mississippi* and she is a song—the song of the stream whose name she has so pridefully borne.

And she is many things. It is to these, too, that we bid farewell.

No worn out hulk of wood and steel is she. Let no one make that mistake.

She is an old engineer soldier come to the day of retirement and honors earned.

She cannot troop the line and take the salute so we do it for her.

What a good soldier she has been.

Going wherever duty took her—into watery highways and byways—going where the need was—many a time going where the desk-bound experts said she would not be able to go—into the Cumberland and along the White—down the Atchafalaya and up the Missouri. Up the Missouri. They said it couldn't be done but she did it.

She has carried the red and white ensign of her corps with honor and devotion. She made the word "Essayon" her motto, too. She did try and in trying never failed—the Army, the Corps of Engineers. or we the people of this valley she served. Let not the Army forget that—or her.

Should it tarnish her record and memory through unseemly disposal it will demean itself.

What is best written of an old soldier on the day of retirement? These four old Army words:

Character: "Excellent."

Service: "Honest and faithful."

There is no greater accolade.

She has a soul and a spirit, does this old friend, and the two are the embodiment of all who has ever served in her, or journeyed on her and come to have affection for her. Their laughter and their fears—their anticipation and the disappointment—became hers by association's right.

She is peopled by those who have gone beyond our earthbound sight and whose friendly voices no longer reach our limited hearing.

She now becomes a haven for yesterday's dear ghosts—men of the soldier breed—the river breed—the valley breed. These do not desert her.

The desertion is ours. We, the living, a profligate people too bemused by the ambitions and anxieties of the present to place value on the past which is prelude—to care for and preserve the benchmarks of other days and the artifacts of those who placed them.

She is something else, is the steamer *Mississippi*—she's a mounted engineer detachment riding with "horse soldiers" into battle on a far away plain; she's an odometer cart measuring the distance between Reno Creek and Custer Hill on the Little Big Horn; she's a battery of artillery galloping forward to a command of "action front", she's a squadron of cavalry making a pistol, or a saber charge

She is all those things of an Army's yesterday—an old trooper—an old steamboat—now become part of the Army's and the river's past.

Hers has been a nobility of service which has surely made her worthy of our tears.

Let us be certain that as citizens of this valley empire we continue worthy the service she has given.

The line has been trooped, the colors dipped, the salute taken and returned. This "old engineer soldier" marches on alone from the present into the past.

How sad, indeed, would it be but for this: that those who have known her well and loved her know—that if, on some future, moon-bathed night they wait patiently on a bank along the river, she'll make a landing and pick them up and downstream she'll go steaming—full speed, without fogs, or shoals to hinder her and a good crew standing watch.

The yestedays were hers and so, too, will be the tomorrows as the spirit of her becomes eternally one with this ageless river.

It is to her yesterdays we say farewell.

It is of our tomorrows that we dream and dreaming, wait on the bank for her.

Steamer *Mississippi*—faithful soldier—salute.

Federal-Aid Highway Act of 1961 and Internal Revenue Code and Highway Trust Fund Amendments

SPEECH

OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 4, 1961

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 6713) to amend certain laws relating to Federal-aid highways, to make certain adjustments in the Federal-aid highway program, and for other purposes.

Mr. HARVEY of Indiana. Mr. Chairman, as a State legislator before coming to the Congress, I attempted to persuade my own State of Indiana in the period immediately following World War II to embark upon a program of new highway construction and highway improvement. We were collecting at that time just enough to maintain the highways we had. It was very difficult, and I was not successful in persuading the people of the State of Indiana to do so. During the ensuing years, the need became greater and the lag in highway construction became more evident. Highways are extremely important, not only to the life and economy of our country, but they are one of our most important links in our whole defense setup. They provide for the American people a way to enjoy visiting and traveling in all parts of our great Nation.

I supported in 1954 the first highway bill under the Eisenhower administration and subsequently the 1956 bill, for they were set up on the basis that would give us ultimately a fine system of highways without, at the same time, creating any additional indebtedness. However, as it became evident that the cost of the system of implementing this highway program was going to be much greater than we had previously anticipated, it has become necessary that we either stretch out our program or levy a heavier tax to expedite it.

In voting "no" on H.R. 6713 I have had the feeling that the enormous increase in tax as proposed in this bill is so much greater than most people realize that in voting "no" I hope to be able to bring to their attention the amount of this additional tax, which is $9.8 billion. The American people are already overburdened with taxes. Of course, you can say this is for highway purposes, but, regardless of what you pay taxes for, nonetheless, it does represent your money that you have to put up for your Government. We are also confronted locally and statewide with a substantial increase in taxes.

As a candidate last year, I pledged to work for and support programs to reduce taxes rather than to increase them. This would very definitely add a substantial tax burden to all the people of my district, and I should also say to our whole country. As fine and as worth-

while as this highway program is, it seems to me it is more important to maintain fiscal stability and to prevent another inflationary spiral than it is to try to speed up the construction of our highways. I realize that in many instances this highway program is needed; but again I do not feel that a highway program is in such dire need that we have to resort to the kind of programs such as we have been witnessing at Cape Canaveral, where money has literally been wasted in millions due to an unfortunate necessity demanding great speed. In the example of Cape Canaveral it is possibly a justifiable waste of money, if any waste can ever be said to be justifiable, for the defense of our country. But in this instance I do not think a speedup in the program will actually see our highway system constructed efficiently or economically; this is certainly a very important consideration.

So again I say that I am reluctant to vote against this bill, but I feel under the circumstances I must. I would just like to add, in conclusion, that in my district the vote on the question of increasing the taxes or having a stretchout in the program resulted in almost a dead heat. Out of more than 13,000 ballots cast, we had less than a 300 difference in the final tabulation of the poll on this particular question.

School-Aid Compromise?

EXTENSION OF REMARKS
OF
HON. MAURINE B. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, May 8, 1961

Mrs. NEUBERGER. Mr. President, there appears today in the Washington Post an editorial which brilliantly describes the dilemma facing many in our Nation today over the scope of Federal aid to education and any provisions for assistance to parochial schools. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SCHOOL-AID COMPROMISE

Talk of broadening the National Defense Education Act of 1958 as a compromise of the differences over Federal aid to private schools calls for careful deliberation. The desirability of extending the present act beyond its expiration date next year seems to be pretty well established. The questions that arise are related to whether it should be used as an entering wedge for much broader aid to parochial schools.

President Kennedy has asked for a renewal of the powers granted in this act and for more money to be lent to private, church and public schools for the purchase of equipment to be used in teaching science, mathematics and foreign languages. Presumably he did not ask for a broadening of the purposes for which these funds might be used because of his belief that public support of parochial schools is unconstitutional.

Some Members of Congress, however, are advancing the view that National Defense Education Act funds could be spent for science, mathematics and foreign language classrooms as readily as for equipment. It is they who are sponsoring a bill for this purpose as a supplement to the administration's general aid-to-education measure.

There is a valid distinction, however, between equipment which can be used only for specific purposes in which the Nation has a vital interest and classrooms that could be used for general purposes. The Supreme Court has specifically ruled that public schools may not be used for religious instruction. If the proposed compromise were voted, would Congress require supervision of science, mathematics and foreign language buildings at church schools to make certain that they would not be used for religious purposes? Could the clergy teach or speak in such buildings?

The complications would be numerous, and the detraction from the atmosphere of education might more than offset any financial relief to be gained from loans of this character. There seems to be no safe way of intermingling what the Constitution and sound public policy have kept separate.

American Prestige

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1961

Mr. DEROUNIAN. Mr. Speaker, Marquis Childs touches on the meaning of our recent loss of prestige abroad, in his article, published in Nassau County's Newsday on May 2:

WASHINGTON CALLING—J.F.K.'s PRESTIGE SHAKEN

(By Marquis W. Childs)

PARIS.—In computing the score of the Cuban fiasco it is necessary to reckon with the effect it has had on President Kennedy's reputation in Europe and the rest of the world. It could well be that the cost is greatest in this department and particularly against the background of the remarkable prestige that the new young American President had begun to acquire.

His statements, his speeches, the whole tone of his conduct of the most important office in the world had inspired not merely respect but a widespread current of hope. This was a President proceeding with judicious calm, with quiet civility, to try to solve the grave problems threatening war and chaos on every hand.

To say that what happened—or failed to happen in Cuba—interrupted the current of hope is to resort to the most generous understatement. It brought a shock of surprise and dismay. The sudden seemingly impulsive act based on so many miscalculations was contrary to the whole impression Kennedy had begun to build up.

Now Europeans are asking nervously: What comes next? This reporter has talked with diplomats and officials of a half-dozen countries during the past week and without exception their hope is that the President will take his setback with as good a grace as possible, learning from an early mistake. They are aware of the mood of America as reported here—the hurt pride that must be quickly redressed. But the conviction is widespread that any direct intervention by the United States in Cuba with American force would make the situation much worse.

As one of the highest officials of the French Government expressed it, the position of America's allies would become difficult to impossible with Latin America torn asunder by such intervention. Others are fearful that the peace of the world would be put in even more precarious balance than it is today and perhaps irreparably shattered.

The question of Cuba has already been raised in the council of the North Atlantic alliance. Significantly, it was raised by Belgium which, with the issue of the Congo being brought up in various international bodies, has reason to be sensitive on the score of intervention. It was done politely—we should like to know the nature of this action and the motives behind it—but nonetheless firmly.

THE PROBLEM IN NORWAY

Norway, after all, has a common border in the Far North with the Soviet Union. If the United States should assert its right to intervene directly in Cuba because of the danger of communism 90 miles from America's shores, could not the Soviets use the alleged danger of NATO installations in neighboring Norway as the pretext for intervention there? This was the implication in Premier Khrushchev's note on Cuba and it is not dismissed lightly here in Europe. The Norwegians, occupied through four bitter years of World War II, have in their isolated position in the north given this solemn consideration.

Raymond Aron, long a friend of the United States, writing in Figaro on "The Cuban Disaster" suggests that the Monroe Doctrine, as enunciated anew by Kennedy, is outmoded. That doctrine was intended, Aron writes, to protect Latin America from European colonialism with the support of the British Navy, which was the supreme power in its day. But that day has passed and the United States can no longer consider Latin America a sphere of influence in which American power is free to work its own will. After all, Aron points out, the Soviet Union has long tolerated the military installations of the United States in Turkey, with its border on the Soviet Union. These installations, he might have added, include intermediate range missiles with nuclear warheads under the control of the United States.

The London Observer, in an editorial headed "Blinkers," goes further in accusing Kennedy, on the basis of his speeches since the Cuban misadventure of a view of the world which is dangerously oversimplified in that it leaves no room for neutralism and equates capitalism with total virtue and communism with total evil. "It is only when the neutral nations are convinced that the West is prepared to respect their independence and leave them alone that they will see much greater faults in the Soviet Union, which is bound by its own ideology to deny freedom of choice to its own people as well as to others," the editorial says.

To Americans suffering from the outrage of a defiant Castro just across the water this may seem heresy. But it should be understood that it is a widely held view among America's most loyal friends everywhere. To go against it will be to jeopardize the structure of alliances and friendships painstakingly built during 15 years.

Historical Observations

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, May 8, 1961

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an arti-

cle entitled "Historical Observations," from the May issue of the Southwestern Episcopalian.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HISTORICAL OBSERVATIONS

Some 2,000 years ago, it was Plutarch who warned: "The real destroyer of the liberties of the people is he who spreads among them bounties, donations, and benefits." And it was an old French peasant who made the following sad observation after the collapse of France in World War II, burdened with social subsidies: "My country fell because we had come to consider France as a cow to be milked and not a watchdog to be fed." But it was Premier Nikita Khrushchev of the U.S.S.R. who predicted, shortly before his 1960 visit to the United States of America: "We cannot expect the Americans to jump from capitalism to communism, but we can assist their elected leaders in giving Americans small doses of socialism, until they suddenly awake to find they have communism."

The Effect of the Mexican Labor Program Upon U.S. Farmworkers

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1961

Mr. COAD. Mr. Speaker, there has been much generalization as to the effect of the Mexican labor program, Public Law 78, upon the U.S. farmworkers with whom they compete, more or less, directly. As one who has taken the trouble to become informed on some of the labor conditions in farm areas using Mexican workers, I have become firmly convinced that the Mexican labor program is a gross injustice which perpetuates, and sometimes actually worsens, the already substandard conditions of our farmworkers.

Now we have some specific testimony as to the effect of the program. I would like here to introduce, for the information of the Congress, a petition which has come to my attention signed by 25 residents of Texas, who attest to the evils of this system based on their own firsthand experience and misery.

The petition signed by these U.S.-citizen farmworkers states, as follows:

We trust that this may not be an addition to your burden of responsibilities. We are unemployed farm laborers, and would like to take this opportunity to inform you why.

From radio and television broadcasts we learn that farmers claim that Americans refuse to perform farm-labor tasks and, therefore, braceros must be hired.

From the Harlingen newspaper we further learn that ——— says that every man would be employed if he would accept the first job available. Such a job would be accepted if it would offer a meritorious salary.

Mr. ———, if our farmers would pay wages commensurate with our standards of living, countless of unemployed Americans would respond to the call of work and eliminate the need for braceros. At present most farmers offer only 45 to 50 cents per hour for fieldwork, far insufficient to meet our demands. Braceros can afford to live on low wages, as they do not have taxes to pay, and we do.

As citizens of our country, we believe that it is only fair and just that we get priority in employment and wages, rather than braceros who come from foreign lands.

Besides being paid low wages, we often work only 2 to 3 days a week. Sometimes the working hours in those days combined do not make a working day. We demand higher wages and longer working hours to meet our living costs.

We feel that in your position you could instigate action to persuade our farmers to pay decent wages to Americans and abolish the phrase "Americans refuse to work."

The Role of Women in the New Administration

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, May 8, 1961

Mr. BEALL. Mr. President, on April 27, 1961, Baroness Garnett Stackelberg addressed the Women's Civic League in Baltimore.

As a columnist for the Baltimore News-Post, Baroness Stackelberg exemplifies the important role that women play in today's world. Her comments with respect to communism are most interesting and are based on personal experience.

I ask unanimous consent that this speech be printed in the Appendix of the RECORD and recommend its reading to all my colleagues.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH OF BARONESS STACKELBERG BEFORE THE WOMEN'S CIVIC LEAGUE IN BALTIMORE APRIL 27, 1961

Mrs. Wonderlic, Mr. Mayor, Members of the Senate, and distinguished guests, it gives me distinct pleasure to speak to you today and celebrate with you the 50th anniversary of the Women's Civic League of Baltimore.

There has been an outcry in the Nation for more women to be appointed to important posts in the new administration. The caliber of the ladies in the Women's Civic League is a proof of what intelligent and determined women can accomplish. If every city in the country had as alert a group, our Nation would be stronger. They have put forth time, thought and arduous work in the fields of health and welfare, aid to youth, education, recreation, proper zoning, worked to make theirs a cleaner city and in fact handled everything from juvenile delinquency to snow removal.

The power of women politically was demonstrated during the last campaign, when Mrs. Lyndon Johnson and various wives and sisters of the Kennedys, brought in thousands of votes to help swing the election for President Kennedy, by traveling 75,000 miles and making speeches all over the country.

As some of you know, I am a columnist for the Baltimore News Post, a Hearst paper. For a reporter to properly cover the youth packed New Frontier she needs today to be an expert on art, 18th century furniture, literature, poetry, gourmet cooking, and how not to spoil little girls.

Sinclair Lewis once said, that when audiences come to see authors lecture it is largely in the hope that they'll be funnier to listen to than to read. I think this may apply also to audiences who come to hear the lesser brand of writers, like columnists. But today I am not going to be funny.

I lectured for 4 years during the war to get women to support the war effort. I had been a prisoner of war for 7 months in Shanghai, China, where I lived for 10 years, and was returned to America on the exchange ship, *Gripsholm*. Those were treacherous times, but the problems we face today are infinitely more grave and complex.

The President will need all his youth and vigor to be able to handle the complex problems facing him today. He has aroused confidence in his first 100 days by his devotion to duty, urgency, and enthusiasm and gained much personal popularity. Whether that can be translated into support for his programs in Congress is another story.

Every President they say is allowed a honeymoon of about 100 days and judging from the criticism of the handling of the Cuban invasion, his is about over, whether or not the CIA or the Defense Department is to blame.

The President is making some bold changes in strategy. One of the most important is associating social reform with our foreign policy. In past administrations the foreign policy was beamed more to protecting American interests and property abroad. The pitch for social reform should help repair some of the damage that has been done to our prestige in Latin America.

Another innovation is the Peace Corps. If nothing more is accomplished than to arouse the interest and enthusiasm of American youth and channel it to try to create good will abroad, that is already something. The Peace Corps could succeed if we can train sufficiently the youthful emissaries, and if we can keep Communists from infiltrating the Corps. We should turn to missionaries, who have had a century of experience and training in medical and educational work abroad, as well as religious.

I remember well the Japanese slogan of "Asia for the Asiatics," that was painted on every building in the Far East and the effect it had on the Chinese. Also I memember saying, "This is the end of the white man in the Far East" on the morning of Pearl Harbor as the buildings shook and the 6-inch shells sunk British, American, and French gunboats in the harbor of Shanghai, a few hundred feet away in front of our windows. A few hours later the Japanese marched in and took over that great international city.

It was all a part of the old story of the Rising Tide of Color. A few years later after China fell, one-half of the earth's population came under Communist rule.

It was less than 45 years ago that communism was confined to a rented room in Zurich and the brains of one man—Lenin. Today communism dominates two-fifths of the globe and more than one-half of mankind, and is within 90 miles of our shores. How long can we go on permitting the Russians to take over the countries of the world, undermine our prestige, and gain lead time in science and psychological warfare, before we reach the point of no return?

We do not admit as a government or as a people that we are at war locked in a deadly and perpetual struggle with a conspiratorial elite, who have perverted every form of human activity to the cause of winning the conflict. Hence, we have no grand strategy and no sustained willpower as they have, either for offensive or defensive action. We tend to treat the as-

saults on Laos, South Vietnam, the Berlin blockade, and the penetration of Africa, as unfortunate isolated incidents, which only temporarily interrupt the world's "normal state of peace."

Our country, grasping for bigger and better material things, has become paralyzed by a cult of doubt and no longer seems to believe in its own values and traditions. Our only objective seems to be to maintain the status quo and assure ourselves after every disaster that there will still be time. The protection of our liberties and our way of life is far more important, than to maintain peace at any price.

The Soviets have more than 100 schools and academies in which agents from all over the world are trained in sabotage, guerilla warfare, and subversion, and are taught as well, the language, history, and customs of the countries they are working to undermine. As distasteful as it is to Americans to employ what we call dirty tactics, we probably won't survive unless we understand and perfect ourselves in the same methods. The Central Intelligence Agency's miscalculation of guerilla warfare and of the police state of Castro in the recent Cuban fiasco is a case in point.

The vital problem facing us today is what we can do as individuals. It may sound trite, but I recommend:

1. That you read your newspapers to keep well informed of facts which affect your homes and very existence, as well as what is going on in Congress.

2. That you write letters to your newspapers and elected representatives to keep a voice in what is going on in our Nation, and also to keep your editors and lawmakers informed of your views.

3. That you read books constantly to help you understand the people of other countries and their aspirations and needs.

4. That you be vigilant in getting out the vote at election time.

5. That you keep yourself informed of the aims of the men you vote for.

6. That you contribute to Radio Free Europe and encourage our Government and Congress to step up broadcasting in foreign languages to all the world, to counteract Russian propaganda. The Soviets spend 100 times more than the United States on propaganda.

7. That you promote exchange of students, the future leaders of the world.

8. That you set up organizations in every major city through which students from other countries can be invited to our American homes and learn about our hospitality and way of life.

9. That you treat with courtesy and kindness all foreign tourists, whom we need to bolster our economy.

10. That guide books be published with translations in many languages for our larger gateway cities. It should contain an explanation of our customs, historical heritage, how to order in a restaurant, how to find different priced hotels, tourist centers, YMCA's and YWCA's, and how to sightsee.

11. Finally, I also suggest that a committee of editors, columnists, and editorial writers, who know the world, should be formed to analyze Communist propaganda and then issue a weekly newsletter to say 1,000 editors who will publish same thereby enabling their readers to recognize and understand hidden and misleading Communist propaganda.

In closing I would like to again compliment the good deeds of the Women's Civic League of Baltimore, which indicate that during the last 50 years they have worked with a sure instinct and full awareness of the contemporary slogan of the DAR's: "For evil men to triumph, good men need only do nothing."

Gold, the Dollar, and the Free World

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1961

Mr. MULTER. Mr. Speaker, the following is a speech that was delivered by Mr. David Rockefeller before the Economic Club of New York on March 7, 1961.

Mr. Rockefeller has made some astute comments on the problem of gold and the dollar which I feel will be of great interest to our colleagues:

GOLD, THE DOLLAR, AND THE FREE WORLD

(By David Rockefeller, president, the Chase Manhattan Bank)

(A speech delivered before the Economic Club of New York, Grand Ballroom, the Waldorf-Astoria, New York City, Mar. 7, 1961.)

I have occasionally been seated along the wings of this table, and often with you out there in front, but this is the first time I have been privileged to stand at the rostrum, I thank you for the occasion. And I shall try to respect the virtue of brevity that I so learned to appreciate as a listener among you.

It is a special pleasure to appear on a program with Governor Coyne. No other friendship means more to us than that with our good neighbor to the north, Canada. And I know that we have all benefited from Governor Coyne's remarks here tonight. In the circumstances, it seemed logical to me to make this a completely international evening. I have, therefore, elected to share with you some further thoughts on the realities and the problems of our international financial position as I see them.

I speak of "further thoughts" since so much has already been written and said about this matter in recent months. We have had the specter of a sizable gold outflow to awaken us, and the President himself has labeled the international financial problem as one of the most pressing to confront us.

I think it is helpful, even necessary, in approaching this problem to recognize that it has two somewhat separate, but vitally related, elements. First, we have the fact of a continuing deficit in our payments with other nations, and the various actions that must be taken if we are to eliminate the deficit. But then secondly, we must consider the whole system of international currency reserves necessary to the financing of trade between nations, which has been built up in the postwar years, and the role of the dollar in that system. For I am not sure it is widely realized that the United States could have a sizable gold outflow even if our own international payments were in balance; or, conversely, that if foreign creditors are willing to keep on acquiring dollars, and dollar obligations in payment for goods sold and services rendered, then there can be a very sizable payments deficit with no outflow of gold. It is important, then, to face both aspects of the problem, and to take wise action on both fronts.

Clearly, the most urgent matter at present is the sizable deficit in our balance of payments. This deficit has not only led to a sharp rise in foreign holdings of dollars—it also raises grave concern about our ability to manage our own affairs. The result of a large and persistent deficit has been a tendency on the part of those holding dollars to convert them into gold or other currencies, lest the value of the dollar become impaired.

BIG STEP FORWARD IN 1960

There is a certain ironic quality in the way this payments deficit has continued to unfold over the past 12 months. For the truth is that our country made a great step forward in 1960 toward reducing our fundamental payments deficit. Our exports in this period have increased to a rate of near $20 billion annually, while imports have leveled out. The resulting favorable balance of trade of close to $5 billion is far larger than that of any other nation. Yet in spite of all this, we had more real difficulty with the dollar in 1960 than at any other time in recent years.

OUTFLOW OF $2 BILLION

The reason, of course, lay in a new element in the picture: A sizable outflow from the United States of short-term funds which was in no way related to trade. All told, this outflow amounted to $2 billion or more, much of it in the second half year. Never before in the postwar years have we experienced an outflow on a similar scale. Without it, the deficit in our foreign payments, because of our large favorable trade balance, would have been reduced to more manageable proportions—perhaps to $1½ billion.

The initial spark that induced these funds to move abroad was clearly a differential in short-term interest rates which opened up between the United States and Western Europe. In late summer, you will recall, this differenial amounted to as much as 3½ percent, and the cost of hedging on forward exchange was about half that amount. It was too great a temptation for treasurers and international speculators with sharp pencils. Unfortunately, the movement in dollars set off a gold outflow. It also produced the illusion that our basic payments position was getting worse, rather than better.

At any rate, certain companies that foresaw a need for funds abroad at some future date were spurred to make immediate transfers, and they were then joined by others, including speculators, who began to bet against the future of the dollar. A stream of modest size soon threatened to become a flood. An outflow of gold caused initially by a spread in interest rates came close to precipitating a confidence crisis for the dollar, which might have been far more serious.

Fortunately, this danger now appears to have passed. Not only Americans, but foreigners holding dollars seem to have regained their poise and perspective. In the meantime, too, the differential in interest rates has narrowed. Today, after hedging on forward exchange, the differential amounts to about 1 percent, a far less tempting lure to foreign exchange speculation. Certain American companies with rather sizable holdings of short-term foreign assets are now considering repatriating at least part of their dollars.

RESTRAINT IS DESIRABLE

A lesson might fairly be drawn from this experience for all of us in the business community. It would seem wise and responsible—in a time such as the recent past, when the national interest clearly is involved—to exercise restraint in responding to a differential in foreign interest rates, particularly when the gains are incidental to a company's main business, and loom relatively small on the income statement. Here, as in so many areas, the business community has an opportunity, even an obligation, to lead the Nation in a rational pattern of behavior consistent with our growing role in the world.

A return of short-term funds, which is bound to come sooner or later, will, of course, temporarily help our balance of payments. But this will only tend to conceal the real problem, just as last year's outflow tended to exaggerate it. Assuming our favorable trade balance continues at the present level, we will still have a hard-core deficit in our balance of payments in the neighborhood of $1½ to $2 billion a year. In view of the fact that our cumulative deficit in the past 10 years amounted to $17 billion, this continuing hard-core deficit is too large, and it should be our aim to eliminate it altogether—or at least to keep it within modest proportions. I know you all are familiar with the basic cause of this deficit—the fact that our favorable trade balance, large as it is, still is not great enough to finance the very sizable military, political and economic commitments we have abroad. One of the major outlays, of course, is the $3 billion we spend on the maintenance and support of military establishments in other countries. Another is the $2½ billion or so of private foreign investment by American business, and still a third is our foreign economic aid, including Government loans, which also amounts to $2½ to $3 billion. Let us look at these elements separately.

There has been much public debate on the subject of economic aid; but I believe more often than not it has generated more heat than light. There are those who would solve the imbalance in our payments by going after such aid with a broad-edged ax. I personally would be opposed to such action, as a serious disservice to our national interest. It is a political fact of life, in this divided world we live in, wrecking our foreign-aid program would gravely threaten the strength—and darken the hopes—of free nations throughout the world. On the balance sheet of history, there is no economic gain that weighs more than such a loss. Even in strictly economic terms, however, there is sound argument against such measures.

MOST AID TIED TO EXPORTS

The fact is that slashing our economic aid would cut away only a small part of our payments deficit. Most aid today—approximately 80 percent—is tied to exports of goods and services, rather than dollars. To cut back on aid would be merely to cut back on exports—and hence would be self-defeating. Although this linking of economic aid directly to exports runs counter to the trade policy we should like to see, I believe that, under present circumstances, the United States has no other alternative. President Eisenhower headed in that direction over the past 2 years, and the new administration indicates that it plans to carry on in the same manner.

The best way, of course, to solve our payments problem is further to expand exports. No one will quarrel with that. No is anyone likely to disagree with the obvious corollary: that to expand exports we need to cut costs, to become more competitive in world markets, and, above all, to keep our economic house, here at home, in good order. These are all appealing sentiments, and it is easy to voice them. It's a much tougher proposition to carry them out. All I can say tonight is that the responsibility falls on people in the business community like you and me, and on others like us. It's not something that can be pushed on to the next fellow or turned over to Government.

LONGER TERM CREDIT NEEDED

At Chase Manhattan, we have been conscious of this problem and are exploring ways to give constructive help, and I should like to take a few minutes to describe for you a plan for action along these lines that appears to us to be promising. Our primary business as commercial bankers, is, of course, to provide our customers with short-term credit. We know, however, that certain types of exports require longer term financing which is not as readily available on favorable terms for American manufacturers as it is for manufacturers in certain other countries, such as Canada, Britain, France, and Germany. This is the case particularly with respect to medium-term credits to finance exports of machinery, equipment, and other capital goods.

The provision of such credit obviously involves unusual and added risks. It might be expected that the commercial banks would be prepared to provide this type of credit if adequate guarantees or insurance were available. In point of fact, however, we are already so heavily committed with domestic term loans, that even if the hazards of lending abroad were eliminated, it is doubtful that most commercial banks would be in a position to expand to any considerable extent credits on exports, which tie up funds for periods of from 3 to 7 years.

COOPERATION IS NECESSARY

I am convinced that to generate this kind of credit in sufficient volume on the order, say, of a billion dollars a year, our great institutional investors—such as the insurance companies, the pension funds, and the savings banks—must be induced to cooperate. They, rather than the commercial banks, have the requisite funds available for longer term lending. But they will make such investments only if the extraordinary risks frequently encountered in export financing are covered by a reasonable guarantee, probably by our Government, and if they are not required to handle the credit investigations, the servicing and the collections for which they have no facilities.

What is needed is an arrangement that will result in bringing together institutional funds (under an appropriate Government guarantee) with the international banking facilities and services of the major commercial banks. I believe this could best be accomplished through the establishment of specialized export finance companies which might be organized as subsidiaries of commercial banks. The whole problem is one we in Chase Manhattan are currently exploring, and I'm happy to say that the Government is taking an active interest in examining it with us.

I wish that we could rely completely on a further increase in exports to solve our balance of payments problem, but unfortunately this would be unrealistic. Our trade balance already is large, and though we can and should stretch it further, there is a logical limit. To try to press beyond this would undoubtedly call forth vigorous counterreaction by competitors in world markets. Of course there are several additional steps that can be taken. For example, the expansion of tourism in our own country, and the removal of foreign restrictions on the flow of capital into the United States. And yet—in the final analysis—I doubt whether all of these together will be enough to bring our international payments into balance.

AN UNWELCOME CHOICE

If this is so, we must examine two further areas: first, whether the movement of long-term private capital abroad should be curbed; and secondly, whether our large military expenditures abroad could be reduced. To choose between these alternatives, if indeed a choice were required, would pose a most unwelcome task. Certainly, we all would want to avoid to the end, if possible, the imposition of exchange controls on private capital. The United States has never had such controls in peacetime, and they run completely counter to the type of economic world we are striving for.

Moreover, it is imperative to realize that what we have done in the past to build up our investment abroad acts today as a favorable factor in our balance of payments. Last year the inflow of earnings from these investments (not counting earnings reinvested abroad) amounted to almost $3 billion—a larger sum, actually, than our investment of new capital abroad in the same period. And yet, in spite of all this, I don't suppose there is anyone in this room who would hesitate to place controls on private capital, if the only alternative were to weaken seriously the national security of our country.

This leads us directly to one of the toughest elements to gage in our whole balance of payments problem. Just how essential are our military expenditures, and is it necessary for the United States to carry so great a burden as we now carry. It is almost impossible for anyone not involved in the military picture to judge whether total outlays in this field can be reduced—and indeed the military services themselves divide on the question.

And yet one thing seems clear: the world is now entering another period of revolutionary technology in the art of defense and aggressive warfare. It would appear that future emphasis will be placed on long-range missiles rather than on manned aircraft. In these circumstances, one might hope that over a period of time the revolutionary changes now under way would tend to reduce the size and cost of our oversea forces.

In the meantime, certain steps which would reduce our military expenditures abroad could be taken fairly quickly, if necessary. For example, a reduction in the purchase of supplies from local sources, with a possible saving of as much as $200 million annually was ordered by President Eisenhower and has been sustained by President Kennedy. With a total bill for supplies purchased overseas by the military probably exceeding $1 billion in 1960, it would seem possible, if need be, to shift a still larger proportion of our buying to U.S. sources.

BROAD PRINCIPLE RECOGNIZED

Since the common cause of all free nations is at stake, it also seems reasonable to hope that our allies might absorb a part of the present dollar cost of our common defense. This particularly should be the case with respect to Germany, which devotes only about 5 percent of its national product to defense, as against 10 percent in our own country.

The reports of the recent meeting between President Kennedy and Foreign Minister Von Brentano were encouraging in their recognition of one broad principle—that the large surplus which Germany has been running on its balance of payments has a bearing on our deficit, and that neither their surplus nor our deficit is good for the sound health of the free world as a whole. Germany's agreement to provide foreign aid on a continuing basis (although not yet clearly spelled out) and her recently announced upward revaluation of the mark, both could contribute toward an improvement of this situation.

SIX HUNDRED AND FIFTY MILLION DOLLARS IN GERMANY

Still more progress, however, should be possible with regard to military expenditures. Dollar outlays for this purpose run to $650 million or more a year in Germany alone. All of us can recognize strong objections to Germany financing the pay and living costs of American troops. But there are also German nationals who work in support of the American forces; and our forces use German railroads, telegraph, and other facilities. Why should not Germany offer such manpower and facilities as a contribution to our mutual defense in which she clearly has such a vital interest?

The serious settling of these problems requires a vision broader than any simple bi-

lateral view between the United States and Germany. The issues at stake involve not only balance-of-payments considerations. They also get into the thorny question of how the burden of economic and military aid should be shared. It would be manifestly unfair to single out Germany exclusively in this regard, for the United States pays out dollars for the use of facilities in many countries of Western Europe and all must participate, in varying degrees, in the solution of our common problem.

We sometimes forget that the allocation of mutual costs for defense was set, for the most part in the early fifties, at a time when the world had a serious dollar shortage, and when Western European economies were still recovering from the ravages of war. Now the whole picture has changed. It is time for a fresh look at the whole situation—a look that can best be carried out through organizations like NATO and the newly proposed OECD. The fact is that, in concert, the nations of the West should be able to meet all their commitments, both military and economic, without undue strain on the balance of payments of any single member, including the United States. But to do so, there must be a genuine desire to work together, based on mutual understanding and recognition of common interests. This is a job for quiet diplomacy and patient negotiation.

As I suggested earlier, however, the deficit in our foreign payments is not the sole problem that confronts us. We have in addition the question of the adequacy of the monetary system of the free world to provide sufficient liquidity for the growing volume of trade and to protect key currencies like the dollar and the pound from extreme pressures—pressures which are induced by economic and psychological developments, often intensified by speculators.

BIG RESERVES NECESSARY

I doubt whether many people who are not specialists in these matters realize what a dominant role the dollar has come to fill in the postwar years. To an extent even greater than the pound sterling, it has come to serve as the store of value accumulated and held by nations in all corners of the world who do not wish to hold gold for this purpose. Today other countries through their citizens, businesses, and official institutions, hold more than $19 billion worth of liquid dollar assets here in the United States, in the form of bank deposits, Treasury bills and other short-term instruments. If the dollar is to fulfill its role as a central reserve currency, these dollar holdings must be considered as safe as gold. Indeed, some $12 billion of them, representing central bank reserves, are immediately redeemable into gold.

DRAWBACKS AND COMPENSATIONS

Large reserves such as those we have described are essential to the smooth functioning of our international monetary system. The British still play a similar role with their sterling balances, although now on a more modest scale. But, as the British discovered a long time ago, the responsibility of being a reserve currency center has its drawbacks as well as its compensation. A country fulfilling such a role has to be as far above reproach as Caesar's wife. Once its fiscal virtue is doubted, rightly or wrongly, the damage could be fatal. There can be, in a word, a run on the bank, threatening the country's international solvency.

There are those who feel that pressure of this kind is all to the good, for it places a certain discipline on the United States to lead a sound, conservative economic life, and indeed there is much merit to this argument. But the trouble is that, during periods of economic recession at home, countercyclical measures, which are perfectly valid from a domestic point of view, may run contrary to our interests as a central reserve currency country.

At such a time, events outside our own control may buffet us—and drive the creditors clamoring to our doorstep. Even our own citizens may be induced to move their belongings abroad. No better illustration of this dilemma is needed than the pattern of the past year, when we found ourselves afflicted with a moderate recession, took a dose of easier money to cure it, and soon began reaping the whirlwind.

It is a fact of life that in a modern, industrial society, every nation needs a certain freedom of maneuver for its domestic economic policy. What is required of international finance is a system that will permit adequate flexibility, while affording the liquidity and safety that is needed in a world currency.

The international monetary mechanism as it now stands is clearly inadequate in this regard. It places too heavy a burden on the dollar and the pound, and it restricts action on the domestic scene, often at the expense of American and British citizens.

More and more this fact is gaining recognition among economists, bankers, and Government officials. A number of proposals have now been put forward to rectify it. Perhaps the most far-reaching of these is the so-called Triffin plan, developed by Prof. Robert Triffin of Yale University. Many of you will recall that Professor Triffin would transform the present International Monetary Fund into what, in effect, would be a supercentral bank. He would set up procedures to lead member countries eventually to transfer most of their official dollar, pound, and other foreign currency balances into the Fund. In addition, they could make a further transfer of gold. For all of this, they would receive deposits in the Fund.

UNIQUE FEATURE OF PLAN

Most nations would then hold the bulk of their official foreign exchange reserves in the form of deposits with the Monetary Fund, and the Fund would hold as assets both gold and liquid claims on other nations. In the case of the dollar, for example, the Fund might eventually take over most of the $12 billion of Treasury bills, time deposits and other liquid assets now held by foreign central banks. The Fund would earn interest on such assets, but it also would pay out interest to the central banks on the deposits with it.

A unique feature of the Triffin plan would be the ability of the Monetary Fund to create deposits, if necessary, under certain strict rules and procedures. In doing this, the Fund would provide added foreign exchange to countries needing it—exchange in a form acceptable to most other nations. Thus, the Fund would become in the international field a lender of last resort, just as the Federal Reserve System is in the United States today.

EXCHANGE RATE GUARANTEE

There seems to me much far-seeing sense in Professor Triffin's proposal, but it does involve the extreme measure of turning over to a central organization immense resources and power—indeed, a power which could impinge to some extent on our national sovereignty. Among other features, there is one that might make the United States in particular take pause. For the plan would require all member nations to give an exchange rate guarantee, in terms of the relation of their own currency to gold, on all assets of their country held by the Monetary Fund.

In essence, this means that the United States would guarantee the gold content of the dollar insofar as Monetary Fund holdings were concerned. We certainly would hope and expect that the price of gold would not be raised, and there is no earthly reason for such a step in the foreseeable future. Yet one hesitates to write a blank check for future generations on a matter not completely in our own control.

Much that the Triffin plan calls for could be accomplished, I believe, in other, more simple ways. The least complicated method, if it did not encounter serious obstacles, would merely involve an agreement among major central banks to hold each other's currencies, under certain conditions, rather than demand gold. Unfortunately, such an agreement runs counter to present policies and regulations of many central banks, and it is highly doubtful that we could expect its adoption. As a practical matter, I believe we may do best to look to the Monetary Fund for more effective help, making only moderate changes in its organization, rules, and procedures. This may not provide the ultimate answer, but it would go a long way toward meeting the immediate dilemma.

In line with this proposal, the United States itself might do well to contemplate borrowing freely from the Fund at an appropriate moment. Under existing rules, we have a theoretical capacity to borrow as much as $5½ billion. I use the term theoretical because the Fund at this stage doesn't possess the equivalent of $5½ billion of the types of currencies the United States would require. And, of course, no one would really expect us to borrow as much as $5½ billion.

There is no reason, however, why we shouldn't go to the Fund as a routine matter for as much as $1 billion, since that is approximately the amount of gold which the United States paid into the Fund. Such a borrowing would carry only a small service charge, and it should arouse no concern. At the same time, the Fund ought to use currencies other than the dollar in making new loans to deficit countries. For example, if the British have to borrow again, they might borrow in marks rather than in dollars.

UNDERSTANDING, COOPERATION NEEDED

If the Fund is to buttress the dollar against extreme swings, it will need to have at its command larger supplies of other currencies. It has been proposed by E. M. Bernstein, former Director of Research of the Fund, that the Fund, or a subsidiary set up for the purpose, be given the right to borrow automatically currencies of member countries which are running a large surplus. This is a very simple proposal that I think makes a lot of sense. It would assure a greater degree of flexibility for the Fund, and put it in a better position to deal with emergencies.

One overriding conclusion emerges from any consideration of these twin problems of the balance of payments and the gold outflow: that is the need not only for discipline at home, but for understanding and cooperation from other peoples, particularly those of the West. The United States would find it very difficult to erase the deficit in its foreign payments by acting alone—especially where heavy commitments for mutual defense and aid are involved. By the same token, if we are to realize stability in world currency arrangements, mutual restraint and coordinated action are imperative.

A CHALLENGE TO OUR WISDOM

For this reason, I share Douglas Dillon's belief in the great importance of OECD, the newly proposed Organization for Economic Cooperation and Development. In OECD, as well as NATO, we have forums where many of these matters can be faced, where policies can be coordinated, and where burdens can be shared.

There is more here, then, than a gold outflow or payments deficit to challenge us. These matters challenge our wisdom, our patience, and the sense of common purpose binding all free peoples. We can never respond by retreat. For isolation means

evasion. We can never respond by panic. For no strength is born of fear.

We can respond only by acting—ourselves and with our allies—in a manner both mature and imaginative, to show the world the capacity of free nations to think anew and to act together.

Major Aspects of World Crises—The Challenge of Peace

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 8, 1961

Mr. WILEY. Mr. President, yesterday, I was privileged to review major aspects of world crises in an address over radio station WGN, Chicago.

I ask unanimous consent to have the text of the address printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXCERPTS OF ADDRESS PREPARED FOR DELIVERY BY HON. ALEXANDER WILEY, REPUBLICAN, OF WISCONSIN, OVER RADIO STATION WGN, CHICAGO, ILL., MAY 7, 1961

Friends, the world—and we, as Americans—today are faced with serious issues which affect our progress, our survival, and the future of mankind.

The establishment of peace—or at least a climate in which differences among nations—can be accommodated or negotiated—still remains as the No. 1 challenge.

If this can be accomplished successfully, the world may progress to new, unparalleled heights of good living for all people.

If we fail, however, the erupting conflicts could well wreak catastrophe upon humanity.

In such tumultuous, complex times, then, the grave questions which require realistic answers include:

Can we stop the Reds without a global war; can we create machinery for resolving the great differences between East and West; can we encourage respect for, and adherence to, international law—not tolerate lawlessness, as now committed by the Communists?

Today, Mr. Khrushchev and his henchmen—now controlling about 1 billion people, or one-third of the earth's population—are throwing more manpower and resources into battle for attaining the ultimate goal of communism: that of world conquest.

What can we do about it?

First, as a leader of the free world, we have a great responsibility for providing not only the military power, but also the political-economic-ideological leadership to combat the Red offensive.

Second, the free world alliances—NATO, SEATO, ANZUS—need to assume a greater role of leadership in their areas of the world.

This includes:

Creating military forces adequate to combat Communist penetrations by force; developing more effective programs to meet the nonmilitary needs of the people—particularly the less-developed have-nots.

Third, we need to take a new analytical look at the role of the United Nations in world affairs.

This would involve the following:

1. Providing a United Nations military force to more effectively meet obligations in troubled areas.

2. Take measures to assure that the members meet their financial and other obligations—not shove off more of the burden on Uncle Sam.

3. Stop the Communists from using the U.N. as an international forum for propaganda.

Time after time, the United States and other non-Communist nations find themselves—unjustly, in many cases—as defendants against false and irresponsible charges by the Reds.

This should be stopped.

Unless we fight back more effectively, however, we can expect to fail—in the future, as in the past—to win battles in the court of world opinion.

NEEDED: GREATER NATIONAL UNITY

Now, how can we, as individual citizens, best face these challenges?

At this time in history, we need greatness, unity, dedication, and leadership and followership, to win the global battle against communism—as well as to fulfill the growing domestic, peaceful needs of a fast-expanding population.

In these critical days, there is no time for:

Unwarranted political sniping: headline seeking, at the cost of national prestige or policy; for defeatism or passitivity; or isolation or disillusion.

Rather, this is a time for stiffening our backbone, for reinvigorating the moral and spiritual, as well as the manpower and material strength of the Nation.

Then, we need to take a new, hard look at our domestic and foreign policies. The purpose would be to determine how or where these may be failing to effectively meet the challenges.

The new administration has had its baptism of fire, in Cuba and Laos. The results are today's headlines—regrettably not favorable.

Nevertheless, the task now is to learn a lesson; to revamp, as necessary, our policies; and to go forward in a united effort to meet the global threat to our security and freedom.

Teachers Against Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. PAUL FINDLEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1961

Mr. FINDLEY. Mr. Speaker, the National Education Association, consisting of public school teachers, has endorsed Federal aid to education. Some people assume from this fact that all teachers are like-minded.

Such is not the case. For example, here is a communication from a group of public schoolteachers in my district:

CAMP POINT, ILL., *April 17, 1961,*

Hon. PAUL FINDLEY,
House of Representatives,
Washington, D.C.

DEAR MR. FINDLEY: Contrary to the stand taken by the delegates of the Mississippi Valley Division of IEA—Illinois Education Association—we the undersigned, all of whom are teachers in Unit District No. 3, Adams County, Ill., are opposed to Federal aid to education for the following reasons:

1. It will lead to Federal control of our schools.

2. It does not offer any solution to the present problem of our schools.

3. It will only be a tax burden without any justification.

4. We believe that the Federal Government should not interfere in problems which are the concern of the local government.

Sincerely,

Elizabeth J. McCoy, C.I C. Clapper, Virginia Henricks, Vivian Hufnagel, L. O. Romero, W. A. Harris, David L. Allen, Harold H. Sickles, Robert March, Joseph L. Wartick, Howard L. Carter, Ethel Blentlinger, Helen Wickliffe, Curtiss Sherman, Harry Elbe, Larry L. Westerman, Gladys Evans, Gene Parker, Marion L. Magill.

This communication contains the signatures of 83 percent of the teachers at Central High School, Camp Point, Adams County, Ill.

What Are the Sacrifices?

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1961

Mr. DEROUNIAN. Mr. Speaker, we await the leadership of our President and the answers asked by Mr. Gould Lincoln in his article that appeared in the Washington Star:

THE POLITICAL MILL—KENNEDY HARDENING UP THE PEOPLE

(By Gould Lincoln)

Now the American people are being blamed—for what? For not being willing to do what must be done to check the drive of world communism—to win the cold war. President Kennedy said as much in his recent address prepared for delivery in Chicago.

"Our greatest adversary," the President wrote, "is not the Russians. It is our own unwillingness to do what must be done." Why is the President so sure the American people are unwilling to do what must be done? In the first place, they have not been told what they must do—except to sacrifice.

Was the President referring only to financial sacrifices—to an outpouring of more and more money to be collected in taxes by the Federal Government? If so, the people have been put on notice. The Kennedy domestic program, if fully implemented by legislation for all kinds of social welfare, will demand more and more of the people's income. But even in his tax program the President has asked for certain remission of taxes to meet certain tax increases.

Of course, more money will be needed by the Federal Government for meeting the Russian challenge in space, in missiles and in their ability, along with their Chinese allies, to conduct "limited wars." Is the President sure that the people will oppose such expenditures if they have to pay for them? There has been no reason to believe that the Congress, or the people will resist necessary expenditures for the security of the United States.

Or was the President referring to an unwillingness on the part of the people to fight a war? The people quite naturally want peace—but not at any price. They have never in their history failed to make the sacrifices necessary when this country has become involved in war. The United States is committed in many parts of the world to aid in repelling Communist aggression,

or any other aggression, when made upon nations of the free world. It is committed, too, to act in its own self-defense against Communist aggression.

PROBLEM OF PROCEDURE

The question is when and how is the Nation to act on such commitments. Only a couple of weeks ago the country was faced with the Cuban problem, and whether to go all out—with arms if necessary—to aid the Cuban rebels against the Communist-dominated regime of Fidel Castro. It does not help matters now to say that, of course, if we wanted to, we could have run over Castro. We didn't. As of today, no plan has been advanced by the Kennedy administration for dealing with this Communist government, the first set up in the Western Hemisphere, and only 90 miles from our shores. The Senate Foreign Relations Subcommittee has been told there is no present plan for any operations against the Castro government—but that if Castro moves against our naval base at Guantanamo, our Armed Forces will be used.

Senator FULBRIGHT, chairman of the full Foreign Relations Committee, has said the invasion was a blunder for which the White House, the CIA, the Defense Department, and the State Department must bear responsibility. No one should expect the President to declare his intention of using armed force against Castro and the Communists in Cuba—certainly not until he is ready to do so—or until after the action has been taken. In the meantime, the American people are kept waiting to learn what, if anything, is to be done about Communist Cuba. There has been no unwillingness on the part of the people as a whole. There has been suspicion, however, that some of President Kennedy's advisers have taken a "hang your clothes on a hickory limb but don't go near the water" attitude, which may have contributed to the Cuban fiasco.

QUESTION OF PRESTIGE

The unfortunate part of this whole Cuban episode, beyond the fact it has resulted in a firmer Communist grip on the island, lies in the position it has left us in the eyes of the world, including the eyes of the other American Republics. What is happening to the prestige of the United States abroad—prestige that was made an issue in the presidential campaign of 1960? Democratic spokesmen, including Mr. Kennedy, spoke again and again of the loss of prestige under the Eisenhower administration. Today, former President Eisenhower, former Vice President Nixon, and other Republican leaders have assured President Kennedy they will support him in international operations—Cuba and elsewhere—for the safety of the United States and the free world. They have not criticized the President for having failed in the Cuban affair. They wish the country to show a united front as a champion of the free world and an opponent of the spread of communism.

Mr. Kennedy has taken a firm position in all his pronouncements and messages to the Communist leaders. He cannot afford, however, to have another "Cuba." It may be that in his Chicago speech and other statements about the perils confronting the United States and the sacrifices he has been hardening up the American people. He may be correct in saying they are their own worst enemy because they are unwilling "to do what must be done." But there is one sure thing—they have not been put to the test in this administration.

President Kennedy served gallantly in the Second World War. Like his predecessor, General Eisenhower, he is a strong advocate of peace. He realizes that we can lose the peace as well as war if we show weakness and unwillingness to do what must be done. The people will do neither if he provides the leadership of which he is capable.

Polish Constitution Day

SPEECH
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. SCHWENGEL. Mr. Speaker, on the 3d of May, 170 years ago, in 1791, the Polish Constitution was proclaimed. George Washington, a man acquainted with constitutions and the meaning of liberty, write to a friend:

Poland * * appears to have made large and unexpected strides toward liberty * * *.

Large indeed were the strides, for the Polish Constitution was not just another ill-conceived and ill-drafted legal document, the like of which the world has seen too often. It was a monument to man's capability to rise above petty strife and self-seeking and establish a basis upon which liberty and human dignity might endure. Almost 2 centuries after this Constitution was drafted, it continues to be recognized as one of the major accomplishments of Western society, ranking with the British and American Constitutions.

The Polish Constitution was born not of abstract thinking but of the national virtue of courage, the ability to realize the misfortune of her geographic location and to heal the wounds of previous strife. The misfortune of her location between the aggressive neighbors of Russia and Prussia was soon to press again on the Poles. Barely a year after the Constitution was established, Russian troops invaded Poland to put an end to the "dangerous novelty" of a Constitution which provided liberty. Poland resisted as best she might, but did not prevail. Such has been the tragedy and the heroism of Polish history.

To some Americans, and some of our younger Americans, Poland has seemed a long way off and 1791 a long time ago. But Poland was not a long way off when our own Nation fought for its liberty in the 18th century. Poles with their attachment to liberty were among us then and their courage stood us well. Casimir Pulaski was the most notable of these. A Polish noble who had fought for liberty at home and had been thrust penniless into exile, Pulaski offered his services to General Washington. In the new America, Pulaski brought a skill most needed—the knowledge and ability to organize and direct calvary. He is properly remembered as the "Father of American Cavalry." But he brought more than skill. He brought a dedication to liberty and a knowledge that liberty for men is indivisible. He died in battle for American liberties in the knowledge that no man is fully free until man everywhere is free. He brought to Americans the knowledge that we did not struggle alone but together with men throughout the world.

In our times, Poland again, as throughout too much of her history, does not know liberty but knows the struggle for it. It is vital that the United States retain Pulaski's knowledge that liberty is indivisible and that we do what we can to aid Poles in their present hour of need. The task is neither simple nor easy, but we do have a definite opportunity in our foreign aid to Poland.

Our modern aid to Poland began in 1957 after the Gomulka government had indicated some ability to move out from under the closest and most complete Soviet control. President Eisenhower clearly recognized the difficulties in providing assistance to a nation under a Communist government in these words:

We do not demand of these governments their adoption of any particular form of society as a condition of our economic assistance. Our one concern is that they be free—for their sake and for freedom's sake.

In this framework, our Government proceeded to provide Poland with our surplus farm commodities, notably cotton, wheat and edible oils. These were paid for in Polish currency deposited to the credit of the United States in Poland. A small loan for the purchase of machinery, farm equipment and fertilizers was negotiated. In return for this initial assistance, the Polish Government agreed to reopen the question of claims of U.S. citizens for property seized by the Communist regime after World War II. In 1960, the Warsaw government agreed to set aside some $40 million to meet these claims.

Our assistance in surplus agricultural commodities has continued and as of the present the United States holds some $400 million in Polish money resulting from the sale of these commodities. This money is frozen within Poland and cannot be converted into dollars and a proposal is under consideration at present to use much or part of it within Poland on projects approved by the United States. They would be projects designed to improve the economic situation of the Polish people. It is a fashion in which our country can make a contribution to the eventual liberty of Poles and Poland.

Poland still knows and knows well the misfortune of her geographic location next to a rapacious neighbor. But the Polish virtue of courage quite clearly has not been lost and the United States must never lose sight of it.

The John Birch Society

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, May 8, 1961

Mr. METCALF. Mr. President, the other day Mr. A. B. Guthrie, Jr., prize-winning author of best sellers about the American West—"The Way West," "The Big Sky"—made the following comment about the John Burch Society in a letter to the Great Falls Tribune of Great Falls, Mont.

I ask unanimous consent to have the letter printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

To the EDITOR:

Mournful memo to members of the John Birch Society: there are more witch-hunters than witches.

Elsewhere some few but noble trophies have been taken—the Eisenhower witch, the Dulles witch and the Warren witch, who will be stuffed and mounted on their broomsticks as proof to our descendants of our prowess. Record specimens though they are, they aren't enough. For most of us the pickings are too slim. Our men go out with full hearts and come back with empty game bags.

This situation can't be tolerated.

There are things we can do right here in Montana. As a first step let's forbid hunting in our state to such notorious poachers as the Federal Bureau of Investigation and the House Un-American Activities Committee. They are better armed than we and know better where good hunting is Montana for Montanans!

As a second step, let's organize a local arm of government roughly like the Fish and Game Commission, one dedicated to the proposition that our witching grounds shall satisfy our hunters.

Matter of fact, maybe the John Birch Society is serving just that purpose.

A. B. GUTHRIE, Jr.

GREAT FALLS.

Nixon's First Hundred Days

EXTENSION OF REMARKS

OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1961

Mr. DEROUNIAN. Mr. Speaker, I should like to include in the Appendix of the CONGRESSIONAL RECORD an editorial on Richard Nixon's days, since the changeover in administration, as it appeared in yesterday's New York Herald Tribune:

NIXON'S FIRST HUNDRED DAYS

While we are all down with this "first hundred days" fever let us not overlook Richard Nixon. On the sidelines doesn't necessarily mean out of the headlines for a man who pursues a political career with the assiduity of the former Vice President.

The start of the Kennedy administration has meant for Mr. Nixon the start of a private law practice. And more, it has been a period of orientation and trial for him in the dual role of defeated candidate and Republican leader. In both capacities he has shone.

As defeated candidate he has conducted himself with statesmanlike restraint. He did indulge in a blast when Secretary of the Interior Udall tried to pin the Cuban fiasco on the Eisenhower administration. He called it "cheap and vicious," which it was, but annoyance with Mr. Udall in recent weeks has been neither an isolated nor partisan occurrence.

Mr. Nixon's appreciation for the difficulties and dangers of the American Presidency have prompted him to speak up at the right time, and keep his counsel to himself at others. A wire of Presidential gratitude from Mr. Kennedy bears witness. We trust this message to the defeated candidate was written with proper humility by the victor who said so much so bluntly and with such cocksureness during the campaign about the need to correct so many errors of the past administration.

As a Republican leader these first hundred days or so have found Mr. Nixon busily looking for Republican talent for the future, diligently prodding his party to greater effort, sharply reminding his fellow workers that with the right kind of planning the future need not be bleak. On his own horizon are a number of office-seeking possibilities, including the governorship of California as well as the most coveted of them all. That barely evaded his grasp last year.

But the elemental clue to Mr. Nixon's attitude is to be found in his decision to make a series of speeches summing up the events of his first 3 months out of office. This action bespeaks a Nixon anxious to apply his talents to the rebuilding of the Republican Party.

Mr. Nixon's "first hundred days" found him retiring gracefully from official life and then springing back unofficially, almost unnoticed, to the political arena where he feels so much at home.

One Hundred Days of "Ripening"

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1961

Mr. GROSS. Mr. Speaker, in view of the serious blunders that have marked the course of this Nation in recent weeks, it is not amiss to recall some of the warnings of less than a year ago.

When the then Senator Kennedy was gearing to capture the Democrat National Convention and the presidential nomination, former President Harry Truman said:

Senator, are you certain that you are quite ready for the country or that the country is ready for you in the role of President in January 1961? I am greatly concerned and troubled about the situation we are up against in the world now and in the immediate future. That is why I would hope that someone with the greatest possible maturity and experience would be available at this time.

And former Secretary of State Dean Acheson said:

Too young * * * still a very young man and uninformed. He needs to ripen.

The following article in the Washington Evening Star, by the columnist, Constantine Brown, is in the nature of a further warning that the "ripening" process can be still more costly:

The first 3 months of the Kennedy administration have come to an end with America at its lowest ebb in many years so far as international prestige is concerned. Mistakes have followed mistakes.

While the Chief Executive has assumed sole responsibility for what has happened in at least three corners of the world, there is no doubt that his intimate advisers have more than an equal share of responsibility. These men, almost without exception, are learned and studious economists, historians and scientists who have been able to deliver splendid lectures to their admiring students or who have written books and magazine articles winning plaudits from many intellectuals and book reviewers. But most of them have lived, relatively speaking, in the ivory tower of theory and have associated principally with other people who shared their theoretical thinking. Diplomacy and affairs of state, these days in particular, require a sense of sometimes ruthless reality. Perhaps the uneducated Nikita Khrushchev could serve as the best example of what modern diplomacy must cope with.

In the 3 months since Mr. Kennedy took office amid the loud approval, not only of the American people, but also of the rest of the world, we have lost more ground internationally than in the last 10 years. Mr. Kennedy, energetic, personable, articulate and full of the best intentions, makes an excellent impression on nearly everybody. His television appearances are described as nonpareil. But in these trying days, when Western civilization is on the brink, more than that is required—a maturity, if not of the Chief Executive himself, at least of those who surround him so closely.

It is in this that he has failed. The enormous blunders of the last 3 months are the result of the lack of realism and maturity of his entourage. The speeches and declarations made by the Chief Executive are inspiring, forthright and strong. But they are never followed by action.

For instance, powerful words were expressed when the Russians initiated the Lao crisis. To back up his words, a carrier and two destroyers were ordered to Saigon from Hong Kong. But all knowing quarters in Washington expressed confidentially the belief that these were mere gestures and that we would never actually intervene. Further, the Lao crisis actually was a Russian-American affair. Yet we accepted Britain as our middleman. The cease-fire agreement between Moscow and London came into effect only weeks after it was first proposed, when the Russian-backed Communist Lao already had taken the most important strategic points. It is an open secret that we accepted the terms demanded by the Soviets.

The fiasco in Cuba was one of the most monumental blunders ever committed by our frequently faltering diplomacy. Not only was the whole operation, directed from Washington in its initial phases, all wrong, but we announced before it occurred that we would not give it the backing without which it could never succeed.

It was folly to imagine that a group of 1,500 men could succeed against Fidel Castro's forces, 100 times as big and supported by MIG's and Russian tanks, all manned by crews from Poland, Czechoslovakia, and presumably China. Moreover, it was foolish planning to land the would-be rescuers of Cuba on only one strip 400 feet deep and half a mile long. Those conversant with such operations say that to make a successful movement it was necessary to choose several beaches on the more than 2,000-mile coastline of Cuba. It is highly doubtful that the operation was planned by our military, who have had such an excellent record for landings in World War II and in Korea.

Finally, the immaturity of Mr. Kennedy's advisers, whom he appears to follow closely, once more was demonstrated in the Algerian crisis, when the Chief Executive offered President de Gaulle of France all our support, including the use of our 6th Fleet and Armed Forces in Europe. It apparently was not realized that no French leader, any more than an American or British, would let foreign troops intervene in a purely national and domestic affair. There is no doubt that General de Gaulle would have preferred to go down to defeat rather than permit foreign soldiers to shoot at Frenchmen.

The Communist Technique

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1961

Mr. DEROUNIAN. Mr. Speaker, Constantine Brown, in his article as it appeared in the Washington Evening Star on May 4, shows excellent insight into the climate of the diplomatic world, as created by the U.S.S.R.:

KNOWING THE MIND OF KHRUSHCHEV—LESSON OF HITLER HELD STILL BEFORE US, AS PEACE DEPENDS ON ONE MAN

(By Constantine Brown)

Shortly before taking office as President Kennedy's new Ambassador to the United Nations, Adlai E. Stevenson remarked that the chief task of the new administration in international affairs was to know the mind of Nikita Khrushchev.

It is a sad commentary on the precarious state of the world that war or peace, in effect, must depend on the fallible mind of one man. All the decencies and aspirations of the peoples of the world could amount to nothing if, for example, Mr. Khrushchev for reasons known only to himself were to decide suddenly that nuclear war was the best way in which to achieve whatever it is he seeks to achieve.

The lesson of Adolf Hitler is still before us. Certainly Nikita Khrushchev is fully as capable, and as powerful, as the Nazi megalomaniac whose single distorted mind plunged the world into the maelstrom of World War II. Today's world can only hope that the mind of Mr. Khrushchev is not afflicted with fantasy.

But regardless of the state of one man's mind, the fact remains that the United States and the free world will have to depend on negotiation and palaver, measure and countermeasure, yielding and stiffening, to keep a precarious peace in existence between the two giants of the world.

Precisely here is the real trouble of the West. The Soviet Union has demonstrated time and time again that the Communists will negotiate only when the outcome is predictable, which means a Red victory every time. Sometimes the Communist gain may be a relatively minor one; sometimes it will be a whopper. But gain there will be, and all the little ones add up to great advantage sooner or later.

Settling the thorny problem of little Laos, for example, by negotiations can bring nothing but a substantial gain for the Communist world. The cards the negotiators will be using are already a marked deck, because Communist and pro-Communist military forces are already in control of the strategic heart of Laos.

This is only a sample, but it conforms to the unsual Communist techniques. Negotiations will, of course, preserve the peace of the world for the time being, but the West inevitably will be yielding position. In the chess game of international politics, position is everything.

Basically, to negotiate with the Communists must involve a clear understanding of Communist philosophy, tactics and strategy. For a Western diplomat to negotiate with a Communist without having a definite insight into the Communist ways of thought is to guarantee a major defeat even before the parleys begin.

The fundamental technique of Communist aggression is, first, the creation of a crisis in which Communist force is either presently active, as in Laos, or implied, as in Berlin.

The crisis is then whipped, agitated, exacerbated and irritated until it becomes a major threat to world peace. Immediately there is a cry for negotiations "to settle the issues peaceably." The Moscow propaganda machine picks up the Western hue-and-cry, and endorses these "peace lovers" who are urging their "warmongering" politicians to seek a peaceful solution.

Sooner or later, the pressures begin to tell. There are tentative approaches to a parley, and the initial Soviet response is invariably a qualified, conditional acceptance. The machinery grinds on until a date and a place are set for negotiations. By the time they are ready to begin, the Soviet position has been so well consolidated that about all the West can do is to accept the fait accompli, and hope that the Communists do not press their advantage too hard.

Moscow negotiates on its own terms, whether the issue be Laos or Berlin or disarmament or a nuclear test ban. The Kremlin is always ready to sign an agreement for peaceful solution of any crisis, so long as the settlement is made on Moscow's terms.

These are the challenging realities of the modern world. We must face them in full understanding of what they are. To do otherwise is to guarantee disaster.

Kennedy Speech Poses Dilemma

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1961

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the San Francisco Chronicle of May 1, 1961, which eloquently speaks for itself:

KENNEDY SPEECH POSES DILEMMA

In his alarmed speech to the newspaper publishers President Kennedy has given a dismaying picture of himself as a frightened leader who would have the press suppress some of the facts of national life "in the national interest."

What particular news he would have the press withhold, or by what standards of self-censorship, he did not say. Nor did he say why the present situation is so grave and urgent as to warrant an appeal for news suppression.

Until he can illuminate the reasons we see no cause to modify our present practice of responsible news editing. No responsible editor in the country today will print anything which, in his opinion, is harmful to the Nation's interest. Mr. Kennedy must be specific about what it is he wants before he can hope for compliance with his ambiguous desires.

These are appallingly ambiguous. The President referred to the need for far greater public information and, at the same time, to the need for far greater official secrecy. Plainly, these two needs contradict each other, and the idea that broad government secrecy and broad public understanding of government can coexist is a delusion.

The whole modern concept of strength through secrecy is begotten of hysteria and panic; secrecy is the weapon of the weak, the dishonest, the fearful, or the immature. In the struggle with communism, we dare not employ the same means that the secret-police states us, for if democracy cannot be allowed to work in the open, then democracy is drifting toward its doom.

Is truth against the U.S. interest? Should a democratic leader expect editors to desert their function of responsibly reporting, for example, what they could discover about the fiasco of the Central Intelligence Agency's direction of the Cuban invasion? Mr. Kennedy seems to long for that; he has raised the question whether stricter restraints are not needed to prevent the "details of this Nation's covert preparations to counter the enemy's covert operations" from becoming available to every newspaper reader.

This speech was misleading and unfair in its implications against the press. It was not in the hitherto cool and confident speech-making style of the President. It would have been better left undelivered; in charity, the incident should be considered closed.

SS "Hope"

EXTENSION OF REMARKS
OF
HON. SAMUEL L. DEVINE
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1961

Mr. DEVINE. Mr. Speaker, under leave to extend my remarks, I am enclosing a clipping which appeared in the Columbus, Ohio, Dispatch on April 14, 1961, relative to the recent tour of Dr. Walter Haynes on the American hospital teaching ship, SS *Hope:*

DR. HAYNES REPORTS—CLAIMS SS "HOPE" BUILDS GOODWILL IN INDONESIA

Dr. Walter Haynes is back in his Columbus office from remote regions of Indonesia, convinced his *Hope* ship tour scored a few points for both medical progress and the American image.

The young surgeon is one of the first doctors to serve aboard the SS *Hope*, the American hospital teaching ship, serving the second 2 months of a 4-month tour of duty he shared with his office partner, Dr. Jack Tetirick.

Dr. Haynes' tour took him to the islands of Indonesia, some of the most remote and primitive in the world, into contact with headhunters, strange customs and the sketchiest kind of medical practice.

He treated patients who had traveled 6 days to reach him and did operations never before performed in some of the areas he visited. He joined the ship in January at Makasar, in southern Celebes, and went with it to Ambon and Kupang on Timor.

At Ambon, famous as a World War II staging area of the Japanese, "we had a terrific operating schedule," he said.

"The first thyroid case I did was from the island of Buru. The patient didn't speak any Indonesian, and none of the Indonesian doctors and nurses aboard spoke her dialect. It was a real test for sign language."

At Kupang, "way out at the end," a veterinarian and a male nurse do the medical work for an island population of 500,000.

Some of the patients brought aboard the Navy hospital ship were from head-hunting areas, and some of the *Hope* doctors went on expeditions into the island.

"Ceram for instance is very primitive," Dr. Haynes explained. "They still practice cannibalism there, but only ceremonially. They eat only the fingers, heart and tongue."

Since all the *Hope* ship visitors returned with these important items intact, "I think you could conclude," Dr. Haynes commented, "that we were received there as friends."

Primary mission of the *Hope* ship is as a teaching center, to help local medical per-

sonnel observe new methods and practice and catch up with late medical thinking—a process which requires diplomacy.

"Doctors are slow to change anywhere—no less in Indonesia than in the United States," Dr. Haynes explained.

"You can't tell a doctor that what he's doing is all wrong and what you're doing is all right, but you can teach him the same thing by example.

"For instance, in the United States, we get our patients up the day after an operation. In Indonesia, doctors still keep the patient in bed for 2 weeks—something we haven't done for years.

"If you can get a man on his feet in 5 days instead of 15, you can treat three times as many patients in the 15 days. In Indonesia, where there's such a shortage of hospital beds, this is pretty important."

Convinced the ship and its mission serve a unique kind of diplomatic purpose, Dr. Haynes noted, "This shows to people on the personal level that we are human beings, that capitalism and the American people who are capitalists have a humanitarian side."

Doctors who serve aboard the ship go as unpaid volunteers. The ship is supported by American contributions. Referring to Dr. Tetirick's earlier tour in Java ports and Bali, Dr. Haynes said, "We both felt this was a project we wanted to support, but neither of us could take as much as 4 months. So we decided to split one tour."

Dr. Haynes' wife, Dr. Ruth Haynes, anesthesiologist at Grant Hospital, met him on his return. They live at 3555 Henderson Road.

Referring to the Indonesians with whom he came in contact, "It's hard for them to realize at first," he said, "that it is not the Government but the American people who are doing this directly.

"I think if you take the cataracts out of grandma's eyes, it's a lot better than giving a country a Sherman tank. Her eight children and their eight children and all the people they know will be grateful because the Americans made an old lady see."

Conservation of Natural Resources—Resolutions of National Society, Daughters of the American Revolution

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, May 8, 1961

Mr. METCALF. Mr. President, at their recent 70th Continental Congress, the National Society, Daughters of the American Revolution, adopted resolutions under the heading "Conservation of Natural Resources."

As one long interested in both pesticides research and water pollution abatement, I join conservationists everywhere in commending the ladies of the DAR for their forthright stand.

I ask unanimous consent to have the resolution printed in the Appendix of the RECORD.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

Resolved, That the National Society, Daughters of the American Revolution, urge the Congress of the United States of America to provide for a thorough research program to determine the extent to which the widespread use of chemical pesticides is endangering natural resources; namely, the slaughter of birds, the harmful effects on plant and wild animal life, and the possible cumulative aftereffects on human health;

Resolved, That the National Society, Daughters of the American Revolution, urge increased activity and cooperation on the part of local, State, and Federal agencies to assure to the people of the United States adequate supplies of good, pure water for all purposes; and recommend to Congress that the Water Pollution Control Act which expires June 30, 1961, be extended and expanded.

Kennedy's Boomerangs

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1961

Mr. DEROUNIAN. Mr. Speaker, President Kennedy's statements during the days of his campaign and returning, now, in different form, as summarized briefly in Nassau County's Newsday report of May 3, by Mr. Harold Levy:

J.F.K.'s ATTACKS ON GOP RETURN TO HAUNT HIM

(By Harold R. Levy)

WASHINGTON.—Some of the brickbats that John F. Kennedy heaved at the opposition a few months back are boomeranging.

Though inhibited to some degree by the danger of fomenting divisive debate on such difficult and delicate matters as Cuba and Laos, the Republicans have mounted their first full-blown attack against the Kennedy administration. Former Vice President Nixon, no longer constrained by his self-imposed, 100-day ban on partisan criticism, will move onto the firing line in New York tomorrow night in the first of a week-long series of speeches.

In his campaign for the presidency, Kennedy made a prime issue of what he called the sharp decline in American prestige, which he defined as "the esteem of good men for good action." Now, in the wake of this country's misadventure in Cuba, the question of national prestige is being raised again—this time by the Republicans.

During the campaign, Kennedy developed the theme which was to become a memorable passage in his inaugural address: "Ask not what your country will do for you—ask what you can do for your country." This week, at its annual meeting here, the U.S. Chamber of Commerce heard the administration's domestic program described as a paternalistic one which contradicts the President's admonitions on self-sacrifice.

Republicans in Congress yesterday began playing back some of Kennedy's campaign speeches as part of an "unbiased" appraisal of the President's first 100 days in office. They have resurrected, for example, his preelection vow that legislation embodying the Democratic platform's pledge on civil rights would be "among the first order of business when the new Congress meets in January." The administration has initiated executive action aimed at broadening minority rights in employment and education, but has made no request for new legislation in this field.

Some of the points now being raised by the Republicans and before such Republican-oriented organizations as the chamber of commerce are also being debated, seriously but less stridently, by many non-Republicans. There is a vague but discernible uneasiness among some Democrats in Congress and within the executive branch.

The mood here is in part a reflection of lessened public confidence in the new administration as a consequence of its miscalculated risk in Cuba. There are indications, too, that Kennedy may have lost some of the supreme self-confidence that once prompted him to say that what this country needed to combat communism in all parts of the world was a President "who acts first and acts fast."

The uneasiness among some Democrats here is not confined to the conduct of foreign affairs. During the campaign, Kennedy often addressed himself to what he called "the harsh facts of the matter" on various issues. There is a feeling in some quarters that, while he has had an opportunity to become more fully informed on the harsh facts of many matters since taking office, he has shied away from resolute action in some matters. However realistic and prudent his moderate approach to civil rights and other domestic issues may be, it has apparently irked some of his party's all-out liberals.

Results of a Poll of Citizens of the First District of Arkansas

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1961

Mr. GATHINGS. Mr. Speaker, for the past 2 years it has been my custom, early in the session, to send questionnaires to the citizens of the First Arkansas District seeking their views on national problems and matters of current interest.

The tabulation of the latest poll has been completed and it is my wish to share with other Members the information contained in it. I would like to point out that the response to this effort was highly gratifying and the poll gives an excellent cross-section of opinion in eastern Arkansas. Farmers, bankers, wage earners, housewives, and people in all walks of life favored me with their replies to these questions and—in a great number of cases—added to the response by writing detailed letters as to why they favored or did not favor certain questions raised. Nor was the tabulation confined to merely the questionnaires mailed from my office. Arkansas newspapers printed copies of the questionnaire which many people clipped, answered, and mailed to me. Area radio stations publicized the questions and cooperated in the effort. The interest in their government and in the problems that face our Nation by Arkansas citizens has resulted in a definitive and a significant expression of opinion.

The poll results are as follows:

	Percent		
	Yes	No	No opinion
1. Do you endorse the proposal to increase minimum wages to $1.25 per hour?	20	77	3
2. Do you approve or disapprove the expansion of the public housing program?	45	41	14
3. Do you favor medical and health care for social security beneficiaries financed by increased social security taxes?	32	64	4
4. Do you favor Federal aid for education for school construction and teachers' salaries?	37	59	4
5. The Post Office Department has an annual deficit of more than $500,000,000. Do you favor increasing postal rates to eliminate it?	55	40	5
6. Do you believe we should pay as we go in the building of the Interstate Highway System instead of going further into debt even if an increase in taxes is necessary?	79	15	6
7. The Secretary of Agriculture believes in increasing the prices received by farmers through higher supports coupled with acreage controls to keep production in line with demand. Do you agree with him?	50	44	6
8. Do you approve a food stamp plan under which needy persons would be issued certificates to buy surplus foods through regular business channels?	54	36	10
9. Our Government has warned the Russians "Hands off the Congo." Do you approve or disapprove this U.S. policy even though serious consequences could result?	78	9	13
10. Do you favor the passage of a law establishing the Peace Corps on a permanent basis to enable Americans to assist in U.S. aid programs in underdeveloped countries?	47	32	21

Struggle for Freedom

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1961

Mrs. GRIFFITHS. Mr. Speaker, May 3 marks a day of importance to millions of Poles throughout the world, for on this day in 1791 the Polish Constitution was officially adopted.

To the Polish people of that year and to the generations that have followed, this document remains as a symbol of liberty and independence. It remains in the hearts and spirit of the Poles even though officially it came to an end a little more than a year later. Under circumstances that have followed a recurring pattern in Polish history, the full fruits of independence were never fully savored.

Russia, always an ominous threat to Polish independence and fearing a united Poland on her western front intervened with military might and forced the Poles to abandon the constitution they had sworn to uphold. Since then Poland has faced a series of partitions and divisions which have tried and tested the Polish dream of a free and united Poland. That dream has not been forsaken.

We in the United States have always felt a strong bond with the Polish people. Some of the outstanding figures in our own struggle for independence were Polish. The names of Kosciusko and Pulaski are as much a part of our history as those of Nathaniel Green and General Gates.

The Polish Constitution was based on the same principles and beliefs as that of the United States and in 1791 only 2 months after the May 3 constitution was proclaimed, George Washington himself acknowledged the stride toward liberty that Poland had made.

Today the same bond remains between our countries. For once again we stand behind Poland as she struggles for freedom and unity. Although Russia has attempted to subjugate this country, the Polish People's Republic is far from a docile Communist satellite. The real Poland of today is a paradox—an example of Communist orthodoxy and Polish individualism.

And it is this individualism plus the proud and courageous spirit of the Poles that we in the United States recognize and admire. It is this spirit that carried the Poles through the ravages of World War I, saw them recoup their strength after the Germans had invaded in 1939, and finally it is this same courage, bravery, and spirit that would not permit them to be crushed under the Russian tanks that rolled into Poznan.

The hope of Poznan has not been fulfilled but the hope itself remains and will continue to live. The paradox of Poland will not endure forever and the Communist system will never completely transform Poland. No one yet has been able to destroy the Poles ability to survive as Poles.

H.R. 587, a Bill To Repeal the Tax on the Transportation of Persons

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 4, 1961

Mr. VAN ZANDT. Mr. Speaker, with the House Ways and Means Committee now involved in hearings on the President's tax message, it was my privilege to have made part of the committee's record the following statement in support of my bill, H.R. 587, a bill to repeal the tax on the transportation of persons.

The statement follows:

STATEMENT BY THE HONORABLE JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, BEFORE THE HOUSE COMMITTEE ON WAYS AND MEANS, MAY 3, 1961, IN BEHALF OF LEGISLATION TO REPEAL THE TAX ON TRANSPORTATION OF PERSONS

Mr. Chairman, as sponsor of H.R. 587, introduced January 3, 1961, and designed to repeal the tax on the transportation of persons, I appreciate the opportunity to join with other colleagues in advocating favorable action on such legislation.

During previous Congresses since the close of World War II, I have had similar bills before this committee. It was a source of disappointment in 1958 when the House conferees found it necessary to refrain from concurring in the action of the Senate in repealing the 10-percent tax on the transportation of persons.

Again in 1959 Congress voted to reduce the passenger tax to 5 percent, effective July 1, 1960. This action was later nullified, solely for budgetary reasons, when the House, by a narrow margin, voted to extend the 10-percent passenger tax another year. The Senate, disregarding the vote of the Senate Finance Committee for complete repeal of the 10-percent passenger transportation tax, voted against either repeal or the scheduled reduction of the tax on July 1, 1960. As a result, under Public Law 86-564, the effective date of the 5-percent reduction was postponed to July 1, 1961.

There is no doubt that the 10-percent passenger tax paid by users of for-hire airlines, bus, rail, and water carriers is proving a detriment to for-hire carriers of all modes of public transportation.

The transportation tax on passengers was levied in 1941 at 5 percent. It was increased in 1942 to 10 percent and raised again to 15 percent in 1944. It was decreased to 10 percent in 1954 and as previously mentioned its outright repeal was favored by the Senate in 1958 but failed to win the approval of both Houses of Congress.

It is common knowledge that the passenger tax was enacted during World War II and applied to travel at home and abroad. It was levied as an emergency measure designed to curb civilian travel on the then overburdened public transportation facilities. The tax on foreign travel has since been repealed.

Purely a wartime measure, the passenger tax is now regarded as a means of revenue despite the fact that it is highly instrumental in discouraging the use of the now underutilized modes of public transportation.

It is recalled that a similar tax on passengers was levied in 1917 during World War I, but it was repealed effective January 1, 1922, or shortly after the end of the war.

It is also of significance that Canada in 1949 repealed its 15 percent World War II passenger tax. Meanwhile we continue to tax domestic travel but exempt travel to foreign countries. This is a form of rank discrimination and serves as a source of discouragement to those who wish to heed the oft-repeated admonition, "See America first." Thus it is proving detrimental not only to public carriers but to the resort and recreational industry of our Nation. The 10-percent passenger tax affects in an adverse manner all forms of public transportation at whose expense private means of transportation and private carriers not subject to the tax become the sole beneficiaries.

Revenue from passenger transportation are practically the only source of revenues for bus companies and the main source of revenue for the scheduled airlines.

It has been estimated that about 85 percent of the bus carriers are small businesses. These small carriers have been especially hurt by the impact of increased costs and

the financial condition of many of them is cause for grave concern.

The financial situation facing many bus companies is further aggravated by decreasing patronage which is threatening the continuance of many bus services. Studies conducted in various States by State legislative committees since 1957 confirm the fact that a material amount of passenger traffic was being diverted from the common carriers by bus to private transportation resulting in the abandonments of bus routes and failures of bus companies. The present Federal excise tax of 10 percent on passenger travel discriminates in favor of private transportation and encourages it over essential public transportation. This is directly contrary to the recommendations of the reports filed by the various State legislative committees.

The intercity bus industry has experienced a steady decline in its volume of passenger traffic since the end of World War II. During this period there has been a decline from 32 billion passenger-miles to about 24 billion—a decrease of 25 percent—in a growing domestic market. While the total bus fleet has decreased about 30 percent during this period, the bus industry is still operating under 50 percent of its capacity. Since the majority of users of intercity buses comprise persons in the low-income level, the 10 percent passenger tax imposes a much heavier relative burden on them.

According to the recent report titled, "National Transportation Policy," released by a special study group for the Senate Commerce Committee, all of the domestic common carriers of passengers have found the number of empty seat-miles increasing since 1946. The rate of increase has been most pronounced in railroad service causing the passenger deficit to climb from less than $200 million in 1946 to over $700 million in 1957.

The report states "although bus service has improved in terms of seats and speed, the number of passenger miles in regular route service has declined since 1951."

With regard to the Nation's airlines the Senate study group found that, "while the available seat-miles for domestic trunk and local airlines from 1946 to 1959 increased from 7,490 million to 45,793 million, or almost 6 times, the revenue-passenger miles increased from 5,910 million to only 29,151 million, or a little over 5 times. The result has been an increase of empty seats from 1,580,000 to 16,642,000, or by an increase of 15,062,000 empty seat-miles."

In addition to the finds by the special study group for the Senate Commerce Committee the national trade associations for all three of the major public carriers—air, bus, and rail—report that they are currently operating below their capacity for handling passenger traffic. Both the bus lines and railroads are operating well below 50 percent of capacity, while the current load factor of the airlines of 59.5 percent is at the lowest level in 10 years.

Since I represent a congressional district in Pennsylvania that percentagewise has one of the largest railroad populations in the country, I have firsthand knowledge of the financial plight of the Nation's railroads.

The marked decrease in rail passenger travel is revealed by the fact that the volume dropped from 50 billion passenger miles in 1946 to 17 billion in 1960, a decrease of over 70 percent. This rail passenger deficit since 1946 has averaged $585 million a year and because freight revenues have had to absorb it there has been a steady decline the past 5 years of the overall railroad rate of return from 4.22 percent in 1955 to 2.13 percent in 1960. As long as freight revenue must absorb passenger traffic losses the need to seek increases in freight rates is not lessened.

Our nation as a whole is the chief beneficiary of a financially sound railroad system. With the vast investment in railroad passenger facilities and the heavy demands made upon the industry for such services in World War II, the constant decline in the railroads percentage of passenger business handled by all classes of public carriers is of national concern. The 10 percent passenger tax is a detriment to the efforts by the railroads to increase passenger revenues and thereby avoid further curtailment of service and poorer facilities. On the other hand, constantly rising passenger deficits are a dire threat to the railroad industry and will eventually result in rendering the Nation's railroad system wholly unprepared for emergencies of peace and war.

Speaking of the ill effects of the passenger tax, the Treasury Department stated in December 1947:

"The prewar history of railroad rates indicates that coach travel is rather sensitive to changes in passenger fares. Accordingly, under normal conditions, the profits of railroads may be affected substantially by the existence of the tax. Because of large fixed costs a small decrease in passenger revenue can have an important effect on profits from passenger operations."

It is not my contention that repeal of the 10 percent passenger tax will serve as the sole remedy for the passenger deficit on our Nation's railroads. I do contend, however, that repeal of the 10-percent passenger tax will have a stimulating effect and aid immeasurably in securing an increase in the volume of passenger traffic which is sorely needed by the Nation's railroads in their battle for economic survival. We should not lose sight of the fact that during World War II we relied upon the Nation's railroads for 97 percent of all organized military travel needs. Today the future of the railroad industry is threatened by operating deficits of over $700 million a year.

We cannot afford to ignore the plight of the Nation's railroads because to do so we are turning a deaf ear to the needs of a strong arm of our national defense. In fact, we should take affirmative action to strengthen our essential public carriers by recognizing that the current 10-percent passenger tax is not only discriminatory and regressive but it tends to undermine our national defense at a time when world tensions and the threat of an all-out war were never more prevalent.

One of the strongest recommendations for repeal of the excise tax on passengers is contained in the following excerpt from the Report of the Interstate Commerce Commission on Railroad Passenger Train Deficit, May 18, 1959:

"The excise tax on passengers was designed primarily to discourage unnecessary wartime travel and only secondarily as a revenue measure. Obviously the reasons for its imposition no longer exist. More important, however, it is harmful to our transportation system and is highly discriminatory.

"Without repeating all of the reasons advanced for the repeal of the transportation tax, we wish to emphasize that it is having a serious effect upon the passenger-train service of the railroads. Since the tax on passenger travel tends to discourage the public from using common carriers, it thereby aggravates the ever-mounting passenger deficit. While we recognize that the repeal would not provide a cure-all for the passenger deficit problems, such action would remove a serious deterrent to a greater use by the traveling public.

"In strongly urging that the Congress take action to repeal the tax outright, we are not unaware of the efforts which various members of the Congress have made and are presently making in this regard. We are also not unmindful of the revenue needs of the Government. We are, however, convinced that any possible loss of revenue would be more than offset by the public interest in strengthening and preserving a transportation system capable of meeting adequately the country's need for service both in peacetime and during emergencies in conformity with the national transportation policy as declared by the Congress."

One of the chief stumbling-blocks against outright repeal of the 10-percent tax on passengers is the assumption that such action would result in a loss of tax revenues. There has been no consideration of the effect of the repeal on the increased business in the resort, recreational, hotel and restaurant industries which would result in an increase in tax revenues.

Nor has there been any consideration given to the beneficial effect from the standpoint of aiding in alleviating unemployment that would result by making it possible for the airlines, bus, railroads, and ship industries to stabilize their employment.

Finally, an increase in passenger traffic on the public transportation system of the Nation would result in a tax yield that would compensate for any decrease in revenue occasioned by the repeal of the 10-percent passenger tax.

According to information available for the fiscal year 1960, the Government collected a total of $255 million, nearly half of which, or $119 million, represented a tax-deductible expense, because it involved business travel.

There is little doubt that if the $119 million in tax-deductible expense for travel had not been allowable, it would have increased the taxable income of business firms. Assuming these firms were in the average 50 percent income bracket, the Government would have collected nearly $60 million in additional tax revenue. In addition it has been estimated that a 5-percent increase in passenger revenues would have increased public carriers taxable net income by about $114 million.

In conclusion, it is apparent that repeal of the 10-percent passenger tax would not necessarily result in a heavy loss of tax revenues. The effect would be one of considerable return in the form of higher income taxes resulting from the greater volume of passenger traffic generated and from elimination of many tax deductible expenses.

Mr. Chairman, in expressing my appreciation for the opportunity of testifying in behalf of my bill, H.R. 587, it is my sincere hope that favorable action will be taken on legislation designed to repeal the 10-percent transportation tax on persons.

Independent Tire Dealers Versus Factory Stores

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1961

Mr. MULTER. Mr. Speaker, on March 24, 1961, I introduced H.R. 5926, a bill to regulate the distribution of motor vehicle tires.

The purpose of this bill is to prohibit the manufacturers of tires from getting into the retail business through so-called factory stores.

It is quite clear that the factory store is doing a good deal of harm to the independent tire dealers across this country. The Congress has had ample evidence of this in the past and the time to act is now. A recent poll of independent business and professional men made by the National Federation of Independent Business shows that out of 15,126 responses received during the first quarter of 1961 more than one-third, 6,664, listed factory store competition as one of the things which hurt their business most.

The tire manufacturers have been increasingly active in undercutting the independent tire dealer by allying themselves with the oil companies and using their filling stations as retail outlets.

H.R. 5926 would remedy this situation and provide a much-needed boost to the independent tire dealers throughout our country.

Because of the nationwide response to the NFIB poll, Mr. Speaker, I have appended the first quarter results for the information of our colleagues.

Special poll summary, months of January, February, and March, 1961, based on 15,126 responses received during indicated period—Submitted by National Federation of Independent Business

States	Unfair competition	Import competition	Government competition	Unfair labor proc.	Overhaul tax laws	Factory store competition

Arlington National Cemetery

EXTENSION OF REMARKS
OF
HON. CLARENCE J. BROWN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1961

Mr. BROWN. Mr. Speaker, the following poem was sent to me by Barbara Leventhal, a 13-year-old, seventh grade student at Roosevelt Junior High School, Springfield, Ohio, after she recently visited the National Cemetery at Arlington. Barbara has so well expressed the great impression the National Cemetery makes on all of us that I thought her poem should be inserted in the CONGRESSIONAL RECORD and made a part of the official documents of the Nation:

ARLINGTON NATIONAL CEMETERY

People, our people, are buried here,
They sleep with peace away from fear.
Mere mortals are they in this land of many
But by them the foundation set.
Tis in the ground, that they doth lie,
Watched by God, the stars, the sky.
Little is their greatness realized
Yet without them
Who are we?

Farm Cost Prices as Compared to Prices Received for Farm Products

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1961

Mr. GATHINGS. Mr. Speaker, earlier in the session, acting under authority granted by House Resolution 86, Representative HAROLD COOLEY, chairman of the House Committee on Agriculture, directed the Subcommittee on Equipment, Supplies, and Manpower to inquire into the cost of farm production and to study the impact of the cost-price squeeze on American agriculture.

Since that time hearings have been held in Washington, in Memphis, Tenn., and in Sioux City, Iowa. On Monday, Tuesday, and Wednesday May 15, 16, and 17, the committee will hold additional hearings here in Washington to fill in the picture of the situation as outlined earlier by farmers and spokesmen for their organizations in all fields of agriculture.

That this inquiry is vital to American agriculture is evidenced not alone by the statement by Secretary of Agriculture Orville Freeman that such a study is the most important facet to a solution of our agricultural problems but by the truly startling attendance of farmers at our field hearings. In Memphis the hearings had to be scheduled in the Memphis Civic Auditorium to provide for the large group who attended. In Sioux City, as in Memphis, many farmers had to file statements because of the large numbers waiting to counsel with the committee. At Memphis farmers from throughout the mid-South were in attendance. In Sioux City the committee heard farmers and livestock men from Kansas, the Dakotas, Nebraska, Illinois in many sections of the midwest Farm Belt.

Members of the subcommittee have worked diligently to gather the pertinent information on this vital problem. I wish to commend each of them for their vital contributions to this inquiry. Members of the committee are JOHN L. MCMILLAN, of South Carolina; WATKINS M. ABBITT, of Virginia; CLARK W. THOMPSON, of Texas; FRANK A. STUBBLEFIELD, of Kentucky; HAROLD B. MCSWEEN, of Louisiana; CHARLES M. TEAGUE, of California; DELBERT L. LATTA, of Ohio; PAUL FINDLEY, of Illinois; BEN REIFEL, of South Dakota; and Dr. A. FERNOS-ISERN, of Puerto Rico. Chairman HAROLD COOLEY and Representative CHARLES HOEVEN, both as ex officio members, have made excellent contributions to the work of the subcommittee as have other members of the full committee. And, we have enjoyed the assistance of interested Members who are not assigned to the Committee on Agriculture but who recognize the vital aspects of the problem and the work underway.

We have employed the talents of the Honorable John Mac Smith, of West

Memphis, Ark., who has served as the General Counsel for the inquiry. He has worked long and hard at the task assigned the subcommittee by the Congress.

As a means of better acquainting Members with the scope of this study, at this point it is proper to place in the RECORD a copy of the memorandum submitted to the committee last March 14 by the General Counsel, John Mac Smith.

Much information—not only statistical—but in the nature of human problems as presented by the farmers and their families has been submitted to the committee. More information of great significance is expected at the additional hearings. From this great compilation of information and comment by farmers and agricultural interests, it will be the task of the subcommittee to bring forth to the House Committee on Agriculture, and through that committee to the Congress, those recommendations and proposals that will seek to counter this erosive impact of the cost-price squeeze on our farming families and the farming communities of the Nation:

MARCH 14, 1961.

Memorandum to: Hon. HAROLD D. COOLEY, chairman, Committee on Agriculture, U.S. House of Representatives; Hon. E. C. GATHINGS, chairman, Subcommittee on Equipment, Supplies, and Manpower, Committee on Agriculture, U.S. House of Representatives; Hon. CHARLES B. HOEVEN, Committee on Agriculture, U.S. House of Representatives.

From: John Mac Smith, general counsel, Subcommittee on Equipment, Supplies, and Manpower, Committee on Agriculture, U.S. House of Representatives.

Subject: Investigation and survey relative to farm cost prices as compared to prices received for farm products.

Pursuant to your direction, I have made a preliminary study in regard to the survey and investigation relative to the above subject to be made by the Subcommittee on Equipment, Supplies, and Manpower, Committee on Agriculture, U.S. House of Representatives, and I am pleased to submit the results of that study to you.

I. AUTHORITY

A. The basic authority for the survey and investigation on the part of the subcommittee is House Resolution 86, 87th Congress, 1st session, which was agreed to February 9, 1961.

B. In addition, Hon. HAROLD D. COOLEY, the chairman of the Committee on Agriculture, U.S. House of Representatives, has directed that the Subcommittee on Equipment, Supplies, and Manpower, proceed immediately with the survey and investigation in order that a prompt but accurate report as to the conditions relative to the subject be submitted at the earliest practicable date so that appropriate action may be taken.

II. NEED FOR THE SURVEY AND INVESTIGATION

A. The consumer has a distorted understanding of farm income and farm conditions, which redounds to the detriment of the farmer.

1. By reason of information which has been furnished over recent years to the news media the farmer has been pictured day after day as constantly at the public trough, and the primary cause of the rise in the price of consumer goods.

Chairman COOLEY stated the condition accurately and succinctly in his remarks in the House of Representatives, 86th Congress, 2d session, on September 1, 1960, when he said that there had been over the years "a design and calculation to inflame consumers against farmers."

2. This misunderstanding as to the farm problem must be corrected, and the consumer must be apprised as to the true farm condition. Actually, the farmer isn't getting anything like his equitable share of the price which the consumer is paying, for example: the consumer pays approximately $3.94 for a broadcloth shirt, and of this amount the farmer receives 28 cents; thus, if the farmer gave the cotton for the shirt the consumer would still have to pay $3.66 for the shirt. (S.P. 119, Agricultural Extension Service, the University of Tennessee, August 1960.) This is only one example of the disparity in prices received by the farmer and prices paid by the consumer, and similar figures, can be furnished as to every article processed from a farm product, which the consumer purchases. Despite this fact, the consumer constantly reads, hears, and sees the farmer as the ward of a beneficent Government. It is believed the survey and investigation can do much to correct the false pictures of the farmer in the event the survey and investigation is thorough.

B. The true picture of the farm problem must be presented to Congress and the general public.

1. The real need, however, for the survey and investigation is to point out to Congress and to the general public the sorry plight of the farmer who is being crushed out of existence by the squeeze between rising cost prices and falling prices for the products which he produces. I quote from a few of the letters and telegrams which Representative GATHINGS has received since the publication of news items in regard to the investigation of farm machinery costs.

"Unless we have help like you are going to give us, in 3 more years the farmers will begin to fall by the wayside like a bunch of flies in a DDT bomb.

"This section of the United States is very dependent on farming and this action is long overdue. As you well know, the cost price squeeze has been working us over. If some of it can be alleviated through this investigation, then you have certainly performed a great service for this section as well as the country as a whole.

"This investigation is long overdue, and I hope and pray your committee will not only get the true facts, but better still will find some solution to a very serious problem affecting (farm machinery) dealers and the farmers they serve."

"I think the investigation of farm machinery, spare parts, and maintenance is justified and you are to be commended for pushing it."

"The cotton farmers of the State and Nation * * * most interested in your attempt to lower cost of machinery. Not many years ago 10 bales of cotton would buy one heavy-duty farm tractor, and it now takes 40 bales of cotton."

"I know 15,000 to 20,000 people directly and indirectly who make their living farming and these farmers are trying to hold up a great burden by paying $10,000 for a combine and $20,000 for a cottonpicker. What is very alarming to me is that some of our best farmers are giving up and hoping that they can get someone else to rent their land. If prices keep going up as they have been, the whole situation is in danger of collapse and will fall in on top of labor and the manufacturers."

2. The economic position of the American farmer is tragic when it is noted that his net income has dropped from $17.3 billion in 1947 to $11.6 billion in 1960, which is an income reduction of more than 30 percent. It cannot be argued that the 1960 recession was in anywise responsible for this miserable condition for the farmer received even less in 1959, that figure being $11.3 billion (Economic Report of the President, January 1961).

What was happening to the cost prices of the farmer while the price he was receiving for his products was plummeting to new lows? Between the years 1946 and 1960 the former's cost for farm machinery more than doubled; his cost for motor vehicles increased 87 percent; the cost of fertilizer increased 25 percent; and his interest, taxes and wage rates increased 45 percent ("Agricultural Prices." U.S. Department of Agriculture, Oct. 15, 1960).

3. Unless the farm income is increased or the farm costs are reduced, the future of a large segment of our society is confronted with immediate tragedy.

III. WHAT CAN BE ACCOMPLISHED BY THE SURVEY AND INVESTIGATION

A. A forum will be offered to the farmer and the manufacturer.

1. The farmer will be given an opportunity to tell his own story. This is a story of pathos, a story when told by the farmer rather than by someone for him, will appeal to the spirit of fairness and equity which have always been characteristic of the American people. When a true word picture is painted by the farmer himself it is entirely possible that prejudice on the part of the consumer will, to say the least, be dissipated.

2. The manufacturer likewise has a story to tell, for he has been beset by increasing costs. However, he has had the means by the use of public relation experts and paid advertisement to tell his story to the public. Regardless of this, he should be made welcome to tell his story before the subcommittee with the same degree of welcome as will be extended to the farmer.

It is possible, although not probable, that the manufacturer may come to the conclusion he is pricing himself out of the farm market, and should make some concessions as to price relative to the articles he is selling to the public. This hope is based upon the fact that the two largest farm machinery manufacturers showed a substantial decrease as to earnings in 1960 by comparison to the 1959 earnings, as follows:

	Per share
International Harvester:	
9 months, July 1959	$4.12
9 months, July 1960	2.51
Estimated earnings in 1960	3.25
Deere & Co.:	
9 months, July 1959	5.99
9 months, July 1960	1.33
Estimated earnings in 1960	2.45

3. Congress will be furnished an accurate and complete report upon the plight of the American farmer in order that its membership may take such action as may be deemed appropriate to remedy this situation.

IV. RECOMMENDATIONS

A. The cooperation on the part of the executive branch of the Government should be requested. A copy of this memorandum may be made available to the Secretary of Agriculture in order that he will be advised as to the intended survey and investigation.

B. Preliminary hearings should be held in the farm areas.

1. It is suggested that a hearing be arranged in the cotton section, preferably Memphis, Tenn., and also a hearing be arranged in the grain section, preferably Sioux City, Iowa.

2. These local hearings should attract numerous farmers who are unable to come to Washington for hearings. The local witnesses who have an important statement upon the subject of the investigation could then be invited to the hearings in Washington.

C. Manufacturers and processors should be contacted.

1. Manufacturers and processers of farm machinery and other products used by the

farmer should be contacted and their story obtained. It is believed these companies will send representatives to Washington, if representatives are not here on a permanent basis, for informal discussion, thus eliminating the expense of trips for this purpose. Representatives of these firms should be invited to the Washington hearings.

D. Government and other lending agencies should be contacted.

1. It is believed that a substantial portion of the credit extended to farmers is extended by Government lending agencies. As indicated the rise in interest is an important cost factor to the farmer, and these agencies will, no doubt, be willing to cooperate.

2. Insurance companies and other companies making mortgage loans to farmers should be contacted in order that interest costs to the farmer may be explored.

E. Farmers' organizations should be contacted.

1. The Farm Bureau, Farmers Union, National Grange and other farm organizations should be fully advised and their assistance requested.

V. CONCLUSION

This memorandum, as above stated, is preliminary as to nature, and as the survey investigation proceeds additional memorandums will be furnished.

The Prisoner in the Legation

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1961

Mr. MULTER. Mr. Speaker, following is the second in a series of articles on present-day Hungary which is appearing in the New York Herald Tribune. This one appeared in the issue of May 2, 1961. On May 1, 1961, I inserted the first of the series.

Gaston Coblentz reports from Budapest on the present situation:

HUNGARY OF TODAY—CARDINAL MINDSZENTY, THE FORGOTTEN MARTYR

(NOTE.—Gaston Coblentz of the Herald Tribune's foreign staff has gone behind the Iron Curtain for a fresh look at the situation in the satellite nations. He started in Hungary, and this is the third of 5 articles on conditions there 5 years after the bloody suppression of the anti-Red uprising. His reports will continue from other lands under the Communist yoke.)

(By Gaston Coblentz)

BUDAPEST.—The U.S. Legation in Budapest is a shabby building on Liberty Square. Its largest office is used as living quarters for Josef Cardinal Mindszenty, Roman Catholic Primate of Hungary, who received asylum in the Legation at the outbreak of the anti-Communist uprising in 1956 and has never left the place since.

The windows of his corner room, normally the office of the U.S. Chief of Mission, overlook the square. Three Hungarian secret police cars, occupied by unsmiling agents, are stationed continuously in the street in front of the building. The cardinal does not come to the windows.

NAME SELDOM MENTIONED

As the years go by, there is less and less talk about him in Budapest. His flight to the American Legation in preference to recapture by the Hungarian Communists may have somewhat diminished his stature as a martyr. When one talks with Hungarian anti-Communists, his name is not necessarily mentioned in reviewing the country's present situation.

The Hungarian Government seems almost satisfied with his continued presence in the Legation. However, a Foreign Ministry official said this week that it "probably" would be possible to reach a compromise on the cardinal's fate if the Vatican were to make an approach on the matter. The compromise presumably would have to consist of Cardinal Mindszenty leaving Hungary.

WANTS TO STAY

He does not want to do so. This much is known, although the American Legation categorically refuses permission for newspapermen to talk with him. The evident reason for this is to deprive the Hungarian Government of any pretext for charging that he is engaging in political activity while under the Legation's protection.

There is little doubt that this is a development that has disappointed the Cardinal, who had hoped to be able to play a greater role while in asylum. Literally the only contact he has with the church in Hungary is the bimonthly visit of a priest, to administer the Sacrament of Penance. These visits are known to the Hungarian Government, and the priests who make them are assumed to be under Communist surveillance.

There has been a further personal hardship for Cardinal Mindszenty: the impossibility last year for him to attend the funeral of his 92-year-old mother in a Hungarian village.

At 69, he has thus virtually been immobilized since his arrest by the Stalinist regime of Matyas Rakosi in 1948. Sentenced to life imprisonment after his forced "confessions" during a grim trial in 1949, he was briefly liberated by the rebels in the 1956 uprising. His long refuge at the American Legation began after only a week of freedom at the height of the revolt.

The only time he goes outdoors is for a daily walk in the bleak cement courtyard behind the Legation with an American official at his side. His meals are prepared in the Legation's cafeteria, and the mission's eight officers more or less take turns in paying him visits.

NO U.S. ENVOY

The legation has been without a chief of mission since the rebellion. However, the Communists seem to believe that the United States at last again may be considering the appointment of an accredited envoy.

It probably would have to be preceded by some easing of the harassments to which the legation is being subjected by the Kadar government, which in some respects have changed little from the practices of the pre-rebellion Stalinist regime of Matyas Rakosi.

Some of the Western missions fare better than others. The British have a fairly well-attended reading room and small film theater, although they have been forbidden, for example, to put up display posters outside their building on the ground that it would spoil the building's architectural line.

Moreover, the fear of Communist listening devices is so intense in several missions that a number of diplomats are extremely cautious in conversation in their own offices, their homes, and even in their automobiles.

REDS SELECT EMPLOYEES

Also, the Hungarian Government is forcing Western missions to employ personnel of the Government's own choosing. The result is that old and trusted employees of the legations are coerced into resigning their posts and because of their long employment by Western diplomats are unable to find work elsewhere.

Officers of the U.S. mission are still forbidden to travel more than 40 kilometers out of Budapest without special permits. Sometimes individual members of the mission wait a year before receiving permission to make a requested trip.

Visiting American newspaper men, once admitted to the country, receive more favorable treatment in being able to travel to virtually any part of Hungary without permission or prior notification to the Government.

White Paper on Cuba

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1961

Mr. ALGER. Mr. Speaker, the State Department White Paper was summarized in a recent newspaper article which is here included as a condensation:

UNITED STATES PUTS CUBA IN RED BLOC

(By Robert Young)

WASHINGTON, May 2.—The United States today designated Cuba a member of the Communist bloc and declared that the government of Premier Fidel Castro has taken on aspects of the Hitler and Mussolini dictatorships.

The State Department said it appears that Castro considers Cuba "further along the Communist road" than some of the other countries in the bloc dominated by Russia and Red China.

The Department issued a long statement in response to Castro's May Day actions proclaiming Cuba a Socialist state, abolishing elections and clamping new restrictions on the Roman Catholic Church.

ON WAY A LONG TIME

The Department said Castro's planting Cuba solidly in the sphere of international communism should come as no surprise because Castro has been heading into the open embrace of the Sino-Soviet bloc for some time.

The statement, made public by Lincoln White, State Department press officer, advised the American people not to be confused by Castro's use of the word Socialist rather than Communist in describing Cuba's form of government.

The Department noted that only Russia and Czechoslovakia call themselves Socialist republics in this stage of their projected development toward communism, whereas the other satellite countries in the Communist bloc, including Red China, describe themselves as people's republics.

TRAGIC FOR CUBAN CITIZEN

"It would therefore appear," the statement said, "that Castro considers Cuba farther along the Communist road than some of the other countries in the bloc."

In reference to Castro's declaration that Cuba was abandoning the free elections he had promised in favor of people's mass meetings, the State Department commented that the Cuban citizen under the Castro regime is in really a tragic situation. Even Russia has so-called elections, although there is no real choice among candidates, the statement continued, so again Castro seems to have gone the other members of the Communist bloc one better.

"The Cuban has but one choice; namely, to say 'si,' and even that not in a duly-

constituted election but in a contrived mass meeting," the Department said.

A SHRUG MIGHT BE DEATH

"The average Cuban is in trouble if he so much as shrugs his shoulders. He is in real trouble—he can be put in jail or put to death—if he says 'no'."

The State Department asserted that Castro's election-substitute, mass meetings, "sound very much like Hitler and Mussolini's mass gatherings."

The Department quoted Jose Marti, Cuba's 19th century "George Washington," as warning that the socialist idea is dangerous in two ways.

Marti, a Cuban national hero, said socialism introduces a "confused foreign doctrine" and permits ambitious men to rise in the world, "to stand above the crowd by faking arrogance and fury and by pretending to be impassioned defenders of the underprivileged."

My concern is not in critizing the findings which appeared to be accurate, but the fact that this report is many days, if not weeks or months late in being released. Indeed the American people, I feel sure, had reached these conclusions long ago, and now the State Department assessment so belated is almost comical in its pronouncements. It would be comical if it were not so tragic, our conduct as Cuba went communistic. The tragedy is in two parts. First, that American lives and property were taken and the United States did nothing to protect them. Such protection is clearly within our rights, and the failure to act becomes patently an admission of weakness, vascillation, and indecision in the eyes of our neighbors in the world. No one, then, would have contested our right to invade Cuba, as we have done some 30 times in Latin America to protect our citizens against the threat of loss of life or property. The tragedy was our failure to act immediately when we clearly had the right.

Second, the tragedy is compounded and made the grounds for additional loss of life and property by our second failure to act to prevent a greater Communist buildup in Cuba. Why, oh why, does our Government let the precious hours and days slip away while Castro beefs up Cuba's military might for the showdown which most assuredly will come and most assuredly must and will be lead by the United States.

I, for one, am apalled at our failure to act, and over the condoning of our mistakes and/or our inability to learn from our mistakes which results from our alleged bipartisan harmony to show the world a unity of purpose. My undying belief is that the United States should protect by force of arms when necessary the live of her citizens and their property when jeopardized unfairly and illegally by any other nation. I shall never agree to a weak and supine policy underlying our foreign aid and our foreign relations as they exist today. It is late, but I suggest and I pray that it is not too late for tough action, not just tough talk. We must tell the world our terms in maintaining freedom and justice and peace. Terms which preclude Communist subversion and our pronouncements firm and clear should be overtly backed up by military power and our willingness to use our armed strength. Only as we get tough can we prevent world war III. A weaker policy will surely bring on the holocaust.

While I am just one voice, I am sure a majority of the American people would rather risk their lives now than to invite Communist enslavement by appeasement. The showdown is approaching. Every American citizen and every nation must now go through an agonizing reappraisal, freedom or slavery, if communism's total conquest of the world is to be stopped in its tracks and driven back.

Rochdale Village Groundbreaking

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Monday, May 8, 1961

Mr. JAVITS. Mr. President, on April 29, 1961, ground was broken in New York City for one of the most important nonprofit community efforts in our Nation—the Rochdale Village housing development sponsored by the United Housing Foundation, which will be the largest housing cooperative in the United States. This development, which will offer accommodations at reasonable cost for 5,860 families in the middle income area, was made possible by the combined efforts of labor unions, housing cooperatives, civic groups, and other nonprofit organizations joined together in the United Housing Foundation, and through financing provided with the help of New York State's Mitchell-Lama Limited Profit Housing program and funds from the State's Teachers and Employees Retirement Systems. This project, whose carrying charges will be approximately $21 per room per month after a $400 per room down payment, represents the culmination of efforts by many dedicated officials, both public and private, including Gov. Nelson Rockefeller, State Housing Commissioner James William Gaynor, Robert Moses, whose idea it was to use the Jamaica Race Track site for middle income housing, and Abraham Kazan, president of the United Housing Foundation.

My bill to establish a Federal Limited Profit Mortgage Corporation, S. 766, follows the pattern of the State Mitchell-Lama program, and this new project illustrates again the kind of job that can be done for middle-income families under such a program.

I ask unanimous consent that there may be printed in the Appendix of the RECORD the speeches made on this occasion by Governor Rockefeller and by Robert Moses.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

EXCERPTS OF REMARKS BY GOVERNOR ROCKEFELLER PREPARED FOR DELIVERY AT GROUNDBREAKING CEREMONIES, ROCHDALE VILLAGE, SPONSORED BY UNITED HOUSING FOUNDATION, NEW YORK AND BAISLEY BOULEVARDS, QUEENS, NEW YORK, SATURDAY, APRIL 29, 1961

My congratulations, first of all, to the labor unions, housing cooperatives, civic groups, and other nonprofit organizations, joined together in the United Housing Foundation, which have supplied the initiative that makes possible this project—the largest housing cooperative in the Nation.

By offering excellent accommodations at reasonable cost for 5,860 families, Rochdale Village is an important step toward meeting one of the most serious problems in the city of New York—the shortage of middle-income housing.

I am naturally proud of the State's role in the financing and supervising of this project, the largest of the 41 projects—providing 17,357 apartments—now either completed, in construction, or in the works under the middle-income housing program Commissioner Jim Gaynor is so ably advancing. This project, of course, began with an idea, and as is so often the case when something big happens in New York, the idea can be traced back to Bob Moses. When the decision was made to close the Jamaica Race Track, it was Commissioner Moses who suggested that this area be used for a large middle-income housing project.

The United Housing Foundation, with several other developments to its credit and with outstanding management headed by President Abraham Kazan, undertook the job. A unique feature of the financing of Rochdale Village is the fact that the New York State Teachers Retirement System and the New York State Employees Retirement System have invested $57 million in this project which, with $19 million of State money, makes up the $76 million mortgage fund.

For the 20,000 people who will live in this small city within a big city, perhaps the most important factor will be the imagination, the consideration for human values and human needs, that have gone into the planning of Rochdale Village. Vehicular traffic has been completely eliminated from the interior of the village—and parking spaces provided for 4,000 automobiles. Over 33 of the 170 acres in the project area have been donated for a park, schools, an athletic field, a public library, and a police station. The number of three-bedroom apartments was revised upward from original estimates to meet the demand of larger families. Special provision has been made for accommodation of elderly couples and the disabled.

With a membership cost of $400 per room and an average monthly carrying charge of $21 per room, Rochdale Village—named in honor of the pioneers of the consumer cooperative movement in Rochdale, England—is indeed a significant advance in the middle-income housing program.

But I am also pleased that an increasing number of rental projects are coming in under the middle-income program. This is especially important to young couples just starting out, and to the elderly.

And most significant of all is the acceleration of the entire program—the steadily increasing number of new projects and the fact that a program initiated by my administration has increased financing available for middle-income housing by 350 percent.

I am happy to announce that the new State housing finance agency has just approved a draft prospectus for its first sale of bonds under its $525 million authorization—and that sale of the first $50 million of these bonds should be underway in a few weeks.

For we are determined to do everything in our power to help lick the housing shortage in this State.

I was pleased to sign a bill the other day granting automatic property tax exemptions for limited-profit housing built for the aged. And as you know, we've just extended rent control for another 2 years—and tightened some loopholes. We've got to have rent control until we do have an adequate supply of decent housing that will keep rentals within the reach of the people everywhere in a free market. But rent control is only a transitional protection; the real solution is a scale of building that fully meets our needs.

It is a very big job. Rochdale Village is a real contribution. But we still have a long way to go, and the utmost cooperation of all concerned—of labor, business, and government—is essential. Working together, we can—and must—do the job.

REMARKS OF ROBERT MOSES AT THE GROUNDBREAKING FOR ROCHDALE VILLAGE, JAMAICA, QUEENS, SATURDAY MORNING, APRIL 29, 1961

This cooperative, middle income, nonprofit project, on the largest remaining centrally located, accessible vacant land in the city, represents my swan song as a houser.

All I can say, beyond expressing profound gratitude for release from some years of title 1 responsibilities, dating back to Bob Taft, is that the United Housing Foundation and its member organizations including the progressive labor unions are the best and in fact the only really well-equipped builders in this difficult, bedevilled, middle-income field. I hope they will be given the powers and aids required for a full-scale attack on the problem, both in areas requiring slum clearance and in the few where middle income apartments can still be built on vacant or relatively vacant land—for instance, on Staten Island, which the Verrazano-Narrows Bridge will bring close to work areas, the meadows north of Jamaica Bay and the East Bronx.

There will have to be much more sincere, reliable and courageous support if we hope to remove this reproach to our boast of leadership among cities. There will have to be less demagoguery, irresponsible criticism and wisecracking, wild-eyed planning, fanaticism, screaming headlines, lurid exposures which prove to be gross exaggerations, and plain ordinary personal malice. I believe my union friends can take it. They are inured to criticism. They have a rooted and sincere regard for their fellow men in the lower income brackets. They are genuinely concerned not only for their members but for the future of the whole city. They are clothed in justifiable armor of righteousness.

As a practical matter, more money will have to be spent on moving people and small business out of the slums if we are to have slum clearance—I mean in the form of cash payments and other aid. The price of decent, humane treatment of tenants is very small in the huge total scale of cost of such projects and should be included in the initial estimates like any other requirements and not left to subsequent debate and chance.

It is nearly impossible for outsiders to appreciate the many astonishing accomplishments of this, our city, in the midst of seemingly endless committee investigations, muckraking and hysterical detraction. The flowers of praise are lost in an atmosphere of Irish confetti and dead cats.

Stick around, my fine friends, tomorrow you may have good notices, but next week the critics will deplore your ground layout, criticize your architecture, question your downpayments and begrudge you partial tax abatement and cheap money. You have, however, cheerfully lived through these things before and you will survive them again. Meanwhile, you have the applause of your conscience and may look forward hopefully to the verdict of posterity.

Some 20,000 people who live here at Rochdale will be siphoned out of bad neighborhoods. They will no doubt make room in the rookeries they are abandoning for others perhaps presently even worse housed. Most of the places they leave would, under competent and courageous planning, be torn down entirely to make way for other new low- or middle-income apartments. Unfortunately we simply don't as yet have the guts, the ability and the support to rebuild New York. It will take a long time. A start has been made, and this must be manifest here at Rochdale even to the most jaundiced and skeptical.

My congratulations to Governor Rockefeller, Mayor Wagner, Borough President John T. Clancy, and to other members of the board of estimate; to James J. Felt, chairman of the city planning commission; to Col. Arthur Levitt, the State comptroller; to Col. James W. Gaynor, the State housing commissioner; and particularly to the unions and, since there is always one dedicated individual who overshadows such achievements to Abraham Kazan, the undisputed champion of cooperative housing. Give him the tools and he will finish the job.

Polish Constitution Day

SPEECH
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. ELLSWORTH. Mr. Speaker, toward the end of the 18th century Poland's greatness and glory had become past history, and she was fast becoming victim to the evil designs of her aggressive neighbors. By the early 1890's Austria, Prussia, and Russia had already robbed the Poles of a good part of historic Polish territory, and Poland's independent existence was under threats. In the midst of such anxiety, a band of patriotic and courageous Polish leaders tried to strengthen and overhaul Poland's Government. Their concerted action resulted in the Polish Constitution of May 3 in 1791.

This historic and memorable document at once became, and remains to this day, a real landmark in Poland's modern history. Through it Polish leaders meant to lead Poland from Middle Ages to modern times. This liberal, progressive, and democratic Constitution sharply curtailed the unlimited powers of the king, making Poland's Government one of limited, constitutional monarchy. A responsible form of cabinet government was provided for, and the legislative assembly became the supreme governmental authority of the country. The basis of the electorate was broadened and religious freedom was guaranteed. The nobility lost much of its privileges, and the peasantry were brought under the protection of the law. In short, this was a model Constitution, and as such was a great pioneering effort on the part of gifted Polish leaders.

Unfortunately for the Poles, before the Constitution was put into effective force, Poland's foes treacherously attacked her, partitioned her and put an end to her independence. But the liberal and democratic spirit of the Constitution of May 3 still lives in Poland, and on the 170th anniversary of its proclamation all patriotic Poles and all lovers of freedom observe that historic anniversary, the Polish Constitution Day.

Senator Mansfield on the World Stage

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, May 8, 1961

Mr. METCALF. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Senator Mansfield on the World Stage," which appeared in the April 4 issue of the Lewistown (Mont.) Daily News, and an article entitled "MANSFIELD Splits Work of Democratic Leader," which appeared in the March 27 issue of the Los Angeles Times.

There being no objection, the editorial and article were ordered to the printed in the RECORD, as follows:

SENATOR MANSFIELD ON THE WORLD STAGE

Senator LYNDON JOHNSON made his mark as one of the greatest majority leaders in the history of the U.S. Senate.

Filling the shoes of such a man is a difficult assignment.

This is especially true in view of the fact that Mr. JOHNSON is now Vice President of the United States and presiding officer of the Senate.

But Montana's own Senator MIKE MANSFIELD is certainly doing the job in a brilliant, quiet, and effective manner all his own.

In the first place, Senator MANSFIELD did not seek this post of heavy responsibility and in fact made it known that he did not want it. In short, the job sought him. This gave him a tremendous psychological advantage in dealing with the Senate. He was elected to lead the Senate because he enjoys the confidence and respect of southern, northern, and western Senators. This certainly speaks well for Senator MANSFIELD because it means that he is not a doctrinaire extremist. He practices the art of the possible. He strives to make democracy work despite the conflicts of various sections and interests.

Because Senator JOHNSON as leader had been so flamboyant as well as able in contrast to the quiet, studious Senator from Montana, the smart alecs and commentotors early assumed that JOHNSON still pulled the strings. They cited as proof such insignificant observations that Senator JOHNSON retained his old office. But more and more the analysts as well as the Senate itself have realized that Senator MANSFIELD is the majority leader in his own right. More and more everyone is beginning to realize that Senator MANSFIELD is on the way to becoming one of the really great Senate majority leaders.

Today, as the American Government deals with the crisis in Laos or the Congo or in Berlin, Senator MANSFIELD is playing a decisive role in history of the world. He is a national and international figure because he is one of the two or three most important men in the U.S. Government. On the domestic front, it goes without saying that he

is the chief architect for enacting the administration's program into law.

Evidence of Senator MANSFIELD's growing stature was recently pointed out in the powerful Los Angeles Times which is read by millions in California and elsewhere. The article, an examination of Senator MANSFIELD's role, speaks for itself. Suffice to say it is a real tribute to "our own MIKE," in whom all of Montana can take justified pride. Let him know that he has our best wishes as he moves through these momentous times.

MANSFIELD SPLITS WORK OF DEMOCRATIC LEADER—SENATE CHIEF EMPLOYS TEAMWORK TO GET JOB DONE—HIS ASSISTANTS KEPT BUSY

WASHINGTON.—The Senate, used to one-man command, is seeing a new kind of teamwork in operation under the direction of Democratic Leader MANSFIELD of Montana.

MANSFIELD has called into action his youthful and peppery assistant, Senator HUMPHREY of Minnesota, on a schedule that will divide the heavy leadership work between them.

Beyond that, MANSFIELD has moved committee chairmen into the foreground to direct the debate on bills sent to the floor by their groups.

SHARP CONTRAST

All of this is in sharp contrast with the methods used by Vice President JOHNSON of Texas in the years when he was the Senate's majority leader.

By nature, JOHNSON was a one-man operator. He was the commander who kept his finger on every development. As the expression goes, JOHNSON knew where all of the bodies were buried.

As the leader, JOHNSON knew when to put on the pressure and when to lift the safety valve to let members blow off some of their accumulated steam. But no one ever got the idea that JOHNSON wasn't in command of the situation.

But MANSFIELD works in a different way. He looks on his as the strategic job of getting President Kennedy's New Frontier program through the Senate. He is willing, and even eager, to share the tactical command.

That was why, when the depressed areas bill was before the Senate, Chairman DOUGLAS, Democrat, of Illinois, of the Banking Committee plumped his husky frame down in the first row seat usually reserved for the Democratic leader.

MANSFIELD moved back three rows and left HUMPHREY seated next to DOUGLAS. It was HUMPHREY's overall responsibility to see that all went well with the bill while DOUGLAS led the charge and countercharge of the debate.

HUMPHREY's assignment will be to shepherd what might be called welfare legislation through the Senate, assisted by the chairman of the interested committees.

MANSFIELD will take tactical command of bills involving international issues, treaties, nominations and the segment of domestic legislation not concerned primarily with welfare matters.

When Latin American issues are at stake Senator SMATHERS, of Florida, secretary of the Conference of all Democratic Senators, will be called upon to help carry the ball.

This division of the workload obviously gives MANSFIELD more time than he otherwise would have to deal with the broad aspects of the Kennedy program.

But HUMPHREY says the burdens of a job that once was more honorary than active are working him harder than at almost any time in his life.

Is Dictatorship America's Future?

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1961

Mr. ALGER. Mr. Speaker, the continuing concentration of power in the hands of the Executive at the expense of the legislative branch of government is a threat no American should overlook or condone.

If a gasoline motor could run without a carburetor, it would advance the efficiency of that motor for the carburetor to be taken out.

What is the use of having a Congress, either/or, for that matter, a Constitution—if an administration persists in running without them?

That, in essence, is the revolution which is going on today.

The Central Intelligence Agency is spending hundreds of millions of taxpayers' dollars every year. How many Americans, how many Congressmen—elected by their fellow Americans—know what the CIA does do or does not do?

A costly organization which might well involve this Republic in global conflict, the so-called Peace Corps, is very much in existence. Did the elected Congress create this mid-20th century childrens' crusade? No. It was established by Executive order.

More recently, the area development bill's conference report, containing a financing clause which bypasses the legitimate action of the Appropriations Committee, was approved by the House. This back-door financing method is rapidly becoming the rule, rather than the exception.

Congress has already given up its constitutional controls over the tariff. It is being heavily pressured to relinquish its controls over appropriations by giving the President an item veto.

Secretary of Agriculture Freeman has proposed a bill which would relieve Congress of the need for ever acting again on important aspects of American agriculture. This, in my opinion, is the first instance of a free man advocating a return to the slavery of the Dark Ages.

I serve notice that I will continue, that I will step up my fight on this insidious attempt to undermine and destroy Congress and the Constitution.

I speak for myself. I commit no other man.

Oh yes, there are still some individualists in Congress. But, as a current writer has so well put it, "The trouble with today's individualists is that they are getting harder and harder to tell apart."

I welcome others to join me in this conflict. Still, if need be, I will fight alone. I hope it will never come to be a one-man battle. Still—if it should be—I will be proud to fight my own "Algerian" counterrevolution.

Address by Mrs. Joseph E. Casey

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1961

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Mrs. Joseph E. Casey, president of the Woman's National Democratic Club, at the 37th annual wreath laying ceremony of the club at the Tomb of Woodrow Wilson on May 1, 1961:

ADDRESS BY MRS. JOSEPH E. CASEY, WOMAN'S NATIONAL DEMOCRATIC CLUB, 37TH ANNUAL CEREMONY, LAYING OF THE WREATH AT THE TOMB OF WOODROW WILSON, MAY 1, 1961

Canon Miller, Mrs. Wilson, Mrs. Bolling, Mrs. Warren, ladies and gentlemen, this is the 37th annual ceremony in which the Woman's National Democratic Club has honored the memory of President Wilson.

Last year, I spoke of his ideals, his spirituality, his courage and his vision.

This year, I should like to discuss the inspiration to face the problems of today that can be drawn from his teachings.

First of all, he said, "This country is going to have crisis after crisis. No body politic so abounding in life and so puzzzled by problems as ours is can avoid moving from crisis to crisis."

Here then is his message that this country will live in a dangerous world and play a continuing important role in international affairs.

In the future, our country has no place, therefore, for the sunshine patriot. Neither can we afford to select as our leaders pleasant, mediocre men, upon the mistaken assumption that a man of the people can give us the necessary leadership in these days of struggle and difficulty.

"What," President Wilson asks, "do we mean by a man of the people?" He answers, "We mean a man who has his rootage deep in the experiences and consciousness of the ordinary soul of his fellow man—but we should not mean a man whose rootage is holding him at their level."

He tells us we should choose a man who has risen above the level of the rest of mankind, a man who sees horizons which they are too submerged to see. A man of the people, not because he speaks from their ranks, but because he speaks for them and for their interests.

Such a leader was Jefferson. "We hold these truths to be self-evident, that all men are created equal."

Such a leader was Abraham Lincoln. "A government of the people, by the people, and for the people shall not perish from the earth."

And such a leader was Woodrow Wilson, who said: "The great Government we loved has too often been made use of for private and selfish purposes, and those who used it had forgotten the people."

Jefferson, Lincoln, Wilson, great leaders all—who had risen above the level of the rest of mankind, but who always spoke for the people and their interests.

Such for our high standard of leadership. Now what message does the immortal Wilson have for "we the people"?

He says, "I wish there were some great orator who could go about and make men drunk with the spirit of self sacrifice. I wish there were some man whose tongue

might every day carry abroad the golden accents of that creative age in which we were born a nation, so that America might again have the distinction of showing men the way, the certain way, of achievement and of confident hope."

Here is a clarion call to raise a standard to which all just men can repair—a reminder that the American experiment was intended as a conscious revolution in human affairs—that it was to evolve a way of living for all mankind to emulate.

Woodrow Wilson had a vision of an America "that would seek to serve, not to subdue the world."

We should not be Americans deserving to call ourselves the fellow countrymen of Wilson if we did not feel the compulsion that his example lays upon us—the compulsion not to heed him merely but to look to our own duty, to live every day as if that were the day upon which America was to be reborn and remade.

Labor From Mexico

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1961

Mr. COHELAN. Mr. Speaker, in a penetrating editorial the New York Times has attacked the continuation of Public Law 78, the Mexican farm labor importation program, without amendments which would guarantee American farmworkers sorely needed protection.

Legislation which would continue this program is scheduled to be voted on in the House Wednesday, and I urge my colleagues to give this editorial their immediate and thoughtful attention:

[From the New York Times, May 3, 1961]

LABOR FROM MEXICO

The time has come for the Federal Government to stop fostering the use of cheap foreign labor to the detriment of American workers. We refer to the program by which Mexican laborers are allowed to come into this country every year on a temporary basis to harvest the crops, mostly in the Far West and Southwest. These Government-authorized invasions, over 300,000 strong last year, have an adverse effect on the wages, working conditions, and employment opportunities of domestic farmworkers.

Public Law 78, which permits these incursions, expires at the end of the year. The Gathings bill (H.R. 2010), now before the House of Representatives, would extend its life as it is for 2 years more. But Representative COAD, of Iowa, has introduced a measure (H.R. 6032), strongly supported by the Kennedy administration, which also provides a 2-year extension, but in contrast to the Gathings bill, would give American workers much needed protection.

It requires that before growers can employ "braceros" they must offer U.S. workers wages that are at least equivalent to average farm wages in the State or Nation, whichever is the lower. Growers would also have had to make reasonable efforts to attract domestic workers by offering them conditions of employment comparable to those required by the existing law. Mexican workers would be limited to seasonal and temporary manual jobs and their numbers could be limited by the Department of Labor so as to assure active competition among growers for domestic farmworkers.

The House Agriculture Committee has reported favorably on the Gathings bill and the Rules Committee has cleared it for action by the House. It should be killed—unless it is amended along the lines of the Coad bill. Its death would be unlamented except by the large-scale growers. They have used it to obtain an endless supply of seasonal farmhands who work without complaint under conditions far below decent American standards.

New York Times Urges Establishment of National Seashore Area on Padre Island Cape Cod, Point Reyes

EXTENSION OF REMARKS
OF
HON. RALPH YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, May 8, 1961

Mr. YARBOROUGH. Mr. President, most of us will recall that President Kennedy, in his message to Congress of February 23, specifically urged that National Seashore Recreation Areas be established at Padre Island, Cape Cod, and Point Reyes, Calif.

The New York Times of Sunday, May 7, 1961, published an excellent editorial which said, in part:

To delay can only increase the cost of the lands that have to be bought by the Park Service, at the risk of losing some of them permanently. At this very moment the bulldozers are scraping out a subdivision in the heart of the Point Reyes peninsula. Texas developers who envisage a new Miami Beach on Padre Island are trying to force a compromise that would leave to their devices an additional 20 miles, and widest and best parts of the long, wild barrier beach. Commercial and residential developments continue to whittle away at Cape Cod. The speculation that is always touched off by plans for public acquisition is driving land values skyward.

The quote from the New York Times, which I have just read, very accurately sums up the need for early action on bills to establish these National Seashore Recreation Areas. This is an informed and informative editorial. I ask unanimous consent to have printed in the RECORD Appendix the aforementioned editorial entitled "Three Needed National Parks."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THREE NEEDED NATIONAL PARKS

Now that hearings have been held by committees of both House and Senate, there is no reason for further delay by Congress in passing the bills to establish new national seashore parks at Cape Cod, Padre Island in Texas, and Point Reyes in California.

In his conservation message to Congress February 23 President Kennedy specifically named these three areas. Secretary of the Interior Udall has given them vigorous backing. The recent hearings in Washington disclosed overwhelming and nationwide public support. The opposition has dwindled to local minorities made up mostly of landowners still angling for a better price when they sell to the Park Service and would-be developers who are trying to shrink the size of the proposed parks so they can have additional, adjacent acreages to exploit.

Each of these areas has its own natural splendor: Cape Cod with its great Nauset Beach, windswept and surfswept by the North Atlantic; Padre Island in its setting of shallow, subtropical seas; Point Reyes with its backdrop of white cliffs and scenic California hills. Each is uniquely worth saving unspoiled for future Americans.

To delay can only increase the cost of the lands that have to be bought by the Park Service, at the risk of losing some of them permanently. At this very moment the bulldozers are scraping out a subdivision in the heart of the Point Reyes Peninsula. Texas developers who envisage a new Miami Beach on Padre Island are trying to force a compromise that would leave to their devices an additional 20 miles, and the widest and best parts, of the long, wild barrier beach. Commercial and residental developments continue to whittle away at Cape Cod. The speculation that is always touched off by plans for public acquisition is driving land values skyward.

In working out this kind of legislation, politicians often try to placate or accommodate every last segment of local interest. There comes a time when the few remaining dissenters, who will never quit grabbing for the extra concession, simply must be overridden in the public interest. At Cape Cod, Padre Island, and Point Reyes that time has arrived.

Address Delivered at Tomb of the Unknowns, Arlington Cemetery, Va., Sunday, May 7, 1961, by Gene J. Bianchi, Sovereign Grand Master, IOOF

EXTENSION OF REMARKS
OF
HON. JOHN DOWDY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1961

Mr. DOWDY. Mr. Speaker, on Sunday May 7, 1961, hundreds of Odd Fellows from all parts of the United States and Canada participated in the Independent Order of Odd Fellows annual pilgrimage to the Tomb of the Unknowns in Arlington National Cemetery. Seventy-one wreaths from that many grand jurisdictions were placed at the tomb. The wreaths from the Canadian grand jurisdiction were laid at the monument constructed by the people of Canada in memory of those U.S. citizens who gave their lives in the service of the Canadian Armed Forces during World War I.

Hon. Gene J. Bianchi, sovereign grand master, IOOF, delivered an inspiring address at the memorial services held in connection with this pilgrimage. Under unanimous consent, I incorporate a copy of his address with my own remarks in the Appendix of the CONGRESSIONAL RECORD:

ADDRESS DELIVERED AT TOMB OF THE UNKNOWNS, ARLINGTON CEMETERY, VA., SUNDAY, MAY 7, 1961, BY GENE J. BIANCHI, SOVEREIGN GRAND MASTER, IOOF

We have this day assembled here in the sacred and hallowed Arlington Cemetery for our annual pilgrimage and ceremony to pay tribute to the ones who have rendered military service to our country, many of whom

sacrified their lives that we may enjoy the blessing of living in a free world.

Today we pause to pay tribute to those whose names are unknown. We know not who they are, nor whence they came. We know not their stations in life, nor whether their possessions were many or few. We know not when or under what circumstances they left the ranks of the living and joined those whose mortal voices are silent.

This is one day when the past rises before us. Once again we are reminded that we are not creatures of chance nor of blind circumstances. It is obvious that this Nation of ours has been led and guided by the hand of our God. We would like to show that "God has provided some better things for us." However, it is only because gallant men, the young and many not too young of this great Nation and its allies, responded to the call of our Government at times when evil men sought to rob us of the way of life we love so much. The liberties and rights given to us by and through the Constitution of the United States of America.

In paying just tribute at this time, we do so, not only to the memories of the individuals whose remains lie at rest in this hallowed ground, but to those hundreds of thousands of known and unknown whom they represent.

Memorial Day will not let true Americans forget that men of many wars lie silent in their graves. Their names are etched on time-discolored tombstone and are unforgettably engraved on the hearts of posterity. Think if you will of the lonely widows who have been the victims of loneliness. The children who were and are tormented with mental anxiety because they have been denied the benefits and the joys of their earthly father. Think of the mothers and fathers who said goodbye to their sons and then carried the feeling that these boys would not come home again. Then there are the returned veterans who must go through life suffering from the effects of war. Men who sacrificed both success and happiness. Who set aside their own plans for the future, postponed their preparations for desired vocations, diverted their attentions from pursuits of peace and construction and directed them to war and destruction. Most of them responded not from any desire to engage in warfare or gain a fighter's fame, but for their recognition of a duty to serve their country and their fellow man.

Every individual who has served our Nation in the armed services is a witness pleading with American citizens to not forget that a great price has been paid for these liberties that are ours. They ask that we preserve that which they paid so dearly to obtain.

Multitudes of patriots paid the supreme sacrifice for their country, giving their lives for an undying cause. The right to worship God according to the dictates of our own heart. The right to a republic form of government. The right to live without being molested by a dictatorial regime. They are saying to every American: You dare not forget our devotion, our heroism, and our appreciation for the principles that make America great. With basic American rights being weighed in the balances, we dare not forget.

We have endeavored to establish and maintain government only by the consent of the governed. Unfortunately, this condition does not prevail within all nations. More than once in the lifetime of most of us here we have seen governments of other countries become intoxicated by power and authority obtained illegally according to our standards, and endeavor to destroy our form of government and impose upon us their form by force and against our will.

In such circumstances those in authority must make the decision whether to submit to force or resist force. There is only one honorable course and on each occasion we have chosen it, knowing full well that it would ultimately lead to war, which would demand the lives of thousands of our youngest and best of those with their most useful and productive years ahead of them. Such are the times when the individual must forsake his individuality, when the safety of the Nation is more important than the life of any citizen regardless of his wealth, position, or power. At these times our young men and women have not faltered nor endeavored to evade the challenge of duty. They have come forward by the hundreds of thousands and by reason of their response with all the sacrifice involved for them it is possible for you and me to gather here today. While we pay tribute to their memory we should thank God that we have had such men and women in our Nation.

Echoing through the corridors of time we hear them say: "You dare not forget the Revolutionary War, the War of 1812, the war with Mexico, the Civil War, the war with Spain, World War I, World War II, and the Korean conflict. We will not allow you to forget what brought this Nation of ours into existence. We will not let you forget what gave birth to this Nation of ours. You cannot let loose of your hold on governmental policies that came about because of the Dark Ages. America, you cannot allow yourself to forget the way that God has led and blessed you."

It is particularly appropriate that the Independent Order of Odd Fellows should pay tribute here today for those who sought to destroy our Nation, first sought to destroy our order. In the form of government imposed by them on their citizens, and which they desired to impose upon us, there is no place for friendship, love, and truth; faith, hope, and charity, or universal justice, the basic principles and teachings of our order. Our brothers in other lands were among the first victims of their ruthless seizure of power. Those virtues which we adopt and which we believe have helped to make our Nation great, must continue to be attributes of the character of both the individual and the Nation. Yes, gallant warriors, you died in defense of those virtues and we here today in humility and reverence gratefully acknowledge our debt to you.

So Memorial Day brings us to the sobering thoughts that upon our shoulders rest the responsibility of reproducing the heroism to maintain that which was purchased and established at terrible cost, and as we approach the moment when we are privileged to place the wreaths at the tombs of America's best known and most beloved heroes, our minds will be closed to the audible word and only our hearts will feel the joy that is ours in representing some 2 million or more Odd Fellows and Rebekahs throughout the free world and we will know that each of these members whom we represent will, in their own way and in their own language, offer a prayer today that these young heroes will not have died in vain, and that the principles upon which our freedom is based and for which they died, will be preserved and respected by all nations, tongues and kindreds of the earth until time shall be no more. While our words and our actions of today deal with and pay well-deserved honor to the past, it is not the past alone which belongs to these who lie here. They gave their lives for the future, a future which can be realized only as we give ourselves to make secure the peace and freedom for which they died.

We stand now in the presence of those who made the supreme sacrifice and in their unseen presence we too must make a decision. Can we in all truth and sincerity say: "Soldiers, as we take our departure and leave you to your lone and silent sleep, be assured you have not died in vain. The generation of today accepts the challenge and goes forth into the world of the living, inspired by your example, to maintain the principles for which you gave your all, that freedom, truth and justice might prevail, and if need be, which God forbid, again lay down their lives, as you have done and until such time to live for their country as you have died for it."

Ladies and gentlemen, such is my hope and their expectation.

How Much Must We Lose?

EXTENSION OF REMARKS
OF
HON. FRANK J. BECKER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1961

Mr. BECKER. Mr. Speaker, having read the columns written by George E. Sokolsky for many years and appreciating his great contributions to our thinking, I am inserting herewith an editorial by Mr. Sokolsky. I am sure that every American reading this must understand that time is not on our side but is on the side of the Communists. If they can continue to get us to talk while they are consuming the world, we already know the answer. The article follows:

HOW MUCH MUST WE LOSE?

(By George E. Sokolsky)

There is no use going into a fight unless the intention is to win. To lose is to strengthen the enemy. The only reason why Soviet Russia has defeated the United States in Korea, Cuba, Laos, as we shall lose in other parts of the world, is that the Russians are intent and aggressive whereas the United States prefers to retreat, to abnegate, to avoid direct action, to talk, talk, talk until the vapor of words fills the air.

All this talk of doing nothing about Cuba is childish because if the United States does not do something about Cuba, the Russians, using Cuba as a fortress, will do something about the United States. The logic which produced our defeat in Korea is producing our defeat in Cuba. The same men who brought about our defeat in Korea are bringing on our defeat in Cuba.

The argument runs that if we protect the United States in Cuba, Soviet Russia will seize Berlin. In fact, Khrushchev said so. The answer to that can only be, "Seize and be damned." Those who are afraid are already dead. When a nation shudders at the thought of war, it is already in the process of being conquered.

This is the basis of Soviet strategy against the United States. It is to defeat us step by step without war and to isolate us. In Laos, the British confused us by the proposition that they would act as brokers to effectuate a truce. Meanwhile, the Red Chinese-directed Lao rebels steadily moved forward. The game is nearly over but the truce is still in the making. Perhaps we shall get around to a truce when the Red Chinese will move into Cambodia and Thailand. Will we retreat from there, too?

If we have neither the courage nor the technique to defend our word, why don't we quit altogether? The Russians will isolate

us in a year or two unless we choose a place to fight them and stop this process. It is our isolation that is their target. The Russians and Red Chinese are building empire and are not wasting time with petty conversations either at the United Nations or any other conference. While they make speeches, they also march forward.

Their argument is:

"You want to talk, so talk. We have plenty of delegates to send to meetings. Let them talk. It counts for nothing but you Westerners are so bogged down in a swamp of words that you talk because it gives you pleasure, like a debating society in college. You talk to each other and you talk to us. But we are very busy men.

"With us, it is different. We are attending to business. Our business. Your business. It does not matter. We have men for talking and men for acting.

"If we have a man who jumps on a horse and rides furiously until he comes to a ditch; then he turns around and goes back slowly—if we have such a man, like some of my colleagues were, we send them far away. We do not need those who dare not take the next inevitable step. We get rid of them.

"The West objects that Khrushchev said, 'We will bury you.' So, he talked too much. So what. You are burying yourself by being afraid. And the more afraid you are, the more we will say, Boo!"

And it is all a correct position. Our President has chosen as his advisers those who advised President Roosevelt and President Truman. The results of their period of political activity have thus far been disastrous. During his campaign, President Kennedy said that we had reached a low prestige. He would raise our prestige, but many of those whom he chose to help him raise our prestige were among those who helped lower our prestige.

President John F. Kennedy is nobody's fool. Sooner or later, he will weary of the supercilious advice which he receives from those who are always proved to be wrong by the course of events.

He will ask himself why the course of events proves them to be wrong. He will then set up his own policy without the counselors of defeat. When he does, the United States will again go forward. It will not go forward by retreating.

Termination Payments Made, Sound Judgment Shown by Members

EXTENSION OF REMARKS

OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1961

Mr. ULLMAN. Mr. Speaker, as you know, the Federal Government recently took title to much of the forest land of the Klamath Indian Reservation. This action was in accordance with the Klamath termination program enacted by the Congress. As a result a large payment was distributed to tribal members for these lands. I know that my colleagues will be pleased and interested in the following report from the Klamath Tribune, which reports from the area itself on the conduct of the tribal members receiving their payments:

TERMINATION PAYMENTS MADE, SOUND JUDGMENT SHOWN BY MEMBERS

Bank officers, police officials, and merchants expressed surprise and lauded the way in which Klamath Indians generally conducted themselves when they recently received their termination money.

Some 588 Klamath adults received their unrestricted funds each amount to about $43,000. Of the total number receiving their checks, slightly over 300 adults are residents in the Klamath Reservation area.

"It was fantastic" was the way one banker expressed it, remarking on the fact that there were only one or two individuals in the whole area who asked for cash. Bank representatives stated that tribal members took full advantage of savings and checking accounts, taking away very little of their money in cash.

Many wild and unfounded tales spread about the Indians' use of their money which, upon a little investigation, were found to be untrue. Newspaper accounts for instance, of one drunk withdrawee who landed in jail with $40,000 cash in a paper bag were denied by law enforcement officials. "There's no truth to it" said the sheriff's office where the story was supposed to have originated. Sheriff Britton remarked on how quiet it was, and the fact that law enforcement problems certainly did not increase as a result of the payments.

Stories of tribal members on a spending spree were for the most part grossly exaggerated. Most tribal members did purchase new cars, and a few, two new ones.

The few isolated instances of unwise spending, blown up out of all proportion in the papers, have overshadowed the other hundreds of tribal members who have wisely invested their money in bonds, mutual funds, real estate, etc., or are socking it away in savings accounts until they decide on a plan and in the meantime are quietly going about their business.

A College Student Looks at Cuba

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 4, 1961

Mr. WILLIAMS. Mr. Speaker, recently I received a letter from a student at Mississippi Southern College, dealing with our current crisis in Cuba. The letter was, in my opinion, such a splendid analysis of the situation that I secured permission of the writer, Mr. Nick Stratas, to have it included in the CONGRESSIONAL RECORD. Therefore, Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am including Mr. Stratas' thought-provoking letter:

I write you this letter with the deep concern for the freedom of America. As a senior college student at Mississippi Southern College, I have witnessed the backward trend that this great country has taken in the cold war with Communist Russia.

The current situation involving the uprising of anti-Castro forces in Cuba gives America a chance to show Russia and the Communist countries that this country will not stand for communism in this hemisphere or the world and that America will come to the aid of those who seek freedom. Now is the chance for America to act. The eyes of every American are focused on Washington to show initiative in this crisis.

As a spokesman for the State of Mississippi and its people, you are implored to use all the power that you have in prodding our leaders to take the initiative. We do not want appeasement. We cannot be proud of it. The present policies of the United States in trying to negotiate with Russia for peace have shown no results. History shows that Russia negotiates only to gain time in a protracted war. They have made us look silly to the world when we are the greatest nation in the world.

We do not want to stand by and watch the world fall piece by piece into Communist hands. We do not want to fear the threat of a nuclear war until it is too late for even war to save us. If the trend continues, we will have lost this war with Russia, even though undeclared, without losing a drop of precious American blood. We have something to fight for. The Communists have used psychology on this Nation until some of us think that it would be better to be a Communist. I assure you that the feeling of anti-Americanism is in the minority. How long will it remain in a minority without American initiative?

We need a psychological boost. Cuba could be the place that the American spirit could show the world that we not only believe in freedom, but we will fight for it. Another Hungary will not make the American public or people over the world proud of this country. It would only make the downtrending feeling for this country continue.

Perhaps you are aware of the American feeling of living in a vacuum of security. As a journalism student I have witnessed this same feeling on the campus. Students as a whole have the feeling that nothing can happen to them. America has never known destruction in this present college generation's lifetime. What will it take to wake them up to the fact that America might be standing on its last legs? History has shown that great countries have fallen because the people thought they lived in a vacuum of security. I maintain that the leadership in Washington is the main cause. Let the people know of the situation they face. If they realize the dire need of action on their part and of our leaders, then perhaps we can be rid of the menace that threatens to enslave us all.

Governmental happenings are too complex for every individual to comprehend. We do not know of the many things that happen in the Capital because of their complexity. We do not know that our representatives are the only ones we can turn to. This is the first time that I have written to you or anyone in Washington. Perhaps this is but one letter among thousands of the same kind. I hope so. If so, I am glad to know that others feel as I feel.

I am aware of the fine job you are doing for this Nation, State, and its people. As I type this letter, I have the feeling that you will do the best you can to stem the tide of appeasement and will help turn America on the path forward to victory and not defeat.

Sincerely yours,

NICK STRATAS.

Third Party Threat Confronts Nation

EXTENSION OF REMARKS

OF

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted me, I am enclosing a letter to the editor of the Arizona Republic, by Mrs. Pat E. Paulsell, Coolidge, Ariz. It was called to my attention by Mr. John E. Robertson, of Phoenix, Ariz.

The apathetic party which Mrs. Paulsell describes here is known to all of us, and I wish every American citizen could stop and ask himself or herself if he or she is a member:

THIRD PARTY THREAT CONFRONTS NATION

EDITOR, THE ARIZONA REPUBLIC:

I used to think the United States had a two-party system, but I find we have three parties, and the third party is larger and more powerful than either the Democrats or the Republicans. It concerns itself not with elections exclusively, but with every phase of American life. It is known by many names, and its members often masquerade under the names of Democrats or Republicans. It is the apathetic party, and its campaign slogan is, "Let George Do It."

It's easy to recognize an apathetic. He is often heard to say, "I forgot to register to vote," or, "What difference does it make who I vote for? They're all crooks," or, "I don't want to get involved, I just vote the way my grandfather told me to when I was 9."

We Georges know the apathetic well. We fight for his rights, we give our money and our time to keep the United States the wonderful place that it is.

The apathetic enjoys the fruits of our work. He says nothing when we succeed, but when we fail, he says we haven't accomplished anything, and we're fools.

We can fight an evident evil, those of us who care, but we cannot win without help. The filth of communism spreads into our hemisphere, and we who try so hard are sickened by it. Something inside us forces us to try harder. But we have two enemies in everything we do—our obvious opponent and apathy.

I write this letter to arouse the apathetic party, but it is a helpless gesture, for the apathetics do not read beyond the first sentence. In fact, most of them do not read anything but the funnies.

MRS. PAT E. PAULSELL.

The Futility of More Talk

EXTENSION OF REMARKS
OF
HON. FRANK J. BECKER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1961

Mr. BECKER. Mr. Speaker, I am inserting herewith a very pungent editorial published in one of the leading newspapers of the United States, the Long Island Press. This editorial expresses in no uncertain terms the futility of more talk:

THE FUTILITY OF MORE TALK

The long delay in arriving at a cease fire in Laos adds up to one more chapter in the doleful record of Western attempts to negotiate with the Communists.

Weeks go by; talks continue.

And the fighting goes on, with the Commie forces continuing to have the upper hand.

Obviously, the Reds don't mind prolonging the conversations. In fact their whole effort seems to prove that they regard peace as a kind of carrot to be dangled before the West and the West, we regret to say, is acting a bit like the donkey who hopes to get that carrot some day.

We fully expect these ridiculous "peace talks" to continue just as long as the Reds are able to push forward on the battlefield. The pro-Western Lao have never distinguished themselves by any great display of energy. And the supposed prospect of peace appears to have taken out of them whatever starch they may have had in the earlier stages of the war.

Further negotiations can only result in prolonging this situation.

"Youth Wants To Know"

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1961

Mr. KEOGH. Mr. Speaker, on Sunday, April 16, Secretary of Labor Goldberg appeared as guest on Theodore Granik's award winning television program "Youth Wants To Know." This was the premiere showing over WABC–TV, channel 7, in New York City and the program received wide acclaim. It may be interesting to note that Secretary Goldberg had the following to say at the conclusion of the program, "This is the most inquisitive and best informed panel that I have appeared before since I took my office."

Mr. Speaker, WABC–TV is to be congratulated on bringing this excellent program to the great metropolitan area of New York City. A special word of praise should go to Mr. Joseph Stamler, vice president and general manager of the station, and Mr. Al Hollander, channel 7 program director, as well as all other personnel associated with making this fine program possible.

As a Member of Congress from the borough of Brooklyn in the city of New York, I am proud and delighted to note that the Hotel St. George, the largest hotel in the city of New York which is located in Brooklyn, is presenting this program over WABC–TV and I should like to pay special tribute to Milton Kestenberg, president of the Hotel St. George Corp., for pioneering in this public service effort.

Without objection, Mr. Speaker, I should like to include in the RECORD a complete transcript of Secretary Goldberg's appearance on "Youth Wants To Know" at the conclusion of my remarks:

"YOUTH WANTS TO KNOW," SUNDAY, APRIL 16, 1961, THE HONORABLE ARTHUR J. GOLDBERG, SECRETARY OF LABOR, GUEST

Mr. BARBER. Ladies and gentlemen, welcome to "Youth Wants To Know." Our guest is Secretary of Labor Arthur J. Goldberg.

Secretary Goldberg is faced with many problems concerning the economic health of our country, but none is more urgent than the unemployment problem. Last month the number of unemployed represented 6.9 percent of the Nation's work force, a 20-year high for the month of March. Recently Secretary Goldberg said that within the coming year, the U.S. economy must turn up 10½ million more jobs. We will have our first question for the Secretary in just a moment.

[Announcement.]

Mr. BARBER. Mr. Secretary, it is a pleasure to welcome you to "Youth Wants To Know."

Secretary GOLDBERG. Mr. Barber, it is a pleasure to be with this panel, one of the most informed and inquisitive panels in Washington.

Mr. BARBER. Thank you. Now let's begin our questioning with Jerry.

Question. Secretary Goldberg, what indications of an economic upturn do you see currently?

Secretary GOLDBERG. Jerry, there are some signs of an economic upturn, but I want to warn that a few swallows don't make a spring or even a summer. And steel production has moved up and that is helpful. It has moved up several percentage points over the last period. As a result of the weather, construction activities have moved up. And then retail sales although they are not what they should be, are beginning to respond. Maybe they are responding to the fact that all of our women, those of us who are married, maybe some of your dates, went out and got some Easter hats and we have had a little upturn in retail sales as a result of Easter business, and finally there is a slight upturn in the amount of hours worked in our Nation's factories. Not enough to bring a 40-hour week, but a little benefit over the period that existed during the last several months.

Question. Do you believe then that certain parts of the Kennedy antirecession program may prove unnecessary.

Secretary GOLDBERG. Oh, no. We need all of the recession program and I just left the President and we were discussing whether or not it was not necessary to have further programs. That is a matter which is under study in the administration at the present time.

Question. Mr. Secretary, what can be done about this hard core unemployment, and what is being done during this administration right now?

Secretary GOLDBERG. Well, first of all, on the hard core of unemployment which some people call structural unemployment, the Congress of the United States has before it right at the present moment in conference an area redevelopment bill. This bill is designed to promote business opportunity and job opportunities in the areas which have hit by chronic unemployment—structural unemployment as some economists call it.

Question. How would you furnish this so-called feed money to badly depressed areas where they haven't money to start over again?

Secretary GOLDBERG. Well, the bill before the Congress which I hope Congress will enact in the next few days after they get through with the conference, provides for loans and grants of several hundred million dollars to enable these communities to develop businesses that will replace the businesses that have ceased to grant full employment because of technological and other developments.

Question. Mr. Secretary, we have been talking about quite a few recession measures. I think one of the important things to consider is the cost of these measures. Exactly how much is this going to cost the Government?

Secretary GOLDBERG. Well, this is hard to say, but the Kennedy administration has been very conscious of cost considerations. Now, for example, our unemployment compensation extension bill, the temporary unemployment compensation extension bill, that is going to cost about a billion dollars and that is a very substantial sum of money by anybody's reckoning. But we have imposed a tax on employers starting in 1963 to take care of the cost of that program.

So the Kennedy programs have been based upon realistic considerations and also based on sound fiscal reponsibilities.

Question. But sir, if there is any increase in taxes at all, which you say will

be necessary to finance these programs, is this a good measure in times of a recession, and won't this aggravate the economic situation?

Secretary GOLDBERG. Not necessarily. It depends on how you impose your tax. In this particular situation we are granting the benefits in the next 12 months, but we are postponing the tax for 2 years. In that way we think we have an ideal prescription. We meet the problems of the recession. We do not add to the tax burden at the same time. We hope by that time that we will have recovered from the recession and then it is appropriate to collect the taxes that will pay for the program that we put in during times of recession.

Question. Mr. Secretary, if local areas are willing to sacrifice, can't they solve most of their unemployment problem?

Secretary GOLDBERG. Well, local areas are doing a fine job. Take Scranton, Pa., for example. They have a great community effort. They have a great State effort in the State of Pennsylvania, headed by their fine Governor, Governor Lawrence, and Mr. Batt, their commissioner in this area. But this problem is more than a local problem. We need a working partnership between local government, National Government, community groups, labor people and management people to try and solve this problem.

Question. Since you cited the example of Scranton, Pa., couldn't other areas similar to this and in similar conditions solve this problem, thus making it not necessary for the Federal Government to intervene?

Secretary GOLDBERG. I wish they could. But the taxing powers which are basic, here, to a sound antirecession, and in fact a recovery program, have been really exhausted by many of the States and localities. They have reached the maximum power to tax. They are unable to cope with the magnitude of the problem which is becoming nationwide, by themselves.

Let me give you a figure: We have classified—I want to refer to the figure—101 major labor market areas of about 150, now, with a substantial labor surplus. This means that throughout the country, north, south, east and west, we have a problem of substantial unemployment. And this means that we have a national responsibility as well as a State and local responsibility to deal with this subject.

Question. Mr. Secretary, don't you think it would be a great burden on many of our country's employers to pass a bill to raise wages and at the same time encourage them to hire more people?

Secretary GOLDBERG. Well, the amount of tax we have imposed for example for unemployment compensation is four-tenths of 1 percent additional tax. That is a very small tax. But because it is a small tax spread largely over all the employers in the country, we are able to raise a billion dollars, and a billion dollars is very important for the relief of people who have been unemployed many long periods. We have 1,800,000 people right now who have been unemployed for 15 weeks or more.

Question. Well, don't you think it will be kind of a burden to ask them to raise the wages and then hire these other people and raise their wages to the same wages the other people working with them get?

Secretary GOLDBERG. Are you dealing now with our minimum wage law?

Question. Yes.

Secretary GOLDBERG. Well, that is another subject. First we were dealing with taxes. On taxes we have imposed a very modest tax and we hope by the time that that tax takes effect we will have substantial business recovery in the country. If we do there will be an adequate profit base to take care of that tax.

Now on minimum wage, the studies of our Department indicate that when we raised the minimum wage last time in 1955, which took effect in 1956, we expanded employment opportunities rather than contracted unemployment opportunities. Now we think it adds up to improvement in the economy rather than retrogression in the economy.

Question. Mr. Goldberg, would you consider a 3 percent unemployment rate the normal rate, and would you work strongly to lower this rate?

Secretary GOLDBERG. I think 3 percent is a high rate of unemployment. It is hard for me to accept the concept that any man who wants to work should be denied the opportunity to do useful and fruitful work.

Now it is true that there will always be a certain margin of unemployment in the country. This is because we are a tremendous country, this is because some people will be changing their jobs, this will be because some factories will be adjusting their product, so I suppose, and this is a very reluctant admission for me to make, that we have to live with a certain amount of unemployment.

Now some countries believe that 2 percent is a high rate of unemployment. When the President mentioned 4 percent, and Mr. Heller, the Chairman of the Council of Economic Advisers, mentioned 4 percent, they were not talking about desirable goals, they were saying we immediately or in the near future have to move the rate of unemployment down from 6.9 to 4 percent as the first measure of our achievement. They were not saying that 4 percent was the ideal goal for unemployment. Four percent is too high an unemployment rate.

Mr. BARBER. Mr. Secretary, at a recent news conference did you not use the figure 4 perdent, even though we would have a business upturn this year, the unemployment rate still would be 4 percent?

Secretary GOLDBERG. I said that unless Government, labor, and management did what they ought to do in this area, as I looked at the future employment and unemployment figures, I was very fearful that we would have several million jobs that we have to provide—about 7 million—and still leave the rate of unemployment at 4 percent. And I mentioned this not as a desirable situation, but as pointing up the challenge of the problem that lies ahead.

Question. What percentage rate would you be satisfied with, of unemployment?

Secretary GOLDBERG. Personally?

I would like to see everybody who wants to work and has the capacity to work fruitfully employed and I would not like to deal with this in percentage terms. I don't like to play the numbers game.

Question. I mean practically, not ideally.

Secretary GOLDBERG. All I would say is that we ought to strive toward the goal of bringing down employment to normal cyclical unemployment and normal employment of transitional people in the work force.

I have mentioned that in some countries this is regarded to be 2 percent. Ours is a larger country and maybe there has to be a little more play in the joints. But I would certainly believe personally that 3 percent is the top rate in the area that we are discussing.

Question. Secretary Goldberg, shouldn't Government play only a position of leadership in solving our problems while management and labor supply the action?

Secretary GOLDBERG. No, I don't agree with that. I think the great action that has to be taken in the country is of course in the private sector of our economy. I have repeatedly said that the best answer to unemployment are jobs at decent American wages in private industry. But Government has a responsibility in this area as well as industry and labor and the responsibility was written into our constitution and first in our preamble when we said we had to provide for the general welfare, and secondly in the powers of Congress. When Congress was empowered to tax, to promote the common defense and the general welfare of the United States.

Question. Mr. Secretary, in a recent 11 point proposal for migrant workers, 1 point was that a collective bargaining program be established for farm workers. How could this be done for this generation without further education and possible corruption?

Secretary GOLDBERG. Well, first of all I just testified yesterday on migrant farm labor. This is a sadly neglected area in our economy. These are the forgotten people of the country. They not only do not enjoy the benefits of collective bargaining, they often do not have adequate housing. They have inadequate education. They have inadequate health. They employ child labor. They do not have registration of contractors who deal in migrant labor. So that what we have to deal with first, since this is a sadly neglected area in our society, our first measure, and yesterday I appeared in support of first measures, but to see to it that on the farms no child works. I exempt from that family farms because the family environment protects against too much heavy labor and too much hazardous labor.

But I believe it ought to be a consensus in the United States as it is in industrial employment, that children less than 14 years of age do not work in the Nation's farms. We ought to house the migrant laborers adequately. We ought to see to it that a public group is created to watch over them. We ought to see to it that crew leaders do not exploit them. We ought to see to their education.

These are what I regard to be priority measures in the area of migrant farm labor.

Question. Mr. Goldberg, could not the local, possibly the State governments handle these problems that you have mentioned better than the Federal Government?

Secretary GOLDBERG. No, I don't think so, and as a matter of fact I have received letters from the States indicating that they need the help of the Federal Government in this area. For example, we have crew leaders. About nine States have enacted laws regulating crew leaders who recruit migrant labor. Six of the nine States have been in touch with me and they have said, "While we have regulated crew leaders, to evade our regulations crew leaders will take migrant labor to other States which do not regulate farm labor and protect them." So you see, since they move across States lines, the constitutional test of interstate commerce is fully met, and we have a national responsibility to see to it that these citizens are afforded real protection.

Question. How can the Federal Government move into this area which is obviously unorganized? The union representatives haven't even been able to unionize these workers. To have collective bargaining, you have to have this type of organization.

Secretary GOLDBERG. The Federal Government can move in by doing what they did for people when they enacted the Fair Labor Standards Act which originally some of the unions opposed.

The test for the Federal Government and for State governments is not whether unions support it or oppose it. The test is what is in the national interest and what is in the interests of people. The fact that unions either do or do not organize the migrant labor does not excuse Government from its responsibility to provide minimal standards, just as we have in the Fair Labor Standards Act, for wages, for children and so on in that area.

Now immediately in the migrant labor area we have not come to the wage problem. We are trying to deal with the elemental things: Health, hygiene, education, housing, crew leaders and matters of that type.

Question. Secretary Goldberg, at present under the Mexican labor program there are thousands of jobs on American farms being filled by Mexican citizens. Shouldn't Americans fill these jobs and therefore help to alleviate the farm problem?

Secretary GOLDBERG. I am now dealing with proposals on the Mexican farm labor program. One of the tests of the program, which is written into law and which will be written into the new law, is that domestic labor is not available to do the job. Only then do I and will I certify that the foreign labor, Mexican labor, or labor from other countries is admissible for the purpose of doing farm labor.

Question. Mr. Secretary, getting back to domestic migratory laborers, after the season is over and they pick their crops, they are then, shall we say, dumped in northern cities: Baltimore, Buffalo, New York. Whose responsibility is that now, the Federal Government or the State or local?

Secretary GOLDBERG. Unfortunately under present laws this is the responsibility of local governments and you have correctly portrayed what happens. The average farm laborer of the migrant character works 100 to 130 to 170 days a year and then he has unemployment unless he is able to get employment in factories or other areas.

I think this problem, which is the problem of sending hundreds of thousands of people across States lines in interstate commerce, is a problem which commands national attention.

Question. Well, now if he doesn't get into other employment, Mr. Secretary—Senator WILLIAMS I think says he makes about $790 a year. That means he must with his family go on the local welfare rolls. Do you see any chance for the Federal Government giving more money to areas impacted with migratory workers? The welfare aspects?

Secretary GOLDBERG. Senator WILLIAMS has been one of our great leaders in the area of trying to protect migrant labor. As pointed out, this statistic that you mentioned, seven hundred and some dollars, we have to add to it and I am sure he would agree—he agreed with me yesterday when I testified—that they earn in nonfarm employment a few hundred dollars more. The total is about $930, but that can't support a family. So that is true that when we advance standards, despite the common conception we are always increasing costs, that does not necessarily follow, because we are not going to allow these people to starve. And so cost exists in one area or another. The best way to do it is to do what has been done in the distressed areas bill and the area redevelopment bill, where we are now making provisions to encourage the employment of rural labor as well as industrial labor.

Question. Mr. Goldberg, now that there are approximately five and a half or six million people unemployed and continually more being let off their job because of automation, how do you see that we can employ these people and what types of jobs do you think we can fit them in?

Secretary GOLDBERG. You have put your finger on a very important problem. I have estimated that next year we will have to create, if we have full employment, ten and a half million jobs. I have estimated that even if we had 4 percent unemployment we would have to create 7 million jobs.

Now part of this is, we hope, the programs we have advanced already will help. We hope to create better opportunities for business so that private jobs can be created. And we are giving our continuing attention right now, the President and his advisers, to the whole question of whether or not the programs we have thus far advanced are adequate to realize our goal of reasonably full employment in the country.

Question. Mr. Secretary, are our present laws adequate to deal with the gangsterism and corruption in our labor unions?

Secretary GOLDBERG. Well, we have a new set of laws which was enacted about a year ago. It has been my philosophy first of all that laws don't solve all problems, any more than the Ten Commandments solved all of our moral problems in the country. Before I will be ready to go to the Congress for additional laws in this area, I want to study the laws that have already been entrusted to me. After I do so, if I am of the opinion as a Government official in charge of this area that existing laws are not adequate, I will not hesitate to go to the Congress for additional legislation.

Question. Mr. Secretary in relation to the Communist problem, why has it been necessary for the Federal Government to enact laws preventing members of the Communist Party to hold office in a labor union?

Secretary GOLDBERG. Well, because this has been the theory of the Federal Government and I must say with considerable justification, that Communists do not enter labor unions for the purpose of really working in labor unions, but that they enter labor unions for the purpose of carrying out the functions of the Communist Party.

I have had some experience in this area, when I represented the CIO and participated in the expulsion of the Communist unions. And I must say there is considerable validity to this position of the Government.

Question. Secretary Goldberg, in a recent news story of last week it was rumored that Mr. Reuther is rather upset with the President, saying that he has paid far too much attention to foreign affairs and has not put enough attention on the domestic problems of job opportunities and the unemployed.

What answer would you have to that?

Secretary GOLDBERG. First of all it is highly natural and understandable that our President should at the moment be devoting his prime attention to the great questions of survival. This is the question which is involved in foreign affairs, but I must say in all fairness to the President and with due respect to my friend Walter Reuther, I have never had any difficulty going to the President and discussing with him important questions of domestic policy. I have just, 45 minutes ago, finished a 45-minute discussion with our President on the whole area of employment and unemployment.

Question. Sir, William Morton of the Federal Reserve Board said that productivity should be increased and the gain should be passed on to the consumer through lower prices rather than to the unions through—to labor through higher wages or management through higher prices. Don't you agree with this?

Secretary GOLDBERG. Well, I hope the consumer and labor and management benefits from our increased productivity. One of the things we must remember in the country always is that we believe in not a stationary standard of living but we believe in advancing our standard of living. And we have many people in the country who still do not enjoy an adequate standard of living.

Question. Mr. Secretary, here is a theoretical question—utopian one, I guess: We have Mr. Stevenson at the U.N. seeking peace, we have diplomats in Geneva seeking peace. If we did get peace and then a demobilization of the people in the Army, just how would they be absorbed in the labor movement?

Mr. BARBER. Excuse me. I am very sorry to tell you that we will not have a chance to hear the Secretary's answer because we are almost completely out of time. I am sorry, Mr. Secretary.

Secretary GOLDBERG. I am sorry, too, because this was a very good question, but after Korea we had full employment without a tremendous armament budget. I am confident we can achieve it.

Mr. BARBER. Now we will have a final word from our guest in just a moment after this very important message.

[Announcement.]

Mr. BARBER. Secretary Goldberg, thank you very much for being our guest.

Secretary GOLDBERG. It is a great pleasure and I ought to correct myself. I said "after" Korea to you, Tom. I meant before Korea. I am delighted to share these thoughts with you and this bears out that this is the most inquisitive and best informed panel that I have appeared before since I took my office.

Mr. BARBER. Thank you, Mr. Secretary, very much.

Prelude to Plan

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. ROBISON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article "Prelude to Plan," by Neil H. Burlingame, of Binghamton, N.Y. This article is copyrighted 1961 by Mr. Burlingame, and is the sequel to his article "The Great American Deception," which I inserted in the CONGRESSIONAL RECORD on January 12, 1960: "Prelude to Plan" is inserted at the request of Mr. Burlingame, and I feel that it will be read with considerable interest:

PRELUDE TO PLAN

(By Neil Hancock Burlingame)

The American affluent society still hides—and breeds—massive poverty. It is of little comfort to 20 million poor families in the United States to know that the general level of prosperity is rising. It will need more than glowing newspaper reports to convince 60 million underprivileged American citizens that poverty is being wiped out in this country. The politicians and businessmen may ease their consciences by telling America's poor they have never had it so good, but this does not mitigate the hardships of millions of our countrymen who fail in the daily struggle to make ends meet.

Personal income information obtained from the Federal Government proves beyond doubt that poverty in the United States is as prevalent as ever, and that our low-income families are comparatively worse off today than at any previous time in the Nation's history. Furthermore, due to their dwindling share of the national income and the rapid increase in population, poor families are being added to the American scene at the rate of a quarter of a million annually. This hardly jibes with high level assurances that the number of poor families in the United States is rapidly getting smaller and smaller.

Shortly after the article, "The Great American Deception," which presents a statistical study of the poverty situation in this country, appeared in the CONGRESSIONAL RECORD, January 12, 1960, one of the Presidential candidates, later nominated by his party, wrote the author as follows:

"I consider your article outstanding, not only because of its bold statistical attack on an ancient deception, but also because it has penetrated the myth that reforms have been effective in dealing with mass poverty."

It is true that the average family income in the United States is rising. But it is equally true that the poor families' share of the national income becomes less and less. What Government and business spokesmen do not tell us—if, indeed they are aware of it—is that economic gains, if any, resulting from so-called reforms to help the poor, actually benefit principally the well-to-do and the rich. At times these gains may tend to raise the average income, but they fail to help the poor families enough to offset the constantly rising cost of living. In the final analysis, it is the same old story: The rich get richer while the poor get poorer.

While our poor families cannot pay for all the things they need, many are better off in some ways, in spite of lack of money, than in former years. In emergencies, services are available that did not exist before. Progress in food processing and distribution, in medical knowledge and other vital areas, tends to benefit some of the poor. Technological advances make living, regardless of station in life, more enjoyable for many. But these considerations do not alter the fact that the overall poverty problem in the United States is no nearer solution than it was a half century ago. And now, suddenly, the security of the Nation and the whole free world depends upon an immediate solution.

Millions of words have been published lately about the national purpose. Outstanding Americans have discoursed on the subject at great length and with considerable eloquence. Yet everything they have said can be compressed into three simple words. The national purpose, as it always has been, is nothing more nor less than service to mankind—including Americans.

What has inspired this rash of rhetoric about the national purpose? Principally, the worry of our people about the security of the United States. Our welfare and security, thus our capacity to serve, depend upon economic growth, and the rate of that growth is diminishing and is inadequate for our needs. The experts agree that the present rate of growth of 3 percent annually must be doubled if we are to contain the Russian threat to impose dictatorship upon the world.

Measures are proposed, some acted upon, to speed up the economic processes. But those who chart the national course have never seemed to realize that the principal obstacle to necessary economic growth is mass poverty in the Nation. If the poor families of the United States could buy goods and services on a par with the other two-thirds of the population, the rate of economic growth would jump to over 11 percent and far exceed the fondest hopes and calculations of the experts and planners.

Among the many problems confronting the Nation, some of which will continue to serve as an economic brake until they are solved, are the following:

Eight to ten million American workers unemployed, including millions not recognized in official unemployment figures, and the situation getting worse;

Many millions of workers not covered by minimum-wage requirements, working for less than a decent wage, and subjected to abuses which free enterprise imposes for the selfish benefits of businessmen;

A perpetual inflationary business-labor climate which constantly advances the cost of living while undermining the purchasing power of the dollar, thus adding to the burdens of those who vitally need every particle of value that can be extracted from the few dollars that come their way;

Twenty million Americans living in slums, and millions more in substandard housing, while real estate interests and the politicians continue to make living problems for the poor more acute and difficult;

Agricultural surpluses mounting while millions at home and abroad are in need of food, with costs of storage and farmer subsidies falling heaviest on the very ones who receive the least benefits from ample national food production;

Opportunities for small businesses being obliterated by special privileges for, and arbitrary absorption by, the big corporations;

Flagrant abuses of civil rights commonplace in all sections of the United States, imposing further burdens on those already subjected to unfair and heavy economic loads;

Ten million needy older citizens without health insurance, and millions more of all ages, unable to pay for adequate medical care;

The richest and strongest Nation on earth second in many aspects of science, the space race, and in economic growth, while our Government temporizes with international affronts aimed at gaining for our enemies further advantages in military and economic areas;

The rapid increase in juvenile delinquency and crime, while parents and officials shirk their responsibilities in the chase for solely personal satisfactions;

Millions of our young folks without adequate educational facilities and oportunities while billions of American dollars are squandered on doubtful needs and whims of remote populations; and a host of others requiring vast sums presently, or potentially, unavailable from customary tax sources.

The present yearly income of the Federal Government is roughly $80 billion. Over half goes for defense, 15 percent to veterans and the farm program, 13 percent for interest on the national debt. This leaves less than $12 billion which is already allocated to the customary needs of Government. Where will the extra billions for the pressing problems be found? Given reasonably full employment of the labor force under the present rate of economic growth, the Federal income might reach $110 billion in 10 years at current tax rates. But the present percentage breakdown of expense will not materially change, and even with a doubled tempo of economic growth, the Nation will be much, much too late with too little to meet the Russian challenge. We need $50 billion in new Government revenue within the next 12 months, and by 1971 an estimated 10-year aggregate of $650 billion from new or vastly more productive tax sources for special measures on which the national security will depend.

Yet solving many of the pressing problems depends upon, and is not so immediately vital to our people as the eradication of poverty in the United States. Furthermore, many of the lesser problems will almost automatically solve themselves with added Government resources available under a sharply stepped-up economic expansion.

During a prolonged study of the low-income situation in the United States, the implication cannot be avoided that our Presidents, our lawmakers, our economists, and our business leaders, past and present, have never really understood the overall poverty problem in this country, and do not understand it today. They do not seem to have the slightest idea of how to go about it to abolish poverty in the United States. This probably explains why they have never seriously proposed it, and why they have never devised a workable program to accomplish it.

Without going into an extended recital of instances and reasons for failure of high-level efforts to improve the low-income situation, one can be singled out as especially typical of many. Outstanding among the better organized and more publicized attempts to analyze the causes of poverty and to suggest remedies, is the widely heralded Rockefeller report published in 1958. This document served as a basis for recommendations by special congressional committees and other groups proposing legislative help for the poor and to increase employment opportunities. Like so many other attempts to set a course for government and business, close study reveals its fallacies and inconsistencies.

If, as the Rockefeller report suggests, the large segment of our population outside the mainstream of our economic growth were switched to the mainstream—and that would take a lot of doing, and require a long period of years at best—how would these people be able to replace those in better paying jobs, or find new jobs at better pay? Or if new industries were formed to make a place especially for them—which is not likely—how would this change the existing proportion in different levels of pay?

Or if the impediments of cost of geographical movement were removed—and this might well be accomplished almost overnight—where would the travelling horde of workers find new jobs? And if they did find them, how would this change the prevailing ratio between the number of high and low pay workers? And if we could spread the educational opportunities for our low-income workers, where would they find additional jobs except as growth of business and industry kept pace, as it always must, with the mounting needs of a growing population?

While some of the changes mentioned in the Rockefeller, congressional, professional, and other special reports focused on the problem might be desirable, they could not be accomplished quickly enough, and would only evolve over the years at a pace determined by the year to year rate of economic development. Even if they could be speeded up or lumped into a priority program, they would not be enough, nor in time, to meet the needs of the Nation. They would not change the relative position that has endured between our income classes during the past half century. They would contribute little toward a solution of the perpetual and puzzling poverty problem.

Poverty has always plagued mankind. There apepars to be no accredited account of its having been abolished in any country in all recorded history. The Bible mentions the prevalence of poverty before and during the time of Christ. It even suggests that poverty will be always with us. Many Americans believe it can never be wiped out. Many believe it is a necessary evil in an economic system where men have individual freedom and are entitled to all their labor and ingenuity can acquire for them. But there never before was an America with enough of everything for everybody if properly channeled with fairness to all.

Some top-rated college textbooks for economics instruction tell us that our economy has never produced, and still is not producing, enough to provide everyone with what they need. The implications of such statements are utterly misleading and false. They reveal how little some of our most highly regarded economists know about the poverty problem. During the past 50 years there has been more than enough, or the capacity if well directed to produce enough, for every man, woman, and child not only in America but including some of the other countries of the world as well. But goods and services, even in the United States, are generally unavailable except to those who can pay for them.

And here is the shocker for our conventional thinkers in Government and business: Poverty can be completely and permanently eradicated in the United States within the next 10 years.

Under favorable circumstances it can be accomplished in 5 years. Not by legislation. Not by channeling more wealth to the top to trickle through to the folks at the bottom. Not by handouts. Not even through Christian faith. But only as a result of some basic changes in the attitudes and thinking habits of the American people. And poverty extinction can be effected without upsetting cherished institutions, or depriving the American people of their rights under the Constitution of the United States and the laws of the land.

Finally, as the most important element in a successful cold war program against the Russians, the abolishment of poverty in the United States as an economic, social, and ideological accomplishment, would be worth far more, and cost far less, in our efforts to gain the respect and love of peoples of the world, than all the billions of dollars we have given away, or the billions more we may be beguiled into surrendering for ephemeral friendships.

As a caution: Let us not get into prolonged controversy over details and lose sight of the broad needs of the Nation. It does not matter if the Government requires $50 billion, $500 billion, or $5 trillion in extra funds during the next 10 years. Whatever is needed, the American economy must provide. It is certain that present Federal revenue, or even that obtained from a doubled rate of economic growth, will not be enough for the programs that must be completed to successfully fight the cold war. Wanted: A writer of national distinction to help interpret the American plan to the American people.

Duval Engineering & Contracting Co.

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1961

Mr. CRAMER. Mr. Speaker, on April 19 of this year I voiced, on the floor of this great body, my opposition to the awarding of a Government contract to the Duval Engineering & Contracting Co., of Jacksonville, Fla., for the construction of a Saturn rocket complex at Cape Canaveral. My objections to this company's receiving any Federal Government contract was founded on the basis of proven fraud perpetrated by two of its supervisory employees who, before a Federal district court, were found guilty of fraud against the Federal Government in lightloading asphalt on the Mayport Naval Base under a construction contract awarded to the Duval engineering firm.

At that time, I pointed out that the Federal district judge who tried them concluded that they were taking the rap for the management of the company and this was borne out by the fact that they are still employed by Duval. At that time I also pointed out that Duval was removed from the State of Florida's bidding list because of fraud committed against the State as well as making payola to State employees a common practice. I further cited the conclusion of the Federal district judge concerning Duval's philosophy which, in the words of the court, was "to cheat the Government if you can."

On April 21, in spite of my objections, in spite of the Federal court's conclusion, in spite of two convictions, in spite of Duval's removal from the State of Florida's bidding list, and in spite of their record of fraud perpetrated against both State and Federal Governments, the U.S. Army Corps of Engineers awarded this company a one-quarter million dollar construction contract for construction of the Saturn Complex at Cape Canaveral. May I point out that this company was denied a State contract, on which they were low bidders, the same day they received the Federal contract.

Following the awarding of this contract, I held a meeting with four representatives of the Corps of Engineers at which time I requested an explanation for their awarding this contract before thoroughly investigating my revelations, I having notified them about the highly questionable activities of this company 2 days in advance of their awarding the contract.

I received the Corps' reply today and it reveals that they have no intention of withholding the contract.

Paradoxically, I also received today a copy of a letter sent to the Governor of Florida, Hon. Farris Bryant, by the senior U.S. district judge who was assigned to and tried the Duval case, the Honorable Albert L. Reeves, of the western district of Missouri. Judge Reeves said:

U.S. DISTRICT COURT,
WESTERN DISTRICT OF MISSOURI,
Kansas City, May 2, 1961.

Re. Duval Engineering & Contracting Co., Jacksonville, Fla.

Hon. FARRIS BRYANT,
Governor of Florida,
Capitol Building, Tallahassee, Fla.

DEAR GOVERNOR BRYANT: While holding court in Jacksonville, I tried a criminal case involving short loading on the part of the employees of the above-named company. They were both properly convicted for the reason that habitually, and almost daily, they caused a shortage of concrete designed for the runways of a Government airport.

It was obvious from the testimony that the acts of these employees were mere symptoms. The contracting company was performing a Government contract. Because of the extreme shortage in concrete loading, and because the Government knew about it, the company made a refund on the basis of a shortage of 451 tons; this, however, did not cover the entire shortage. From the testimony of witnesses, including the president of the contracting company, it appeared that the Government had not only been defrauded on the basis of a greater shortage than was accounted for, but that the employees were acting for the contracting company and were simply obeying orders. They did not profit—the company did.

I considered that the treatment of symptoms was of no value in the enforcement of the law, and granted probation to the two employees.

An effort should be made to remove the cause of wrongdoing and such an effort would reach fruition by denying an unworthy contracting company the right to be awarded Governmeht contracts under any circumstances.

It is for these reasons that I commend the authorities in the great State of Florida for denying Duval Engineering and Contracting Co. any further contracts. Companies of this character and repute should be taught that fair dealing is not only proper, but necessary in doing business with municipalities.

I take occasion to congratulate you on the splendid executive work you are doing in a great State.

Sincerely yours,

ALBERT L. REEVES.

This letter certainly evidences the degree of concern in this matter by the judiciary and is, to be sure, a highly unusual statement for a district judge to make. Obviously, he is incensed at what he believes to be a great miscarriage of justice, and I most emphatically concur with him. I believe this letter to be most significant in that Judge Reeves is probably the man most familiar with the case, having tried it recently.

In light of this mounting evidence against Duval, I can see no alternative but to have the Corps of Engineers revoke this contract. And, in light of the fact that, since 1957, Duval has been awarded nearly $18 million worth of Federal-aid highway contracts, I will repeat my request that the Roads Investigating Subcommittee, on which I am ranking minority member, thoroughly investigate these projects in order to find out if the Federal Government has been defrauded on this $18 million worth of Federal-aid highways.

Senator KARL E. MUNDT, ranking minority member of the Senate Permanent Subcommittee on Investigations, presently conducting hearings on defense contracts, has already taken the lead in that body having requested an explanation from the U.S. Corps of Engineers concerning Duval's being awarded this Government contract.

Memphian Takes Command of Guided Missile Carrier

EXTENSION OF REMARKS
OF
HON. ROBERT A. EVERETT
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1961

Mr. EVERETT. Mr. Speaker, on Saturday, April 29, 1961, I had the honor and privilege of witnessing the commissioning of the Navy's big new carrier, the U.S.S. *Kitty Hawk*. The impressive ceremony was on this huge carrier's deck at the Philadelphia Navy Shipyard.

The commanding officer of this new carrier is Capt. William Floyd Bringle, a native of Covington, Tenn., which is in the Eighth Congressional District, the district which I have the honor of representing in this body.

There follows a very vivid description of this commissioning by an excellent writer, Morris Cunningham, of the Commercial Appeal of Memphis, Tenn., an outstanding newspaper of the Nation. There also follows an editorial from the hometown newspaper of Captain Bringle, the Covington Leader, an outstanding weekly newspaper of the Nation. The leader is edited by Joe Buford and the managing editor is William C. Simonton:

[From the Commercial Appeal, Memphis, Apr. 30, 1961]

MEMPHIAN TAKES COMMAND OF GUIDED MISSILE CARRIER

(By Morris Cunningham, staff writer)

PHILADELPHIA, April 29.—Capt. William F. Bringle, Jr., of Memphis and Covington, Tenn., smartly accepted command of the huge *Kitty Hawk*, the world's first guided missile aircraft carrier, at commissioning ceremonies here Saturday afternoon.

As a host of notables looked on, the stern-faced 48-year-old graduate of Byars-Hall High School in Covington briskly stepped forward, read his orders, and assumed command of the 80,000-ton carrier.

In quick order, Captain Bringle directed his executive officer to set the watch, and proceeded with the other steps in the colorful, traditional ceremony.

Captain Bringle, in accepting command, called it "the high point of my years of Navy service." He pointed with pride to the magnificent fighting qualities of the ship and with a word to the crew said, "it is up to us to develop a ship with a fighting spirit second to none * * * we promise to devote all of our efforts to molding the *Kitty Hawk* into an efficient fighting ship."

At the conclusion the giant craft, which already has undergone sea trials, became an active unit in the U.S. fleet and America's latest contribution to the preservation of world peace.

Guests here for the ceremony included a score of Congressmen, among them Representative Robert A. Everett, Democrat, of Tennessee, who represents Captain Bringle's home district, Representative James B. Frazier, Jr., Democrat, of Tennessee, and Representative J. Carlton Loser, Democrat, of Tennessee, the captain's wife, his daughter, Lynn Bringle, 14; his son, Donald Bringle, 6; his mother, Mrs. William F. Bringle, Sr., his brother, and sister-in-law, Dr. and Mrs. Carey Bringle, all of 1639 Peabody, Memphis.

ADMIRAL BURKE PRESENT

Adm. Arleigh A. Burke, Chief of Naval Operations, delivered the principal address and was the senior officer present. A Navy band played the national anthem during the commissioning.

The *Kitty Hawk* is unique because it is the first carrier to depend upon guided missiles, rather than conventional antiaircraft weapons, for its surface-to-air defense.

Rapid-fire advanced Terrier missile batteries replace the conventional dual-purpose 5-inch guns.

The Terrier is a missile about 15 feet long and about a foot in diameter and weighs about 1,100 pounds. It is propelled by a booster rocket of about the same length, but thicker, that weighs nearly 2,000 pounds. Automatic loaders enable two-missile salvos to be fired seconds apart.

Electronic brains in the missiles cause them to follow a thin radar beam that is projected from the *Kitty Hawk* to the target. The missiles explode when they hit the target.

LATEST TYPE PLANES

For additional defense, as well as for attack, the *Kitty Hawk* carries the very latest type of carrier-based planes. The planes, which can range out to distant targets, are equipped with missiles that can carry nuclear warheads.

Takeoff time is trimmed to minutes by high-speed elevators and other equipment designed to place planes in the air in minimum time.

The carrier, one of the world's biggest ships, is 1,047½ feet long, and 252 feet abeam. The flight deck measures 4.1 acres. The hangar area for handling, parking, and repairing of planes, measures another 2 acres. It is fully air-conditioned, and provides sleeping quarters for a crew of up to 3,855 men.

APPOINTED BY COOPER

He was appointed to the U.S. Naval Academy by the late Representative Jere Cooper, Democrat, of Tennessee, and was graduated in 1937. He was comissioned an ensign, and advanced steadily until he became a captain July 1, 1955.

During World War II he saw service both in the Atlantic and the Pacific. He was awarded the Navy Cross and the French Croix de Guerre for heroism in the invasion of France. Later in the Pacific area he commanded a cruiser squadron that made numerous strikes against the Japanese. There he was awarded the Distinguished Flying Cross with 5 gold stars, and the Air Medal with 16 gold stars. He remained on active duty, accepting a variety of assignments, after World War II.

[From the Covington (Tenn.) Leader, Apr. 27, 1961]

A HIGH MARK

Saturday morning in Philadelphia, the helm of the Navy's newest, biggest, and presumably best, aircraft carrier was turned over to Navy Capt. William Floyd Bringle.

As a community, we can justly take pride in this announcement. Captain Bringle's people lived in Covington, he was born here, and he attended the local schools. He has many friends here who went to school with him and still remember him well, although he has not been back in several years.

The command of a ship such as the *Kitty Hawk* is a tremendous responsibility. That Captain Bringle has been selected by the Navy for the job, should be a real and bona fide inspiration to all of us here, especially the younger people. It shows just what personal endeavor and a little hustle can do if a man has the ambition to move up in this country.

Captain Bringle had no more advantages than most of us here—he graduated from Byars-Hall, and then attended a military academy until he got an appointment to Annapolis.

Being a captain in the Navy, while being a noteworthy achievement in itself, is not so much of an outstanding accomplishment—the Navy has lots of captains; they are comparable in rank to a colonel in the Army.

That Captain Bringle was selected above all the other captains to command the *Kitty Hawk* is more than ample evidence that the man has a lot on the ball and why we should feel community pride in his achievement. His command might be likened to being placed in charge of a multi-million-dollar business with several thousand employees.

He has set a high mark for the upcoming youth of this county to shoot at.

When Are We Going To Face Facts on Foreign Aid?

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1961

Mr. ALGER. Mr. Speaker, the following editorial from the Wall Street Journal should make us pause and think before we approve additional billions of American taxpayers' dollars being spent on foreign aid. Is it not time we ask ourselves just what we hope to accomplish through foreign aid and how close we are coming to our objective? Are we spending the money of the American taxpayer in the best interest of our own country or are we using it to subsidize socialism around the world? Is it not time we received some firm commitments from those we help so generously instead of pouring money into countries who lavish praise upon the Soviet Union any may even be lined up with the Communists in any showdown?

I urge the Members to read the editorial and ask themselves these questions:

NINETY-BILLION-DOLLAR LESSON

Secretary of State Rusk said the other night that 14 years' experience in handing out some $90 billion in foreign aid has taught this country a few lessons. He indicated that the most important of these is that aid, to be effective, must have clear targets and be carefully planned.

While Mr. Rusk was making these remarks, it became known that the United States plans to lend Socialist India $1 billion in the next 2 years. The state planners in New Delhi need the money because they have spent and borrowed themselves to the verge of bankruptcy on a variety of overambitious industrialization projects. The country's third 5-year plan is said to need a stiff hypo of foreign cash if it's not to crumble completely.

The United States plans to turn over the funds on a blank-check basis, with the New Delhi Socialists free to spend the money according to the same policies that have gotten India into gigantic debt in the first place. As part of the deal, however, Uncle Sam is considering helping New Delhi with two specific projects: A state-owned nuclear powerplant and another state-owned steel mill.

This brings up a couple questions. First, is it a clear target of U.S. diplomacy to further entrench socialism in India? And secondly, putting aside for a moment the fact that a billion-dollar boost for India will hardly help Uncle Sam's balance-of-payments problem, is it careful planning to mire India in still more debt? Another billion will bring the total U.S. aid to India to nearly $5 billion.

Mr. Rusk is certainly right when he says the Government should carefully plan its foreign-aid spending and aim it at clear targets. But when do we start?

Partisan Nominations Held Without Effect on Judicial Attitude

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1961

Mr. KEOGH. Mr. Speaker, in the preliminary discussions which accompanied the recently passed bill increasing the number of judges in the U.S. courts, some commentators sought to make political capital from the fact that all of the appointments under this bill would be made by a Democratic administration.

The basis of this argument was that such appointments would necessarily be objectionable because they would be made under the auspices of a political party.

One of our colleagues the gentleman from Connecticut [Mr. MONAGAN], in a letter to the New York Times skillfully and effectively demolished this argu-

ment. I feel that the rebuttal which he made is important enough to be brought to wider attention than that of the readers of the letters column of the New York Times and I append Representative MONAGAN's letter herewith:

PARTISAN NOMINATIONS HELD WITHOUT EFFECT ON JUDICIAL ATTITUDE

To the EDITOR OF THE NEW YORK TIMES:

When one considers the history of judicial appointments to the Federal bench nothing could be less founded in fact than Prof. Robert Dixon's contention in his recent letter that partisan nominations lead to judicial partiality.

Without going so far as to advocate purely political designations, one must conclude that a review of past nominations clearly demonstrates that there is little connection between the nominal political affiliation of an appointee and his approach to the legal questions with which he deals as a member of the judiciary.

Justice Black is perhaps the greatest example of the fallacy of this argument. When he was named to the bench his nomination was criticized as being a threat to civil liberties. A former member of the Klan, he was opposed on the grounds that he could not, because of his former associations, exercise impartiality in the consideration of constitutional cases in the field of civil rights.

ACCUSATION OF CONSERVATIVES

Yet today Hugo L. Black is the archprotector of civil rights, a justice who is accused by some conservatives of desiring to strike down without discrimination all laws directed at the elimination of subversion and the restraint of freedom of expression.

Harlan L. Stone was Attorney General under President Coolidge and was named to the bench as a Republican. Yet many of his opinions—notably his dissent in the Agricultural Adjustment Administration case—rank as landmarks in the liberal approach to constitutional questions.

Earl Warren, a Republican Governor of California, and a candidate for Vice President on the Republican ticket, is the author of the liberal opinion in *Brown* v. *Board of Education*, a milestone in liberal opinion in the field of racial discrimination.

Oliver Wendell Holmes, Jr.—sounded out in advance by Theodore Roosevelt, and nominated as a Republican Justice—gravely disappointed the President who named him. In the *National Securities* case, he was described by the ebullient Chief Executive as being a judge "with a backbone like a banana" and went on to become a darling of the liberals and an outstanding proponent of freedom of legislative action in the field of social legislation.

CRITICISM OF LIBERALS

Felix Frankfurter, a leading critic of the course of the judicial process in the *Sacco and Vanzetti* case, is today criticized by some as being hypertechnical and overconservative in civil liberties and free speech cases which reach the Supreme Court.

From these examples, it can be clearly seen that there is little connection between a man's political affiliation or his prior station in life and the attitude he takes when, as a member of the Federal bench, he deals with questions of great import.

His prior party allegiance may qualify him for nomination under our system. But when he is a member of our great Federal Court, relieved of obligation and sworn to the impartial administration of justice, he usually deals with the matters which come before him on their merits and in what he considers to be the best interests of the country.

JOHN S. MONAGAN,
Member of Congress.

WASHINGTON, *March 27, 1961.*

Legislating for Votes

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1961

Mr. ALGER. Mr. Speaker, in rushing through many measures demanded by the administration, much of it designed to expand Federal programs and controls, it may be that Congress is arousing suspicion that we may be playing politics with legislation. Just last week we pushed through a $9 billion highway bill which is going to cost every taxpayer of this Nation additional money and we did it without even a record vote. The handling of some of the other legislation has been equally haphazard and could well lead many citizens to believe that some are more interested in votes than in responsible government. In this light, I call the attention of the Members to the following editorial which appeared in the Wall Street Journal. Maybe we should take a little more time to study the legislation we pass before giving way to administration pressure:

ETHICS AND POLITICS

With so much high-sounding talk about "conflict of interest" and the presumed need for higher ethical standards in government and business, maybe it's time for some down-to-earth thinking about the state of political morality in Washington, D.C.

We have in mind, among other things, a brace of brandnew laws Congress has obligingly presented the President very much as he asked for them. Both the minimum-wage and the depressed-areas laws are marvels of political hypocrisy. We don't say they are the worst in the long history of politicking, but they are bad enough.

The basic concept of the minimum-wage bill has been described this way: Extend coverage to as many workers as possible while incurring as few enemies as possible. By noting that the law covers 3.6 million workers not previously included, the politicians can trumpet their compassion for the "poor little people."

That is a sham. The law excludes many workers—certain hospital workers, agricultural laborers, laundry workers, for example—who actually make less than $1 an hour. Such exclusions are not difficult to fathom; to take just one, the powerful congressional farm bloc wouldn't hear of bringing in agricultural laborers. Indeed, a small group of workers in the South that were previously covered are kicked out under the new law, in order to make it more palatable to southern politicians.

At the same time the measure extends coverage to many whose wages are far above present or prospective minimums. A choice instance is the inclusion of 1 million construction workers. The average hourly pay of construction workers in this country is $3.32. The reason for dragging them in is purely and simply to pad the apparent coverage and so make it appear that the Government is doing a lot for a whole lot of people.

This fraudulent law has good company in the depressed-areas measure. The definition of such an area is one where unemployment is above an arbitrary percentage. First of all, the Government makes only the most superficial attempt to discover how many people in this country are genuinely unemployed, in the sense that they are able and willing to work and actually looking for any work that will keep them off the governmental doles. Thus the very premise of the depressed-areas legislation is faulty.

Beyond that, it is designed to attract industry to areas whose problem of the moment is an excess of industrial capacity for immediate needs, while providing no assurance of attracting industry to economically unappealing areas. Some of the law's more candid supporters admit their doubts that it will do anything to relieve unemployment. The all-important political point is that it is a means of channeling nearly half a billion dollars to politically appealing areas.

More generally, it is becoming clear that this administration and this Congress propose to pursue their political spending plans with little regard to the Government's financial condition. Unless they change quickly and abruptly, they are setting the country on an inflationary course. That means shirking one of the Government's most basic moral responsibilities, the preservation of honest money.

We would want it well understood that we are not against politicians or politicking. In our Government a President is perforce a politician. In the nature and diversity of our political society, compromises in Congress—logrolling if you wish—are necessary and frequently desirable. In this way it is possible to reach something like a consensus of the country; it is frequently possible to defeat or modify dangerously extreme legislation.

But what is striking about many in this administration and this Congress so far is the high degree of political cynicism they have brought to Washington; the virtues of politics, after all, can turn into vices, as when they produce legislation and actions in clear conflict with the public interest.

So it is perhaps not out of place to suggest some examination of consciences in Washington. If that is asking too much, the public should at least take a good look at what is going on in its name.

The Veterans of Foreign Wars of the United States Deplores the Showing on Television of May Day Parades in Moscow

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1961

Mr. VAN ZANDT. Mr. Speaker, the Veterans of Foreign Wars of the United States, whose zealous efforts resulted in the approval of legislation designating May 1 of each year as Loyalty Day, sent a telegram to officials of the National Broadcasting Co. protesting the showing on television of the annual May Day parade in Moscow.

Observance of Loyalty Day, May 1, was conceived by the VFW as an effective means of counteracting the publicity given the annual May Day celebrations staged by the Communists in New York City. Loyalty Day celebrations have proved a powerful antidote to Red demonstrations in the United States and are worthy of the widest possible support and publicity.

The following telegram which I received on April 28, 1961, contains the text of the protest to NBC officials:

KANSAS CITY, MO., *April 28, 1961.*

Hon. JAMES E. VAN ZANDT,
House Office Building,
Washington, D.C.

The following telegram in protest has been forwarded to Robert W. Sarnoff, Robert Kintner, and Brigadier General Sarnoff:

"The Veterans of Foreign Wars of the United States bitterly opposes proposed showing by National Broadcasting Co., of the Communist May Day parades in Moscow. The Veterans of Foreign Wars, and many other patriotic groups in the United States, have spent much time and effort in promoting Loyalty Day in this country to counteract the effects of Red May Day celebrations throughout the world. In fact, Brig. Gen. David Sarnoff has participated in the Loyalty Day parade in New York and I am sure he is fully familiar that until the Loyalty Day parade were started in New York City, May Day was celebrated by huge parades in New York City by Communists and fellow travelers. It seems strange that National Broadcasting Co. should ignore Loyalty Day celebrations in the United States while stimulating interest in communism through extensive coverage of the Moscow May Day parades."

I trust that you agree with my protest in this instance and will join me as we all know that May Day parades in Moscow are forced parades and are not participated in by the citizens on their own volition. In my opinion, the best interest of our country in our fight against communism cannot be served by programs of this type.

ROBERT E. HANSEN,
Senior Vice Commander in Chief
(In the absence of T. C. Connell, Commander in Chief, Veterans of Foreign Wars of the United States.)

Civil War Centennial Address by W. Houston Barclay

EXTENSION OF REMARKS
OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, May 8, 1961

Mr. ROBERTSON. Mr. President, the adventure, the suspense, the agony, and the final tragedy of the War Between the States came to many communities, large and small, North and South, in a variety of ways.

The broad impact of the war on our civilization can never be fully understood without some appreciation of what it meant to the people it engulfed.

Mr. W. Houston Barclay, a descendant of a Valley of Virginia pioneer family, and a member of the Rockbridge Historical Society, described this recently in an address at the court house of my hometown of Lexington, Va., on the 100th anniversary of the departure of the first troops from Rockbridge County for the conflict. I ask unanimous consent to have printed in the Appendix of the RECORD, the text of his remarks, from the May 4, 1961, edition of the Rockbridge County News.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"LEXINGTON AND ROCKBRIDGE COUNTY GO TO WAR"—CENTENNIAL ADDRESS GIVEN BY HOUSTON BARCLAY

(NOTE.—The text of the address by W. Houston Barclay at the recent Rockbridge Civil War centennial observance is published below. Mr. Barclay spoke at rites on the courthouse lawn sponsored by the Rockbridge Historical Society. The occasion was the 100th anniversary of the departure of the first county troops for the conflict, and a tablet honoring Rockbridge war dead was unveiled).

One hundred years have passed since our country went thorugh the period of its greatest trial. Before we start on the account of the Civil War itself and the effect on Lexington and Rockbridge County we must go back a few years before 1861 so that we may understand why our people felt and acted as they did. For those who do not know this history would have a hard time being sympathetic with them.

This part of my talk I have called "The Union Must Be Preserved," for this is the phrase most often heard repeated in the accounts of this period. As early as 1850 Judge John White Brockenbrough, of Lexington, in an address pleaded with his people to "stay the tide of fanaticism which is sweeping our land." Also in 1855 William Cabell Rives had spoken "to drive the spirit of fanaticism and sectional hostility from our land, which is leading to a struggle between blood brothers." Wise leaders here agreed that because Virginia was a border State it would most likely be the battlefield, and therefore they were much concerned.

The Virginia Assembly at Richmond sent out an invitation to all the southern States for a 'Peace Convention" to be held in Washington, D.C., on the 4th day of February 1861, at the Willard Hotel. Of the 34 States invited 21 responded by sending 133 delegates. These men were most earnest in trying to stop the coming onslaught and hold the Union together and by doing this to prevent a war. This same day 6 southern States that had already seceded from the Union met in Montgomery, Ala., and formed the "Southern Confederacy."

As we look back on this Peace Convention it is very easy to criticize it. In one way they missed the mark completely by not facing the facts but the resolutions that they formed after 23 days of debate were first "to try to hold slavery South of the 36° N. latitude and second to enforce the fugitive slave law. Both of these resolutions were voted down by the Congress of the United States.

Meanwhile, the secession convention of Virginia in Richmond kept trying to get an agreement among its members and a great uncle of mine, Samuel McDowell Moore of Rockbridge, was burned in effigy for a fiery speech he made in favor of the Union.

About this time Maj. T. J. Jackson of Lexington accompanied a detachment of Virginia Military Institute cadets to Harpers Ferry and they were present at the hanging of John Brown.

FAMILIES DIVIDED

Families were divided on the subject of preserving the Union at all costs and great misunderstandings were nurtured. Dr. George Junkin, president of Washington College was a strong Union man. His family was badly divided on this subject and one daughter and a nephew sided with the Doctor while another daughter, who had married Col. John T. L. Preston, a Lexington man, and her two brothers sympathized with the South. In fact, these two brothers were in the southern army. Another daughter who had just died was the first wife of Maj. T. J. Jackson. It was largely from the dairy of Mrs. Preston, a northern woman; that I have obtained much of my information for this talk.

Many other families were divided in the same way, which is one of the things that make a Civil War so horrible. Even as late as April 26, 1861, the "Southern Churchman" published a plea for peace. It said, "Some Christians think there is more power in a bag of gunpowder than in the arm of the Almighty."

On April 15, 1861, came the great blow. President Lincoln called for troops from Virginia to help bring the seceded Southern States back into the Union. April 12 Fort Sumter was fired upon and on April 17, 1861, Virginia seceded. The curtain was raised on one of the greatest tragedies in our history, for the Civil War was both futile and unnecessary.

Mr. Lincoln's call united all Virginians in one great cause to protect the State. Now nothing mattered but the preservation of Virginia and all the people of Rockbridge and Lexington began working together. I said all but this was not true, for there was a small group who refused to join the army or help in any way. Among these were a few merchants. These people were called "Yellow Dogs" and some of them were pointed out to me years later. But on the whole the better citizens responded bravely. From my family, my father and nine uncles were in this struggle. What stories I have heard, for strangely enough though most of them were wounded all came home alive. They talked about the war every day as long as they lived.

War was declared.

Bands played "Dixie."

Girls sang and put cockades of red and blue ribbon in their hair, the first symbol of the Confederacy.

Boys marched. The young men of Rockbridge County had been drilling and forming companies for some time before this. The Rockbridge Dragoons were organized in November 1859. Now a vote was taken in the county as to the advisability of Virginia seceding the result 1,728 for secession and only one vote against it.

LOCAL UNITS LEAVE

Gov. John Letcher (a Lexington citizen) called for volunteers for the southern Army. The day after Virginia seceded the Rockbridge Rifles marched to Staunton 103 strong. The same day the Rockbridge First and Second Dragoons with 60 men each left for the same destination. On Sunday, April 21, the Virginia Military Institute cadets under Maj. T. J. Jackson left Lexington for Richmond, where they took over the training of officers for the Confederate Army. All of these cadets became officers themselves in the years that followed.

These companies gathered in this courthouse square for a blessing and prayer by the ministers of Lexington, before leaving. Washington College professors and students were drilling on the campus under instructions by the VMI cadets before these men left for service.

After Mr. Lincoln's call and before Virginia seceded a Confederate flag was raised on Washington College. Dr. Junkin, the college president, ordered it taken down and a wise student said that as Virginia had not seceded they had no right to put up the flag, so it was agreed to take it down. A few days later it was raised again, and Dr. Junkin, his daughter, and a nephew left Lexington for Philadelphia.

The next company of which we have a record was the Rockbridge Artillery which was formed April 21, 1861, with 70 men. Gen. William N. Pendleton, of Lexington, the Episcopalian minister and a graduate of West Point Military Academy was elected the com-

mander. Colonel Poague in his book states that many men from over the mountain in Charlottesville at the University of Virginia came to join these Rockbridge companies because of their outstanding leadership. This was also helped by the fact that Sandy Pendleton, a son of the general who later became a member of General Jackson's staff, was a student at the University of Virginia. Also there were many Southern States represented among the students and cadets in Lexington.

The cavalry and artillery companies were outstanding for the care given their horses. This was due to the fact that a large number of the men in these outfits were Rockbridge County farmers, and knew how to select and care for their mounts.

There was much interest among the colored people of the county in forming a company of their own and Col. James Cole Davis was appointed to organize such a company.

The Liberty Hall Volunteers, named for a company from this area that fought in the Revolution under the president of Liberty Hall Academy, Dr. William Graham, was organized at Washington College on June 8, 1861, and my father than a student there at the age of 17 was among their number. They left Lexington after a period of prayer and worship led by Dr. W. S. White, minister of the Presbyterian Church. They were mustered in at Staunton the next day.

HEAVY TOLL

From then on for several months companies were leaving Rockbridge County for the army, a list of 15 in all. Two of this number were formed at Brownsburg, a company of rifles and one of cavalry.

In Rockbridge during the whole war 2,343 men enlisted. This was 86 percent of the manpower of the county according to census, and 37½ percent of these men never returned, but were killed or died in service. One strange thing was that all this time the people thought it would be a short war. Colonel Poague states that his law partner in Lexington wanted to go at once for fear the war would be over before he could enlist. Mr. Lincoln's first call for men was for three months' service.

The county women were not idle during these first days. The ladies of Brownsburg made 80 coats, 80 trousers, 80 knapsacks, 80 canteen covers, and 10 tents in 1 week for one of their companies. The years dragged on, and the time between 1861 and 1863 was known as the "Middle Years." Lexington and Rockbridge County during this period did not suffer nearly as much as they were to do later on.

Rockbridge people were chiefly concerned now with caring for the sick who came home, burying the dead, supplying the army with food and clothing and providing for their horses. Business in our towns was about at a standstill as supplies had to be gotten through the blockade and money was so scarce the people could buy nothing. The population of this area was composed mainly of women, old men, children and ex-slaves.

THE LADIES' WORK

The ladies formed Aid Societies and worked in the town churches making supplies which were shipped to the hospitals. One of these hospitals was at Alum Springs one at the White Sulphur and one at Staunton. There was another at the fairgrounds in Lexington and later in the war one was established at Washington College. The fairgrounds hospital had 150 beds and most of the time was filled with cases of smallpox. The ladies aid societies sent everything that they could possibly spare—beds, carpets, food, tableware, money, blankets, quilts and sometimes they gave the services of their servants. All the window curtains were used as bandages. Nothing was too good for our wounded and sick soldiers. All the ladies asked in exchange was that their men wherever they were would receive the same loving care.

Lexington was divided into seven parts and each part was responsible for a hospital a week. For example the wagons for Staunton left every Thursday loaded with all that was collected and made for that week in that section of town. After a time when all of the men were gone the Masonic Halls were used as workshops.

The Ladies Aid Society of Natural Bridge did a unique thing. They offered their houses for men on furlough who were too far away from their own homes to go there. Also the sick and men recuperating from wounds were cared for by them. The same was done in other parts of the county but not on as large a scale.

Colonel Poague tells that he came to his house near Falling Spring after being badly wounded and that he realized that his family did not have enough food to divide with him. His mother and sister were going without in order to feed him so he left and went back to the Army in order to relieve the strain on his people at home. He also stated that when he returned he took with him 60 new recruits from the county to the Army.

The Society of the Southern Cross was organized among the ladies and their special task was the making of surgical dressings for the hospitals.

The Lexington chapter had 70 members. When the boys came home hidden supplies were brought out and given to the neighbors to help them meet the need.

The town streets became almost impassable for there was no money and there were no men to work them. May 15, 1963, was a day never to be forgotten in this county. Gen. Stonewall Jackson was buried here. For the first time some of the inhabitants began to believe that maybe God was not on their side.

Exactly 1 year to the hour later the Battle of New Market was fought and the young cadets from Virginia Military Institute were present; 10 were killed and 45 boys and two officers wounded..

Whenever the stage coach arrived in Lexington everyone who could, ran to hear the news. Lists of wounded and killed were posted and the small boys who read the lists spread the news rapidly to the relatives and friends. We cannot picture a town without telephones, telegraph, radio, or television. How hungry they must have been for word of their loved ones, for often they had heard the cannonading and knew that a battle was in progress.

The doors of Lexington were never locked and this is a great compliment to the colored men of the town who were the only young men left at home, but the citizens had such perfect confidence in them that they never dreamed of any trouble.

THE BLACKEST DAY

Now came the blackest day in the history of Lexington. On June 7, 1863, news was received here that the Federal army of Gen. David Hunter (who was a Virginian by birth) was in Staunton and coming this way.

The town began to gird itself for the shock. Supplies were hidden along with the family silver and other treasures. All animals that could be moved were driven to the mountains, soldiers on furlough or wounded were moved to places of safety, June 11 the first scouts arrived in town. Mrs. Preston tells in her dairy of seeing a squad of cavalry in Confederate uniforms passing her front gate. She called to them to hurry for the Yankees were coming and one of them cursed her and said they were northern spies. Then came the infantry after the town had been shelled by cannon from across the river. Forty houses were hit beside the Virginia Military Institute and Washington College, although General Hunter in his report says he did not shell the town. The Confederate Army burned the bridge over what we now call the Maury River to slow down the progress of the Federals.

The houses used by the northern generals as headquarters while in Lexington were the Jacob Fuller house, the Francis H. Smith house, the Prof. James J. White house. At 9 a.m. the Virginia Military Institute was set on fire and burned. They burned it because this was State property and also because the Virginia Military Institute was doing such a fine job training soldiers for the southern Army. Gov. John Letcher's home was also burned.

As the infantry entered town the men began looting the houses on the pretense of hunting for Confederate soldiers, but taking all food found and anything else that pleased them. This of course frightened the occupants. Mrs. Preston's diary gives a full description of what went on. She said she wrote it down so that she could send it North to her father so he could know how they behaved. She and her daughter hid the family table silver and her brother-in-law General Jackson's sword under their hoop skirts all the time the Federal troops were around.

I also remember a family story of how an ex-slave slept on the doorstep of my grandmother Barclay's house with an ax to protect the three lone ladies in the house. The library at Washington College was looted and the guard at my grandfather Moore's house gave their cook a Greek dictionary for making him a pot of soup. Washington College was saved by a board member's going to General Hunter and telling him that Gen. George Washington had given the money to build the college.

On Thursday, June 14, the Federal troops left as quickly as they had come and carried away the Washington monument from in front of the Virginia Military Institute. This was returned after the war. The town of Lexington began to breathe again and lick its sores and adjust to an even more frugal life than it had known before. An average supper here at that time was hot milk poured over a slice of toast or occasionally a bowl of grits. As my father used to say about his northern prison experience, "We had a dried apple for breakfast, a glass of water for lunch, and let it swell for supper." That was almost as bad as it was in Rockbridge County in those days.

When the Yankees left a number of the young colored people went with them.

PRICES SOARED

Prices in Lexington after Hunter's raid are recorded as $30 for a gallon of sorghum, $6 for a pound of candles and $250 for a barrel of flour. This was for the people who had the money but most trading was done by exchange for some other product.

Colonel Preston sent his family for Christmas 1863 from Richmond a pair of rubber shoes for his wife for which he paid $30, some old illustrated magazines picked up in the barracks for the smaller boys, a piece of dress goods given him by a friend for the older daughter, a bridle picked up off a battlefield for the older boy, and as a special gift some writing paper from a captured northern supply train. This was almost impossible to obtain in civil life. And last but not least one orange.

Most of the schools in Lexington were closed by this period. Time was running out for the Southland.

Now we come to the sad story of Appomattox. After Petersburg, Lee realized that the end was near and on Sunday he sent word to Richmond to evacuate the city. This notice came while the people were in church so the news spread rapidly. The citizens of Richmond ordered the liquor shops to pour the whisky into the gutter. The riff-

raff drank it as it ran down the streets and the results can be imagined. For some reason the tobacco factories were set on fire and the flames spread to the residential section. Miss Ellen Anderson of Lexington has a clock carried out of their burning home to the sidewalk. It was the only thing saved and was found the next day unbroken. The city was in bad condition when the soldiers came through. Those who could left town; the rest boarded up for the arrival of the troops. Lee and his now small army marched toward Appomattox as they were overpowered by the enemy.

Surrender took place after very little fighting and Lexington heard the sad news quickly. The whole town and county virtually went into mourning. General Grant allowed the officers to keep their horses. My uncle Ned Moore, although a private, had acquired a horse. He was telling his neighbor from Lexington, General Pendleton, about it, whereupon the general appointed my uncle to his staff and he was able to keep his horse. When he came home to Lexington he sold the horse for enough money to enter Washington College the next fall. This is very revealing in the fact that it showed that officers and men had close contact all through the southern Army. All accounts tell of officers returning from furlough often bringing great numbers of letters to the private soldiers from families at home. How wonderful that this close fellowship existed.

General Lee was allowed to retire to Oakland on the James River, where for a few months, with his family once again around him, he could rest and catch his breath and get his bearings. Later, as you all know, he accepted the call of the board of Washington College to become its president.

The Carpetbaggers from the North were very discreet in Lexington because of the presence of so many ex-soldiers in the two schools; also because of the fact General Lee was living here. It was fortunate for our people that they had "Lee the Guardian Angel Myth" at this most trying time.

The people of Lexington and Rockbridge County were closely united because of the suffering they had gone through together as well as by the comradeship of the men in camp for 4 years. The boys and girls were together again and youth has a way of forgetting quickly. Small groups of young people began meeting and these gatherings were called "Starvation Parties", with little to eat but lots to talk about. The old custom of serenading the ladies was begun again and life in Lexington and Rockbridge County slowly became more normal.

Minimum Wage

SPEECH
OF
HON. DOMINICK V. DANIELS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. DANIELS. Mr. Speaker, the action of the House in approving the conference report on the minimum wage bill was a great victory, not only for the administration, but for underpaid workers throughout the Nation. It would have been unconscionable, in my view, to have permitted another session to go by without giving some relief to this group.

For the first time since 1938 we have succeeded in substantially extending the coverage of the Fair Labor Standards Act. Under the bill which we approved on Wednesday retail and service establishments, with certain exceptions, which gross at least $1 million annually and which purchase or receive goods for resale that move or have moved across State lines in the sum of $250,000 or more per year, to pay their employees a federally designated minimum wage. It is difficult for me to understand why this provision evoked so much controversy. Small retailers are not affected, and surely it is not unreasonable to expect firms which do a business of $1 million a year to pay $1 or $1.25 an hour. Nor is the dollar volume yardstick a unique concept in determining what constitutes interstate commerce. As has been frequently pointed out, the National Labor Relations Board has used it for years, and the Congress gave its consent to this approach by incorporating it into the Landrum Griffin Act in 1959. As a Representative from the State of New Jersey I am deeply gratified by the new minimum wage law. Although most industry in my State already pays wages considerable in excess of the new minimum, the bill will help those workers at the very bottom of the wage scale. It will represent an increase in purchasing power as well, and this cannot but stimulate the expansion of our general economy. And, to some extent, it will tend to discourage industry from moving out of the State to areas where present wage rates are far below the national average.

Charles F. Crowley Nomination for the Football Hall of Fame

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. PHILBIN. Mr. Speaker, it was most gratifying to have word recently of the nomination of my good friend, the late Charles F. Crowley, of Cambridge, Mass., for the Football Hall of Fame.

Charles F.—Charlie—Crowley, distinguished alumnus of the great Cambridge Latin School was one of the outstanding football leaders of his generation.

He was educated at Cambridge Latin, Harvard College, and Notre Dame University and his career on the gridiron of his day stood out like a beacon light in the history of American sport.

He was recognized by his contemporaries as a rugged, star football player of invincible spirit and dogged determination. The great Percy Haughton named him as the greatest end he had ever coached, and the famous Jim Thorpe hailed him as the only end who ever stopped him without a single gain during the course of any football game.

At Notre Dame, he was the teammate and close friend of the noted Knute Rockne, Gus Dorais, and others who were developing the modern game at Notre Dame and bringing the forward pass into the important role that it plays today.

After a brilliant career as a player, Charlie Crowley later entered the field of coaching at Harvard where I first met him, and where he aided materially in promoting the success of great Harvard teams of that time.

He was head coach at Dallas University in Texas where his teams made a deep impression on the entire southern conference, and later at Columbia University, first under Percy Haughton, and later as head coach, where his teams made the best record in modern Columbia history.

Charlie Crowley was undoubtedly an outstanding sports figure of his day, and a real credit to any and every institution with which he was associated and a great credit to the game of football and American sport.

But Charlie Crowley was something more than that: he was an outstanding coach, a great American, and a noble Christian gentleman.

While he was a rugged, courageous competitor greatly respected by his opponents, he was esteemed and respected for his sense of fair play, his inspiring leadership of young men, and his superb brand of sportsmanship.

While he believed that any game worth playing was worth winning, he was an ardent disciple of hard, clean play, and always stood for the highest standards of sportsmanship and conduct on and off the football field.

He was a man of amiable and generous personal qualities, a great human being interested in promoting sound values in his boys, helping them with their problems and encouraging them to seize their opportunities and take up the burdens of leadership in whatever field of life they aspired.

Though he was endowed with strong, rugged personal traits and a remarkable courage, and quick-witted reactions that enabled him to rise above almost any situation, he was a man of supreme kindness, gentility, and love of his fellow man. He was beloved by all who knew him, and he was a friend whose loyalty knew no bounds.

Such a man was Charles F. Crowley, who is so fittingly honored by a recent coaches' nomination for the Football Hall of Fame.

We can all be proud that this noble American lived in his time to make such noteworthy contributions to the game which he loved, to the youth which he so intelligently and devotedly trained, to our schools and colleges, and to the Nation which he served in war and in peace with all his heart.

The life and work of Charlie Crowley will long be remembered. His burning faith, his high ideals, and his unselfish contributions are a source of genuine pride to all of us who were close to him and to all of those in this great country of ours who admire rugged character, inspiring example, stalwart Americanism and unswerving loyalty to the principles of our national life.

It was a great honor and privilege for me, Mr. Speaker, to join in impressive exercises for my very dear and beloved friend, one of the great figures of the American gridiron, Charlie Crowley, on December 20, 1960, at Cambridge Latin School, Cambridge, Mass., when I made the presentation of the Charles Crowley Memorial Cup to a very fine young man of whom Charlie Crowley would be very proud, Louis E. Cellineri, Cambridge Latin football star and honor student who was selected for this honor by his coaches and Headmaster Jack Sheehan.

This award was made for the first time at an assembly at Cambridge Latin which had many of Charlie Crowley's old friends in attendance, including a large delegation of Gridiron Club members, and the proud parents of the outstanding young man, Louis E. Cellineri.

Crowley's career was one which truly serves as an inspiration for the young men of the Nation. Starting at famous Cambridge Latin School where he was an all-round athlete and captain of the football team, he was probably the only man in the history of American football who could claim the honor of having been a star player at both Harvard and Notre Dame. His outstanding skill as a player and repute as a gentleman, sportsman, and student, still continue to be legendary at both these great American universities.

At Harvard he played on some of the great Percy Haughton famous teams and at Notre Dame where, with his warm friends, the immortal Rockne, illustrious Gus Dorais and other greats, he became one of the leading originators and exponents of the type of forward pass football and the open game that now dominates the American scene.

The great and famed Boston sportswriter, George C. Carens, took occasion recently in his celebrated column to comment on the Crowley Award and at the same time briefly outline Charlie's brilliant career alluding to his close association with Percy Haughton and Rockne, two of the truly outstanding men in American football and Gus Dorais, another coach-player of first magnitude.

The fine young man, Louis E. Cellineri, is following in several respects in Crowley's footsteps, and as the first recipient of the Charles Crowley Memorial cup at Cambridge Latin School he unquestionably has a brilliant athletic, academic, and personal career ahead of him.

He was selected for the Crowley Award by experts who evaluated and appraised his magnificent work as a player and these included the very eminent headmaster of Cambridge Latin School, Hon. John Sheehan, his teachers, coaches and others familiar with his all-round performance, not only as an athlete but as a brilliant student and an inspiring young leader.

The selection of Cellineri as a student-athlete carries out the gleaming heritage and tradition of this old and highly esteemed secondary school, one of the greatest in the Nation, which throughout its long faithful service as an outstanding educational institution has emphasized the building of character, the cultivation of the arts and sciences, the encouragement and inspiration of lofty aims and achievement and the virtue of the old Roman expression "Mens sana in corpore sano" and the effective balancing of the intellectual and the physical, and, of course, proper emphasis on the role of those spiritual values which must predominate in any adequate, successful program.

The headmaster of this great school is an inspiration in himself and the same is true of the excellent teaching staff. Jack Sheehan has distinguished himself as one of the great educators of our State. A brilliant athlete in his day, an accomplished scholar and student, an inspirational and highly qualified leader, Jack Sheehan has admirably carried on the great traditions of Cambridge Latin and the same may be said of his associates on the teaching staff of this renowned school.

On the day I had the honor of presenting the first Charles F. Crowley Award, I was profoundly impressed with the atmosphere that prevailed in the school, the complete order and attentiveness of the more than 3,000 boys and girls crowded into the huge auditorium.

An air of solemnity prevaded the great room and you could almost hear a pin drop during the exercises presided over by Headmaster Sheehan. The dignified, able, and distinguished head of the Veterans' Administration at Boston, a great personal friend of Charlie Crowley for many years, the beloved and respected, Gen. William J. Blake, spoke of Crowley's great intrinisic worth, high character, and his superb contribution as a captain of the infantry in World War I and his highly gifted, effective, and outstanding service to the work of the Veterans' Administration as a learned lawyer, counselor, and valued aide in this vital work.

Lifelong friends, schoolmates, teammates, and admirers of Crowley's were gathered to join in the tribute of honor and affection being paid him. They included his Veterans' Administration associate, Neil Cronin, John Irwin, Patrick Roche, his close friend, Dr. Simon Kelleher, Tom Hickey, the incomparable N. V. (Swede) Nelson of Harvard football fame, one of the greatest after dinner speakers and finest American sportsman, John Carver, John Glacken, and his old and very dear friend, Charles Linehan, another inspiring football great and longtime outstanding beloved and revered coach of Rindge Technical School, a teacher, educator, and gentleman of unsurpassed character, integrity, ability, and good works, Joseph Kozlowski, famous Boston College football star, Henry C. Lynch, another warm friend and great teacher and Dr. Edmund J. Twohig, and very close friend, Dr. William Sharry. The distinguished colleagues and comrades were crowded into a special section reserved for Charlie Crowley's gracious and beloved wife and helpmate, Mrs. Myrtle Crowley, his two lovely daughters, Mrs. Mary Rogers together with her two sons, and Miss Jean Crowley.

There was an unusual quality of solemn appreciation of a great event about this award that made a vivid and lasting impression upon the participants and everyone in attendance and the stirring occasion will long be remembered as one of the moving events of its kind in the long, bright history of Cambridge Latin School and Massachusetts.

I feel that a special word of commendation should be said of the interest and efforts of the great sports figure and teacher, Mr. Charles Linehan, in assisting Headmaster Sheehan with the arrangements for the award which contributed so greatly to the success of the occasion. His loyalty to his ideals and his friends, not to speak of his other noble qualities, make him stand out in Cambridge and in the Nation.

Law Day, U.S.A., May 1, 1961—Due Process of Law—The Lawyer's Responsibility—By Hon. Joseph A. Cox, Surrogate, New York County; President, New York Law School

---

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1961

Mr. KEOGH. Mr. Speaker, Law Day, U.S.A. was celebrated on May 1 throughout our land for the purpose of calling to mind the importance of the rule of law in protecting our cherished individual rights and liberties. A scholarly speech of national significance was delivered for this occasion at the New York Law School by the Honorable Joseph A. Cox, surrogate of New York County, who is also president of New York Law School. Surrogate Cox makes a lasting contribution to legal literature in pointing up the role of the judiciary and the responsibility of the lawyer for protecting due process of law.

Under unanimous consent, I include the full text of Surrogate Cox's speech in the Appendix of our CONGRESSIONAL RECORD:

LAW DAY, U.S.A., MAY 1, 1961—DUE PROCESS OF LAW—THE LAWYER'S RESPONSIBILITY

(By Hon. Joseph A. Cox, surrogate, New York County, president, New York Law School)

This year, continuing the precedent of past years, President Kennedy has proclaimed today as Law Day, U.S.A. It is a day of introspection, reevaluation, and rededication by lawyers to the basic principles which distinguish our legal processes and procedures from those of countries where the rights of the individual are subordinated to those of the state.

One of the most important and basic rights in our form of government is the constitutional guarantee of due process of law. I have chosen to discuss this phase of our system of jurisprudence, not only because of its fundamental significance to the individual, but because of certain notable developments during the last year which merit consideration and reflection on this occasion.

The lawyer has a singular obligation, to safeguard due process. His duty to his clients requires that charges or allegations

be proved before they may be asserted or published as facts. His training compels him to reject hearsay, surmise and suspicion. Allegations and charges must be supported by admissible evidence, either in the form of sworn testimony subject to cross-examination, or by means of documents possessing probative value, or both. Thus is the integrity of the judicial process maintained. The presumption of innocence, the privilege against self-incrimination, the right to reasonable bail, the right to counsel, and the right to be confronted by witnesses—these and more are legacies of the common law and our constitutional history—legacies which the legal profession utilizes, yet seeks to preserve and even enlarge, as the custodian and the protector of due process of law, the trustee of individual rights.

Our constitutional guarantees of individual freedom are under constant attack, and our continuous preoccupation with legal questions involving due process bears witness to the zeal of our courts and lawyers to maintain and indeed broaden the scope of these guarantees, in some cases abandoning long-accepted procedures in the light of more searching analysis, as we shall see in considering several recent cases.

These cases, to the observant and studious lawyer of experience, as well as to the lawyer in the making, emphasize that we should not espouse the concept of due process of law as a high-sounding phrase, to be favored in general terms or in theory. Due process is tested again and again in our judicial forums, and these adjudications should rekindle our faith in our judicial system, even when the result may be momentarily distasteful or unwelcome.

Let us take, as our starting point, the case of *Matter of Wood* v. *Hughes*, decided by the New York Court of Appeals as recently as February 23, 1961, reported at 9 N.Y. (2d) 144.

In this case, the court, at long last, nullified the heretofore existent power of a grand jury to file a so-called report or "presentment" where the evidence is insufficient to warrant an indictment.

The decision was 4 to 3, which is indicative of the gravity and closeness of the question to the members of our highest court. Hence, it may be of value to appraise the facts, the implications, and the reasoning which resulted in a much needed clarification of an important application of due process.

The case involved an investaigation by the grand jury into charges against public officials. Previously, although the evidence failed to sustain an indictment, the grand jury had been permitted to file with the court a public report, censuring the officials for their conduct. In its majority decision the court held that the grand jury lacked such power, and sustained the right of the New York Supreme Court to refuse to accept the so-called report.

Prior to the decision in the Hughes case, a grand jury report which criticized the actions of private individuals was suppressed by the court of general sessions of New York County. The comprehensive opinion of Judge Mitchell Schweitzer so holding is reported at 19 Misc. (2d) 682 (Nov. 19, 1959).

The Hughes decision, applying as it does to public officials, must apply a fortiori in the case of noncriminal conduct by private individuals. The opinion of Judge Schweitzer, rendered in such a case, is now validated by the Court of Appeals decision in Hughes.

Those who advocate that a grand jury, lacking sufficient proof to base an indictment, should nevertheless have the right to file and make public its so-called presentment, predicate their contention upon the belief that the public has the right to know the facts, and to judge whether the presentment fairly reflects the situation found by the grand jury. I, too, believe—and just as passionately—that in a democratic society the public is entitled to the fullest knowledge of the functioning of its public servants. Doubt arises, however, when we consider whether the grand jury is the appropriate vehicle for disseminating knowledge to the public of noncriminal acts or conduct—knowledge which has been derived from evidence given in secret, not in a judicial forum, not before a jury, not by confrontation of witnesses, but merely as a preliminary to possible later judicial review and determination after indictment, after due process of law, with every safeguard of our judicial machinery available to the defendant or defendants.

In the Hughes opinion, written by Judge Fuld, the Court of Appeals reasoned that the grand jury's historic function is limited to determining whether the evidence submitted constitutes the commission of a crime. If so, the grand jury should find an indictment; if not, the grand jury should dismiss the charge or remain silent. If it goes beyond this, becoming in effect a self-appointed censor of morals, the court stated that it engages in conduct which is "legally unauthorized and morally obnoxious."

We may, and should, in this connection, take note of the view with which the general public regards the grand jury. To the layman it is a part of the judicial process particularly associated with criminal law. To him it is a public body whose pronouncements carry the weight of official condemnation. Any published statement of its activities, whether called presentment or report, carries with it an implicit accusation of wrongdoing. Though the person involved may not be guilty, even were he indicted, his reputation may suffer incalculable harm through a critical pronouncement or censure which he is given no opportunity to refute.

The grand jury is composed of men and women, sincere and honorable in their purpose, but possessed of no greater wisdom than the rest of us. As stated by Judge Fuld in the Hughes decision:

"Grand jurors are not selected for their skill in appraising efficiency in public office or delving into matters more appropriately reserved for executive or legislative action."

Their views on public morals are no more sound, nor any less so, than yours or mine. Yet, until now, the grand jury has been privileged under the law to do what might be defamation of character were you or I to engage in similar conduct.

Consider also that an individual maligned in a grand jury presentment or report has no forum to which he may resort for vindication. If indicted, he may attempt to secure vindication at the ensuing trial. If defamed by you or me, he would have a similar remedy, with possible pecuniary recompense. He is powerless, however, to obtain legal redress when possibly baseless charges of a grand jury are publicized in the guise of a public court record.

Again, Judge Fuld in the Hughes case:

"A report * * * is not intended to serve as a basis for prosecution. It is not a criminal accusation, grounded on legally sufficient evidence of the violation of a criminal statute, to which answer may be made in court; it is rather a moral condemnation or exhortation without any forum being provided for explanation or defense."

When the grand jury's investigations concern the question whether or not to indict, its activities and all subsequent procedures are circumscribed by applicable law. The members of the grand jury are assisted by the district attorney and his staff in determining the legal effect of evidence prescribed in reaching their decision to indict or not. This is not the case where they step outside this narrow area into the limitless range of public or private morality. This is the function of the legislature, which is empowered to conduct the type of investigation required to establish the foundation for needed legislation.

Much has been said and written concerning legislative investigatory procedures, and it is not my purpose to discuss the controversial aspects of this subject. It is to be noted, however, that legislative investigation differs fundamentally from the type of investigation hitherto resulting in the so-called presentment or report of a grand jury.

Legislative investigation is specifically authorized by law. Its purpose to to provide a factual basis for new or remedial legislation, if deemed necessary. All of the investigative procedures are public and published, including the evidence presented by witnesses and documents. It is in these important areas that legislative investigation differs from the findings of a lay body based upon secret examination of witnesses for a totally different purpose. While it is true that legislative investigations have developed their own shortcomings particularly with respect to possible impairment of individual rights to due process, no one will dispute the right of legislative bodies, under sanction of law, to throw a searchlight on activities which may require regulatory legislation, and to garner facts upon which such legislation may be premised.

With the Hughes decision before us, it may well be appropriate for us, as lawyers, in our pursuit of justice, to consider on this Law Day, 1961, how we may help to curb excesses in our legislative investigatory practices and procedures, to the end of still further safeguarding the rights of the individual and restraining unwarranted encroachments on those rights, even as we acknowledge the basic soundness of the right of legislative inquiry.

The decision in the Hughes case, in my opinion, is a landmark in the application of due process. Not only does it finally clarify a long-disputed question, but its effect is to contribute to the greater protection of individual rights as against the encroachments of the State. I trust that our legislature will not alter this signal advance.

I turn now from the Hughes case and its important implications to another noteworthy case involving individual rights—in this case the rights of unpopular individuals, persons of disreputable and in some instances criminal background. I refer to the case of *United States* v. *Bufalino*, reported at 285 F. (2d) 408.

This is the so-called Apalachin case, with which I am sure you are all generally familiar. The indictment charged conspiracy to obstruct justice and commit perjury on the part of a group of allegedly unsavory characters meeting at Apalachin, N.Y. These defendants were convicted in the U.S. District Court after a trial by jury, and it was this conviction which was reversed by unanimous decision in the Circuit Court of Appeals.

In its reversal, the court found it necessary to state that it was remarkable that the case was started in the first place. Circuit Judge Clark, in his concurring opinion, made a substantial contribution to the long history of due process in words which deserve to be quoted:

"From its inception this case was given unusual and disturbing publicity in newspapers, journals, and magazines; and this unfortunate feature has persisted up to this date, with even the prosecutors indulging in highly colored accounts while the case has been pending on appeal. Much of this has been in terms of a crisis in law administration seemingly demonstrated by an unexplained gathering of arch criminals and of a general satisfaction that somehow they have now met their just deserts of long imprisonment. This is vastly unfortunate; not only does it go beyond the judicial record necessary for its support, but it suggests that the administration of the criminal law is in such dire straits that crash methods have become a necessity. But it seems we should have known better, and a prosecution framed on

such a doubtful basis should never been initiated or allowed to proceed so far. For in America we still respect the dignity of the individual, and even an unsavory character is not to be imprisoned except on definite proof of specific crime. And nothing in present criminal law administration suggests or justifies sharp relaxation of traditional standards.

"Chief Judge Lumbard and Judge Friendly authorize me to state that they agree with the writer that the publication by former special prosecutors of accounts and comments regarding this case and the appellants, while this appeal was pending, was improper."

I am sure that neither the Circuit Court, nor I, nor you, would wish to disparage the serious task of law enforcement which confronts our officials and our prosecuting attorneys. We all owe them our respect and support. Their zealousness may, however, at times, lead them to excesses which must be curbed, as in the Bufalino case. Here I may advert for a moment to the sense of frustration we may feel at times when our law enforcement machinery seems powerless to reach the known criminal and give him his just deserts. Yet we, as lawyers, must restrain our impatience, we must reject the concept of trial by newspaper, and above all, we must accord to the lowliest individual and the most disreputable character the same basic rights which are the foundation upon which our entire system of criminal law rests. An individual's past transgressions afford no justification for relaxation of time-honored principles of due process.

The third case which I shall discuss with you concerns the overzealousness of local government and the power of its law-enforcement machinery to violate personal rights when under public pressure to produce results. This is the recent case of *Monroe* v. *Pape*, decided February 20, 1061, by the Supreme Court of the United States, reported at 5 L. ed. (2d) 492. The complainants, husband and wife and their children, alleged that 13 Chicago police officers, without search warrants or arrest warrants, broke into their home in the early morning, routed them from bed, made them stand naked in the living room, ransacked every room, emptied drawers and ripped mattress covers, took the husband to the police station and there detained and interrogated him for 10 hours about a 2-day-old murder and during this period failed to take him before a magistrate, though one was available, refused to permit him to call his family or his attorney, and then released him without preferring criminal charges against him.

The action which the complainants brought against the police officers and the city of Chicago was under our Federal statute which prohibits any "person" from interfering with the "rights, privileges, or immunities secured by the Constitution" to any citizen or other person. The Supreme Court held that the complainants had a cause of action against the police officers, but not against the city of Chicago because it was not a "person" within the meaning of the statute.

It is a grave question whether the law should not be amended so as to make a municipality liable as well for violating the statute. Such an amendment would impel the local government to take effective measures to restrain its law enforcement officers from violating the requirements of due process.

The vitality of due process in our emerging electronic age was demonstrated by the Supreme Court of the United States within the past several weeks in its holding in *Silverman* v. *United States*, decided March 6, 1961, reported at 5 L. ed. (2d) 734. The question in this case was whether evidence in the form of conversations obtained by the police through use of a so-called "spike mike" driven into the premises occupied by the defendants was illegally obtained and therefore inadmissible at the defendant's trial for carrying on unlawful gambling activities.

The "spike mike" is an electronic listening device, a microphone with a spike about a foot long attached to it, together with an amplifier, a power pack, and earphones. The police had obtained permission from the owner of adjoining premises to drive the spike mike through a party wall until it made cotanct with a heating duct which served the house occupied by the petitioners. The entire heating system was thus converted into a conductor of sound, making conversations which took place on both floors of the house audible to the police who were listening through earphones.

The Supreme Court held that the conversations thus overheard were inadmissible as evidence because obtained by means of an unauthorized physical peneration into the premises occupied by the petitioners. It was a breach of due process, an instance of illegal search and seizure, for the officers to usurp part of the defendant's premises without warrant, and without their knowledge or consent.

It was brought out in the Silverman case that electronic devices now exist which the courts may find difficult to reach under existing tests deriving from the preelectronic era. Among such devices described to the Court were a parabolic microphone which can pick up a conversation 300 yards away; an instrument for flooding a room with sonic wave which will permit a person a hear everything said in the room without ever going into it; an instrument which can trap conversation through an open office window on the opposite side of the street.

The Court indicated it would deal with all of these devices at the appropriate time. In the meanwhile, the court adhered to the established tenet of the law, the right of a man to retreat into his own home and there be free from unreasonable governmental intrusion. In line with this principle, conversations overheard by electronic devices which physically penetrate the premises in question will be denied admissibility in evidence.

I do not know that this test will suffice in the face of the newly emerging ingenious electronics devices for eavesdropping. I do not believe, however, that the courts will be powerless to meet new situations in this field. The Supreme Court has been able to adapt itself in the past to novel encroachments on due process, and has struck them down unhesitatingly when necessary for the protection of individual rights.

Our common law system has evolved in large measure by emphasis upon procedure. Procedure requirements are basic to the protection of the individual, whose rights are paramount in our democratic society. The strains and stresses of modern life often result in encroachments upon the individual rights and freedoms we all enjoy and we as lawyers, particularly, must be vigilant in forestalling even the slightest invasion of the civil liberties we have achieved over the centuries. For even the slightest letdown, a minor deviation resulting from hysteria, overzealousness, or contempt for the type of individual concerned, weakens the fabric of due process and lays the groundwork for further deprivations in the future.

The law's will is not the will of the wind, nor is it the popular will at a particular time or place. The law is not static, as the cases I have discussed amply demonstrate, but the law cannot move in response to whim, emotion, or fancied emergency. Justice under the law is different from the vagaries of justice in the marketplace. It stands firm when it should; it bends, not to pressure, but to progress and as the result of deep and unemotional thought.

It is in this spirit of introspection that Law Day is of moment to the lawyer, for it is a day of stock-taking, of evaluation, and of rededication to the ideals of equal justice under law, the firm and unyielding pillar which is the vital distinguishing characteristic of our form of government from others which pay but paper homage to individual freedom and individual rights.

How To Finance Aid for Aged

EXTENSION OF REMARKS
OF
HON. CLINTON P. ANDERSON
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES

Monday, May 8, 1961

Mr. ANDERSON. Mr. President, I was very pleased to hear the announcement of the chairman of the House Ways and Means Committee that hearings will be held on proposals to provide health care for the aged through the social security system. It was good news to the supporters of this legislation, and I compliment Mr. MILLS.

There have been expressions of doubt that any progress would be made on this important matter in the current session of Congress. I think the announcement by the Representative from Arkansas should diminish those doubts. We hope the House hearings will be followed by hearings in the Senate.

The subject of providing health security for our aged has received increased and deserved attention in the press. I ask unanimous consent that a recent article from the Richmond Times-Dispatch detailing the views of those who see the wisdom in the social security approach be printed in the Appendix of the RECORD. It was written by John E. Raine, chairman of the Virginia State Commission on the Aging.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Richmond Times-Dispatch, Apr. 16, 1961]

HOW TO FINANCE AID FOR AGED?

(By John E. Raine)

The most controversial subject discussed at the White House Conference on Aging and one which will continue to be polemic until the issue is finally settled, is the financing of medical care for the aged.

All agree that more medical care and medical care for more of the aged is a humane as well as an economic problem.

All are not in agreement as to how such medical care is to be paid for.

Some believe that there should be no fund to provide this care.

There are many others, honest, sincere, practical, and conscientious citizens—including the almost unanimous vote of the Virginia Commission on the Aging—who believe that the recently enacted Kerr-Mills law effectively meets the needs of the aged and that proposed alternatives under social security are unnecessary and unwise.

However, a substantial number of others believe that the financing of medical care, as approved by the White House Conference on Aging, should be a part of the social security program. This is a difference of opinion between well-meaning individuals and each is entitled to his own opinion.

SOLE CONCERN

My sole concern, and one to which I have given study and solemn thought, is that the aged should be provided with the medical care they need.

The Congress has enacted the Kerr-Mills law which is supposed to provide medical care for the aged but which law has been put into operation in only six States, Virginia not being one of those six, and it is questionable whether the Kerr-Mills law will ever become operative in Virginia.

Seventeen States are contemplating legislation to meet the requirements of the Federal statute, with 11 States not planning any action in the near future.

Pending in the Congress is legislation providing medical care under social security. Many of our highest type, conscientious citizens whose integrity and honesty are beyond reproach, do not favor this approach. Their opinions I respect but with those opinions I do not altogether agree.

BOTH SIDES

The arguments of the opponents to financing medical care through the social security system are ably presented in this issue of the Times-Dispatch by a most capable, conscientious member of the Virginia Senate.

In order that the views of the proponents of financing medical care through the social security system might be considered by the general public, some simple, factual statements and comments are timely.

The Kerr-Mills law provides for medical care. This law is endorsed by the American Medical Association, and is 100 percent tax sponsored, with the Federal Government from general tax income paying 65 percent of the cost, the State of Virginia paying 22 percent, and the local communities paying 13 percent. No one can estimate the total cost to Virginia, for which an appropriation will be necessary, or to local communities, if the Kerr-Mills law ever becomes operative in Virginia.

It is possible, under the Kerr-Mills law, for any State participating in the program to use every penny of income to increase the per diem payments to hosiptals or nursing homes and no State is required to provide more medical care or medical care to more people.

RESTRICTED POLICY

The social security approach to medical care legislation is restricted to those who qualify for social security, but so is every insurance policy restricted to those who qualify for insurance benefits.

Old age assistance and benefits under the Kerr-Mills law are based entirely on a means test and are outright charity, and as needy and deserving as they may be, this is not a dignified approach to help those who built our cities and towns and who laid the foundation for the America we have today.

Income from social security is a return (just as ordinary insurance from premiums paid) as a result of a tax paid by the recipient of such income, plus a contribution from the employer of the recipient.

A recent survey of 1,233 large and small businesses concerns throughout Virginia indicates that 78 percent of such firms, employing over 175,000 persons, have no retirement plan in effect.

I do not agree with the medical profession, who are trying to confuse the issue, that the medical care for the aged is socialized medicine or even an approach to socialized medicine. A majority of students of medical care for the aged are not in agreement with the American Medical Association's views that health care through social security would socialize the practice of medicine to the everlasting detriment of the American people.

Medical care under social security is not going to add or subtract one doctor or one nurse from general practice or detract from the type of service rendered.

I am too much of an American to agree with many that the cooperation or the participation of the Federal Government with State government or agencies of State governments is cancerous and should be avoided at all costs.

HOW TO PAY

The issue we are facing today is not that of medical care but how is that medical care to be paid for.

Until recently the eligibility requirement for indigent hospital care in Richmond was low. A person with a total income of more than $90 a month or a couple whose total income was $110 from all sources per month, was not eligible for indigent hospitalization.

At present, regardless of the income of any person no funds are available to aid the indigent with hospital costs as the city's medical bureau has exhausted its total funds for that type of aid so that in Richmond medical care of the indigent becomes an acute problem.

Dr. F. J. L. Blassingame, executive vice president of the American Medical Association, said, in a prepared statement, published by the Times-Dispatch on February 28, that President Kennedy's proposals for hospitalization and nursing home care for the aged are "unrealistic, limited, and coercive" and that while AMA finds much to applaud in the President's overall program, and supports the general goals of his program, it cannot support his proposal that such program be financed under social security.

DEFINES POSITION

The above official statement of the American Medical Association clearly defines the position of the AMA and establishes the demarcation between the proponents and opponents of this controversial issue.

No one has yet expressed opposition to medical care for the aged.

The issue is how this care is to be paid for.

Not all doctors agree or are in sympathy with AMA's stand on the social security approach to the medical care for the aged.

REPROVED APPROACH

At the White House Conference on Aging, Dr. Elkin Ravetz of Philadelphia, joined with Dr. Benedict Duffy of the Hudson County (N.J.) Medical Society, in reproving the AMA approach to the financing of medical care, which they said was negative.

Dr. Richard J. Ackert, medical director for Richmond's Blue Cross-Blue Shield, at a meeting at Newport News recently, stated that while being opposed to medical care under the social security formula he conceded that private insurance cannot cover the medical needs of all the aged.

In answer to the off-expressed argument that the enactment of legislation providing for medical care for the aged would encourage a rush for hospital treatment for the correction of minor ailments, the proposed legislation under the social security approach provided a majority of insurance policies provide for a deductible provision of $10 for each of the first 9 days of inpatient hospital care, with a minimum deductible of $20 with a deductible for each diagnostic study of a hospital outpatient.

The fact that a patient will have to bear a part of the cost of the services received is a safeguard against unnecessary use of health services and reduces the administrative cost of handling small claims.

Nothing is provided in the proposed legislation which would, in any way, conflict with the established practice of the medical profession.

FREE CHOICE

The health benefits would be provided without interfering with the patient's free choice of his physician or facilities for treatment and the medical profession would continue to be responsible for the method and quality of such medical care.

The payment of such medical care would be through the social security fund much the same as that now used when such care is paid for by Blue Cross and other purchasers of accident and health insurance.

HONEST BELIEF

There are some who state, in all honesty and sincerity, that no one in our State or Nation goes without the medical care (including drugs) they need.

Communications received by the Commission on the Aging do not support this view insofar as Virginia is concerned.

It is true that under Virginia's indigent hospitalization program medical care is provided for those who pass a means test and who cannot pay for hospitalization.

It is also true that public assistance agencies and private charitable organizations do a most commendable job.

Many physicians and institutions are generous in reducing their charges or providing care at no cost. Relatives and friends frequently pay medical expenses of those who have no funds of their own.

TOO PROUD

But what is also true is that many older people who are sorely in need of medical care, do not get it because they are too proud to accept charity and will not undergo the humiliating experience of proving that they are in want or are practically paupers.

Also, it is true that many friends and relatives, in an effort to aid elderly members of their families, do so at the terrific cost of denying an adequate education to their children and even go without food and clothing they need because grandfather has to go to a hospital or because grandmother must have her pills to keep alive.

I have reached my conclusions, not only from a study of the proposed legislative bill but from the reports of congressional hearings and discussions on similar proposed legislation in Washington and in eight of nine cities throughout the country and from the endorsement of such organizations as the National Council of Churches, the American Public Welfare Association, the American Nurses' Association, the Council of Jewish Federations and Welfare Funds, the American Veterans Committee, the Group Health Association of America and the Synagogue Council of America.

In conclusion, notwithstanding the views and opinions of so many of my friends and acquaintances, for whose judgment I have a profound regard, I am of the opinion that medical care for the aged through the participation in social security is the best, most practical and most economical of all the health care programs discussed.

The Saga of Our Italians

EXTENSION OF REMARKS

OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1961

Mr. SANTANGELO. Mr. Speaker, many people have contributed to the greatness of the United States. Our

country has been called a melting pot of the world with freedom being the alloy, fusing the various metals together. Our ethnic groups have been likened to a symphony, with each one playing an instrument in harmony with the other instruments and completing a symphony of joy and beauty.

Frequently discordant notes arise which can easily be remedied with a little attention and with determination. In recent years Americans of Italian ancestry have been besmirched by various media of communication, sometimes unintentionally, other times inadvertently, and frequently with design. As a consequence, programs stereotype Americans of Italian origin as disreputable characters and cause a great deal of bitterness and resentment among an ethnic group which has contributed so much to the founding, development and preservation of our country. One of the programs, known as "The Untouchables" was a particular source of displeasure and aroused the ire of Americans of Italian origin throughout the land. Economic action, moral pressure, and literary persuation brought about an understanding whereby the sources of friction were gradually eliminated.

One of the great newspapers of New York, the New York Mirror, recognizing the sentiments of Americans of all ethnic backgrounds has commenced a series of articles, publishing the good deeds of persons of Italian ancestry and their contributions to our beloved land. I believe the first article publiced on Sunday, May 7, under the byline of Ara Piastro and Harry Altshuler, is a harbinger of greater understanding and paves the way for a new approach. I take pleasure in setting forth the article in the New York Mirror, and I salute them for their endeavors to paint a more truthful portrait of Americans of Italian ancestry:

THE SAGA OF OUR ITALIANS

(By Ara Piastro and Harry Altshuler)

It was the challenge of America that swept an Italian youth—Pietro Belluschi—into a lifelong love affair with this country from the time he first set foot here in the mid-1920's.

Mention his name, now, and perhaps a few knowing people will recognize it. If they do, you'll see a look come into their eyes a thrill of appreciation that mingles delight of the spirit and the senses in the work that bears Belluschi's name.

Most people, frankly are strangers to his name. And why should they know it? He's never figured in a page 1 newspaper headline. He's never taken a bow in the spotlight before a hushed mass audience.

Yet he has taken from America—and given back tenfold in his contributions, seeing the grand promise of the land, the inarticulate dreams in the faces of its people and clothing these dreams in visible form, solid yet soaring.

Bricks and stones and mortar, steel and aluminum and native woods are his materials. He is an architect.

There are graceful homes dotting the Pacific Northwest area—spirit-lifting churches of many denominations but all striving toward God—airy office buildings, college libraries and art museums that show his hand, with still more to come as America builds and rebuilds, filling its needs and interpreting its yearnings through the art of architecture.

He is a consultant on the huge Pan-Am building that is rising over Grand Central, and on the new Juilliard School and the new high school that are part of Lincoln Center. Perhaps most important of all, he is helping to shape and train new generations of architects, new interpreters of America, as Dean of the School of Architecture and Planning at Massachusetts Institute of Technology.

This story—so woven into the texture of American life—began in Ancona, Italy, where Belluschi was born on Aug. 18, 1899.

He pursued his studies in Rome, winning a degree as doctor of architectural engineering at the university there in 1922. Why did he choose this career? Well, his own dreams can be seen in a pamphlet he once wrote for young people about the field:

"The architect has the satisfaction of knowing that he is helping people to live, work, and play together better—he won't become a millionaire, but there are moments that cannot be measured in dollars. There is enormous gratification in an architect's work. No other art can give its practictioner such a sense of completeness. The buildings an architect designs not only can be seen and felt, they can be lived in and used. And they add to the world's store of beauty."

In 1923, as a young man still looking for the direction his life would take, he won a year's study in civil engineering at Cornell as an exechange student.

He came here, largely unacquainted with the language but eager to see and study. He spent the first 6 months mostly sitting alone, laboriously translating his textbooks into Italian, so he could tell what the professors were talking about in class. By the end of that time he knew textbook English, at least, pretty well. Then the Italian ambassador boosted his education in the more colloquial language of the country, by finding him a job at a lead mine in Idaho. Belluschi started there by stringing power lines, and ended by designing powerplants.

An architect's office in Portland, Oreg., offered to take him in, and when he went out there he was struck by the rugged beauty of the country. From laboring over specification sheets and minor details on the drawing board, he rose to quick recognition as a modern master. His house designs were not only built—they were widely published and commented on by other architects.

He opened his own office. Not only homes, but large-scale jobs flooded in. At times he had 40 designers and craftsmen assisting him there, but he always kept the atmosphere of a small office with Belluschi involving himself in every phase of the work even when it drove him to exhaustion. A constant stream of students, young graduates, and admiring colleagues were coming in also, and he was never too busy to pour himself out in talk with them.

His friendly nature needed these contacts—and more, his architecture needed them. His art was not something conceived in lonely granduer, and imposed from above. It was give and take—interpretation through the screen of his brilliant mind and warm spirit. He once wrote:

"We architects, of the common working variety, who must be frontline men, facing frustration and compromise; we, who must understand, absorb and give visual form to so many of the forces which make our world move, must not be ashamed to listen nor to understand what lives around us, ever mindful that each one of us can give more in a creative way by being part of the great mass of people, sharing their loves and enthusiasms, guiding them in the realization of their obscure ideals—not disdainful, temperamental stars—but men of vision among men. * * *"

It was this spirit of sharing which led him to make a drastic change in his way of life and locale by answering the call to the deanship at MIT. Now he lives in Boston with his wife, the former Helen Hemila, of Finnish descent; and their two sons, Peter, 22, and Anthony, 20.

He became a naturalized citizen in 1929. "I've never been sorry for a moment," he said recently. "Europe is stifled with too much population and not enough wealth. Here, there is so much to be done—we are just now beginning to find our way, with faltering steps, in changing raw land into civilized country."

Pietro Belluschi is one of the changers. One of those who is shaping America, and its image in the eyes of the world.

Opposition to Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. FRANK J. LAUSCHE
OF OHIO
IN THE SENATE OF THE UNITED STATES
Monday, May 8, 1961

Mr. LAUSCHE. Mr. President, I am pleased to learn of recent action by the Washington Court House, Ohio, Board of Education, expressing opposition to Federal aid to education. A resolution on this subject is a part of a letter I recently received from that board of education. I ask unanimous consent that this letter be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

WASHINGTON COURT HOUSE
CITY SCHOOLS,
OFFICE OF THE CLERK-TREASURER,
May 5, 1961.

The Honorable FRANK J. LAUSCHE,
U.S. Senate,
Washington, D.C.

MY DEAR SENATOR: I have been requested by the board of education of the Washington Court House City School District to transmit to you their following action taken in the regular board meeting of May 1, 1961:

Mr. Flee moved the adoption of the following resolution:

"Whereas the Washington Court House Board of Education holds the firm belief that the children of this Nation may best be served by schools controlled and financed at the local level and responsibile to local people;

"Whereas the various communities throughout our Nation have responded to the financial needs of education; and

"Whereas we are anxious to preserve the freedom of thought upon which our Nation was founded: Therefore be it

"Resolved, That the Washington Court House Board of Education go on record as opposing additional Federal money for support of education; and be it further

"Resolved, That Senator FRANK LAUSCHE, Senator STEPHEN M. YOUNG, and Congressman WILLIAM HARSHA be sent copies of this resolution."

Mr. Girton seconded the motion.

On rollcall, the members voted as follows: Reed, yea; Flee, yea; Dray, yea; Girton, yea; Willis, yea. Five yeas.

The president declared the resolution adopted.

Respectfully yours,
THELMA E. ELLIOTT,
Clerk, Washington Court House Board of Education.

A Midwest County Editor Fears for Nation's Future

EXTENSION OF REMARKS
OF

HON. EARL WILSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1961

Mr. WILSON of Indiana. Mr. Speaker, the State Department held what it called a foreign policy briefing session. Newspapermen from all over this Nation attended the 2-day meeting and listened to foreign policy experts from President Kennedy down through some Assistant Secretaries in the State Department.

What they heard was almost totally pessimistic. It was so pessimistic that one might have thought the answer to a question such as "What do you thing of the Kentucky Derby?" would be greeted by an answer such as "The owners of all the losing horses will be mighty sad and will have lost prestige."

This foundation of frustration upon which America's foreign policy is now being built greatly alarmed one newspaperman, my good friend, Robert Gordon, editor of the Columbus Evening Republican, a newspaper that is looked to by residents of several counties in Indiana for information and guidance.

Mr. Gordon did not return to write his accounts of the meetings on the same basis of thought that he found here in Washington. He did not resign himself to the reduction of our Nation by the forces of communism. He did not capitulate to the calumnies of the Reds. He chose to adopt a positive outlook and state in his own terms what he feels is wrong with our present positions and the present direction of our foreign policy.

In four publication days of his newspaper he had the readers of the Evening Republican aroused to the dangers of our present policy posture. His comments are so good, so level headed and so typical of the Midwestern trend of thought that I offer them here today.

They show that we in the Midwest are not ready to resign ourselves to being pushed around by the Communists and their cohorts all the time. They display Midwestern patriotism, Midwestern willingness to get on with a job that needs to be done, and Midwestern candor.

Mr. Speaker, under unanimous consent, I include one of Mr. Gordon's articles in the Appendix of the RECORD:

FOREIGN POLICY ON THE BRINK—HOW U.S. COPES WITH THREE BIG "IFS" MAY DECIDE THE NATION'S FUTURE

(By Robert E. Gordon, editor, the Evening Republican. Last of four articles)

If the Government of the United States continues to drag its heels on initiating a "get tough" policy with Communists, its years are numbered as the land of the free and the home of the brave.

If the United States does not throw Castro and the Communist government out of Cuba before the Russian military buildup is completed, it will be extending an invitation to Russia to expand its foothold throughout Latin America under threat of bombs for the U.S. mainland.

If our Government fails to make a realistic reappraisal of our foreign aid program, and its noble but stupid effort to be all things to all people in free world, it will destroy the free enterprise system that has made it possible for us to help others and defend the cause of freedom.

These may seem harsh statements, but they are my opinions previously formed but cemented during a 2-day U.S. State Department background briefing session which I attended last week in Washington.

Speaking in Chicago Friday night President Kennedy told an audience of 5,000 people: "Every new piece of information, every fresh event, have deepened my conviction that the survival of our civilization is at stake—and the hour is late."

These words by the President of the United States were based on his new experiences during 3½ months in the White House. I believe that the President is facing reality and every word he spoke is the truth. Godless communism is relentlessly on the march following the blue print drawn more than 100 years ago in the writings of Karl Marx and Friedrich Engels. The dedicated Communist leaders of Soviet Russia are playing it to the hilt and we of the free world are today, and have been for 30 years, performing exactly as they would have us from the Communist point of view.

SAY THEY WILL BUT DON'T

Communism is expanding over the world and it has finally gained a foothold just 90 miles from the U.S. mainland, 30 minutes flying time on commercial transport. We ask the Communists to stay put and they say they will, but they don't. We spend billions to win friends around the world and awaken to discover that most of them are either playing both ends against the middle, or are inclined toward the Communists.

Meanwhile our capitalist free-enterprise system of production is being financially sapped, we are producing more than we can sell thereby creating unemployment and conditions which make us susceptible to the alleged "better things" which the isms so graciously advocate. We have managed in the past to weather such problems as unemployment and out of balance production, but today our plight is more grace than at any time before. Militarily and economically, we are committed in a hundred or more countries around the globe. The Department of State reports that we are now maintaining embassies in 193 countries plus 20 other State Department service posts. The insults are many and the broken window cost is high. We are spread so thin that it is easy to understand the warnings President of the United States acknowledges that for more sacrifices by the American people.

The very serious problem which we face today was not created over night. It has been building up over the years and has finally reached the point where the President of the United States acknowledges that "the survival of our civilization is at stake—and the hour is late."

FEW CARE TO LISTEN

In spite of the scolding which President Kennedy gave the Nation's press in a talk before the American Newspaper Publishers' Association in New York Thursday night * * * it has been the American press and only the press over the years that has been telling the American people what is happening to them. But few have cared to listen or give consideration to doing anything about it. We, the people, have been too busy worrying about what the Government can do for us * * * and the Government certainly is trying to be all things to all people. You and I have been saying for years that it's a mess, and it really is.

The United States is the greatest country in the history of the world, where the individual is supreme. There is no challenge insurmountable if the people have the facts. Freedom of the press was based on a concept that if the people have the facts they will make wise and judicious decisions. The problem is for the people to know what the facts are * * * and I am convinced that too many don't want to know what the facts are, rather than being unable to get the facts.

Now to pass on some of my country style opinions and impressions after sitting in for 13 hours of discussions and questions and answers participated in by the top brass in our Government. Not more than two were on at the same time, but they included President Kennedy, who spoke off the record for 20 minutes and answered questions for 10 minutes; Secretary of State Rusk, Central Intelligence Agency Director Dulles, Edward R. Murrow, Information Agency; Adlai Stevenson, Bowles, Williams, Bohlen, Jones, Ball, Kohler, and Tubby, top men in the State Department, the heads of the Space Agency, and the Defense Department.

HAVE RED BULL BY TAIL

It was my opinion that the heads of our Government are aware they have a great red bull by the tail and they don't know where to let go.

To me, these leaders of our 180 million people are running frightened if not downright scared. President Kennedy learned quickly in his first 100 days that you can't negotiate with communism and that the spending of billions in foreign aid has not accomplished the results that had been hoped.

I fear that a disillusioned President Kennedy, stunned by the seriousness of world problems, is ready to search every avenue for an answer.

Since the Cuban invasion failure and the stepping up of Communist activity in Laos, he has conferred with President Eisenhower, Rockefeller, Nixon, Goldwater, President Truman, President Hoover, and General MacArthur. I do not believe all of these consultations were for the sake of national unity. Rather, for the most part, I think he was asking advice on what to do.

With the information he has collected from these leaders—military and political—plus the dismal reports from the members of his staff, let it be hoped that he will meditate in the seclusion of his private chambers and reach a decision based upon what is best for the United States and mankind. As I view it, his position today is much like that which faced President Lincoln before the Civil War.

SPEAKS OFF RECORD

President Kennedy spoke off the record to our group and he was humble, more so than I had ever seen him. Frankly, I thought the President acted like he wished he were back in the Senate.

I gained the impression that these leaders of our Government lack confidence and that they are fearful of the American people and our friends around the world on the decisions they make. There seemed to be fear of the reaction to new decisions in view of statements and commitments previously made. For example, in a press conference on April 13 the President said, "There will not be, under any conditions, an intervention in Cuba by U.S. Armed Forces."

President Kennedy need not fear the American people in a crisis. Give them the facts and if the cause is just they will make wise decisions. They always have.

In view of the failure of the Cuban-Florida trained American equipped invasion force, I wonder if such statements as the above might influence the President against making an immediate decision on what he believes now should be done.

PRESTIGE IMPORTANT

Prestige seemed to be a major consideration in foreign policy. In a discussion of the possibility of sending a man to the moon, it was brought out that it would cost from $20 to $40 billion and require about 6 years and then there was no assurance that we would be first. No mention was made of what it might mean to mankind or in the defense of the free world. It would be a race or a contest. If that is the main concern, it should be tossed out the window.

Our officials discussed at length our costly foreign aid programs and the new Organization for Economic Cooperation and Development. Our share would be 1 percent of gross national product or $5 billion plus. This cooperative effort with other free nations would be for the purpose of helping the underdeveloped countries of the world improve their standards of living so that they would be less susceptible to the bait of communism. It was brought out that this is not a case of trying to buy friends or to have others be like us, but rather to place them in a position where they can improve their own economy with assistance.

This, and all our foreign aid efforts designed to aid the people, are noble efforts, but a look at the past doesn't seem to show where they have paid many dividends in the cause of freedom.

COMMONSENSE

Applying the horse or commonsense measuring stick, it is inconceivable how we can stand back and permit a Russian military buildup in Cuba. We must get them out of Cuba and the quicker the better. If we don't, Russia and Castro will be in a position to strengthen their foothold in Latin America under threat of bombing the U.S. mainland in case of interference.

It is inconceivable how we can successfully accomplish economic development and appreciation for the finer things in the underdeveloped countries without a stepped up educational program. Success of slum clearance in our own Hoosier State has only been accomplished through education. Dr. Blackburn of Flanner House, Indianapolis, emphasizes that education is essential in a redevelopment program.

It seems that our finest tools in the cause of freedom are our missionaries, who work from a Christian foundation with understanding of the weaknesses and problems of the hungry and ignorant of the underdeveloped countries.

YOU CAN'T NEGOTIATE

Based on past experience it is inconceivable that we can expect peaceful negotiating with communism. We have lost every round because that is the way they play it. They are cunning and dedicated to the Communist cause and they know what they are doing.

It is inconceivable that we, the American people, should be afraid and lack confidence. If any one should be afraid it is Russia. In the face of a get-tough U.S. policy, based on fairness, wouldn't you hate to be occupying the Kremlin with Russia ringed with allied nuclear bases, and hated by the peoples of the world more so than we are * * * plus the fact that the United States has the greatest capacity in the history of the world?

Further, it is inconceivable that we would permit our own successful free system of economy to be strangled to death in much the way blueprinted in the Communist manifesto.

WHAT SHOULD WE DO?

What should we do? You may ask.

That is a big question * * * and all that I can do is give you one country editor's opinion.

Being a "good Joe" has gone on far too long. Surely we have learned that you can't negotiate with Khrushchev * * * and that too often those we help become our enemies.

The United States must take off its velvet gloves and adopt a get-tough policy with communism. This it must do if it is to survive as the land of the free and the home of the brave.

It must lead from a position of strength, but with fairness and peaceful intention.

The United States must throw Castro and the Communist government out of Cuba * * * and do it now * * * and we must tell Khrushchev and the Communists in no uncertain terms to get out of the Western Hemisphere and stay out. As for our policies in Europe and Asia, we need to take a fresh and realistic look at our foreign aid and our commitments around the world.

It is inconceivable that we can go on and on supporting the world without destroying our own system which has placed us in position to help others and defend the free world.

Our friends, what few we have left, will respect us more if we get tough in the cause of freedom.

Killer Substances in Food

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1961

Mr. PHILBIN. Mr. Speaker, the American people have been greatly disturbed over a period of time now about persistent reports of increasing peril from cancer-causing agents in foods, drugs and cosmetics. From time to time the Congress has given considerable attention to this most serious question and some legislation seeking to control this menace to human welfare has been enacted.

Recently Dr. Freddy Homburger, president of the Bio-Research Institute of Cambridge, Mass., testified before our House Subcommittee on Health Appropriations that a Federal appropriation of $10 million is urgently needed to help protect the American people against cancer-causing agents in the above products. At the same time he suggested that this sum would enable the Food and Drug Administration to speed up research on improved methods to detect cancer-inducing substances in consumer goods.

We have a law designed to exclude from human consumption all cancer-producing substances, said the doctor, but we lack the methods to determine exactly what constitutes a cancer hazard, even for test animals.

Pointing to the fact that in existence today there are innumerable consumer items which never have been adequately tested because of the lack of quick, economical and reliable methods, the doctor outlined a $10 million program, one-half of which would go for intramural studies, grants-in-aid and contract research programs. Another $5 million would go for the construction of needed laboratory space for the Food and Drug Administration.

Dr. Homburger's recent demonstration that an agent used widely in soft drinks and contained in many other flavoring components produces cancer in rats was most alarming. Strongly urging the Congress to take action, this well known scientist declared that as an example of what the public must be guarded against, was the substance used as a weight-reducing agent for years until it became evident that it caused cataracts of the eyes. Dr. Homburger also urged Congress to support and bolster independent research institutions which exist outside of universities and hospitals, and requested an appropriation of $50 million to create new institutes of this kind throughout the country. He said this sum would make it possible to organize, construct, and equip 100 independent institutes at the rate of two in each State, to be operated by government and private grant-in-aid funds.

He summarized his case by stating:

The universities, with their team efforts, educate a type of scientists who work together admirably in committees, research teams, and departments of large laboratories. But nowhere are we training—systematically—the leaders of tomorrow who will guide new scientific developments. Such leaders can emerge from independent institutes.

I trust that the Congress will take Dr. Homburger's urgent warning to heart, and I urge the Appropriations Committee to make sure this year that sufficient funds are appropriated to take every effective measure that is necessary to eliminate cancer-causing agents or other deleterious substances in food, water, drugs, and cosmetics and other products, materials, or substances with which the public comes in contact and are capable of producing incurable or serious disease or affliction.

This question is one of greatest urgency and topmost priority because America's food preparation and eating habits are changing greatly. Additional effective controls must be found to protect the public health and to prevent millions of innocent people from being poisoned or rendered sick or afflicted by what they eat, what they use, what they wear, or what they may be exposed to in modern society.

There is need for boldness and immediate action in fashioning the broadest type of program to combat these evils. Congress must provide the answer at an early date and I strongly urge that it be done.

The article follows:

FUNDS ASKED FOR RESEARCH—FOOD TESTS VITAL IN WAR ON CANCER

WASHINGTON.—A Boston scientist told Congressmen Thursday that a Federal appropriation of $10 million is urgently needed to help protect the American people against cancer-causing agents in their foods, drugs, and cosmetics.

Dr. Freddy Homburger, president of the Bio-Research Institute of Cambridge, Mass., told a House Subcommittee on Health Appropriations the sum would enable the Food and Drug Administration to speed up research on improved methods to detect cancer-inducing substances in consumer goods.

"We have a law designed to exclude from human consumption all cancer-producing substances," Dr. Homburger said, "but we lack the methods to determine exactly what constitutes a cancer hazard, even for the test animals."

WORKED AT TUFTS

"There exists today innumerable consumer items which never have been adequately tested because of the lack of quick, economical, and reliable methods," he said.

Under the Homburger plan, one-half of the $10 million appropriation would go for intramural studies and for a grant-in-aid and contract research program. Another $5 million would make possible construction of needed laboratory space for the Food and Drug Administration. "The agency," Dr. Homburger said, "now has practically no funds for such research."

Dr. Homburger, former research professor of medicine and director of cancer research at Tufts University, recently demonstrated that an agent used widely in soft drinks and contained in many other flavoring components produces cancer in rats.

As an example of what the public must be guarded against, the Boston scientist cited the case of a substance used as a weight-reducing agent for years until it became evident that it caused cataracts of the eyes.

NEW TEST DESCRIBED

"Dr. Bernard Armbrecht of the FDA has now developed a method, using chickens, that can demonstrate toxic properties of drugs in a matter of days," Dr. Homburger said.

Dr. Homburger also urged Congress to encourage independence in health research by bolstering independent research institutes which exist outside of universities and hospitals. He requested an appropriation of $50 million to create new institutes of this kind throughout the country.

He said this sum would make it possible to organize, construct, and equip 100 independent institutes at the rate of 2 in each State, to be operated by government and private grant-in-aid.

"The universities, with their team efforts, educate a type of scientists who work together admirably in committees, research teams, and departments of large laboratories," he said. "But nowhere are we training—systemically—the leaders of tomorrow who will guide new scientific developments. institutes."

Herb Klein Evaluates the First 3 Kennedy Months

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mr. CURTIS of Missouri. Mr. Speaker, Herbert G. Klein, press secretary of former Vice President Richard M. Nixon, recently addressed the Joliet, Ill., Rotary Club giving his evaluation of the Kennedy administration in the field in which Mr. Klein is most knowledgeable, that of public relations. Mr. Klein is well remembered and highly regarded in Washington from his years of service here and I am sure that his remarks will be of interest. I would like to place Mr. Klein's statement in the RECORD at this point:

EXCERPTS OF REMARKS BY HERBERT G. KLEIN, EDITOR OF THE SAN DIEGO UNION, AND FORMER PRESS SECRETARY TO VICE PRESIDENT RICHARD NIXON, BEFORE THE JOLIET, ILL., ROTARY CLUB, APRIL 18, 1961

We are nearing the completion of the first 3 months of the Kennedy administration. During this time there has been much talk of proposals in various fields ranging from oceanography to unemployment, but there has been major action only in the field of public information.

President Kennedy has set double standards—negative and positive—in the field of information. He has appeared on television and issued news statements whenever he has had a story he wanted to put over, but oppositely, he has simultaneously tightened news restrictions on information which does not fit into his domestic propaganda machine. This is a serious matter. The President and his staff have done more to hinder a free flow of information than has any administration in this century. The resultant damage is serious.

The public has even lost its watchdogs. Representative JOHN MOSS, a Democrat from California, was the congressional checkmate against censorship during the Eisenhower administration. But today he is strangely silent. He has pointedly ignored restrictions which he previously protested loud and hard. His silence today unfortunately indicates that his previous concern for the free flow of news must have had partisan connotations. He should be as free in his criticism of the Democratic administration as he was of the Republican. He has not been.

And what of the press? I am afraid too many of my colleagues also have joined the widely publicized honeymoon period. One of the major developments of this first 3 months has been the lack of constructive criticism of this administration by many of the usually watchful elements of the press. It is time for the newspapers and television to call off the honeymoon. The Nation's best interests are better served by constructive criticism than by silence.

I'm not advocating free-swinging unreasonable criticism. But it is essential to our democracy to have the free press criticize vocally and constructively, honeymoon or no honeymoon. Unless this is done, the habits of our first months of marriage to this administration may permanently handicap the Nation.

Some have questioned whether former Vice President Nixon should give his critical analysis of the administration when he appears in Chicago on May 5. For him not to do this would be to fail in his responsibilities as the leader of the Republican Party. Incidentally, those who question his position of leadership should consult with the citizens who have been writing him at a rate of 2,000 a week or the other thousands who have turned out to meet and cheer him at every stop in California.

There is no one actively leading the Republican Party today whose national popularity even approaches Mr. Nixon's. In Chicago and in subsequent speeches elsewhere he will offer guidance on national programs.

I think that few have realized the changes in news restrictions because they have not been fully analyzed.

Double talk on the part of Mr. Kennedy and his press aids is largely responsible for this.

Mr. Pierre Sallinger, Mr. Kennedy's able press secretary, recently told Democratic women that the public is "entitled to know what is going on when it is going on." He added, "nothing is more vital in government than the freest possible flow of news."

He then went on to criticize the Eisenhower administration. Mr. Sallinger is skillfully practicing doubletalk.

As an example, newsmen now are being barred from traveling with the segments of the 7th Fleet which is patrolling off the Lao-Indochina area. During all previous wars, cold or hot, newsmen have been allowed aboard ships because, as Mr. Salinger says, the public is entitled to know what is going on. The Kennedy administration has not revealed why it has this ban. I haven't even seen a news story on it. I can only surmise that this is part of the naive policy to avoid offending the Soviets by stories from a fleet unit. This is the Kennedy sound barrier.

This policy of treading quietly around the Communists has resulted in the muzzling of our military leaders. Rear Admiral Frankel found his speech censored last week. Earlier Admiral Burke himself was the victim of the sound barrier.

Recently the national space surveillance control center has been forced to halt its public confirmation of Soviet space shots. We hide information only from ourselves.

The administration is censoring even such matters as the Boite report which deals with such top secret measures as the officer grade spread, promotion patterns and whether Navy rear admirals of the lower half should be floated or selected to the upper half. Navy men are barred from discussing this publicly under Defense Department restrictions.

Mr. Khrushchev has imposed no barriers on his willingness to criticize the United States. He takes the best possible advantage of strong propaganda.

Why are we restricting ourselves? The Soviets are not going to deal with us on the basis of their appreciation of our timid comments. Mr. Khrushchev enjoys give and take as well as anyone. He respects strength and evaluates in terms of self-interest. The Kennedy sound barrier will not help our relations with the Soviets but it may well endanger traditional American freedom of information and criticism.

True national security comes from outbuilding and outpacing the enemy.

An Editorial Analyzing the Position of a Typical American Community on Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1961

Mr. COLLIER. Mr. Speaker, with the clamor for Federal aid to education at a public school level, it is interesting to observe the attitudtes of those who are sincerely pledged to improving educational standards at every level.

One of the finest editorials I have read on this subject appeared in Life newspapers, published in my district. The editorial deals with the issue in my home community—a middle-income city where folks take pride in their homes, schools, churches, and civic functions of every nature.

Many of the folks who live in this community have mortgages on their homes—but they have met the growing cost of government without neglecting their responsibility to their school systems. They have supported bond issues and willingly accepted this additional tax burden in recognition of their primary civic responsibility. It should be noted, too, that this community is without the advantage of the large industrial tax income which others enjoy.

I commend the author of this editorial, Frank Dillett, and the Life publications for the exceptionally fine job

they have done in presenting the issue to their thousands of readers and in doing so in factual perspective.

The editorial follows:

Somewhere in the distant past, born of an idea and nurtured by organized groups, there has arisen the belief that the subject of education is sacrosanct and that only those in that field were qualified to discuss the subject with any authority.

Further than that, any critic of instructional matter, curriculum, or supposed academic facilities was pilloried in the public press as somewhat of an undesirable citizen and the mechanics of the educational front groups were loosed to drive him to silence.

Slowly, but surely, local school district authority over educational affairs was limited by county and then State jurisdictions, and now Federal aid to education has become a national issue with Congress currently considering the administration's $5.6 billion Federal aid to education program.

Over the school Easter vacation, we had an opportunity to discuss this latest trend with a teacher whose experiences on the staffs of schools in both Minnesota and Wisconsin, as well as on the instructional staff of a school teaching children of our Armed Forces overseas, provides more than the average background for an opinion on the subject.

This teacher is unalterably opposed to Federal aid to education as a practical business proposition. It will simply mean, our teacher said, that we will be taxed more and send our money to Washington, D.C., where a large share will be siphoned off by a whole new bureaucracy before some of it is remitted back to the source.

Looking at the matter dispassionately, how would the $2.3 billion earmarked for construction of public school classrooms and raising teachers' salaries benefit our area? Our school facilities in this community are more than adequate, since there are many empty classrooms not now in use and not expected to be. We have paid or are paying for them without any help other our own. We didn't ask county or State help. We certainly don't need Federal aid.

On the teacher salary question, the Federal measure would provide for increases for the next 3 years. What happens then? Are teachers any more willing to take pay cuts than you if the local school district is unable to meet the expanded payroll at the end of that time?

Won't it breed dissatisfaction among teachers and the teaching profession when that happens? We certainly think so.

The other $3.3 billion proposed in the Federal measure would be authorized for loans to colleges for housing, construction of academic facilities, and for scholarships. Won't this encourage demands for more grants and more scholarships; and where will it end?

Let's take a look at the facts in our own area as well as in Illinois. Between 1948 and 1959, a total of 1,276 new school buildings (not classrooms) were constructed in Illinois. In the last 5 years alone, 15,390 classrooms were either put up or are now scheduled for completion in the State.

Nationally, school construction and teachers' salaries have kept pace with Illinois and with our local school districts. It might be pointed out that in the past decade, public school enrollment has increased approximately 50 percent but school expenditures increased approximately 200 percent.

In Illinois last fall we voted for a $195 million bond issue for our State universities and the teachers' college board has recommended a 31 percent increase in the total of the operating budgets for the next biennium for the four State universities (not including the University of Illinois or its Navy Pier branch) under its jurisdiction.

In the last few years, all four area grade school districts have built or are building new schools, while nearly every school has some degree of renovation, many of major character. Morton West has been built and further construction is planned for the junior college as well as at Morton East. Every dime has or will come from local taxes.

In Illinois between 1948 and 1959, average annual salaries of teachers in Illinois schools rose from $3,059 to $5,224, or 70 percent. We don't have the averages of teachers' salaries in each district locally, but a few years ago the Cicero district average was over $5,900.

With such increases in the offing on a State basis, can we afford to pay more Federal taxes for teachers' salaries and school construction? We're scheduled to get a healthy increase in State taxes in any event, not all due, however, to educational increases which have been asked for other schools. Those taxes all come out of the same pocket. It would seem that we ought to keep our spending closer to home where we'll have a better chance to keep track of our expenditures.

Trend Toward Centralized Government

EXTENSION OF REMARKS

OF

HON. ALBERT H. QUIE

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1961

Mr. QUIE. Mr. Speaker, the nationwide "what America thinks" poll was recently conducted on the question of government powers in our country becoming more and more centralized in the Federal Government. Since increased Federal Government powers represent an important issue to all Americans, I believe my colleagues would find the results of this poll revealing. Following this report, the Rochester Post-Bulletin newspaper, of Rochester, Minn., made some editorial observations on the results of the poll. I believe the cogent observations in that editorial, which was published on Tuesday, May 2, will be of value to all our citizens:

GROWING TREND TO STRONG CENTRAL GOVERNMENT FAVORED BY MAJORITY

(by Jack Boyle)

NEW YORK.—Americans are conditioning themselves for a strong, central Government in Washington, this week's "what America thinks" poll indicates.

Of those with opinions, 55.3 percent think a more centralized Government in Washington would be a good thing for the individual American, 44.7 percent said it would be bad for the individual.

Trained interviewers asked a scientifically selected cross section of Americans this question:

"Government powers in the United States are becoming more and more centralized in Washington. Do you think this is a good or bad thing for the individual American?"

The answers were:

	Percent
Good	45.8
Bad	36.9
No opinion	17.3

Of those saying good, few spoke out for completely authoritarian rule in the United States, but many approached that idea.

THOSE IN FAVOR REPLY

"The head of Government could get and give out knowledge to the people and we would be better informed. Besides, more money could be had from a centralized power in Washington," declared a Massachusetts crane operator. "Kennedy is looking ahead by getting all the keymen and advisers in one place. He is pretty sharp," said the owner of a California dental laboratory. "The Government knows more about what is necessary and best for the country," said the supervisor of a naval air base in Rhode Island.

The wife of an Iowa packinghouse operator said, "The Government should operate like a family and, like a family, branch out in every direction." The wife of a Colorado railroad telegrapher said, "We've grown so big, it's the only way things can be handled."

"It's a trend to socialism, and, while some may think this is bad, I think it is a good thing," said an Arizona lumberman. "We need leadership and it's a good thing for our country to have it centralized in Washington," said an Ohio advertising copywriter, a woman.

A few had monetary reasons for favoring a strong central Government. "There is too much redtape in the Pentagon. If things were more centralized, there would not be so much duplication and waste of taxpayers' money," said an Ariozna plumbing warehouseman. "It's the quickest way for minority groups to benefit from legislation that will improve their status," said a Long Island teacher, a man. "It's good because people will be able to get more financial help or business loans. State governments can't lend as much money as Washington can," said a Massachusetts brush manufacturer's wife.

THREAT TO DEMOCRARY

Those who thought the trend toward centralization was bad often said it was a threat to democracy.

"It's dangerous. We are a democracy and believe in the voice of the people and, when too much power is concentrated in one place, decisions are taken away from the people," said a retired Texas salesman.

"We are getting too much like Russia—too centralized and too socialistic," said a Maine coed. "This can lead easily to a real bureaucracy and do away with the rights of individuals. All kinds of graft can flourish this way," declared the wife of a Long Island businessman.

"It seems to be the Government is getting into too many things and pretty soon it will be all government instead of 'of, by and for' the people," said an Iowa farmer.

"From a medical viewpoint, it's bad, but from a scholastic viewpoint, it's good," said a Missouri secretary. "I'm a Republican and I don't believe in the slow socializing process that is taking place," said a California mortician. "Socialism is being brought about by ignorance. People have to realize government spending can come only from the people," said a New Mexico dental technician.

"When you send tax money to Washington it goes into many hands. So much of it is spent along the way. Washington is getting too big," said an Ohio State road watchman, a woman. "Centralized Government is trying to force integration," declared a Mississippi farmer. "The Government should keep out of schools. We look to Washington for too many things, such as teachers' salaries, and this encourages the pressure groups," said a Rhode Island postal supervisor. "I believe in the rights and privileges of the individual," said a California flight engineer.

The following is the editorial which, as I have mentioned, appeared in the

Rochester, Minn., Post-Bulletin on May 2, 1961:

POLL RESULTS DISTRESSING

The weekly report of the "What America Thinks" poll, which appeared on this page Monday, couldn't help but be distressing to those of us who believe in individual initiative and individual freedoms.

The question posed was: "Government powers in the United States are becoming more and more centralized in Washington. Do you think this is a good or bad thing for the individual American?"

The answers, in a scientifically selected cross-section of Americans, were: Good thing, 45.8 percent; bad thing, 36.9 percent; no opinion, 17.3 percent. Of those with opinions, 55.3 percent said this trend is a good thing.

This sheep-like reliance on a "big brother" to take care of them is based on the socialistic trend of the past 30 years in the United States. Evidently the people have swallowed the line that Federal bureaucrats know what's best for the people and that Federal spending aid is free.

Witness some of the explanations given in the poll by those saying the trend is a good thing:

"More money could be had from a centralized power in Washington."

"The Government knows more about what is necessary and best for the country."

"The Government should operate like a family and, like a family, branch out in every direction."

"We've grown so big, it's the only way things can be handled."

"It's good because people will be able to get more financial help or business loans. State governments can't lend as much money as Washington can."

These kinds of "reasons" are what perplex conservatives. No amount of logic seems able to overcome these specious arguments.

It's so easy to be in favor of vast Government spending programs and then attack the opposition for failure to come up with "positive" programs. It's so much harder to sell a program of individual initiative and liberties when too many individuals apparently are willing to exchange the traditional American way of life for some imagined economic blessing from Washington.

Over and over, in every poll on this subject, the same silly argument repeats itself—"the people can get more money from Washington." Just why the people don't understand that the money obviously comes from them through high taxation is simply beyond comprehension.

When 45 percent of Americans think a growing socialistic trend is a good thing, and another 17 percent don't even know what they think, it's almost too discouraging to put up a fight against the trend.

But we must. The only chance to halt the cancerous growth of the Federal Government into every phase of life is to fight against it whenever and wherever possible. Maybe it will be a losing battle, judging from the poll results, but it definitely is a battle which should not be lost by default.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1961

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of May 6, 1961:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

MAY 6, 1961.

At the end of the first 100 days of the Kennedy administration we find U.S. prestige apparently at its lowest in history and our domestic programs merely an extension and acceleration of the New Deal-Fair Deal programs, which the President admires, but which many consider proven failures. Worldwide Russian leaders are accelerating their Communist subversion, stimulated by Kennedy's failure to follow firm talk with firm action. Bipartisan harmony to show the world U.S. 'unity of purpose' fails on two counts, at least: (1) Our purpose is not clear, thanks to contradictory programs; (2) past mistakes are not only buried from view, such as the Cuba fiasco, but so, too, are the lessons we might have learned. Our contradictory programs are daily delineated on the House floor. This week's crop includes (1) the minimum wage final version; (2) Federal aid for water pollution; (3) a $9-billion tax increase to highway users.

The minimum wage House-Senate conference was a capitulation by the House Members. The Speaker selected as House conferees (POWELL, ROOSEVELT, DENT) Members committed to the dollar volume view already voted down by the House. The House had endorsed the Interstate Commerce principle as the basis for Federal participation in wage setting. The Senate bill embraced the dollar volume view and it prevailed contrary to the legislation passed by the House. Once again we witnessed the House views flouted by the Senate and the administration. So now we will have a minimum wage forced on our people based on $1 million gross and $250,000 of goods crossing State lines—with some businesses exempted. It is apparent that some of the exemptions were politically motivated, such as laundry workers and cotton gin employees, in an effort to secure more Members' votes in support of the administration plan. Despite a determined Republican stand, the bill passed 230 to 196—30 Republicans voted for it; 57 Democrats against. Federal Government wage setting must and will be accompanied by direct or indirect Federal price control—neither of these is compatible with a free, private enterprise system—there's the basic contradiction. In other words, it's unconstitutional.

The water pollution bill doubling the amount of Federal aid for construction of of local sewage disposal plants passed 307 to 110. The bill provided $1 billion total at $100 million per year—a doubling of amount in a program only 4 years old. What business the Federal Government has in this, I don't know. Stream pollution, which everyone disapproves, can be prevented in other ways (State compacts, for example). The construction of sewage plants is a local matter. Here again is the basic contradiction—Federal intervention in a local-State matter.

The highway taxes were increased $9 billion without House Members even demanding a record vote (only 24 arose, not a sufficient number). It was late in the day (6 p.m.) and, also, the Members don't want to appear to be against highways, even though disapproving somewhat the increase of taxes. I opposed it for several reasons, including (1) taxes are high enough now, on motorists, truckers and all related industries which pay taxes as highway users—$1.6 billion of highway users excise taxes annually now go into the general treasury beyond the amounts spent on highway construction; (2) as alternatives, we can either cut spending on welfare programs or stretch out the construction timetable.

The omnibus judgeship bill was probably our most ignominious action of the week. Instead of 35 or 59 additional judgeships (last year's maximum declared needs) or even the 70 passed by the House (see Newsletter, Apr. 22), the Senate version was adopted providing 73 new judgeships. The actions of Members of both Houses is quite transparent. Many have hopes for such an appointment, a lifetime job. The House leadership, under the Speaker's guidance, can receive the credit and blame for our legislative accomplishments to date.

Worldwide, meanwhile, we are losing ground in the Communist-free world contest. Daily Cuba is importing the sinews of war—oil, weapons, and Russian technicians. Every hour is irretrievably lost to the United States which must mount the offensive to free Cuba. When will the American people demand action? The State Department only now has released a study of Cuba, acknowledging officially and warning the American people of the socialism and communism the American people have recognized for months. Our inaction now, following our earlier mistakes, is almost unbelievable. In Laos, Africa, Vietnam, Berlin, Mexico, South America, we face Communist subversion: We know that under present policy a temporary slowdown will not prevent a later takeover. Day by day, we see the showdown coming closer. It will be wth Russia, not just with Cuba, Laos, Congo, Vietnam or other peripheral areas. So what are we doing? Meanwhile, we learn that supposedly patriotic union leaders and members have struck again and again at our missile sites pushing up wages to fantastic amounts of $400 to $700 weekly; legalized blackmail, you might call it. It's beginning to look as though our Nation, the leaders and/or the people, is suffering from mass hypnosis or sickness, making sensible conduct as the free world's leader an impossibility. Foreign aid to our enemies and neutrals is a leading example of this sickness. Our lack of firm action another.

The astronaut's successful flight, fully publicized, was a tremendous success for the United States way of life over Russia's secrecy and propaganda. Uncommitted nations may well be influenced to recognize (and emulate) the advantages of our way of life which combines a free society with military might, a happy and tough combination (if we don't sell ourselves short).

Americans Have Cause To Outrun the Communist Design To Enslave the World—Text of Communist Party Dedication Must Be Outnumbered by Freedom

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1961

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I present to the attention of yourself and all the other Members of this great legislative body, and also to all others who read or learn of it, the following text which I received through the U.S. mail this day:

A TOTAL COMMITMENT DESIGNED TO ENSLAVE A TOTAL WORLD

JEFFERSON STANDARD BROADCASTING CO.,
Charlotte, N.C., March 10, 1961.

MR. NORMAN R. GLENN,
Editor and Publisher, Sponsor,
New York, N.Y.

DEAR NORMAN: Enclosed is an exact copy of a letter which a young Communist sent to a friend of his back in the United States.

The letter appeared in Presbyterian Survey, a very fine publication of the Presbyterian Church. In reproducing it, the editor made one of the most profound and thought-provoking observations I've ever read. He said, "We think this letter shows more graphically than any editorial what total committee means." He went on to say, "Are we as committed to the truth as this young Communist and millions like him are committed to an empty hope?"

To a great majority of people in the free world, particularly people in America, this kind of dedication is unheard of. They simply cannot believe that the architects of communism, Karl Marx, Lenin, et al., could possibly have such influence on any human being. I feel that to defend and protect freedom as we know it today, it is imperative that all people in the free world understand the inner feelings of those who are determined to destroy it. I am hopeful, therefore, that you—through your widely read publications—will give the enclosed letter as much publicity as you see fit.

We simply must convince Americans and as many of our friends in the free world as possible that communism is by no means just another political party. It is a form of religion, a complete dedication, a total commitment designed to enslave a total world.

Sincerely yours,

CHARLIE CRUTCHFIELD.

A YOUNG COMMUNIST WRITES

What seems of first importance to you is to me either not desirable or impossible of realization. But there is one thing about which I am in dead earnest—and that is the socialist cause. It is my life, my business, my religion, my hobby, my sweetheart, wife, and mistress, my bread and meat. I work at it in the daytime and dream of it at night. Its hold on me grows, not lessens, as time goes on. I'll be in it the rest of my life. It is my alter-ego. When you think of me, it is necessary to think of socialism as well, because I'm inseparably bound to it.

Therefore, I can't carry on a friendship, a love affair, or even a conversation without relating it to this force which both drives and guides my life. I evaluate people, books, ideas, and notions according to how the Socialist cause and by their attitude toward it.

I have already been in jail because of my ideas, and if necessary I am ready to go before a firing squad. A certain percentage of us get killed or imprisoned. Even for those who escape these harsher ends, life is no bed of roses. A genuine radical lives in virtual poverty. He turns back to the party every penny he makes above what is absolutely necessary to keep him alive. We constantly look for places where the class struggle is the sharpest, exploiting these situations to the limit of their possibilities. We lead strikes. We organize demonstrations. We speak on street corners. We fight cops. We go through trying experiences many times each year when the ordinary man has to face only one or twice in a lifetime.

And when we're not doing these more exciting things, all our spare time is taken up with dull routine chores, endless leg work, errands, etc., which are inescapably connected with running a live organization.

Radicals don't have the time or the money for many movies or concerts, or T-bone steaks or decent homes and new cars. We've been described as fanatics. We are. Our lives are dominated by one great, overshadowing factor—the struggle for socialism. Well, that's what my life is going to be. That's the black side of it. Then there is the other side of it. We Communists have a philosophy of life which no amount of money could buy. We have a cause to fight for, a definite purpose in life. We subordinate our petty personal selves into a great movement of humanity. We have a morale, an espirit de corps such as no capitalist army ever had; we have a code of conduct, a way of life, a devotion to our cause that no religious order can touch. And we are guided not by blind, fanatical faith but by logic and reason, by a never-ending education of study and practice.

And if our personal lives seem hard or our egos appear to suffer through subordination to the party, then we are adequately compensated by the thought that each of us is in his small way helping to contribute something new and true, something better to mankind. (Reprinted from the Presbyterian Survey.)

Mr. Speaker, in reading and rereading the text following the words: "A young Communist writes: 'What seems of first importance to you is to me either not desirable or impossible of realization,'" my memory is refreshed of an experience I have not infrequently had during these 14 years of my membership on the House Committee on Un-American Activities when I have been sitting as a member of an investigating committee of that vital and essential committee in some part or other of our beloved Nation. For, Mr. Speaker, the text of what I herewith present as a dedication of this "young Communist" is strangely familiar; yes, is substantially what I have heard many times stated under oath, by American citizens who have formerly been dedicated members of the Communist Party of the United States. Time and time again, under oath, as friendly witnesses in an endeavor to help the committee understand the danger resulting from the dedication of themselves and others as Communists to the Communist cause, I have sat in amazement and trepidation, as I heard them state their former dedication to the Communist conspiracy directed against the freedom-loving and freedom-dedicated philosophy of our beloved Nation, and to hear them say without hindrance or limitation or any thought of equivocation, that they had thus formerly dedicated their life, when they became Communists in the United States of America, to live for, and often, in fact, even to make unbelievable sacrifices for the Communist philosophy.

Mr. Speaker, I am referring to the former Communists in the United States who have had a revulsion of feeling against the philosophy and practices of the Communist Party; I speak of such of those who have volunteered to come to the support of the U.S. Congress through their cooperation with the House Committee on Un-American Activities, and thus to help us better to understand, not only the threat of subversive Communist infiltration, but to understand the direct and positive danger and hazard thereof to American ideals and to American institutions of government, schools, churches, labor unions. I have heard them tell of divorcing a wife, or a husband, respectively, because of their Communist Party loyalty and dedication. I have heard them tell of habitually deceiving their loved ones; of neglecting their families, of going without food and going without adequate necessities of life. I have heard them tell of going underground and undercover like so many moles and gophers; living a daily life of deceit and false identity. I have heard them tell of abandoning loved ones and parents and brothers and sisters and sweethearts. Mr. Speaker, these former Communists who thus desert this Godless philosophy help very much indeed when they voluntarily come forward and help the people of the United States to protect themselves against the dedication of those who have not yet revolted against those false ideologies of communism sufficiently to take that step. Mr. Speaker, I would to God that we Americans who have no use for the Communist philosophy and would not think or dream of uniting with it in any way whatsoever, would have a devotion to our constitutional way of life; to our heritage, as God-loving American citizens; of freedom and dignity for the individual, might consciously and deliberately place these elements sufficiently into our daily experience so that all mankind would know from our daily life, in our actions and by our daily dedication to all that is high and lofty, patriotic and righteous that we do dedicate our substances and ourselves to a valiant and steadfast desire and readiness to make any sacrifice necessary to perpetuate the philosophy of the individual dignity of man and reverence for God, for our beloved Nation in a safe and sound world of enduring peace. Dedicate bespeaks loyalty and love. We have cause to outmatch and outrun the Communist dedication.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

Appendix

Inspection of the Combined Arms School of the 7th Army Training Center

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9, 1961

Mr. THURMOND. Mr. President, last November while on a Reserve officers tour of duty with other Members of Congress, I had the pleasure of inspecting the Combined Arms School of the 7th Army Training Center. This school, under the training center command of Brig. Gen. Edwin H. Burba, is operated by Lt. Col. Carl G. Witte, assistant commandant, in Vilseck, Germany, near the Czechoslovakian border.

The itinerary afforded an excellent opportunity to observe field exercises of the combat arms which stressed realistic tactical conditions, leadership training, and teamwork within and between the arms. A tour of the academic facilities disclosed a remarkably high degree of ability on the part of the staff and faculty. The efficient planning, conduct, high standards, and excellent quality of instruction proved to be an exceptional example of the formal military training program in Europe. It is a recognizable fact that the Combined Arms School, as part of the 7th Army Training Center, plays a very important role in the readiness mission of the 7th Army.

I ask unanimous consent, Mr. President, to have printed in the Appendix of the RECORD some remarks I have prepared on my inspection of this fine service school.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR THURMOND

The Combined Arms School, as it is known today, was originally the Tank Training Center of the U.S. Constabulary. Established as a school in 1948, its primary mission was to train the personnel of the Constabulary to accomplish border surveillance duties. The 7th Army commander, realizing the shortage of well-trained personnel during the transitional period following the war, directed that the school be expanded to include training for all armor personnel. As a result, in 1951 the U.S. Constabulary School was redesignated the 7th Army Tank Training Center and again in 1958 was renamed the Combined Arms School in consonance with the addition to the curriculum of training that applied to all arms.

The mission of the Combined Arms School is threefold in nature and accomplishes the following:

1. Prepare and conduct instruction in communications, gunnery, small unit tactics, wheeled and tracked vehicle maintenance, and chemical, biological and radiological warfare, reflecting the latest Department of the Army doctrine, as applicable to the needs in Europe and foreign students.

2. Conduct studies, experiments, and tests for the purpose of developing the capabilities of equipment and supplies, and adapting existing doctrine and techniques to requirements peculiar to 7th Army operations.

3. Control, operate, and maintain live fire combat ranges for armor, artillery, infantry, and engineer units.

In accomplishing the primary mission, the Combined Arms School's curriculum includes courses for the advanced armor crewman, the turret mechanic, reconnaissance leader, track vehicle mechanic, motor officer, motor sergeant, chemical, biological and radiological courses for officers and noncommissioned officers, and special courses that are conducted relative to new equipment. These courses vary in length from 2 to 6 weeks and are programed to graduate in the vicinity of 3,200 students per year.

In addition to these courses the school also conducts classes and special training for units that come to the training center for field work on a request basis in over 200 related subjects. Since its inception, the Combined Arm Shcool has graduated over 30,000 officer and enlisted students in programed classes and 103,000 in the nonprogramed field.

Tactical training on combat ranges consists of small unit live fires, day and night exercises which provide integrated, progressive training for infantry and armor units with support from mortar and artillery units.

The personnel of the staff and faculty are imbued with a special sense of responsibility toward the student and his unit in that they make certain he learns his required skills. To accomplish this, small group instruction and practical work or "hands on equipment" instruction is emphasized. Through these methods much individual attention can be given to the student thereby turning out an exceptionally high rate of successful graduates who have been rapidly taught and are trained so that they in turn can serve as instructors in their own units. This system gives unit commanders the highly trained specialists, supervisors, and leaders needed to fill the gaps in the trained personnel ranks of 7th Army and other NATO commanders.

The activities of the Combined Arms School are under constant observation by visiting military and civilian representatives. These visits are practically daily affairs and consist of representatives of many foreign countries as well as many senior commanders of our units in Europe. The school's methods of instruction are being emulated widely.

Of particular note, disclosed by this visit, was the sincere attitude of the instructors in the conduct of their duties. This fact was repeatedly reflected by the interest and attention of the students to the instruction. The school undoubtedly is an outstanding model for military schools of this type and should be considered a pattern to follow by other military institutions of learning.

In addition to the normal functions of a school, the Combined Arms School is also conducting a searching study in methods of instruction in a constant endeavor to teach more to more students in less time. In this respect the school is now programing selected subjects for presentation by the teaching machine method.

The school's knowledge of educational psychology, coupled with their sense of urgency and the spirit of a crusader, is well worthy of our recognition.

Pioneers Grow Up

EXTENSION OF REMARKS
OF
HON. ABNER W. SIBAL
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mr. SIBAL. Mr. Speaker, it is with a feeling of great satisfaction that I commend to this body an article written by Gene Shumate, and appearing in the Washington Daily News of May 4. It concerns a constituent of mine, Samuel F. Pryor, one of the senior vice presidents of Pan American Airways. By an interesting and pleasant coincidence, the president of that famous carrier, Juan T. Trippe, is also a constituent of mine.

Mr. Shumate writes about Pan Am's inaugural flight from New York to the Scandinavian countries last week, and of his pleasure in having Sam Pryor as his traveling companion.

PIONEERS GROW UP

(By Gene Shumate)

Pan American World Airways, with great success, pioneered the first American jet service from New York to Scandinavia the other day. I was along for a very enlightening ride.

This wasn't the first pioneering adventure for Pan American. This company, our leading flag carrier, has blazed trails over most of the aerial routes.

For instance, it first flew the old China Clippers over the Pacific, down the coast of South America, and today the firm is operating the Cape Canaveral space center for the Government with 5,000 space engineers helping get our first astronaut off the pad.

NOSTALGIA

All of the in-between stories bring Pan Am around in a full circle from old planes to space trips.

Remember those days of the China Clippers. They were seaplanes, and they plopped and plopped across the Pacific. Once in a while the pilots had bad luck and ripped the bottom out of their plane.

Later came the Japanese in World War II. The last people out of Hong Kong, evacuating Americans home, were Pan Am pilots.

I couldn't help thinking of all this the other day as we whisked across the Atlantic at 580 miles an hour.

I couldn't forget either how Lindbergh and his wife, in a single-engine Lockheed, pioneered the polar route from Washington to Japan on behalf of Pan Am.

TRIPMATE

Along on the trip with me was Sam Pryor, a vice president of Pan Am.

This old World War I Marine Corps pilot is today a combination secretary of state

and secretary of health, education, and welfare for Pan Am.

He's also a sophisticated rubberneck.

In Helsinki, Sam did more good for American-Finnish relations than can easily be imagined. The Finns loved him.

He's slight of build, with bushy eyebrows, a strong chin, and a gab that will melt most anybody.

Helsinki, he said, was not only a new stop for our flag carrier; the stop meant money for Finland and his line—he didn't equivocate about that—but it also meant that two nations that had reason to resist the Russians were closer by many hours.

FELLOWSHIP

Along also on the trip were some Hawaiians. The Finns reacted wonderfully to them.

Elbowing and squeezing, a hundred or more Finns squeezed around the Hawaiians who were singing. Soon, at least 16 Helsinki policeman came to break up the demonstration.

On the way home from Helsinki, Sam slumped back in his chair. If he was tired he didn't look like it.

After a few days rest in New York and Washington, he was set to shove off again for Europe for Pan Am.

The story he was carrying was Pan Am, a competent private company, and Pan Am, our No. 1 flag carrier overseas.

Collins Off to Fine Start as Head of National Association of Broadcasters

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9, 1961

Mr. PROXMIRE. Mr. President, former Gov. Leroy Collins, the new president of the National Association of Broadcasters celebrated his new assignment with a speech that should be welcomed by thoughtful Americans everywhere.

He called on the TV and radio industry to do these things:

First, take sides on hot issues and editorially shape society.

Second, provide more blue-ribbon programing on the networks in the evening.

Third, have less regard for the sacred rating systems that have destroyed so many excellent programs.

In an appraisal of Collins speech critic Jack Gould, of the New York Times, properly notes that Collins has not given adequate attention to some of the excellent programs the networks are in fact showing.

The Gould appraisal is so perceptive, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RADIO-TV—COLLINS ENTERS NATIONAL ASSOCIATION OF BROADCASTERS LISTS—TALK BY BROADCASTERS' LEADER IS ASSESSED

(By Jack Gould)

The National Association of Broadcasters is a study of puzzlement tonight: it does not quite know what to make of its new president, LeRoy Collins, former Governor of Florida. The members are going to live with him; they just wonder if the experience is going to be a little like falling in love with the Federal Communications Commission.

In his maiden address to the full membership of the trade organization, the soft-spoken southerner illustrated one of his points by disagreeing with the traditional admonition to the darling daughter. This was a time, he said, when it was not enough to hang one's clothes on the hickory limb; to swim properly it is necessary to get wet.

By the time Mr. Collins had finished, the rank and file of the National Association of Broadcasters realized they had engaged a formidable diving instructor, not a beachcomber.

Mr. Collins said that the broadcasters should stand up, take sides on the hot issues of the day and editorially help to shape society, a thought that traditionally has left most station owners monumentally skittish.

He called upon the three networks to cooperate on a plan for substantially more "blue-ribbon programing" in the evening. He vigorously denounced the sacred rating systems as statistical poppycock. Point by point, he ticked off what he felt were the requisites to make broadcasting a noble profession and not a coast-to-coast supermarket.

In tone and fervor it was a remarkable speech, in part because the level of its prose was so far above the norm for TV's high brass. It was also a courageous and heartening display; it is not every day that the head of a trade organization, normally preoccupied with lobbying for the status quo, charts a program that potentially steps on the toes of many who pay his salary.

In broad outline there can be no question that Mr. Collins was dead right. Television has stood in need of vigorous leadership and stimulation and one of the jobs of the head of the National Association of Broadcasters should be to point the way.

But in one respect Mr. Collins' speech was somewhat disappointing. His generalizations about more blue-ribbon programing have their place, but the time would seem to have come to spell out his plan much more specifically. Actually, the networks are not so bereft of worthwhile fare as his remarks might imply and some of their schedules next fall will show further improvement.

If the full effectiveness of his leadership and inspiration are to be realized, an intimate familiarity with what is actually on the air is extremely important. The broadcasting industry will be more inclined to cooperate if the most prominent critic within the industry recognizes more generously not only what they should do but also what they are doing.

Mr. Collins' assault on ratings was especially welcome in the depressing environment of the National Association of Broadcasters' convention. He placed principal stress on the question of the accuracy of the ratings, a point upon which he will receive arguments for the duration of his administration. But in the larger sense his emphasis was telling and superbly pertinent.

The competion between the networks, as reflected in concern over ratings here at the convention, is reaching an intensity that is often distasteful. In some quarters of the industry there is a calculated policy of disparagement of a rival's wares and efforts that is simply childish.

When one hears the scuttlebut in corridors about campaigns to win this or that award one cannot be blamed for concluding that most of TV's publicized honors are chosen on the basis of pure politics, not merit. The normal zeal to toot one's own horn is giving away to cheap pettiness at a competitor's expense. Even the magnificent pooled coverage of the space flight has been tarnished by partisan claims of superiority.

The current trend of many in TV, though not all, to tear down the rest of the industry's house for purposes of fleeting strategic advantage made Mr. Collins' espousal of true professional behavior seem like a breath of fresh air.

Will Democratic Apathy Defeat Move To Make the Lafayette Square Opera House a Living Memorial Symbolic of the Spirit Which Has Always United America and Germany in Spite of All Storms and Years of War?

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mr. KEARNS. Mr. Speaker, a German-language newspaper, the Washington (D.C.) Journal reported on May 5:

During the past weeks talks had been conducted in the congressional office rooms and in the cultural department of the German Embassy, which proved that the project (to restore the old Lafayette Square Opera House in the Nation's Capital as the Beethoven Opera House and as a living memorial to the friendship which unites Germany and the United States in spite of all storms and years of war), which is especially close to the hearts of all Washingtonians, is also of great interest to the German authorities.

This seems to me to be an especially meritorious project, and it is my hope that the familiar Democratic apathy toward the arts will not strangle it in official redtape or smother it with less worthy plans to destroy this great structure in order to build a Federal court building, which could better be located elsewhere.

Only last year the President introduced a bill, S. 3280, to restore the Lafayette Square Opera House, which David Belasco once owned, as a civic theater.

It can be expected that the President, who is known as a great student of our history, will look with approval on the conversion of the Lafayette Square Opera House to the Beethoven Opera House. Certainly he would have strong support from the Republican side of the aisle in such an historic development.

I include as part of my remarks the article from the Washington Journal which has been translated for me by the Library of Congress:

WILL BELASCO THEATER BECOME "BEETHOVEN OPERA HOUSE"?—GERMAN INTEREST IN THE RESTORATION OF THE OLD THEATER ON LAFAYETTE SQUARE—ONE-HALF MILLION DOLLARS NEEDED

During the past week talks had been conducted in the congressional office rooms and in the cultural department of the German Embassy, which proved that the project, which is especially close to the hearts of all Washingtonians, is also of great interest to the German authorities. Other European countries, among them Italy and the Netherlands, in the past years expressed their gratitude to the United States for its active postwar assistance, by donating representative gifts to the American Federal Capital. With-

in the Federal Republic, the desire to give a lasting token of this gratitude in a suitable form, has been repeatedly expressed. Now a project is being considered, which has a special symbolic significance.

For years a struggle of prominent citizens and numerous organizations of Washington has been going on to preserve historical buildings on Lafayette Square, that park in front of the White House which, among other things, honors such revolutionary generals as Friedrich Wilhelm von Steuben and Thaddeus Kosciuszko. One of the buildings which are threatened to be torn down by the renewal plans of certain ambitious circles, is the old Belasco Theater which, since 1940, has been used for other purposes. Today it serves as a USO soldiers home. From 1895 to 1940, this chamber theater was one of the few cultural centers of our Capital City and generations of Washingtonians experienced unforgettable artistic adventures in its cozy rooms. To be sure, the theater is not large, but is it not a fact, that it is the small opera houses and stages of Europe that belong to the jewels, to those places where one can make music, sing and spin yarns without enormous costs?

BEETHOVEN OPERA HOUSE IN THE FEDERAL CAPITAL

Well, German circles now think not only of rescuing this Washington theater from destruction (in which task they will need an active support of uncounted citizen's associations of Washington and the whole country), but also of its restoration and, while preserving the traditional frame, of converting it into a snug opera house for our city. The name of Ludwig von Beethoven would suit more than any other to symbolize what had always united America and Germany in spite of all storms and years of war.

We have learned from the circles which are interested in the preservation of the theater, that the total cost of the restoration of the Belasco Theater would amount to about $500,000—DM2 million. Recently, the Federal Republic offered DM1 million for the preservation of the Nubian Temple of Kalabasha in Egypt. In spite of all savings appeals to all free governments, those in Bonn know that cultural needs require sacrifices which are never spent needlessly. Perhaps, a part of these expenses could be meet from contributions by those industrial enterprises and institutions which were able to regain their world importance with the aid of the Marshall plan money. In this way, the gift would not be just a Government matter, but an expression of gratitude of the German people. Congressman CARROLL D. KEARNS, Republican of Pennsylvania, who was quite happy to learn about these plans and who, together with his Democratic and Republican colleagues has taken the stand for the preservation of the buildings on Lafayette Square, told us that a European country could hardly select a better form of the expression of its gratitude to America, than this contribution to the cultural life of the capital city. In the meantime, Mr. KEARNS and Congressman HARRIS B. MCDOWELL, Democrat of Delaware, together with other representatives of the population, continue their campaign for the preservation of the Belasco Theater (which, by the way, has received its name from the unforgettable manager David Belasco), because the original idea of rescuing the theater through the initiative of the American citizens has not been given up. It is possible, however, that an initiative from Bonn will precede these endeavors, and erect a lasting cultural memorial in Washington, in the spirit of American-German friendship.

Preservation of Indiana Dunes Area

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9, 1961

Mr. DOUGLAS. Mr. President, on May 3, for six other Senators and myself, I introduced S. 1797, a bill to preserve for the people portions of the priceless recreation area and geologic and botanical wonderland known as the Indiana Dunes. This bill and the next few months will provide what is perhaps our final opportunity to protect from thoughtless destruction the little that remains of this irreplaceable natural heritage.

It is gratifying to note the increased support which is building for our purpose. In addition to the great conservation groups which have been our allies for some time, elected officials in Indiana are now urging that the proposed lakeport and terminal facilities be located at an Indiana site other than Burns Ditch. They say, as others of us have said, that it would be senseless to destroy the dunes for the sake of a harbor at Burns Ditch, because putting a harbor there would serve only the narrow interests of one big corporation. The economic interests of Indiana will be better served—and an important part of the dunes will be saved—these Indiana officials say, by putting the harbor at another site more accessible to many Indiana industries.

Another new statement of support for saving the dunes has come from the New York Times, which, in a May 4, 1961, editorial, asked the people of Indiana to demonstrate that "vision and understanding" which would "reject the cold cash advantages of wrecking the dunes today, in favor of the long-term benefit of a unique scenic and recreational area of great value for tomorrow and all time." I ask unanimous consent that this New York Times editorial be printed following these remarks in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DUNES AGAINST DOLLARS

We cannot quarrel with the ambitions of Indiana to have a deepwater port and to expand industrially with the growing commerce on the Great Lakes induced by the St. Lawrence Seaway.

But we can and do quarrel with the dredging plans of the Army Corps of Engineers and the Indiana Port Authority, which would hopelessly destroy the unique Indiana Dunes area, proposed by Senator PAUL DOUGLAS and other Members of Congress for permanent preservation as a national monument.

Alternative plans have been offered; but the Engineers say the evidence is all in favor of spending $80 million for terminal facilities at a site which would split and devastate the remaining unspoiled area of dunes wonderland located a figurative stone's throw from Chicago. Engineers can cite cost figures with an air of ominous finality and doubtless they will do so at the current hearings on the project in Indianapolis.

It is difficult to balance the intangible values of fresh air, clean beach and natural beauty at the doorstep of a great metropolitan area against the cost-benefit ratios of the Engineers. But if the people of Indiana have vision and understanding, they will reject the apparent cold cash advantages of wrecking the dunes today, in favor of the long-term benefit of a unique scenic and recreational area of great value for tomorrow and all time.

Cuba and Laos

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mr. MADDEN. Mr. Speaker, the following editorial by H. B. Snyder, publisher of the Gary (Ind.), Post-Tribune, sets out some practical and constructive thoughts on our international situation in Cuba and Laos.

The same should be read by all Members of Congress:

As this is written there is a provisional cease-fire in Laos, but there is no peace in Laos.

An abortive invasion has been crushed in Cuba, but there is no peace in Cuba.

There is a continuing attempt for coalition government in the Congo, but there is no peace in the Congo.

At the moment of writing there was no war in any of those places. There was an absence of war, that is, in the sense that men were not dying in the battle lines—though some died before firing squads and some in intertribal and interparty bloodletting.

But there definitely was not and is not peace. In a very real sense the whole world is at war. The war is for men's minds and for men's souls and for men's lands and the way men live and the way their children and their children's children shall live for generations.

It has been called a cold war, and it is, in the sense that bombs are not dropping, except sporadically, and that guns are not firing, except intermittently. But the danger in that phrase is in thinking that it is not a real war, in thinking it is not a war to the death.

The important difference between this cold war and the wars the world has known is that for the time being the weapons of potential world annihilation possessed by both of the major camps are held in check.

The important similarity between this cold war and the other wars in this century of total wars, a similarity which is too often overlooked by our side—is that issues in it are not settled by polite negotiation, but by the application of strength.

We can negotiate with the Kremlin, as we have, and in such negotiations see Czechoslovakia and Hungary, North Korea and the Chinese mainland pass into the Communist orbit.

The British and the French tried that kind of negotiations with another land-

hungry, man-hungry totalitarian regime less than 25 years ago and finally learned on a long, hard road that it wouldn't work. It is working no better now and can't work.

And that's why it is necessary for those on our side, and particularly for those of us in the United States—both the people and its leaders—to realize the similarity between our cold war and any other war, the fact that nothing can win but strength.

What strength is needed?

The strength of continued nuclear power, of increased space power, certainly.

The strength of troops in readiness, more troops that we now have in readiness, and troops who are thoroughly trained in guerrilla warfare.

The strength to help build up anti-Communist forces in the various threatened areas into effective guerrilla bands, and to keep those guerrillas continually supplied and conscious of strong backing.

The industrial strength to produce and the willingness to turn that strength away, when needed, from production of mere home consumer goods.

The economic strength to help those nations of lesser opportunity to raise their standards of living to the point they will be glad to be on our side, the side of freedom.

The moral and intellectual strength to teach and to guide, not in a spirit of intellectual superiority or in the comfort of an air conditioned classroom, but by working with real sympathy among people eager to learn but resentful of an attitude of white superiority which they have come to hate.

The strength of patience, not patient listening to Soviet rantings, but the patience of really learning the needs and the aspirations of the new peoples from the bush-roots up and learning the complexities of their languages and traditions so that they can be guided to the lives they want in an image they have come to know.

What would such strength cost?

Sacrifice, no doubt.

Sacrifice by our youth who very probably would have to spend more time in more numbers in the armed forces.

Sacrifice by the mothers, wives, and sweethearts of those same youths.

Sacrifice by the specially educated who would be asked to go to less lucrative jobs in order to work with the people of the new nations whom we want as our allies.

Sacrifice by business and by individuals in the form of new taxes, very possibly heavy new taxes.

Sacrifice by industry and by consumers in the terms of frills that most of us have come to regard as necessities.

Sacrifice by workers, unionized and not, perhaps, of increased pay and easier hours and sacrifice by industry of more certain and increased profits.

We doubt if we have named all the strengths required or all the sacrifices which might be required to obtain those strengths. We doubt if we know the full need or the full price.

But the question arises: Would the American people be willing to pay the price?

Perhaps on the basis of present information they might not, certainly would not without loud complaint.

But if the proper leadership—the President and his advisers who are in a position to know—would speak out we think they would be willing.

Granted, it is easier to stir a nation to sacrifice when bombs are falling, when its sons are dying, when the danger is as obvious as it is real.

But we are in a war now.

It is up to the President to impress that fact on the people. It is up to the people to realize and face that fact.

It probably will not be a short war. In some ways it will be easier than a shooting war—which we hope it does not become—but in other ways it will be harder. It is harder to sacrifice when that sacrifice is not stirred by actual killing.

But we believe it is necessary for our diplomats to realize that it is not a war which can be won in negotiations unless those negotiations are backed by very real strength; for our generals to realize that that very real strength must be built up and kept in readiness; for the people to realize that victory can be won and liberty preserved only through sacrifice.

We believe that it is up to the President to bring this realization to the people.

We believe that once they realize it, the people will be willing to do their part.

Democracy Under the Guns of Cold War

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9, 1961

Mr. CARLSON. Mr. President, our Nation is in a conflict of ideologies and many ask themselves can a democracy survive and retain the freedoms that we enjoy under our Government.

There are many who believe that the only way we can survive as a Nation is to give more power to the executive branch of the Government, so that necessary actions may be taken more quickly in order to cope with the decision-making ability of a totalitarian state. There are many dangers involved in giving the executive branch of the Government absolute authority to make hasty decisions without recourse to the people.

We are a representative Government, and therefore, it is essential that the Congress, which is the representative branch of the Government, maintain its position as the direct voice of the people.

Roy Roberts, one of the outstanding students of government and editor of the Kansas City Star, wrote an article "Democracy Under the Guns of Cold War," which appeared in the Sunday, May 7, issue of that publication, and I recommend it for thoughtful study.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEMOCRACY UNDER THE GUNS OF COLD WAR
(By Roy Roberts)

More than once democracy, with its inefficiency, has shown that it can win a shooting war, even against the most ruthless dictatorship.

But can democracy with all its peacetime checks and balances, its delays and its lack of protective secrecy, win the deadly cold war that is making the history of the mid-20th century?

The obvious answer: Yes. Undoubtedly democracy can and will muddle through somehow. But the United States must admit, as its leaders have pointed out, that the perils confronted today and to be confronted for many tomorrows are in fact greater than those of the battlefield. Is the present mechanism of our democracy best constituted to meet the new, grave challenge of peace that is not peace?

Many students of government and world issues have their doubts. There is a growing belief that a genuine reexamination of our governmental structure is necessary, if the United States is to counter the drive of the Communists for total domination. They suggest that such a reexamination may be as essential to the Nation's future as building military defenses, voting billions for aid, shoring up foreign policy and hastening into outer space.

Basically, the argument boils down to this:

The American constitutional structure was built in the days of an agrarian society, when the principal concerns of government were purely domestic. Only to a limited degree did international problems intrude on the thinking of the Founding Fathers.

So there was a system of effective if clumsy checks and balances, designed primarily to keep the executive or either of the other branches of Government from becoming too powerful.

The system worked and with amazing effectiveness. It brought the United States to an unprecedented level of greatness. Never before had the mind of man devised so vital a principle of government.

But times and the world have changed. And it may be necessary to verge on political heresy by suggesting that some changes in the American democratic system may now be imperative. Today our international concerns overshadow our national problems, as great as they may be. Today, we live on a globe in the ferment of revolution.

Pinned down, almost any national leader would admit that there is validity in the argument for national reexamination. Privately there is much talk of relieving the President of some of his burdens, of streamlining the mechanism of democracy. But it is regarded as political poison to get out in front in this area. There is philosophical discussion, usually in private. Then the business of government, of politics, of life goes on in the old-fashioned way.

In 1961, however, the world picture grows increasingly darker. New and critical decisions face Government each day, each hour. Can the United States afford to pursue the old ways? There seems to be more, and timely, discussion of this question than at any time in the past.

Indirectly, President Kennedy was dealing with this overall problem in his recent speech to the American Newspaper-Publishers Association. Bluntly, he outlined the dangers of the cold war, dangers greater than those of shooting war.

"No war ever posed a greater threat to our security," he said.

Candidly, he urged the press, television, radio and other media to accept more responsibility by suppressing stories that might conceivably give valuable information to the enemy.

Because the question raised by the President may provide the initial reappraisal of democracy fighting a cold war, we mention it first. Already leaders of the press have accepted Mr. Kennedy's challenge. This week they will confer with him on the problems of a free press in a moment of great world crisis.

We may note, certainly, that freedom of information is an essential of democracy. It is one of our cherished heritages. That it should be discussed by the President in such a manner is a measure of the new menace of the cold war. If we were trading bullets with the enemy, there would be no problem. There would be precedents from the past to guide us. When a national emergency is officially declared, the powers of the Presidency are immensely strengthened. Numerous special laws, on the statute books, come into force. In a sense, the President

becomes as powerful as a dictator for the duration of the emergency.

In shooting war, too, censorship may evolve from two sources. It may be imposed by the Government. Or it may be voluntary. Self-imposed censorship is apparently what Mr. Kennedy seeks in this nonshooting war—a voluntary self-discipline by all the news media.

Such discipline can be attained and direct Government censorship avoided, as it was in World War II, if the occasion demands. But pressed to an unwise extreme, it could also mean the withholding of information to which the public is entitled, and which is essential for the development of enlightened public opinion.

Certainly the voluntary censorship of World War II was one of the great achievements of democracy. It reflected credit on the press and radio—there was no TV then.

Leaders of Government, of the military and of the press set up the codes, and they were self-enforced. Now and then the codes were changed with the changing military situation. But they worked so well that there was no suggestion of formal censorship.

It was a great example of democracy in action, meeting one of its problems effectively. But it was an example of wartime.

Could similar codes of self-discipline be imposed in time of peace, even though it is a peace in which the world is divided into menacing and armed camps?

The problem of cold-war censorship is mentioned as a typical example of the problems of democracy in these changing times. There are, of course, many other crucial areas where Government and the Nation must take a long look. We suggest, however, that there are three major areas for reexamination:

The office of the Presidency itself.

The organization of the executive branch.

The relationship between the Executive and Congress.

Let's look at the Presidency. And here we are thinking of the office in the abstract, not as occupied by John F. Kennedy or any incumbent of the moment. For years, there have been urgent conversations about the need for removing some of the crushing workload from the Chief Executive. Little if anything has ever been done about it.

Yet the writer of this editorial, on a recent trip to Washington, was impressed particularly by one fact of life in the White House: The great and time-consuming demands that the Nation makes of its Chief Executive.

How in the world, you wonder, does Mr. Kennedy find time simply to think?

When, in the silence of his office, can he meditate on the forces of the world and reach the momentous decisions that must be made by him and him alone?

For a President—whoever he may be—is at once Chief of State, his own premier, leader of his Nation and leader of his political party. This thought is not original, of course. But look at the burden carried by the President as he wears his several hats:

As Chief of State he must meet all visiting foreign potentates, from the smallest and mightiest of nations. Trips to the airport, formal dinners, receptions take countless hours—usually given to smalltalk. The vital conversations take place in short, private conferences.

As Premier, the President must run the vast executive department of the Government. A multitude of details fills his every moment. He must be available to Cabinet officers, to agency heads. He must maintain his contacts with congressional leaders or he will lose his hold on Capitol Hill.

As leader of the Nation, the President must provide a program and must be concerned with every aspect of national life.

As political leader, he must open the baseball season, greet delegations, and make many speeches. He must attend this function or that. The American people expect all this of him. If he fails, he slips politically. And a President without the country behind him cannot furnish leadership.

Yet our world, today, is on fire. How can one human being, as endless as his energy may seem, do all that is expected of the President—and still think through the vital decisions that affect our very survival?

There have been, in the cold war, many suggestions for giving the President more authority, for permitting him to act with greater celerity, and greater secrecy in matters of world policy. But what new powers? And what routine details will be removed from his daily agenda to give him more time to function as a true leader? It is easy to suggest the advisable changes; but it is not so simple as it sounds. Yet the Star believes that some changes in the machinery of government are imperative to meet the relentless threat of communism.

Obviously, the President himself should not be burdened with the task of reexamination. That would simply add to his man-killing schedule. The Star suggests that there are three men in the United States who are eminently qualified to make suggestions on the Presidency today. We refer to the three former Presidents, Mr. Hoover, Mr. Truman, and General Eisenhower.

Here we have three men who have experienced the rigors of the White House. Yet they are otherwise very different men, different in personality and methods of operation.

Mr. Hoover is recognized as a close student of Government organization. The two Hoover committees have served the Nation admirably.

Mr. Truman is known as a scholar of the Presidency, its power and traditions. The Truman Library at Independence is a veritable storehouse of White House lore and it is becoming more important every day.

General Eisenhower served as President through 8 years of cold war. In office, he himself tried two methods. First, delegating power to his staff, then assuming more personal leadership.

The Star believes that these three former Presidents, if their views should be brought into focus, could make a valuable and lasting contribution to their Nation.

We doubt that Mr. Kennedy himself should guide this grand reappraisal. But Vice President Lyndon Johnson, between his many diplomatic trips for the President, would be the ideal man to coordinate the efforts of the three former Presidents. He has had many years of experience in the legislative branch and has learned, in a short time, a great deal on the problems of the Presidency. He knows the ins and outs of government. And he knows, we imagine, how to deal with three such diverse men as Mr. Hoover, Mr. Truman, and General Eisenhower.

The second area for reexamination is the whole executive branch. The need was dramatized by the recent Cuban fiasco and the role of the Central Intelligence Agency. Its effectiveness and its relationship to the Presidency have been questioned. In the U–2 incident and in the post mortem on Cuba, General Eisenhower, and Mr. Kennedy have taken personal responsibility for events with which they possibly had little to do.

The CIA is the most secret agency in our constitutional system. In a manner of speaking, it has simply mushroomed since World War II, a peacetime carryover of an essential wartime agency. After Cuba such a reexamination or study is being made under the direction of Gen. Maxwell Taylor.

We hear the suggestion, for example, that the agency should be confined to the gathering and evaluation of intelligence. That was its original purpose. It did and must involve some espionage, of course, as distasteful as the thought may be to a democracy.

It has been suggested, too, that the "paramilitary" end of the Central Intelligence Agency operation should be turned over to some other agency. "Paramilitary" is a polite term for the guttertype operations that involve demonstrations and counterdemonstrations and other subversive work. It may lead to the sparking of counter-revolutions. It is dirty work and abhorrent to our system.

But it becomes more apparent every day that we are going to have to get down into the gutter and fight the Communists with their own subversive tactics. In this paramilitary phase of cold war, the United States has been a sitting pigeon for the Reds. The Nation has been on the defensive, constantly. And nations don't win wars, hot or cold, on the defensive.

Obviously, if the United States is to undertake this type of operation it must do so without retreating from its humanitarian principles of justice and freedom. On those principles, this Nation would like to see the world build. The Communists pay only lip-service to them, at most. They are not bound by the rules of decent conduct and high motivation that bind a democracy. Democracy must find ways to overcome its operational handicap.

We cite the present appraisal of the CIA operation as an example of the problems that have grown up in the executive branch.

The third basic area for democracy's self-examination lies in the relationship between Congress and the executive branch. Again the Nation must consider the vast changes that have taken place since this relationship was originally outlined in the Constitution. More than 40 years ago the writer of this editorial was covering Congress from the press galleries. There have been a few changes since. But the fundamental operation has hardly been altered.

There are countless examples of the anachronistic ways of Congress and of its time-wasting relationship with the executive branch. Let's consider one, and follow a foreign aid proposal through the Capitol Hill corridors.

First there is the presidential message. Then the authorization bill, with hearings in one house, then the other, leading up to final action. Each house calls the same top officials, from Defense, State or other departments, and asks, in effect, the same questions.

Then, after the authorization, the appropriation bill is considered. Again, hearings before the money-approving committees, more questions of the same officials.

We could not guess at the lost hours in this whole process, hours devoted to repetition and hearings and rehearings. Now certainly no one would strip Congress of its power to question or to investigate. No one would suggest that the lawmakers should relinquish even slightly their control over the purse strings. That control has been a constantly restraining hand on the executive. It is a proper and essential force in our democracy.

Because of that zealously guarded power over the purse strings, Congress has shunned long-term money commitments.

Not one but several of the Kennedy administration officials have said, privately, that because they have had to spend so much time on the Hill, it has been much more difficult to organize the departments. The hearings don't last forever, of course, although to a weary Cabinet official it must seem that they do. Eventually there is final action on the bills. But obviously this intricate relationship between Congress and the executive branch slows the machinery of government and hampers the ability to make decisions and to follow through.

A genuine streamlining of the legislative process, we believe, might provide some intelligent and time-preserving shortcuts. Again, we return to Vice President JOHNSON as the man qualified to consider the problems of government from the viewpoint of both executive and legislative branches.

More combined Senate-House hearings might be considered, for example. Such combined hearings were held in World War II. The system worked. But when the battlefield pressures ended, combined hearings were abandoned.

More long-term commitments, particularly in the foreign aid field, might strengthen the cold war counteroffensive.

We recognize that this is a sensitive field. Congress is a private club jealous of its prerogatives. It has not and will not change easily. But the Star believes that Congress itself should make its own contribution toward improving the efficiency of democracy for the long cold war.

There you have the case. We suggest that it is fundamental to the Nation's future.

As a nation, we speak of greatness, and we are great. We talk of efficiency, and we are efficient.

But our aspirations to greatness, our goals of efficiency can be expressed only through Government. Our hopes for cold war victory—indeed, for survival—can be fulfilled only through Government.

Thus it is for Government and for the people to look seriously at democracy, to assess its mechanism in the light of new and relentless world forces. It is for the Nation to determine whether it is best equipped to meet the pressures of communism that has world conquest as its goal.

Frankly we believe this process of reexamination is essential, not tomorrow, but now. It is as essential as devising new missiles, as building spaceships, as voting billions. Hard decisions must be made. For the United States must at all costs find the most efficient battle dress for democracy as it goes forth to wage cold war.

New President Learns Leading the Nation Isn't a Simple Matter

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mr. CEDERBERG. Mr. Speaker, with a bit of nervousness the Nation willingly heeds the admonition of former President Eisenhower to stand behind the new Chief Executive in this tense international situation.

However, there is concern about our position among other nations of the world and our allies in particular as the result of recent developments. This is a time for firmness and consistency.

This is ably pointed out by David Lawrence, noted columnist and publisher, in his recent syndicated column in the Washington Star.

His comments follow:

IT'S NOT SO SIMPLE, AFTER ALL—FIRMNESS, CONSISTENCY, EXPERIENCE SEEN AS SOLUTION TO GROWING CRISES

(By David Lawrence)

On the surface, it does look like there's another mess in Washington. But there's nothing really wrong here that wouldn't be cured by some consistency and firmness, plus a little more experience by President Kennedy.

Tens of thousands of words are poured out in Presidential messages. Task forces galore—composed of earnest-minded but often naive intellectuals—are running around here trying to spell out reforms in well-written phrases that read like the promise-all planks of the political platforms.

After 100 days in the White House, Mr. Kennedy, himself a well-meaning, conscientious young man, is finding out the hard way that National Government isn't so simple after all. He perhaps wishes he had not been so critical of the Eisenhower administration a few months ago and probably regrets the demagogery he put into those campaign speeches.

Nobody will deny that Mr. Kennedy has an almost superhuman job on his hands and needs every bit of sympathy and help that he can get. But he will not win cooperation by alibis attempting to shift responsibility to the press, nor by spending so much of his time at partisan political dinners or in conferences with political bosses while international crises in Laos, South Vietnam and Cuba worry the American people.

The President's speech in New York last week urging the press to be cooperative was well intentioned, but it has very little to do with the mess that arose in the handling of the Cuban invasion. For the press, after all, has been indoctrinated during most of the last 8 years by congressional committee studies and hearings to believe that "freedom of information" is paramount and that everything must be made available to the public. Members of Congress themselves have often given out military information they thought was important to the American people even though at the same time potential enemies of this country were unwittingly furnished some valuable data.

What is the remedy for this continuing depreciation of the United States? The first restraint will have to be imposed by members of Congress and the politicians upon themselves. They had a field day a year ago over the U–2 incident, and the Senate Foreign Relations Committee's partisans even went so far as to publish a detailed report on the U–2 affair—an obviously secret operation in the "cold war." The formal report made joyful reading in Moscow.

The press, of course, will print what is visible or audible to people generally. Democratic Senators and Representatives who made speeches about our "missile gap" could not expect the press to refrain from publishing them—in fact, they sought such publicity even though it undermined the prestige of the United States at home and abroad. Rarely has any individual newspaper come up on its own with what might strictly be called military information that wasn't generally known.

Anyone who takes into account the large size of the Cuban exile group and the open operations of some of its leaders in Miami must realize that semipublic activities of this kind will be fully covered in the press and will be widely broadcast.

The Central Intelligence Agency is supposed to collect intelligence information, and it rarely makes anything available to the press. Whether it really knows what's going on abroad sometimes is difficult to establish, but nobody can quarrel with its desire for secrecy.

There's one important question to which the Kremlin wants the answer: Is the United States going to stand up for its rights and fight if necessary? To put it another way, is the real viewpoint of this Government expressed by the appeasers in our midst who go around telling the world we are licked on the issue of Red China's admission to the United Nations and might as well surrender? Defeatism of this kind does more harm than news stories of a dozen Cuban "invasions." All that Moscow wants to know today is whether the United States is bluffing on Berlin or Laos or Cuba.

There was no doubt left by President Eisenhower that America would defend Formosa. It was made clear that we would defend Quemoy and Matsu under certain circumstances. Mr. Kennedy during the campaign last year didn't help the cause by expressing opposition to a defense of Quemoy and Matsu. It was unwise then to broadcast such information to the Kremlin, because there was the possibility that, as President, Mr. Kennedy might face a decision on that very point. The press wasn't to blame for this dilemma, created to gain votes in a political campaign.

All in all, the press can help the cause of the United States by voluntarily suppressing news of weapons or gadgets or the mobilization of ships or airplanes or armies unless such movements have been officially announced. But the press can't help much in suppresing news about the administration when so many spokesmen are available from day to day to hint at changes in foreign policy that amount to a weakening of the U.S. position.

Nor does it seem to make much sense for the State Department to hold—as it did last week—two days of secret conferences with 250 American newspaper editors, including an off-the-record talk by President Kennedy himself, while a Communist newspaper was present and took notes which doubtless were being read in the Kremlin within 24 hours. The episode is explained as a mechanical error in making up the invitation list and the President was advised about it before he began speaking, but it was then too late to do anything without creating an international incident.

Sooner or later the mess in Washington will have to be cleaned up. It will be done when the number of cooks now making the broth is reduced considerably and some firm decisions are made by the President himself that are consistently maintained by deeds as well as words.

Kennedy Gives Brunswick Boy Heroism Medal

EXTENSION OF REMARKS
OF
HON. IRIS FAIRCLOTH BLITCH
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mrs. BLITCH. Mr. Speaker, recently it was my honor and pleasure to have as my guest at the Capitol, Mr. Donald McGregor, of Brunswick, Ga., while he was in Washington to receive recognition for an outstanding feat of heroism off the Georgia coast.

It was Donnie McGregor who on July 20, 1959, rescued four persons from the Atlantic Ocean after their boat ran aground, turned over, and sank.

For his bravery, Donnie was awarded the Young American Medal for Bravery and the Carnegie Medal.

I am very proud of Donnie McGregor. Because the story of his brave deed means so much to the people of Georgia and to the Eighth Congressional District, which I represent, I wish to submit to my colleagues and friends the Associated Press report of his visit to Washington on March 24, 1961:

KENNEDY GIVES BRUNSWICK BOY HEROISM MEDAL

WASHINGTON.—President Kennedy has presented a medal for heroism to a 16-year-old Georgia boy who saved four lives.

The President pinned the Young American Medal for Bravery on Donald Eugene McGregor, of Brunswick, at a ceremony at the White House. The tall crewcut youngster saved a family which was aboard a cabin sloop that went aground and broke up in a storm on the Georgia coast.

McGregor was guest of honor later at a luncheon given by Representative IRIS BLITCH, Democrat, of Georgia. Mrs. BLITCH presented him the Carnegie Hero Medal.

Attending were McGregor's parents, Mr. and Mrs. Ernest McGregor; his younger brother James, an uncle and aunt, Colonel and Mrs. Roland Linker of Petersburg, Va., and the Linkers' daughter, Dianne.

The family Donald saved also attended. They are Mr. and Mrs. Harold Clark of Jacksonville, Fla. and their children, Robin and Christine.

Senators RICHARD B. RUSSELL and HERMAN E. TALMADGE, of Georgia attended the White House award, and most of the members of the Georgia House delegation attended the luncheon.

McGregor's act of heroism occurred on July 20, 1959. He was on a fishing boat when he sighted the Clarks' cabin sloop aground and went on board to help them.

Rough seas turned the sloop over and the Clarks and McGregor decided to try for shore. All had lifejackets except Clark, who clung to a small cushion seat preserver.

Holding onto a small plastic float, with McGregor at the head of it, they made for Little Cumberland Island, about 3 miles away.

The group got within 200 feet of the beach after 3 hours in the water, but the current halted further progress, and Donald swam ashore for help. Running along the shore for several miles he came across a shrimp boat which radioed the Coast Guard for help and a Navy blimp was brought into the search.

Donald then went back to where he had left the Clarks. As the tide changed, the family had been able to make shore. Donald spelled out the word help on the beach with marsh grass, enabling the Navy blimp to locate them and direct the Coast Guard to their rescue.

The Young American Medal for Bravery was established by Congress in 1950. No more than two of the medals may be awarded each year. The other medal this year was awarded to Shirley Frances O'Neill, 20, of San Francisco, who pulled a swimming companion ashore after he was attacked by a shark.

Advantages of Routing More Naval Work to Commercial Shipyards

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9, 1961

Mr. BEALL. Mr. President, as a member of the Committee on Armed Services, I have been increasingly concerned by the policies of the Department of Defense which permit the Government-owned, Government-operated naval shipyards to operate at fairly steady levels of activity while private commerical shipyards go out of business. This is Government competition in its purest form, and no other major industry in the United States is confronted with the same intensity of Federal competition. The absurdity of this situation is demonstrated by the fact that the Navy yards are immune from all forms of taxation and that their costs are higher than the private yards. In other words, tax-free Government facilities are excessively draining the Federal Treasury while tax-paying private shipyards are forced to curtail operations or go out of business.

Maritime Reporter magazine editorially asked on April 15, 1961, "How Much Longer Will the Navy Ignore the Facts." This editorial impressed me greatly. I ask unanimous consent that it be printed in the Appendix of the RECORD so that my colleagues will have an opportunity to consider this problem which has a damaging effect upon private industry.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Maritime Reporter, Apr. 15, 1961]

HOW MUCH LONGER WILL THE NAVY IGNORE THE FACTS

Any dispassionate examination of comparative production records for naval versus private shipbuilding and repair yards should convince the Navy's Bureau of Ships and the Armed Services Committees in both branches of Congress of the advantages of honest and vigorous action to route more naval work to commercial shipyards.

A recent objective study showed that during the 7-year period from 1953 through 1959, major private shipyards throughout the Nation built and delivered 415 ocean-going naval and merchant ships, repaired another 106,603 vessels, and converted 187 ships for a total value output of $9,674,293,000. The average yearly employment for this tremendous production was 74,875 workers.

In the same period, the 11 Government-owned and operated naval shipyards employed a yearly average of 104,393 men to produce only 16 new ships, repair about 5,700 vessels, and convert 120 ships at a total cast of $5,325,604,000. In other words, naval shipyards employed one-third more men to produce only a fraction of the tonnage turned out by the commercial yards.

In the event that a reader is preparing to argue that the Navy yards may have produced bigger and more complicated ships and therefore needed more men, we again refer to the study which shows that the 16 vessels built by the 104,393 workers in the Navy yards comprised two giant aircraft carriers, three atomic-powered submarines, four conventional submarines, two guided missile submarines, two fleet minesweepers, two coastal minesweepers, and one landing ship tank.

The 229 naval vessels built by the 74,875 workers in commercial yards included two sisterships to the giant aircraft carriers, five nuclear-powered submarines, five conventional submarines, an assortment of destroyers, cruisers, minesweepers, and all the other naval types. The cost figures, incidentally, do not include the tremendous loss when fire partially destroyed the aircraft carrier *Constellation* last December in the Navy's Brooklyn, N.Y., yard.

What the study boils down to is this: that private commercial shipyards can perform work on Navy ships at some $500 per displacement ton less than in naval yards. Last fall, Vice Adm. Ralph E. James, Chief of the Navy's Bureau of Ships, conceded that naval shipyards were wasting at least $95 million a year through inefficient management techniques.

President Kennedy has said that the public is entitled to the fullest values for its tax dollars. The study proves conclusively that one of the best ways to get this value is to build and repair naval ships in commercial yards.

Proposed Cape Cod National Seashore Park

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9, 1961

Mr. SALTONSTALL. Mr. President, the proposal to establish a Cape Cod National Seashore Park has been under close consideration by Congress now for well over 18 months. The original bill, cosponsored by Senator Kennedy and myself in the 86th Congress, is now represented by a revised version, S. 857, cosponsored by my junior coleague from Massachusetts [Senator SMITH] and myself. Three separate sets of hearings have been held by both House and Senate subcommittees, and we believe that action on the measure is near at hand.

Both a front page box entitled "Some Facts About the Seashore That Seem to be Overlooked" and an editorial entitled "Your Homes Are Safe Within the Park," appeared in the May 4 edition of the Cape Codder, a weekly newspaper published in Orleans, on the lower cape, which has taken a forthright and articulate stand on the issue since it first developed. These articles are most helpful in explaining in clear terms the kind of protection which local communities and citizens will receive under the provisions of the proposed legislation. I ask unanimous consent that they both be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

YOUR HOMES ARE SAFE WITHIN THE PARK

Homeowners within the boundaries of the proposed National Seashore Park may keep their houses forever if they choose to. They can bequeath these houses to their children or they can sell them to another individual without any interference at all from the Federal Government. The only qualification is that the towns cover these areas with adequate zoning regulations. The principles for such zoning have been made public by the Secretary of the Interior. Since the towns already have zoning codes which pretty much cover these requirements, this is really no qualification at all.

We feel a little silly in writing the above. But, for some reason, and despite the fact that it has been true ever since the original Saltonstall-Kennedy-Keith bill was drafted a year and a half ago, an amazing number of people do not know it or choose for some exotic reason not to believe it.

We had an irate telephone call last week from one reader who had seen a statement to this effect in the paper. We estimate that the same statement has appeared a couple of scores of times before. But, for some reason, this particular time it hit home. Was this person calling us filled with the joy of

discovery? Not at all. She simply did not believe it. She had read the bill and there was no such clause in it. We were liars and deliberately misleading our readers. She demanded that we retract the statement and apologize.

This is all very bewildering, to say the least. The principle is emblazoned upon the bill in unmistakable language, and we are asked to deny that it even exists. We are at a loss to explain this phenomenon. But it is obvious that somewhere along the line someone has failed to communicate. And others are so emotionally involved that they fail to look a fact in the face.

It was exactly because Cape Cod was an area different from any other ever considered by the National Park Service that Senator SALTONSTALL, the then-Senator Kennedy, and Representative HASTINGS KEITH developed the idea of suspending the power of condemnation of property so long as proper zoning requirements were met. This was a creative piece of legislation. On the one hand it recognized the area under consideration contained quite a number of homes owned by people who had no desire to be displaced. On the other, it realized that the Park Service was interested in keeping the area as it is, including the homes. The real purpose of the seashore is to stop further despoiling of the area and keep it in its present state for generations to come.

For the record, once again, the language which covers this principle is contained in section 4b, subsections 1 and 2, of the current version of S. 857. The wording is as follows:

"(b) 1. The Secretary's authority to acquire property by condemnation shall be suspended with respect to all improved property located within such area in all of the towns referred to in section 1 of this act for 1 year following the date of its enactment.

"2. Thereafter such authority shall be suspended with respect to all improved property located within such area in any one of such towns during all times when such town shall have in force and applicable to such property a duly adopted, valid zoning bylaw approved by the Secretary in accordance with the provisions of section 5 of this act."

It is true, of course, that owners of these homes within the park boundaries will not be able to subdivide their property, put up a motel, or otherwise change the character of the property as it now is. But live in it themselves, rent it, bequeath it to their children and their children's children * * * this they can do.

There may be some confusion in the fact that homeowners within the park will have alternative choices open to them. They may decide to sell outright to the Government. They may decide to sell and accept life tenancy on the property. Or, as we have recounted, they may obey the zoning requirements and continue to live as they are in peace and quiet.

The National Seashore is an emotional issue in these parts. Often in an emotionally charged situation people will see only what they want to see, refusing to be confused by the facts. Nevertheless, these are the facts, ma'am.

SOME FACTS ABOUT THE SEASHORE THAT SEEM TO BE OVERLOOKED

The Park Service is not taking your home. Many people seem still not to understand this but it is true. Current seashore park legislation provides specifically that people within the taking may keep their homes just as they are, provided that adequate zoning regulations are applied. Since, with minor exceptions, the towns already have these zoning codes, there are no ifs, and or buts—a man's home will still be his castle in the park area. We repeat: The Park Service cannot take your home. Those wishing to see this in black and white should read section 4b, subsections 1 and 2 of the bill, S. 857.

You can leave your house to your children. This, too, is true. If you live within the park area and decide not to negotiate with the Government, you are perfectly free to pass on your house to your children or anyone else. The thing to remember about the current legislation is that the choice has been put in your hands. You may negotiate with the Government for the sale of your home if you wish. Or you may decide to have nothing to do with the Park Service and live on as you always have. The decision is yours.

You can sell your house if you wish. Yes, you may sell your home to someone other than the Park Service. Or rent it, if you like. The only thing you cannot do is breach the zoning requirements. You may keep your home within the park area and carry on as before, but you may not change the character of the property. For example, you cannot change it from a residence to a commercial property.

Soil Stewardship Week

EXTENSION OF REMARKS
OF

HON. M. BLAINE PETERSON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1961

Mr. PETERSON. Mr. Speaker, I ask the House to pause with me a few moments today to reflect upon the importance and significance of soil stewardship which is observed this year from May 7 through May 14.

Soil stewardship is simply our account to the Maker for the use we have made of His land.

This applies to all of us alike and not only to the man who cares for the large acreage; the home gardener is equally as responsible as the home developer. If our soil is destroyed and abused, our future generations are doomed.

The custom of giving special recognition to soil stewardship has been brought to prominence by the National Association of Soil Conservation Districts together with churchmen from several denominations. In 1955 they undertook the first national observance. A committee of churchmen from several denominations, working with an Association committee, develops each year appropriate materials which the National Association of Soil Conservation Districts prints and distributes to local districts and church groups throughout the country. These include booklets, programs, posters, and related materials.

Each spring, thousands of rural and urban churches, in cooperation with a local Soil Conservation District, devote time to recognition of the urgency of good stewardship of the land as a fundamental of moral and civic responsibility.

At the national meeting of the National Association of Soil Conservation Districts in Minneapolis in 1958, one of the outstanding features of the program at the annual banquet was an impressive stewardship ceremony written and presented by the Reverend E. W. Mueller, secretary, rural church program, National Lutheran Council. Entitled, "The Gift of Precious Soil," it included the presentation and blending of soil from each State of the Union. Subsequently, a tree was planted in this soil on the grounds of the Minnesota State Capitol.

Earlier mention of stewardship was made in the National Association of Soil Conservation Districts prayer written by Director W. F. Hall, of Sparta, Ga., during the fall meeting of the National Board of Directors held at Galveston, Tex., November 1955. It was given for the first time at a luncheon there.

On motion of Director Dave J. Doneen, seconded by Southeastern Area Vice President A. D. Holmes, the board voted to adopt this blessing officially and use it on all occasions when the board met together for breakfast, luncheon, or dinner.

It has since been used on numerous occasions by individual soil conservation districts and State associations at formal luncheons and banquets:

OUR PRAYER OF STEWARDSHIP

Our kind Heavenly Father, giver of all good gifts. As we partake of this food and drink, may be realize that You willed it so in the beginning. May we know that Thy promises are everlasting.

Give us wisdom, O Lord, that we may know Thy will; give us courage to do Thy will. Convince us that we really owe nothing, but that by Thy grace we are stewards of Thy many resources and that Thou dost rejoice in the service of a good and faithful steward.

As this food and drink restores our strength and energy may we render pleasing service to Thee. Help us to be worthy of Thy many blessings.

All of this we ask in Jesus' name. Amen.

Soil Stewardship Week is a modern version of Rogation Days. Observance of Rogation Days began centuries ago. In the observance, man has given thanks to Almighty God for His bountiful gifts.

Many thousands of people each year now are participating in soil stewardship and Rogation Day prayers in city, village, and open country churches.

"Rogation" comes from the Latin word "rogare" meaning "to ask." Rogation Day began at Vienne, France, in the year 470. It was a time of crop failure—due to earthquakes and bad weather. It was a time of hunger.

St. Mamertus, bishop of Vienne, ordered prayer and penance on the 3 days preceding the Ascension. The clergy and the people called upon God to help in their desperate need.

Other communities took up the custom, and from France it spread throughout the world. At the end of the eighth century the observance had been formally accepted by the church. It has been the custom to hold each year before Ascension Thursday a special rogation service.

On Rogation Days people implore the mercy of God that He may keep us from all evils of soul and body, and give to the plants of the field an increase. In the spring, when the fields are green and there is promise of a good harvest—but also the possibility of destruction by

frost, hail or rainstorm—prayers and processions have served as a reminder to feeble man to turn with humility and confidence to the Giver of all good. For, it is not the earth alone which brings forth fruit, nor is it alone on the busy hand of man that increase depends; but it is God who gives the increase.

Utah is equally conscious of the proper use of other vitally important natural resources like forests and ranges, fish and wildlife, minerals and petroleum. The vacationer who chooses Utah for his holiday has in store for him a breathtaking wealth of natural beauty.

Over 12 million acres of farmland are benefiting today in Utah from one or many of the practices sponsored by the Soil Conservation Service. We have five excellent watershed protection projects in my congressional district and the sixth lacks only congressional committee approval.

These accomplishments would not have been possible without the work of many dedicated people who pioneered the field of today's progress.

One such outstanding individual is Mr. A. R. Croft, a personal friend of mine for many years who was recently honored upon the completion of 30 years of distinguished work. The Salt Lake Tribune of May 1 gave such a fitting tribute to Mr. Croft that I feel it is worthy of your attention:

HE MENDS WATERSHEDS

The outstanding performance rating and cash award given A. R. Croft, watershed management specialist and hydrologist for the regional office of the U.S. Forest Service, Ogden, caps 30 years of distinguished work.

Mr. Croft's scientific treatises on erosion problems appear regularly in professional journals and he is in demand as a speaker before both laymen's and academic societies. Four years ago he received the Agriculture Department's Superior Service Award, recognizing among other things his work in establishing analytical criteria for and gaining public support for scientific watershed management.

Formerly a research forester for the Intermountain Forest and Range Experiment Station, Mr. Croft helped develop and improve the contour trenching system on the steep Davis and Box Elder Counties watersheds, a system now widely used throughout the Nation and abroad to prevent floods and mud-rock flows.

Through the work of Mr. Croft and other dedicated ecologists, the flood peril which has plagued Wasath Front communities since the turn of the century eventually may be eliminated.

However well the State of Utah and other States have heard and heeded the advice and direction of the conservationists, there is still much to be done. After all, our natural resources are a direct gift of the Almighty for which we will be required to give an accounting. It behooves all of us, therefore, to use them prudently and yet preserve them for our children.

Perhaps it is well for us to ponder the wisdom propounded in the so-called 11th Commandment which begins: "Thou shalt inherit the Holy Earth as a faithful steward, conserving its resources and productivity from generation to generation."

Expense Accounts and Taxes

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9, 1961

Mr. DOUGLAS. Mr. President, reform of our Federal tax system is one of the most important and controversial issues this Congress will face. The present treatment of business expense accounts has been a longstanding source of inequality in our tax structure.

The President in his tax message of April 20, 1961, stated:

In recent years widespread abuses have developed through the use of the expense account. Too many firms and individuals have devised means of deducting too many personal living expenses as business expenses, thereby charging a large part of their cost to the Federal Government. Indeed, expense account living has become a byword in the American scene.

There may be differences of opinion over such matters as the proper degree of progressivity in the tax structure. However, all parties who are concerned with justice in the tax structure certainly ought to agree that those individuals with equal incomes should receive equal treatment under the tax laws. Individuals who abuse business expense accounts should not be permitted to avoid taxes and shift the tax revenue burden to those who must pay for personal entertainment out of their own pockets.

Mr. President, on Friday, May 5, the New York Times carried an excellent editorial supporting tax reform entitled "Expense Accounts and Taxes." This article deserves the attention of every Senator who is concerned about tax reform. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD following my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EXPENSE ACCOUNTS AND TAXES

The scandalous abuse of tax-deductible expense accounts is a well-known feature of American business life, but some of the extremes brought to public attention by Secretary of the Treasury Dillon in his testimony before the House Ways and Means Committee may have surprised even the most jaded tax evaders.

The administration merits support in its apparently determined effort to force those who wish to enjoy yachts and other expensive forms of entertainment to pay for them out of their own pockets, and not at the partial cost of the great majority of American taxpayers who must make up the revenue lost through the broad loopholes of present law. Expense-account living is not the only area to be attacked; there are many other special kinds of exemptions, such as the exaggerated depletion allowances enjoyed by producers of oil and other raw materials, that deserve reexamination and drastic revision.

Those who have defended the exceptions and the loopholes make essentially this argument: present rates of individual and corporate taxation are so high that they tend to reduce incentives for the exercise of talent and initiative, as well as for the assumption of capital risk. The loopholes are needed, it is contended, to make up for the disincentive effect of present tax rates.

The core of this argument, the need for incentive, cannot be dismissed. But its use to defend special privileges for some at the expense of the majority is wrong. The general impression of inequity created by the present extensive system of loopholes strikes at the basic confidence required for a workable tax system, a confidence that the system is really fair to all, to poor man and rich man.

A more sensible approach to the problems of equity and incentive would entail drastic reduction of loopholes that create unjustified special privileges for special groups, more vigorous use of excise or sales taxes on luxuries, with possibly a slight lowering of income taxes feasible as a result of the increased revenues thus obtained.

Operation Challenge II

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mr. BAILEY. Mr. Speaker, there is much talk of the failure of the regulatory agencies to perform the functions for which they were conceived because of the inefficient ways in which they operate. I have watched the work problems of the NLRB. It is a pleasure to point out at least one of our regulatory agencies has sought by modern management techniques to streamline its operating procedure to give fairer and more thorough service with dispatch. The General Counsel of the National Labor Relations Board, Mr. Stuart Rothman, has in short order dramatically and fairly reduced the time delays and backlog which had prevailed for many years in that Office, and has established Advisory Conferences on Administration at the local or regional level where it counts most. I have recently received a copy of a new program, Operation Challenge II, which the Office of the General Counsel has announced with the purpose of further improving the Office's performance in effectuating the policies of the act. I am inserting a copy of this program in the RECORD because I believe it deserves the attention of everyone who is interested in what an office can do to provide better public service:

OFFICE OF THE GENERAL COUNSEL,
April 12, 1961.

OPERATION CHALLENGE II

The best way to administrative betterment and improvement is through the process of continuous self-evaluation. In the Office of the General Counsel we have often said that we shall be our own severest critics. If, armed with the knowledge that we have of our own work, we have the capability to stand back and objectively evaluate it; if from time to time, we can set fire to our administrative imagination and conceive of new and better ways of realistically improving existing operations; and, if we

can make certain that these new ways are effectively translated into action; we have the ingredients of a successful operation.

From all reports, the Office's two previous programs, Operation 60 and Operation Challenge, were successful. Naturally, the question arises whether or not it would be desirable to undertake another management improvement program of major proportions with new emphasis and priorities, similar to Operation Challenge. The matter has been talked over in Washington and it is the consensus of the staff that the goal of high administrative and operating efficiency in the face of continuously rising caseloads would be substantially helped if we would undertake another well-defined improvement program, Operation Challenge II, by name.

We have learned much from our experience with Operation Challenge and Operation 60. Necessarily, the push and responsibility for these two programs had to come from Washington. Operation Challenge II, however, contemplates greater responsibility and participation by the field. This has certain advantages. The cooperation and integration of effort between Washington and the field will produce better overall results. It will mean a mutual sense of responsibility in Washington and the field by those who carry out the parts of the operation and permit increased delegation of authority at both levels.

Operation Challenge II, while keeping many of the programs and objectives of Operation Challenge, as indeed it must because of their continuing nature, will be based upon an increasing refinement of solutions to problems, some new and some chronic. Our Office's experience under Operation Challenge should help us tackle and solve these problems, and, we trust, enable use to progress even beyond the present high level of time and quality standards to which the latter has carried us. Operation Challenge II goes into some of the problem areas which, until now, we have been unable to deal with, as well as some in which much has already been done but in which more can still be done by more precise effort. Those in the Office of the General Counsel who have done so much to improve the time and performance efficiency of the Agency and have been in a position to look at and evaluate our performance over the months, are now in a better position to recommend further areas of possible increased efficiency and better public service.

The ultimate test of the administrative process, of course, is not necessarily efficiency for efficiency's sake. However, it is submitted that only the Government bureau that has reached adequate time and performance standards has earned the right to say this. The ultimate test is the due protection of the rights of the person as an individual, and efficiency and the elimination of unreasonable delay are but a means to that end—a means of avoiding the oft-repeated truism, "Justice delayed is justice denied."

The objective of Operation Challenge II, then, is simply this: While remaining on our present high plateau of time and quality performance, to concentrate our efforts with increased precision, new emphasis and priorities in important areas where any degree of further improvement will pay off in better public service, fairness of administration, more effective litigation and enforcement, and generally in a better effectuation of the purposes of the act.

Operation Challenge II has many parts. The following major ones are briefly identified.

I. Strengthening collective bargaining through voluntary processes: Continued emphasis on new ways to encourage fair and amicable settlement between the parties in meritorious cases, and the encouragement of better voluntary industrial relations by new and appropriate uses of all of the processes of the act which lend themselves to that end.

II. Securing more effective compliance: A better effectuation of the purposes of the act by continuing and furthering recent improvements in obtaining timely, voluntary, fair and more meaningful compliance with board and court decisions.

III. Protecting the act's integrity against racketeering influences: A program to strengthen office knowledge and practice to safeguard the board's processes against established labor-management racketeering including continued concentration on adaptabook on Racketeering Abuses" which is designed to aid in identifying true racket and criminal situations.

IV. Improving field litigation services: A continuing improvement program to provide the public with highest quality legal services and assure the fullest degree of fairness to all parties in the event of litigation, including continued concentration or adaptation, where practicable and justified, of proven modern principles of judicial administration. This item includes important subdivisions; for example:

(a) Analytical study of long litigated cases, with a report and recommendations for the improved handling of the protracted case before the NLRB;

(b) Continued attention to the adaptation of pretrial conference techniques to be utilized pursuant to agreement of the parties litigant and which may appropriately and justifiably be incorporated into office administrative processes;

(c) Study and recommendation with respect to reasonable use, where required, of the investigatory subpena.

V. A consideration of administrative due process in discharging the office's responsibilities under the act: A further review to determine whether adjustments in procedures may be indicated as justified to assure what may be termed "administrative due process" in the discharge of all responsibilities of the Office of the General Counsel so as to provide absolute fairness, impartiality and objectivity in all aspects of case handling, including consideration of any necessity for improving appellate procedures with respect to dismissed unfair labor practice charges.

VI. Meaningful communications as an aid to good administration and a better effectuation of the purposes of the act: Full utilization of established and new means of discussing matters with labor law practitioners and specialists, including the regional advisory conferences on administration, to provide exchanges of views and for informational and educational purposes in novel substantive, as well as procedural areas; including increased concentration upon the techniques and possibilities of preventive law in labor management relations.

VII. Field office representation case handling: The development and utilization of procedures designed to best achieve dispatch, thoroughness, and fairness in clear and simple ways in all areas of representation case work which fall within the responsibility of the General Counsel.

VIII. Greater use of the act's equity powers to effectuate its purposes: Consideration of the problems and possibilities of recommending greater use of the preventive measures provided under section 10(j) and 10(e) in those cases where it is desirable and necessary to maintain the status quo and to safeguard the statutory rights of individuals.

IX. Relating developments in the law to administrative case handling matters: Basic legal research and consideration of the impact, meaning, and interrelation with administrative problems of developing law, such as Columbia Broadcasting decision and revision to update basic legal memorandums, under operation 60, concerning the effect of Landrum-Griffin amendments.

X. The role of Office of the General Counsel as an employer: Continuation of the program of effective personnel policies which recognize the Office's responsibilities as an employer, and which are designed further to raise the high level of employee morale and satisfaction in doing the job by, among other things, appropriately rewarding talent and meritorious performance, giving special consideration to the equitable classification of employees, clerical as well as professionals, providing effective means of recruitment and training; continuing consultation with the NLRB Union and assuring that all aspects of personnel policies are free of discrimination based on race, creed, color, or national origin.

XI. Internal improvements in management and budget controls: Continuation of studies to achieve fullest use of adaptable modern management techniques to all phases of the office's internal administration, with special emphasis upon thoroughgoing improvement in methods of formulation and establishment of workload and budget estimates, and increased emphasis upon post-budget control.

XII. Residual Operation Challenge program: The time and performance standards for case handling developed under Operation Challenge have become integral and basic to operational procedures of Washington and the field. They will, of course, be continued under Operation Challenge II. In the face of a steadily increasing workload every effort will be made to continue on our present high plateau of quality and time performance and, with continued good performance and cooperation of the regional and Washington staffs, the Office shall seek to improve further our administrative and operational efficiency through Operation Challenge II.

Operation Challenge II is a substantive and procedural program of which these are special parts. In addition, special machinery on a functional basis has been created for its effective implementation.

The operation provides for an executive secretary, a steering committee, operational chairmen with select committees, proposed procedures for consultation with regional advisory conferences, and correspondent regional participation in program development. The planning and the initial work programs have been completed.

The operational chairmen have the responsibility to comprehensively evaluate processes within their respective terms of reference, to guard against improper or unwise changes, to make recommendations for improvement, and to carry out operations through to effective action ends.

Each of the operational chairmen has been assigned the projects within his major program area. In coordination with the steering committee he will appoint subpanels when necessary to consider those proposals requiring subcommittee consideration. Some action programs are ready to be communicated to the field, but the first 60 days will emphasize program development. The operational chairmen will have the continuing responsibility for insuring that each of the programs which became earmarked for definite action is carried through to the end. Operation Challenge II will bring regional representatives into the program development phases as much as possible. It is also intended that, to the extent practicable, members of the Regional Advisory Conferences will be requested to comment.

Regions with good constructive suggestions or recommendations which may further enhance the objective of Operation Challenge II should submit them directly to the appropriate operational chairman.

STUART SYMINGTON,
General Counsel.

Commemorative Postage Stamp

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9, 1961

Mr. WILEY. Mr. President, traditionally the postage stamps of our Nation depict in miniature its famous men and women, the great events of its history, its organizations, its industries, its natural wonders.

As we know, selections of subjects for the commemorative stamps are performed by a Citizens Stamp Advisory Committee through the offices of the Post Office Department.

Recently, I received a recommendation from Mr. Leslie H. Fishel, director of the State Historical Society of Wisconsin. Mr. Fishel proposed that such a stamp be issued in honor of Frederick Jackson Turner, one of the preeminent American historians.

I quote the following reasons by Mr. Fishel:

No historian has ever been honored by a commemorative stamp and Turner, whose work at Wisconsin and Harvard materially changed the study and interpretation of American history, deserves this recognition.

I commend this recommendation to the Congress, to the Post Office Department, and to the Advisory Committee.

Reflecting further on the merits of Dr. Turner's contribution in his field, I ask unanimous consent to have the letter by Mr. Fishel to Postmaster General Day printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

STATE HISTORICAL
SOCIETY OF WISCONSIN,
Madison, Wis., March 15, 1961.

Hon. J. EDWARD DAY,
Postmaster General of the United States, Post Office Department, Washington, D.C.

DEAR MR. DAY: Together with colleges and historical agencies all over the United States, the State Historical Society of Wisconsin respectfully suggests and will support the issuance of a special commemorative postage stamp during the year 1961 to honor the historical profession and a great movement in American history. This year marks the centennial of the birth of one of the greatest historians this Nation has produced, one whose influence as a teacher and a scholar has been worldwide, Frederick Jackson Turner.

Frederick Jackson Turner (Nov. 14, 1861–Mar. 14, 1932) first came into national prominence in 1893, when he head his epochal "The Significance of the Frontier in American History" before a special meeting of the American Historical Association. He developed a hypothesis which marked a significant interpretation of American history. In this essay and in subsequent historical writings he pointed out that men behave differently in a free environment as compared to their behavior under social and economic coercion, that equality of opportunity gave a substance to democracy in politics, that the social and governmental institutions which the frontier created were a constructive amalgam of the old and the new, and that the frontier as it moved from east to west, left a legacy of freedom with responsibility of which our Nation can be proud.

Dr. Turner believed that the frontier was less a place than a process which swept the American Continent. Noting that by 1893 much of the physical frontier was gone, he foretold a future much different from the past insofar as the open physical frontier had been a positive force. His belief in the quality and power of the American democratic experiment permeated his work. For his contributions to American historical theory and writing, Dr. Turner received the Pulitzer prize in 1932.

You are aware that there never has been a special U.S. commemorative postage stamp to honor the historical profession in the "Famous Americans" series. We believe that the centennial of Frederick Jackson Turner's birth affords an opportunity to honor the profession of which he was so great an exponent.

We would like to suggest a stamp of the size and horizontal arrangement of the recent "Conservation Series," a portrait of Dr. Turner to occupy its central panel to be flanked by right- and left-line drawings of Bascom Hall of the University of Wisconsin, where Dr. Turner taught, and of the building of the State Historical Society of Wisconsin, which collected and housed the library and archival materials upon which Dr. Turner's monumental thesis was established. It was the man, the materials, and the necessity for communicating to the future through students of the day which brought about the doctrine, and in honoring the man and the two institutions the whole profession of historian will be honored.

We would like further to suggest that design, engraving, and printing of the stamp—whatever form its final design may take—be hastened so that the stamp may be issued in Madison, Wis., on the centennial of the date of the birth of Frederick Jackson Turner, November 14, 1961.

Very truly yours,
LESLIE H. FISHEL, Jr.

United States Did It Where All Could See

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1961

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence:

UNITED STATES DID IT WHERE ALL COULD SEE—THE OPENNESS OF AMERICA'S SPACE SHOT COMPARED TO SECRETIVENESS OF SOVIET'S

For the first time in the history of the world, a man has gone up into space who was watched by millions of people both before he ascended and when he came down to earth.

This is, however, only one of a series of "firsts."

For the first time, a man in capsule was able to control and guide his flight while in the air. The Soviet astronaut who orbited the earth was just an inanimate passenger.

For the first time, a man who flew into space was photographed as he entered the capsule before he ascended and immediately after he came down. The Soviet astronaut, on the other hand, was not photographed by anyone except government representatives. No free press was present afterward to make its own record or freely to interrogate the astronaut.

For the first time, a nation sent a man into space and paid for the project out of a small fraction of its tax receipts. No class of human society was deprived of anything by reason of that expense—and no hardship was imposed upon the people. The enormous sums spent to send Soviet satellites aloft have been taken from a people deprived of the necessities of life. All this was ordered merely to advance the propaganda of totalitarian rulers.

America is rightfully emphasizing to the world that its achievement was in the open where nothing was hidden. To this day, the true facts about the flight of Major Gagarin of Russia are still unavailable, either to the press or to the international scientific organization which must eventually pass judgment on the validity of the claims.

Comdr. Alan B. Shepard, Jr., who made the great flight for the United States, captivated Washington. He is a credit to his country in general and to the U.S. Navy in particular. He handled himself with modesty, tact and skill, not only in his public appearances at the White House and at the Capitol but in the press conference that was televised to the Nation.

Here was an example of a naval officer trained, of course, for the physical hardships he might have to endure. But where did the training come from that enabled him to take in his stride the adulation and applause that were showered upon him? American manhood—the product of a free environment and the heritage of sturdy American parents—can be given the real credit. For the risks were great and a steady-nerved young man took them bravely for the cause of science and the advancement of man's knowledge.

Undoubtedly there has been a spirit of competition aroused ever since the Russian sputnik circled the earth. The Soviet press and radio played up the Gagarin flight, and there was a big celebration in Moscow, too, as Premier Khrushchev made speeches and bestowed the accolade on the Russian astronaut.

While doubts still persist as to what Major Gagarin really did—perhaps he also only went up and down at a given place in the air—the disposition of officialdom here is to credit him with his claim. But at the same time there is a natural pride here that America did everything in the open and made all facts available immediately to the public. Meanwhile, the Soviet people have been given skimpy accounts of Commander Shepard's feat, which is being deliberately played down inside the Soviet Union by orders of the Moscow government.

Why should the Kremlin be afraid to concede the significance of Commander Shepard's flight? Because it is important to the Communists to make the Soviet people feel that their sacrifices must be continued and their hardships borne in the interest of a patriotic spirit. The rulers of Russia rely heavily on patriotism to help them to excuse their failure to provide food and decent living quarters for the millions who are enslaved.

It has been of incalculable value to the prestige of American democracy in the free world to demonstrate the virtues of freedom to the smaller nations just emerging from bondage. For years to come the exploit of Alan Shepard will be remembered not only because of the bravery of a man who ventured into the vast unknown of space but for his dedication to the cause of science for which he was ready to risk his life.

Commander Shepard will remain a national hero because of what he has accomplished, but everlasting credit will also go to the scientists, engineers, and devoted

leaders in our Govrnment who, with cautious and faithful adherence to scientific research, refused to be stampeded prematurely into a manned flight and ordered it only after many experiments, including failures, had shown them it could be done with a reasonable chance of success. How many lives the Russians lost in their experiments may never be known.

As for a manned flight in orbit around the earth by the United States, this will come in due time. Already this country has 21 satellites circling the globe, while the Soviets have only one. A trip 115 miles up and then 302 miles across the ocean through space is an indication that at the proper time the United States will make the flight around the earth with an astronaut who will keep the world informed with his own voice, as did Commander Shepard—the first of all firsts. He talked and sent messages from the suborbital spaceship, and all the world knew it simultaneously—a truly great first.

Tribute to Cedric Adams

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9, 1961

Mr. HUMPHREY. Mr. President, Minnesotans were deeply saddened by the recent passing of one of their most colorful popular and beloved fellow citizens, Cedric Adams, the Minneapolis Star and Tribune reporter, radio and TV personality, and literally jack-of-all-trades. Everyone in the Twin Cities, and Midwest automatically turned to Cedric's column in the Minneapolis Star not only to keep up with local events, but also to share Cedric's unique philosophical outlook on life. Cedric was also well known nationally through the media of radio and television, endearing himself to all who came into contact with him.

Mr. President, I know that I voice the opinion of my fellow Minnesotans when I say that with the loss of Cedric Adams, Minnesota witnessed the passing of an era. It is with heavy heart that I ask unanimous consent that Mr. Bob Murphy's article commemorating Cedric Adams in the February 26 Minneapolis Sunday Tribune be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REPORTING AT LARGE
(By Bob Murphy)

As a newspaperman, I thought I had been dealt on occasion, some pretty rugged assignments. None, though, was ever as rugged as this. The thought is to keep this a friendly corner of the newspaper, as it was developed by Cedric Adams. And it falls to me to carry on, in as much the same vein as I can manage. The ruggedness comes about not only as a call on craftsmanship; it's a personal thing. I was a friend of Adams. And I think he was a friend of mine. The news that he had gone over the divide was as profound a shock as I've yet had to undergo. I had seen him the day before, and there had been the usual amount of kidding, and a comparing of notes which we hadn't had the chance to do for a while. And now, for the time being, I'll attempt to fill what has suddenly become the most vacant newspaper space in the world.

It's something like trying to follow the chariot race in "Ben-Hur" with a solo excursion on a motor scooter. I first met Adams in 1935, when he walked into the old second-floor sports department space in this building, where I was a sports writer with something like a couple of months seniority. He was by then to me a Mr. Big. Working on a weekly paper elsewhere, I had read and admired the column he wrote for a shopping gazette. As a matter of fact, I robbed him blind, stealing any of the bewildering variety of items he published that I could use.

I became acquainted in detail with the Adams power of appeal, however, when a photographer—I think it was Hy Sommer—and I went up north on a story. A small boy had become lost in the swamps north of Pine River, Minn. I think the boy's name was Hickle Harley Ware, and I don't believe he was ever found. Anyway, for 2 or 3 days we went out and joined the hunt. The national guard sent hundreds of men to the scene. Hundreds, or thousands, of extra mouths, hungry ones after tramping the muskeg, made a drain on the town's food supply.

I was asked if I could get Adams to appeal to food trucks traveling that territory—communications and highways were less efficient then than now—to stop in with extra supplies. I appended the request to the story I overheard—Sent by wire—to the office that night. It got to Adams, he relayed it, and the trucks began calling. The next day, we went out in the field, and when we got back to town the word was around. We were a lionized pair, because we had enough influence with Adams to get the appeal circulating. We knew, and I think the townspeople did too, that no influence was required—just a small note about a small but locally important problem.

On another occasion I did a little outside work for Adams. It included reading batches of his mail. He was in a reminiscing mood, and offered small prizes for the best letters of the "I remember when" type. I went through this mail, to screen it for the judges. And I was astounded to discover that fully half of the letter writers weren't even in the contest. They were just people in whom he had perhaps awakened a sense of nostalgia. They wrote to express gratitude, affection, the feeling of kinship or companionship that he aroused in most people, whether they knew him personally or not.

In no sense could I ever consider myself a replacement for Cedric. He was unique and irreplaceable. While he built a vast audience through friendliness and seeming simplicity, the simplicity was deceptive. He was a complex man. Nobody who juggled as many tasks as he did with finesse could be anything but complex. Newspapermen knew him as a bewilderingly fine reporter who could soak up information, detail, attitudes, nuances like a blotter, without apparent effort. Everybody knew him as a glowing writer with a facility for the twist, the word, the usage that made an item not only more readable but, frequently, memorable. Sinclair Lewis said he had the best enunciation of any broadcaster in America. And he had an uncommon resilience; if he did bobble, he could laugh about it or make an apology read or sound like a tribute. I have never seen him angry, or even perturbed.

It's with deep humility that I approach this responsibility. I know that comparisons with the Adams output are inevitable. I must plead that neither I nor anyone else could ever be another Adams. I could try to emulate him, but emulation is travesty unless it's correctly done. And here's where a lot of you come in. I'd like to earn at least a small measure of the huge friendship you had with Cedric, and to keep going the type of work he did in the Minneapolis Star and the Sunday Tribune. To do that, I need your mail—accounts of incidents touching, humorous, offbeat or personal. Believe me, everything will get thorough reading, full consideration and my heartfelt gratitude. I feel the best possible effort is owed to the Adams tradition. And I'd lay a fast buck he'd be grateful, too. He always was.

Aid to Dependent Children

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mr. BYRNES of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a resolution adopted by the Board of Supervisors of Manitowoc County, Wis., memoralizing Congress to enact legislation permitting localities to give recipients under the aid-to-dependent-children program commodities or vouchers for purchases in lieu of cash at the discretion of the local public welfare department. It outlines a problem which should receive consideration by the Congress:

Whereas the Federal Government contributes funds for such aid-to-dependent-children program, only upon the condition that such aid be disbursed in cash payments, and that no accounting be demanded of individual recipients thereof as to how such cash is spent; and

Whereas in many cases due to poor financial management or other reasons, the cash disbursed has been spent unwisely or inadequately to protect the children involved; and

Whereas it would be beneficial to the public interest to permit local authorities to exercise such discretion and control in cases where the recipients of such aid either manage their money unwisely, or conduct themselves improperly, or care for their children inadequately: Now, therefore, be it

Resolved by the Manitowoc County Board of Supervisors, That the Congress of the United States be respectfully requested to consider and enact legislation in 1961 amending the laws relating to aid to dependent children categorical aid program administered by the Federal Department of Health, Education, and Welfare to grant discretionary authority to local governing bodies and public welfare directors to enable them to distribute such aid in the form of commodities or vouchers for the same in lieu of direct cash payments, as such local governing bodies of public welfare directors may deem appropriate in individual cases; and be it further

Resolved, That authenticated copies of this resolution be transmitted to the Wisconsin Members of the U.S. Senate and House of Representatives; and be it further

Resolved, That such Wisconsin Members to Congress be requested to take joint action to insure that this resolution be spread upon the CONGRESSIONAL RECORD for the purpose of making know the contents thereof to all Members of the Congress of the United States; and be it

Resolved, That the legislative committee of said Manitowoc County Board of Supervisors

be, and they hereby are instructed to sponsor a similar resolution in the 1961 Wisconsin Legislature so that the foregoing objectives will be adopted by the latter body as the intent and public policy of this State.

Dated this 18th day of April 1961.

ARNOLD NELSON,
MAX BIGEL,
Legislative and Rules Committee.

The Expensive Federal Road Program Moves Ahead

SPEECH
OF
HON. HENRY C. SCHADEBERG
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 4, 1961

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 6713) to amend certain laws relating to Federal-aid highways, to make certain adjustments in the Federal-aid highway program, and for other purposes.

Mr. SCHADEBERG. Mr. Chairman, according to testimony by the Honorable C. Douglas Dillon, Secretary of the Treasury, before hearings of the House Committee on Ways and Means, a total of $9.7 billion will be needed to meet the anticipated costs of completing the Federal highway program by 1972. This means $900 million a year must be raised to meet the 1972 target date for completion. Further, $2.5 billion has been diverted into the general fund making a real cost total of $12.2 billion.

It is interesting to note that the bill proposes a tax increase from 8 to 10 cents per pound on tire rubber; 3 to 5 cents per pound on tread rubber and 9 to 10 cents per pound for tube rubber—for an estimated total of $1.1 billion, raising about $150 million a year. The bill also calls for a continuation of the 1 cent temporary tax on gasoline for the duration of the Federal highway program keeping the Federal gasoline tax at 4 cents a gallon—for an estimated total of $8.3 billion or about $600 million a year.

It is my conviction that the Members of this House have an obligation to the people in three respects regarding the Federal highway program and its financing:

First. To allow the one cent tax on gasoline offered as a temporary tax to expire June 30, 1961. The people cannot long be patient in view of the fact that temporary measures seldom are temporary but with seeming apparent ease are extended and made permanent. The people have a right to expect their Representatives in Congress to mean it when they say that a measure is temporary.

Second. To expect that money raised in support of the Federal highway program is used for the program and not diverted to the general fund. I was happy to hear the chairman of the House Ways and Means Committee assure the House that this bill will not permit such diversion of funds in the future. However, the public has a right to know that some of the excise taxes collected on vehicles and equipment are being placed in the general fund and are not being used to pay for the Federal highway program.

If the $2.5 billion diverted from the Federal highway program to the general fund were replaced, the additional tax levy against rubber would not be necessary. The fact is that the 1 cent temporary tax on gasoline could be allowed to expire and a new tax of 0.9 cent could be levied to pick up the tab for the balance needed to complete the program by 1972.

Third. To expect to be informed that this is a pay-before-you-go bill and not a pay-as-you-go bill.

I am not opposed to the highway program. However, I do feel that the cost for completion of the 41,000-mile program should be shared by all who benefit from it and not just those who happen to operate motor vehicles. The fact that the highway system contributes substantially to our national defense indicates that part of the burden of the cost should be levied against the defense budget.

An Idea on Taxes

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

THE EDITOR'S LETTER
(By F. F. McNaughton)

Here's an idea on taxes.
Kennedy's camp hatched it.
Reduce taxes on two classes:
1. The poor;
2. The rich.
What's the idea?
Purpose is to boost business.
What makes business?
1. Buying;
2. Investing.

They say, "The poor spend all they have, probably of necessity, although it may be what keeps them poor." Anyway, if the tax of the poor is lowered $300 a year, they will buy something with the $300—and that will make jobs.

The J.F.K. schemers also say:

"The rich likewise don't hang onto their money; they keep it working for them; they invest it." It is the investments of the rich that build factories. That makes jobs. If Government leaves a rich man only 8 cents out of each top dollar he makes, he, first, doesn't have the money to invest; and, second, why should a man risk $10,000 to make (at 6 percent) $600 and get to keep only $48 of it—and he might lose the whole $10,000.

But the middle class man, they argue, is too thrifty to spend the $300 or $3,000 that his taxes might be reduced, and he is too wary to invest it in factories or mines or toll roads or electronics, or jet plane or outboard motor manufacturers, or citrus groves or wonder drugs or plastics, or atomic powerplants, all of which make jobs.

Our forecast: Congress will not pass it.

Jesus said: "The poor always ye have with you." Abraham Lincoln said: "God must have loved the common man; he made so many of them."

By now Congressmen are well aware that in 1961 America, the middle class has the most votes.

H.R. 6713, Highway Bill

SPEECH
OF
HON. ROY A. TAYLOR
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 4, 1961

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 6713) to amend certain laws relating to Federal-aid highways, to make certain adjustments in the Federal-aid highway program, and for other purposes.

Mr. TAYLOR. Mr. Chairman, I am in full accord with the interstate road program and the results that we hope to achieve by the final passage of H.R. 6713.

No person today can fail to see the critical need for improvement in both our primary and secondary road systems. As our economy becomes more complex so does transportation and commerce. It therefore stands to reason that as we progress economically our highway program must move forward on schedule.

The transportation needs of our country demand that our highways be made modern and safe. I am reliably advised that completion of the $41 billion Interstate System by the target date in 1972 will reduce highway deaths by as many as 4,000 persons a year. On a four-lane divided highway with controlled access the number of deaths by vehicle mile traveled is reduced by two-thirds as compared to traffic on the ordinary two-lane road.

Aside from this foremost safety aspect highway users, truckers, businessmen, vacationers, will be saved an estimated $2 billion a year in vehicle operating costs and upkeep.

The interstate highway program in many sections of our Nation will bring about unprecedented economic growth. The congressional district which I am privileged to represent, situated in western North Carolina amidst the most lofty and picturesque mountains in the Appalachian Range, is among those sections of our Nation which has suffered economic retardation because of geographic isolation and inadequate highway facilities. The people in this district are now receiving their full share of interstate roads. They appreciate this program and are willing to help pay for it. The Federal-Aid Highway Act of 1961 has given the people of my district, and I am sure the people in the districts of most of my colleagues, new hope for modern highway facilities in their areas commensurate with the needs.

It is incumbent upon Congress to provide the necessary financing if the In-

terstate System is to be completed in 1972 as originally planned. Now that we have this program moving we must not only continue at the present rate but should accelerate construction.

By our action we determine the future speed and direction of this important program. We hasten the day when interstate roads will stretch in all directions across the face of this great Nation for all citizens to use and enjoy.

Michigan's Governor Cracks State Police Knuckles With Censorship on "Operation Abolition"

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mr. CEDERBERG. Mr. Speaker, the people of Michigan have a right to a forthright answer to the question of what is expected of their State police in combating the Communist menace.

Governor Swainson is responsible for the question that exists in the minds of the people whose commonwealth he heads. Without ever seeing the film "Operation Abolition," Governor Swainson invoked censorship on the Michigan State Police Department and forbade that agency's showing this film of the disgraceful Communist inspired episodes at the congressional hearing in California.

The editor of the Midland Daily News very well sums up the situation in the following editorial:

SWAINSON HASTY IN BANNING FILMS

Governor Swainson may be already regretting his hasty decision ordering the Michigan State Police to stop showing two controversial films depicting Communist tactics.

His first mistake was in taking a position before he viewed the actual films. He admitted that this was done on the advice of some of his staff and that he had not had an opportunity to see "Operation Abolition" and "Communism on the Map."

If these films are objectionable in the mind of Michigan's Governor, the people of the State have a right to know that his decision is from firsthand information. In other words, to be blunt, they expect him to know what he is talking about.

Reaction came quickly and members of the legislature are scheduled to view the films at a special joint meeting tonight. No doubt we will be hearing and reading of the views of various members and possibly some legislative action will be proposed.

In Grand Rapids Monday, the National Association of Evangelicals took issue with the Governor and asserted that he "yielded to certain pressures."

Rev. Thomas F. Zimmerman, president, and Dr. George L. Ford, executive director said: "We want to express our concern over widespread efforts to suppress information concerning Communist defiance of law and order in any free society."

They said they recognized differences of opinion on the "merits of the film" showing student riots in San Francisco but hoped "public officials will exercise real caution in yielding to any pressure groups who plead for such suppression of information."

The Michigan State Police is an agency long trusted by the citizens of the State to defend the people against crime and subversion.

Members of that force detailed to investigation of subversive activities are students of corruption and the evil tactics of communism. They believed that the two films were worthy of public attention.

The least that Governor Swainson could have done before passing judgment was to look at the films himself. Then he would be in a better position in ordering the State police to desist educating the public of Communist dangers via the films in question.

There are rumors that the State police have also been ordered to discontinue Communist investigations. These should be either confirmed or denied because the people of Michigan have a right to know whether their State government is succumbing to the well-known Communist tactics calling for nullification of all anti-Communist legislation, muzzling of investigations and elimination of security programs. A side line is to humiliate and challenge the integrity of law enforcement agencies.

Censorship of State police efforts to let citizens view the two films in question tends to aid and abet the Communist line even though such action might have unwittingly come from a busy Governor who did not take time to investigate for himself.

Address By Hon. Clark W. Thompson, of Texas, at Rice Millers Convention, Galveston, Tex., May 5, 1961

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mr. GATHINGS. Mr. Speaker, some men have the happy faculty for making difficult tasks appear easy—and that is the way in which our colleague, the Honorable CLARK THOMPSON, of Texas, handles his duties as chairman of the Subcommittee on Rice—now the Oilseeds and Rice Subcommittee—of the House Committee on Agriculture.

As an indication of how he works effectively to represent not alone the constituents of the Ninth District of Texas, but the Nation and the Congress in its relations with our citizens, it is a pleasure and a privilege to call attention to the address given by Representative THOMPSON before the Rice Millers Association convention held last weekend in Galveston, Tex.:

ADDRESS OF CLARK W. THOMPSON, OF TEXAS, AT RICE MILLERS CONVENTION, GALVESTON, TEX., FRIDAY, MAY 5, 1961

I am very highly complimented by the invitation to confer with you in behalf of the Rice Subcommittee at your annual convention. I have worked, for many years, with the Rice Millers Association and I think it is safe to say that all of our relationship has been pleasant and I hope that you have profited by it.

You will be interested in the background of the various commodities subcommittees in general and the Rice Subcommittee in particular. Some 6 years ago, when the Democrats reorganized the Congress, our chairman, The Honorable HAROLD COOLEY, of North Carolina, and our vice chairman, our own BOB POAGE, of Waco, conceived the idea that each basic commodity should have a special group with which to resolve the various problems peculiar to that commodity.

Perhaps because the congressional district which I represent produces more rice than any other in the United States, I was named to head this particular subcommittee. With me since the beginning on the Democratic side is E. C. ("TOOK" as we call him) GATHINGS, of Arkansas, who has always been a grand member for me to work with and I am sure that you would say the same.

GRANT of Alabama, MCMILLAN of South Carolina, ALBERT of Oklahoma, ABBITT of Virginia, COAD of Iowa, and MCSWEEN of Louisiana are the other Democratic members.

On the Republican side, the senior member is PAGE BELCHER, of Oklahoma, with FINDLEY of Illinois, DOLE of Kansas, BEERMANN of Nebraska, and REIFEL of South Dakota.

We have not transacted much business thus far, but I have already learned very much to my satisfaction that these members are all interested in the subject of rice and also oil seeds which is a new responsibility of our subcommittee.

I note with particular pleasure the presence here, today, of HAROLD MCSWEEN, of Louisiana, and BEN REIFEL, of South Dakota, who have come here to take part in our conference.

In the years gone by, this subcommittee has been blessed with the most pleasant kind of relationship with the entire rice industry. It is an industry which we have always found is particularly easy to work with whether it be producers, warehousemen, or millers. When you have a problem, you have the habit of thrashing it out before hand among yourselves. Then, you take it up with the Department of Agriculture, and finally you bring it to our committee all wrapped up in a nice package and generally ready for me to simply write it in bill form and drop it in the legislative hopper.

Since any differences of opinion have been ironed out before Congress ever sees the legislation, we generally pass our bills by unanimous consent. When we have had opposition in the past, it has never been of a serious nature. Let's hope that as long as I serve you, we can say the same thing.

Later this year, I would like to bring this subcommittee back to the rice belt to spend a few days observing the production and the operations of all phases of your business. Speaking for myself, and I believe I voice the opinions of the rest of us, we have a lot to learn. You in the industry can certainly teach us. Both sides would profit tremendously from such a visit.

If there are problems confronting us at the time, we could hold some hearings, something which I always like to do at the grassroots, to give producers who could not otherwise present their views to the Congress the opportunity which the Constitution provides to every citizen to make his voice heard in the Legislative Halls.

Maybe they can't come to Washington, but we can bring Washington to them.

At the moment, two pieces of legislation are before the committee. One is our succession of interest bill which is ready for action as soon as we receive the Department report. The measure is a very simple one and I have informal advice that the report will be favorable as it was last year.

It provides for the transfer of acreage history where a producer withdraws from the production of rice. It lets him transfer to a son, son-in-law, grandson, or nephew.

The Secretary has covered the provisions of this bill by written regulations in the past, but the attorneys for the Department feel that there should be statutory expression to protect both sides.

Since you are all more familiar with it than I am, I shall not take the time today to elaborate.

I see no reason when we should have any legislative problems in passing the bill since it does not affect any commodity except rice, and as a matter of fact, it only gives the rice industry in Texas and California, where we have hip-pocket allotments, the same privileges that the producers in other States already have.

Another piece of legislation which I recently introduced is designed to make rice more attractive for the school lunch program. There is constant resistance to the inclusion of rice because some who administer the school lunch program think that it should be enriched and that it should be packaged in a more sanitary container than is presently the practice.

Another very important factor is the size of the packages.

This bill would require rice which is stored in commodity credit warehouses to be in packages of not more than 25 pounds so that they could be easily handled by the cooks and thus be more attractive for the school lunch program. So much for rice legislation.

I don't see why we should have any particular trouble passing that bill but, of course, I always run scared on legislation and never count it in the bag until it is signed by the President. However, at the moment, it looks all right to me.

Now as to legisaltion generally, the so-called Cooley bill, H.R. 6400, is in the mill and is being thoroughly aired out in the committee. There are some basic differences of opinion and, as is so often the case, the good parts of the bill are lost sight of and the snipers get busy on the party they don't like meanwhile condemning the entire legislation which, of course, is very foolish. The bill contains such things as the school milk program, Public Law 480, and various other generally noncontroversial items.

The real controversy is over the proposal of the Secretary of Agriculture to consult with the grassroots committees in the various commodities to find out what sort of program the farmers, themselves, desire; then to thrash out the legislative features in the Department of Agriculture, and finally to submit the proposal to the Congress.

The original idea was to give Congress the veto power just as it has in the Hoover committee recommendations. This has not proven to be acceptable to the Congress and whatever happens, we will have to retain, in the Congress, legislative jurisdiction—in other words, we will pass laws; we will naturally consider any recommendation which the Sscretary sends up; but we will act on it affirmatively rather than negatively.

This is not a serious difference of opinion at all. The basic idea of consulting with the producers is as sound as it could be, and it reflects what I believe to be an excellent attitude on the part of the Secretary of Agriculture. After all, this is exactly what we do in the rice industry. You get your heads together, decide what you want, clear it with the Department, and then bring it to the Congress. And, that is just exactly what he wants the other commodity groups to do.

I shall not undertake any detailed discussion of the legislation because it is so uncertain at the moment that we might just be spinning our wheels.

I do strongly recommend that you consider with open minds whatever proposals come from the Secretary of Agriculture. Please realize that now, for the first time in many years, we have a Secretary who is trying to do something for agriculture and to stabilize the position of agriculture in the broad economy of the country.

It is a refreshing change, and any man who tries as hard as Secretary Orville Freeman is trying surely deserves a friendly consideration on our part.

This day has been a great pleasure and privilege for me. You are here in my hometown and I am glad that you have been so cordially received. It has been wonderful to work with and for you. I trust we will be together for a long time.

The Union Lag at the Missile Sites

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mr. DERWINSKI. Mr. Speaker, along with the success of our first man-in-space venture, the construction problems at Cape Canaveral and the exorbitant costs involved have been disclosed by a Senate Investigating Committee.

The editorials, "The Union Lag at the Missile Sites," from the Chicago Daily Tribune of May 5 and "Extortion at Canaveral" from the Chicago American of April 29 should be carefully studied since this entire problem is certainly the responsibility of the Congress.

[From the Chicago Daily Tribune, May 5, 1961]

THE UNION LAG AT THE MISSILE SITES

The Senate Permanent Investigations Subcommittee has now heard a description of how four union ironworkers shut down the missile launching site at Cape Canaveral, Fla. They simply posted a roadside notice, "Ironworkers not working today." So every otherworker of the numerous unions employed on the base honored the unauthorized walkout and stayed away from work.

This process, known as "going fishing," is invoked to force the Government into overtime work in order to catch up on lost time. The result is that fantastic premium wages have pushed the weekly wage to $400 to $700, while construction on missile sites has fallen months behind schedule. Not content with this gouging, the unions also compel the Government to pay every worker a travel allowance averaging about 5 hours of overtime pay each week. The work roster is crowded with unnecessary and unqualified foremen who draw an extra 25 cents on each hour's pay, though they do not work.

Heads of national unions examined about this stay-away substitute for the picket line testified that no strike is authorized without their permission, but admitted no disciplinary action had been taken against anyone. They expressed no shame over union racketeering, though they know the United States is competing with Russia for mastery of space.

This lack of union morality is not surprising, but the complacency of government labor relations representatives and officers of the Air Force and Army Engineers at Cape Canaveral is shocking. Instead of going to bat with the unions, they badger the contractors to find out, if they can, what the unions want and to give it to them.

A colonel of Engineers brushed off contractors' complaints with the observation that for 10 years "the atmosphere of Congress has been prolabor" and that if the military sought to break a strike, "all hell would break loose politically."

If the survival of the Nation depends on the patriotism of the unions at the missile sites or the backbone of the military in charge of them, we are in a bad way. Congress should lose no time in cracking down.

[From the Chicago American, Apr. 29]

EXTORTION AT CANAVERAL

In view of the pressing national need to develop its space and missile programs in a hurry, it is surprising—to put it mildly—that there are people who have been allowed to slow it down to a comparative crawl by means closely resembling extortion.

These are the leaders of some of the 30 unions whose members work at Florida missile bases. Witnesses before the Senate investigations subcommittee have testified that 162,872 man-days of work have been lost in 4 years because of strikes and slowdowns called to reinforce demands for huge wages.

Two Air Force officers and a Government contractor told in detail how some union leaders at Cape Canaveral have forced abnormal working shifts on contractors, so workers can collect sky-high overtime pay. As a result of overtime finagling, skilled workers pull down $450 to $611 a week and one supervisor, an apprentice electrician whose brother-in-law happens to be a union leader at Canaveral, gets top pay of $673 a week—exactly what Vice President LYNDON JOHNSON is paid.

This gouging has added up to millions of dollars in excess costs for taxpayers and has cut working efficiency to 20 to 30 percent of expected norms.

Rivalry among unions contributes to the slowdown. If the members of one get overtime for essential work, others will insist on getting overtime too, justified or not. This has led to such incredible make-work practices as disassembling component parts shipped from factories so that workers on the scene can assemble them again, at full pay.

Subcommittee Chairman JOHN F. MCCLELLAN has indicated that Congress will act if necessary to prevent any more work stoppages and gouging at missile bases. We hope Congress won't waste time about it. Any agency that sabotages the Nation's defense and space programs for its own gain has no claim to sympathetic treatment.

Back-Door Finance

EXTENSION OF REMARKS
OF
HON. R. WALTER RIEHLMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mr. RIEHLMAN. Mr. Speaker, opposition to the recently considered conference report on the depressed areas bill was based primarily on the so-called back-door financing provisions which the bill contained. The dangers inherent in this sort of financing are the subject of much concern and, although this battle against back-door spending was lost, the war is far from over.

Under leave to extend my remarks in the Appendix, I include the following editorial which appeared in the May 5, 1961, edition of the Syracuse (N.Y.) Post-Standard:

BACK-DOOR FINANCE

Taxpayers should note that the aid-to-depressed areas bill just signed by President Kennedy provides for back-door financing.

That is, most of the $451 million allocated will be borrowed direct from the Treasury without going to the bother of getting congressional Appropriations Committee approval.

The House finally agreed to this, although Congress is supposed to keep some control over spending and maintain a system of checks and balances. It abdicated this right in the depressed areas bill.

Advocates of the method of financing maintain it makes money quickly available. But there is no need for haste in this instance because the administration is not organized to channel funds to depressed areas.

The Commerce Department will run the program but six other agencies will have a hand in it—the Departments of Health, Education, and Welfare; Agriculture, the Interior, Labor, the Small Business Administration, and the Housing and Home Finance Agency.

All will be clamoring for a slice, yet the Senate has not confirmed a candidate to take over the depressed areas command post in the Commerce Department.

In fact the boundaries of depressed areas have not been mapped out, and the task will not be eased by heavy pressure from Congressmen, mayors, and local chambers of commerce.

All of which makes it clear there was no need for Congress to give up its right to review such financing.

The depressed areas picture may change considerably before the money begins to flow, yet the back door to the Treasury has been opened wide. The taxpayers would feel better if they knew the appropriations committees were keeping a watchful eye on the operation.

Television To Develop Literacy

EXTENSION OF REMARKS
OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1961

Mr. ROBERTS. Mr. Speaker, I am convinced that television can be a powerful medium for providing greater educational opportunities to people of all ages. My bill, H.R. 132, would encourage use of educational television channels.

Because of my interest in this subject, I was particularly intrigued by an address delivered at the 6th annual conference of the International Reading Association, held in St. Louis May 4 to 6.

This address "Shall We Use Television in Developing Literacy?", was delivered by Mrs. Pauline Jones Hord, literacy consultant, Memphis, Tenn., and, under unanimous consent, I include it in the RECORD at this point:

SHALL WE USE TELEVISION IN DEVELOPING LITERACY?

(By Pauline Jones Hord)

Who is the illiterate?

Census takers, going into crowded row houses of a swarming city or into tenants' homes in the agricultural South ask the question, "How many grades of school did you complete?" Millions of answers are gathered and finally a statistic is ready for a speech which states "10 million over 25 years of age have less than a fifth grade education." This is generally accepted to mean "10 million persons are functionally illiterate."

We all know people who have been through grade school. Many were able to complete the third or fourth grade. Many who completed the eighth grade are still unable to write a telephone message and can't read their children's report cards intelligently. All too often they are unable to decipher the recipes on the freely distributed surplus food packages.

When we add our out-of-school citizens under 25 years of age who are unable to communicate with their fellowmen through the written word to the large block of adults who are recorded as having less than an eighth grade education, it is reasonable to say that the functionally illiterate group is shockingly beyond any official figure. According to a special spring census of 1958 there are approximately 23 million persons above age 14 who are functionally illiterate. Perhaps the most realistic figure comes from UNESCO: 1 in 10 Americans, they estimate, cannot pass their test which is to read with understanding or to write a short statement on everyday life.

Where are these people and what are they like?

The largest group is in the South. Two-thirds of this largest group is Negro, one-third white. The next largest group is congregated in the big northern cities. It includes the foreign-born who are illiterate in our language; it includes many Negroes who have migrated from the South in increasingly large numbers within recent years. Idle boys, the streetcorner loafers, who are over 16 and not compelled to attend school swell the numbers of this group. Another segment is the migrant farm laborers, scattered widely through the Middle and Far West. Nationwide we must include the isolated mountain and sharecropper families.

In the cities we can locate the functionally illiterate by the welfare list, the unemployment compensation list, and at the bottom of charts on earning power where the income ceiling is $500 a year. Most often the illiterate is the man without a steady job. We do not find hih listed as physically crippled or blind perhaps; but he is crippled because he cannot write; blind because he cannot read.

Should they be in school?

Yes, they ought to be going to school. But are they?

The answer is close to a 98 or 99 percent "No" as far as public school classes are concerned. It may be as low as 95 percent "No" if we count those reached by TV literacy programs in the South, and in two northern cities—Baltimore and Philadelphia. It may be as low as 94 percent if we count the classes sponsored by church and other non-school organizations, such as the program for migrant workers carried on by the council of churches.

Why is so little done through public school facilities? In the past these have seemed to be the obvious logical media. Frequently public school officials reply that "the results simply don't justify the expense and effort." The public schools, we all realize, are already overburdened and overworked; it would take additional funds and communitywide effort to reach and teach the illiterates. However, a subconscious attitude that the illiterate is a lesser breed has undoubtedly hindered such a program, just as it has probably kept school officials from bringing the problem of the illiterate to public attention.

We recognize the serious obstacles to the success of a literacy program. Illiterates are not eager to attend classes. They are rather like sinners who won't come to church. Shame keeps them away. They are isolated, often physically, always mentally, because of their reading disability. Defense mechanisms keep them from admitting their handicaps. Habitual failure saps the will to self-discipline. They are "used to" the little islands of life on which they drag out their limited routines. It is difficult to convince most of them that reading will make even the slightest difference in their lives.

To say "the results simply don't justify the expense" is seemingly substantiated by records which show that many students learned little even though they showed up regularly for class. The tendency is to blame the student. There is evidence, however, that an appropriate program makes the diffrence between success and failure. A good remedial program must begin at the beginning, move forward logically, with special stress on the fundamental relationship between speech sounds and their related written symbols. The adult student needs, above all, to see his progress the very first day. Without this initial success, discouragement and skepticism push him back into the limbo of disillusion and our country has another confirmed nonreader.

What about television?

Television, the mass medium, can reach most of the 23 million functional illiterates. This giant visual aid can go anywhere and almost everywhere in our Nation. It can tackle the job with amazingly successful results. TV can reach the unreachable if it travels the popular wave lengths. By projecting the one well-done, effective program, one expert teacher will be available to all. Lay assistants can supervise groups of students watching as a class. Such laymen may well be unpaid volunteers as is true of projects in Tennessee, Alabama, North Carolina, South Carolina, and Texas.

Memphis has the first and probably most ambitious literacy project on TV. Dr. Laubauch, world literacy missionary, who is here today, sparked the program into life on Educational TV Station WKNO back in 1956. His own visual-phonetic approach was combined with many teaching techniques to produce a literacy series known as streamlined reading. Working with Dr. Laubauch, I spent 5 absorbing years directing the writing of TV scripts, creating teaching materials, training TV teachers and their assistants who were lay supervisors of classes. Ninety-eight films were made of the lessons which we broadcast 3 nights a week. Ten commercial TV stations, mostly in the South, have rebroadcast these lessons. All educational TV stations in Alabama are currently broadcasting them. The University of Georgia educational TV station in Athens is beaming these classes to a third of the State. Soon a Dallas station and a Little Rock station will begin.

The Memphis experiment included registration of pupils and evaluation of their work. Some literacy programs have not. Attendance records show a heavy toll of dropouts, even among those who paid the fee for their books. Roughly 5 percent of the registered students viewed the TV class at home. The majority of the dropouts were in this unsupervised, unaided group. About 95 percent of the registered students attended supervised classes of from 5 to 25 persons. The majority of this group completed the program. Their test scores showed rewarding results. Various methods of evaluation showed the effective results of phonetic approach in well devised courses of study. In 8 months these adults, encumbered with layers of bad mental habits, psychological learning barriers, and adult cares and responsibilities, accomplished as much as average primary grade children learn in 27 months. These lessons worked equally well with the beginning and the remedial students.

The Memphis project had the essential elements. We had sufficient money to keep going. We had community support. The lay supervisors of classes were all volunteers.

Civic groups, radio, and TV stations, newspapers, women's clubs and the church contributed their energies and abilities to our publicity and support. We had a well-designed approach to a logically developed series of lessons.

In all such projects, on TV and off, the greatest single problem lies in the recruitment of students. If only 1 percent of the functionally illiterate will want and avail themselves of the classes, the project is performing but a part of its job. Station WBAL in Baltimore is concerned with this problem. In this once-a-week literacy program the teacher devotes a good deal of time to motivating the students. She urges them to join night classes for adults held in the public schools.

Is such motivation enough? Think of an individual's responsibility to his country, his community, and to his family. Couldn't we make literacy training a prerequisite for receiving certain now-free benefits? The need for assistance usually is dictated by lack of or limited education. Many of those who receive welfare aid would have an intimate and compelling reason to attend classes.

Is there a solution?

During the war some illiterates were required to attend school. Since literacy was considered an urgent factor in our national defense, nobody waited for this illiterate to decide whether or not he wanted to be taught. In this present semipeace can we afford to wait for the illiterate to feel the urge? Should we wait for him to overcome, independently, his long-practiced inertia?

In a certain county in Michigan, surplus food and welfare help are donated to long lines of the unemployed. Each person receiving aid is not only expected, but required, to give of his time and services in the distribution center. A better requirement of the functionally illiterate would be to attend a TV literacy class. Perhaps, under a national plan, we could turn to the Peace Corps for enthusiastic young supervisors. Funds from money appropriated for public education could be tapped for TV station costs. If literacy competence were required by major social and governmental agencies, we could, lesson by lesson, week by week, whittle away the deadwood of illiteracy.

Let us not be nearly so afraid of communism in this country as of the apathy and indifference which now exists toward the functional illiteracy of 22 million of our people. We have temporized far too long. We have the technical skill and mass media to wipe out illiteracy. Through increased social action we can narrow the yawning gap between our educational and technological achievements. As our new and vigorous President has already said, "Let us begin."

The John Philip Sousa Home in Nation's Capital Now Threatened With Destruction by Officials Inspired by Proposed Razing of Historic Buildings on Lafayette Square

EXTENSION OF REMARKS

OF

HON. CARROLL D. KEARNS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1961

Mr. KEARNS. Mr. Speaker, I have introduced legislation, H.R. 6893, to provide for the preservation and maintenance of the home of John Philip Sousa, one of America's most beloved composers. The home is located at 318 Independence Avenue SE., Washington, D.C.

The building was the first home Mr. Sousa owned, and he occupied it from about 1900 to World War I. The home, a Victorian-type house, has been condemned by the officials of the District of Columbia despite the fact that it has been planned as a shrine by those concerned with the advancement of American music for at least 20 years.

The destruction of the Sousa home by insensitive officials is just one more example of the present disregard for America's historic and culturally important buildings by top Government officials. During the past 20 years one-fourth of our significant buildings have been destroyed, many of them by Government action.

Last week William Walton, a painter, was revealed as the gentleman who, despite his lack of any official status, had advised leading Federal Government officials to destroy the Dolly Madison House, and the Benjamin Tayloe House, and the Belasco Theater on Lafayette Square. Various groups of citizens of this Nation have been trying to save the historic buildings on Lafayette Square for 20 years.

Mr. Walton was reported by the Washington (D.C.) Star, of May 3, 1961, as saying that—

The Dolly Madison House was completely gutted by the Cosmos Club in 1895 so that it no longer has any historical meaning. Inside of the outside stucco are some original brick walls, that's all. If rebuilt it would be essentially a replica. The same thing is true of the Tayloe House, which is of less historical importance.

The Washington (D.C.) Star report went on to say:

As for the Belasco Theater, it is so outdated, he said, no theater company would want it. And since its facilities are too limited for theater, the stage would be hopelessly inadequate for the opera.

The argument over whether the John Philip Sousa Home, and the historic buildings on Lafayette Square should be preserved will doubtless continue until the present criteria are revised, or until some new and more competent advisers are found.

Miss Gertrude Carraway, honorary president general, National Society, Daughters of the American Revolution, indicates that the problem is really a national problem in a recent letter in which she declares:

I am having a similar argument with the National Park Service over their failing to include Tryon Palace in their Registry of Historic Landmarks that you seem to be having in Washington over the failure of "some national authorities" to recognize Lafayette Square as possessing exceptional value in commemorating and illustrating the history of the United States.

Mr. Walton would have us believe that no one is interested in the Belasco Theater. The Citizens Committee to Save Lafayette Square was formed last year by the Washington Opera Society which was intensely interested in saving the Belasco Theater in a city which has been called a hick town and a cultural backwater by such national publications as the New York Times and Time magazine, because of its lack of cultural facilities.

Other groups interested in preserving the buildings on Lafayette Square are the DAR, the General Federation of Women's Clubs, and the National Federation of Music Clubs. In fact, there is not a single national organization which has demanded the destruction of the buildings on Lafayette Square.

Only one short year ago the President introduced legislation to save the Lafayette Square buildings in the form of a bill, S. 3280, and he made a strong speech to rally support for his measure.

One can only guess at the number of history-minded Americans who voted for this history-minded candidate in last fall's political campaign on the basis of his well-known and widely heralded drive, in which he was joined by eight leading Democratic Senators, to preserve the Lafayette Square buildings. These votes might have been decisive since the results were close.

If the Lafayette Square buildings are destroyed, then this will amount to a repudiation of his position of last fall.

The New York Times recently reported how the President intervented to save Harvard Yard at Harvard University from an office building:

Kenneth P. O'Donnell, class of 1949, and special assistant to the President, phoned leading (Massachusetts) State Democrats urging them not to make the (15-story office building) project a party issue.

McGeorge Bundy, Yale 1940, and a Republican, former dean of the Harvard faculty, and now special Presidential assistant for national security affairs, passed the word to some Republicans.

One can only surmise that there is not a single Presidential assistant with the courage to face up to William Walton and defend Lafayette Square at this crucial period in our history.

The New York Times reported on April 8, 1961, that the President asked Congress on April 7 to—

authorize U.S. participation in an international effort to save antiquities marked for inundation by the Soviet-financed Aswan Dam, which is being built in the United Arab Republic.

The President suggested that the United States finance alone the estimated $6 million cost of preserving the Pearl of Egypt, a group of temples on the Island of Philae, between the old and new Aswan Dams. They now are submerged part of the year.

Mr. Kennedy also proposed that the United States take part in preserving lesser temples both in the United Arab Republic and in the Sudan, at a cost of $2,500,000, and that it contribute $1,500,000 to speed extensive archaeological and prehistory research in areas now unexplored but threatened with flooding.

One way, perhaps the only way, to save such buildings as the John Philip Sousa Home, and the Dolly Madison and Benjamin Tayloe Houses, would be to replace some of the students of the history of Egypt or Harvard University on the President's staff of advisors with students of the history of our own Nation. A start could be made by bringing in such cultural leaders as Gertrude Carraway of the National Society, DAR; or Helen Sousa Abert, a surviving daugh-

ter of John Philip Sousa; Joseph Watterson, editor of the Journal of the American Institute of Architects; Mrs. Ozbirn, national president of the General Federation of Women's Clubs; or Mrs. Bullock, president of the National Federation of Clubs.

I include as part of my remarks the text of my bill, H.R. 6893, and articles from the Washington (D.C.) Post on the John Philip Sousa Home:

H.R. 6893

A bill to amend the District of Columbia Redevelopment Act of 1945 to provide for the preservation of the home of John Philip Sousa, and to protect the homes of residents and the businesses and good will of the small businessmen in the vicinity of the United States Capitol Building

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 7 of the District of Columbia Redevelopment Act of 1945 (D.C. Code, sec. 5–706) is amended by adding at the end thereof the following:

"(j)(1) For the purpose of providing for the preservation, and maintenance as a shrine, of the former home in the District of Columbia of John Philip Sousa, there is hereby established a board consisting of the conductor of the band of the United States Army, the conductor of the band of the United States Navy, the conductor of the band of the United States Marine Corps, and the conductor of the band of the United States Air Force, ex officio, plus ten additional individuals appointed by the President, which shall acquire the home of John Philip Sousa at 318 Independence Avenue, in the District of Columbia, and shall preserve and maintain such home as a shrine dedicated to his memory, and as a museum for the preservation of memorabilia of John Philip Sousa.

"(2) For the purpose of obtaining funds for carrying out this subsection, the board is authorized to accept donations of funds, services, and property, and to conduct a nationwide fund-raising campaign. All departments and agencies of the United States, upon request by the board, shall transfer to the board all memorabilia of John Philip Sousa in the custody or control of such departments and agencies.

"(3) Members of the board shall serve without compensation for their services as such, but they shall be reimbused for their expenses of travel and subsistence while actually engaged in the performance of the duties vested in the board. There are hereby authorized to be appropriated such sums as may be necessary to carry out this subsection.

"(k) Until a comprehensive plan has been prepared for the proper development, preservation, and improvement of the physical environs of the United States Capitol Building and the surrounding complex of Federal buildings, including the Senate and House Office Buildings, the Library of Congress, and the United States Supreme Court, no funds shall be expended for the acquisition of real property or for the purchase or demolition of existing buildings located in the vicinity of the United States Capitol Building and the surrounding complex of Federal buildings.

[From the Washington Post, May 8, 1961]

HOME SLATED AS SHRINE TO SOUSA IS CONDEMNED

(By Stephen S. Rosenfeld, staff reporter)

The Capitol Hill home of John Philip Sousa, the man who put a nation on march time, planned as a shrine for 20 years, now faces destruction.

The District has condemned as unsanitary the victorian edifice at 318 Independence Avenue SE., the first home Sousa owned and where he lived from about 1900 to World War I. Unless the Condemnation Board is dissuaded or the home repaired, it will be razed.

With it will go the last chance to memorialize America's premier bandsman within walls that he knew, since his birthplace at 636 G Street SE., was chopped up into apartments.

Efforts to make the home a museum in the early forties and middle fifties flopped. But another effort has been mounted.

Sousa's daughter, Helen Sousa Abert of New York, who owns the house, entrusted it a few years back to the Sousa Memorial Committee.

So when the District told her last week she had only until May 9 to ask for a stay, she turned to the committee.

This, apparently, is fine by the Condemnation Board. At its meeting Wednesday it probably will shelve the matter until the committee acts, Director Richard L. Mattingly said.

The committee itself will meet informally this week in Coral Gables, Fla., where its chairman, Lt. Col. William F. Santelmann of Arlington, former Marine Band director, will be visiting Otto Kraushaar, president of the American Bandmasters Association.

Kraushaar, who played in Sousa's band, said a fund-raising scheme would be mulled over. Mrs. Abert estimates $50,000 to $100,000 is needed.

She stands ready, she said, to furnish several rooms with her father's belongings and to give a roomful of his trophies, his music library, books of press clippings, pictures and such memorabilia as batons. The Library of Congress already has the manuscripts of his marches.

"There's so much talk about culture and the arts in Washington," said Mrs. Abert, "it would seem rather wicked to drop this. It's unique."

[From the Washington (D.C.) Post, May 9, 1961]

MEMORIAL TO "MARCH KING"—HOUSE BILL TO PRESERVE SOUSA HOME WOULD BLOCK CAPITOL HILL EXPANSION

Legislation was introduced yesterday to preserve the Capitol Hill home of John Philip Sousa. The bill includes a provision which would block efforts of the Government to purchase a block of Capitol Hill property.

The bill, introduced by Representative CARROLL D. KEARNS, Republican of Pennsylvania, besides providing for the Sousa memorial, would require a comprehensive plan for development, preservation and improvement before any Federal money could be spent to purchase or demolish buildings in the area around the Capitol.

The Republicans' Capitol Hill Club, at 214 First Street SE., has already been purchased for $600,000 but other residences and small businesses in the area scheduled to be taken over, bounded by Independence Avenue, First and Second Streets SE., are still to be affected. The eminent domain proceedings have come under attack by area residents who charge that the payments to be made are both inadequate and inequitable.

The Kearns bill would establish a 14-member presidentially appointed board to acquire the Sousa residence at 318 Independence Avenue SE. and maintain it as a shrine.

Kearns submitted the measure after reading in the Washington Post that the residence of the famed bandsman had been condemned by the District as unsanitary.

If it is razed, it will end years of effort to memorialize Sousa within a home that he knew. His birthplace at 636 G Street SE. is no longer available for a shrine. His birthplace was restored by R. C. King & Associates into a home quite similar to the original home, but with an apartment on the first floor.

In view of the Condemnation Board's pending action, the Sousa Memorial Committee, which has been entrusted with the preservation of the Independence Avenue dwelling by Sousa's daughter, announced it intended to consider a fund-raising effort to save the home.

Under KEARNS' bill, however, the proposed 14-member board would be authorized to conduct a nationwide fund-raising campaign. The board would include 10 members appointed by the President and the conductors of the Army, Navy, Marine, and Air Force bands.

The proposed legislation, amending the District Redevelopment Act, goes beyond the preservation of the Sousa home and seeks to protect other Capitol Hill residences and businesses.

San Francisco Verdict

EXTENSION OF REMARKS

OF

HON. AUGUST E. JOHANSEN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1961

Mr. JOHANSEN. Mr. Speaker, the Battle Creek Enquirer and News, a leading newspaper in my district, has been outstanding in its editorial recognition and support of the necessary and vital work of the House Committee on Un-American Activities. Its judgment in this matter coincides with the overwhelming judgment of this House in its 412-to-6 vote on March 1 of this year in support of the committee's appropriation.

This newspaper has been equally firm in its support of the film "Operation Abolition," as depicting the events in San Francisco during the hearings last May and as disclosing the organized Communist campaign to abolish the committee.

Under leave to extend and revise my remarks, I include an editorial from the May 5 issue of the Enquirer and News commenting on the recent acquittal of a student charged with assaulting a policeman during the May riots:

THE FACTS ARE UNALTERED

The acquittal of a University of California student on charges that he assaulted a policeman during the riots at a hearing by the House Committee on Un-American Activities in San Francisco last year does not in any manner alter the basic facts of the affair. It does, however, raise a few interesting questions.

The student, Robert J. Meisenbach, was charged specifically with slugging an officer over the head with the officer's own night club. The issue was centered on the young man's guilt or innocence on that count and not whether a riot or other form of violence took place.

Mr. Meisenbach's attorney, Jack Berman, has never been more mistaken than when he declared that the verdict "knocks 'Operation Abolition' into the creek." Mr. Berman, of course, was referring to the controversial film of the riots which has been circulated

under sponsorship of the House committee. The fact that riots did take place, and that the film depicts them, remains unchallengeable.

The Meisenbach verdict proves only one point—that in the United States any man or woman can be tried by jury and that a jury's decision, popular or not, is the final word, except for a defense appeal. This is one situation that should be borne in mind at all times. This country still stands on the principle that the outcome of trials shall be decided upon the evidence submitted. In the Meisenbach case, the evidence in his favor apparently outweighed that offered by the prospecution, as far as the jurors were concerned.

There is, by the way, one intriguing aspect of this case that deserves emphasis. After his acquittal, Mr. Meisenbach celebrated at a beer party and among the guests were four of the jury members, including the foreman. Since jurors are expected to be impartial and not personally acquainted with a defendant during a trial, the appearance of four jurors at the party is rather strange. Perhaps it only serves to show how quickly some people can make new friends.

As to the effect of the verdict on the House committee film, we feel that the mayor of San Francisco, George Christopher, has summarized the situation nicely. He said bluntly that Mr. Meisenbach's acquittal "does not alter the fact that there was general rioting, nor that a duly constituted official committee, as well as courts and other city hall departments, were forced to cease operations pending restoration of order."

The primary purpose of the film has not been affected. We have contended—and continue to do so—that the film was prepared to show how Communists have tried to destroy the House committee and to portray how the Reds can infiltrate American college campuses. There is absolutely nothing in the acquittal of Mr. Meisenbach—on an assault charge—that can be truthfully construed as a repudiation of the film, either by the court or the jury.

Mrs. Maier Has a Message for Americans

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mr. DEROUNIAN. Mr. Speaker, I am pleased to place in the Appendix of the CONGRESSIONAL RECORD a letter from one of my constituents, Mrs. Alfred A. Maier, of Port Washington, N.Y., with a message for all Americans. I particularly admire her sound, basic reasoning.

Mrs. Maier writes:

DEAR MR. DEROUNIAN: With reference to the Russian accomplishment, man's first flight into space, I wish I knew a way, through you, to tell all Americans to talk less and work more. Everyone is giving an opinion; everyone thinks it should have been done his way, etc.—radio, TV, and the printed media—What's wrong with our NASA, etc.—just now I heard on radio that a Congressman is asking for a public hearing as to why we lagged?

Why can't there be less breast-beating and more silent, contemplative work?

Sure, being first has propaganda value, but I think this bickering among ourselves certainly has a propaganda angle, too. What's wrong with being second and doing a better and more thorough job—and as Mr. Kennedy said, "One that endures"?

How can you Congressmen go about the job of suggesting that people as a whole be just a little more circumspect and not so rash in their pronouncements?

Yours very truly,

MRS. ALFRED A. MAIER.

Frank N. Graass

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mr. BYRNES of Wisconsin. Mr. Speaker, a signal honor was paid to one of Wisconsin's distinguished citizens recently when the Wisconsin State Assembly adopted a resolution commending Frank N. Graass for his significant service to the State over a span of more than 4 decades. Businessman, orchardist, conservationist, politician, administrator, and legislator, Frank N. Graass has had a notable career, and I join his other friends in wishing him long and fruitful retirement from public service.

Under leave to extend my remarks, I include the resolution adopted by the Wisconsin State Assembly on March 8, 1961:

STATE OF WISCONSIN JOINT RESOLUTION COMMENDING FRANK N. GRAASS FOR HIS SIGNIFICANT PUBLIC SERVICE EXTENDING OVER A PERIOD OF MORE THAN FOUR DECADES

The convening of the 1961 Wisconsin Legislature marked the first time in more than 40 years that Frank N. Graass did not have an active part in the public affairs of this State.

Few people have had the opportunity to influence the trend of events in certain fields of public concern which was afforded Mr. Graass. His forceful nature was early predicted when he captained his high school football and track teams all 4 years while in high school. He not only held the Wisconsin high school shot-put record but also the American high school discus record.

A native of Sturgeon Bay, he was long an active fruitgrower, and he has never permitted anyone to lose sight of the products of that area.

As the secretary-treasurer of the Wisconsin Izaak Walton League for more than a decade he not only strengthened that organization but developed a strong and lasting interest in conservation problems which led to his active participation in the formulation of many of the basic conservation laws under which this State operates.

In his early adulthood, he started a tree seed business, and at one time was America's largest exporter of seeds. Many of his seeds were shipped to Germany and Austria where selective forestation was put into operation while we were still ruthlessly destroying our own great resource.

His legislative service in the assembly of 11 sessions extended into every decade since World War I, and he served with distinction on the joint finance committee, conservation committee, legislative council, commission on interstate cooperation, board of governors of the council of State governments, committee on Great Lakes fisheries, and the Great Lakes area council. During the first period of his legislative service he was active in the establishment of the Wisconsin General Hospital, and has continued his interest in the handicapped throughout his career.

As the chief aid to Governor Goodland from 1941 to 1945 he was described by one political analyst at that time as the most powerful politician in the State. Intensely loyal to the octogenarian Governor, he devoted tremendous energy to his work as the Governor's assistant.

Few legislators expended as much time and thought each biennium in the interests of their constituents.

In view of his long and distinguished career in the service of Wisconsin and his community; be it

Resolved by the assembly, the senate concurring, That the legislature commend Frank N. Graass for his service, and extend to him the most sincere wishes for a long and enjoyable retirement from the public service.

Federal School Aid

EXTENSION OF REMARKS
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mr. MEADER. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Jackson Citizen Patriot (Mich.) of May 4, 1961:

FEDERAL SCHOOL AID

As so often is the case, there has been much more racket than revelation about the hot issue of Federal aid to education.

Supporters have jumped to claim for themselves the position of defenders of good education, as attractive as apple pie and motherhood.

The opposition has raised grim specters of Federal control, and conjured fake dragons of all sorts to slay.

All this is in the nature of politics, but it doesn't get to the heart of the issue.

School budgets are in trouble, and it is not the sort many would have us believe. The prattle about classroom shortage, for example, is outdated by recent progress.

President Kennedy said America needs 60,000 classrooms each year; construction in the past 5 years has averaged 68,000.

The real snag lies in paying day-to-day bills for teachers, lights, heat, special programs, and improvements, chalk and talk.

And those bills put a severe strain on the old property tax.

The choice is simply whether to cut the program or find other money.

There's been little talk of the former and too much nearsightedness about the latter.

Instead, many immediately turn to the Federal Government, seeing it as an inexhaustible source of cash. They forget that purse problems exist in Washington, too—the Federal debt is around $750 billion, including all commitments, the equivalent of $4,100 for each man, woman, and child in the United States. The current budget promises a deficit of $5 billion more.

Total State debts run around $60 million; many States have no debts at all. One half of 1 percent—1 in 200—of the Nation's school districts have reached the limit of their available bonded debt.

Yet, because Washington is far away, people seem to turn there rather than to local means.

This sort of wishfulness is encouraged by State legislators, who believe it more con-

venient to hold taxes down and then let problems pile up until solutions must come from the Federal Government—at increased cost, with less awareness of what's going on.

But a State lawmaker who refuses to consider tax revision that would include giving local communities the right of home rule and local taxation, can claim he kept taxes low. His words have a hollow echo, though they may sound good at a Fourth of July speech.

Education is the proper duty of the States, and States refuse to accept that duty. People should rap on doors in the State government, rather than look towards Washington.

Well aware that there are real problems, we have continued to oppose Federal aid. We do this less because we fear Federal control than because we believe people should solve difficulties as close to home as possible rather than sweeping them under the Federal rug, already bumpy with other difficulties.

President Kennedy has urged that we "ask not what your country can do for you, but what you can do for your country." One of the first things we can do is face local responsibilities so the Federal Government can do things of a truly national scope.

Voters should urge State legislators to assume that responsibility, rather than passing it to Washington.

You can keep tabs on local officials much better than on the far-off folks in Washington. It seems a shame people would rather pass the buck than bear down on those who should be working to solve the problems on a State rather than national basis.

Not a Very New Frontier

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mr. SCHWENGEL. Mr. Speaker, my reservations about the monstrosity we passed last week under the guise of minimum wage legislation are shared by others. Those of you who saw the Doris Fleeson column know that it is very unusual for her to find fault with the Kennedy administration, but this legislation was more than she could stomach and I commend her for speaking out so forthrightly.

The Des Moines (Iowa) Register carried an excellent editorial on Friday, May 5, which says many of the same things I have been saying about this legislation. I think that all of the points in this editorial are well taken and under leave to extend my remarks, I include the editorial in the Appendix of the RECORD:

NOT A VERY NEW FRONTIER

The minimum wage bill passed by Congress is being called a victory for President Kennedy, and on the surface it sounds like a substantial modernization of an old law. The minimum wage in covered businesses will rise from $1 to $1.15 per hour within a few months if the President signs the bill, and will rise to $1.25 per hour in 1963.

Also, 3½ million new workers are to be covered. The newly covered workers will be guaranteed a minimum of $1 an hour at first. Two years later they will start getting overtime pay for hours in excess of 44 per week. In another year they will get a minimum of $1.15 an hour and overtime will begin after 42 hours. In still another year—by 1965—they will get the $1.25 minimum, and overtime will begin after 40 hours.

Thus the adjustment to the new minimum will be slow in businesses already covered and even slower in the new businesses to be added. There will be no shock to the economy nor a sudden increase in unemployment because of the higher minimum wages.

This bill falls far short of the goals set by Mr. Kennedy in his campaign for the Presidency and, on analysis, proves to be a political compromise with little real gain for the lowest paid workers in the country.

The administration forces traded off the workers most in need of protection in return for votes from southern Democrats and Republicans. Of the 3½ million new workers to be covered, only 660,000 are getting less than the minimum now. Only 1.9 million of the 22 million workers now covered are likely to get any increase as a result of the raise in the minimum.

Southern Congressmen succeeded in eliminating cotton gin employees, tobacco processing workers and others. Farmworkers—the lowest paid of all in the affluent U.S. economy—still are not covered. Laundry workers and workers in nonprofit hospitals were cut out.

The bill extends the coverage in better paid industries but does not move far to extend the coverage to workers who need it. The bill comes close in numbers added to the President's proposals, but not in the kinds of workers to be included.

We agree with Representative CHARLES A. GOODELL, Republican of New York, that "this was a cynical approach." If a minimum wage law is to have meaning, it should provide help to workers who are unorganized and who are unable to protect themselves against exploitation. This bill does little to accomplish this. It enables the least efficient industries to continue to pay far below the U.S. standard wages. It also tends to retard the application of improved methods in the least efficient industries.

The administration and the Democratic Party must accept full responsibility for this retreat. Democrats in Congress made the moves for the many exemptions.

Aid to Dependent Children

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mr. BERRY. Mr. Speaker, I have received a letter from a constituent. I think it is too good to just file away in my office and under unanimous consent I include it in the Appendix of the RECORD.

The letter is as follows:

E. Y. BERRY,
Congressman.

DEAR SIR: I think the idea of staying home and raising kids will be a lot better than working.

If I cannot get this aid to dependent children in South Dakota, I will move to a locality where I can.

Will you publish a list of places where it can be had and which one pays the most.

I am tired of digging post holes and anyway, with the number of kids I can produce while not working, it will bring me a much better income than I would earn as a laborer, or even a professional.

I will not sign this as it may keep me from drawing aid for my dependent children when I move to a place where I can get it.

Thank you.

A LAZY FARM LABORER.

Encouragement for Textiles

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mr. DORN. Mr. Speaker, Greenville, S.C., is the textile capital of the world. The following editorial appeared in the Greenville News May 5:

TEXTILE INDUSTRY GETS A HEARING

President Kennedy's announcement last Tuesday of a seven-point plan for the relief of the besieged and beleaguered textile industry is encouraging in that it represents a long step toward what the experts of the industry, and many of those of the administration, feel is necessary.

There has been no final decision on the basic specifics as to how the domestic industry is to be protected. That should be clearly understood.

But the Kennedy administration has agreed to give the industry the best chance it has yet had, since the end of World War II, to make its case. And we think it can.

Some weeks ago, the industry, acting through a congressional committee headed by Representative CARL VINSON of Georgia, went to a White House group with the plea that a strong textile industry was essential to national defense and that it was being damaged, perhaps hopelessly, by foreign imports.

These men asked for a country-by-country, category-by-category, system of import quotas. This would mean that no country could export to the United States more than a limited amount of cloth or finished goods of certain types.

This the administration has not yet agreed to, but it has left the door open to the textile industry to prove its case and, perhaps, win its point.

That is the most important element in the situation as it now stands.

With some of the President's points we cannot agree. He said for instance, that he had directed the Department of Commerce to launch an expanded program of research and development to discover new products, processes and markets. This the industry has been doing for years, sometimes with Government assistance.

He said he would ask for a review of the tax structure with a view to improving depreciation allowances on machinery. This has been an issue for years.

He said he would ask for assistance for textile plants running into serious financial difficulties. An American textile industry in a fair competitive situation should not need this.

Textiles are the mainstay of the southern industrial economy. Our people are not asking for a "distressed area" act. But they are asking for a fair shake. And Mr. Kennedy has indicated that this will be forthcoming.

There are two key phrases in his statement of Tuesday. One is that the problem is important and deep rooted. That it is. It is entertwined with the national economy and

with foreign policy. We cannot suddenly shut off textile imports without jeopardizing the economies of some of our staunchest and strongest allies.

The other is that the time for action is now.

For too long the American textile industry has been inhibited in its planning. The trouble with the import problem has been that at no time have the men who plan production known just how much they might expect in the way of foreign competition. If they could know that, they could proceed intelligently and with a measure of certainty.

But all of this may be remedied. We hope so.

Acting on the advice of such men as Gov. Ernest F. Hollings of South Carolina and southern textile executives, the President has paved the way for a solution.

The industry is basing its case on its essentiality to the national defense. It has been assured of a hearing of its case "on its merits," in the words of the President himself. That's all that could be asked.

As the President said: "I believe it is time for action."

It is.

Water Pollution Control Act Amendments of 1961

SPEECH
OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1961

The House in Committee of the Whole House on the State of the Union had under consideration the bill, H.R. 6441, to amend the Federal Water Pollution Control Act to provide for a more effective program of water pollution control.

Mr. DONOHUE. Mr. Chairman, as one who advocated and supported the pasage, in 1948, of the first water pollution control bill, I rise to urge my colleagues to promptly approve the measure presently before us, H.R. 6441, designed to amend the existing Federal Water Pollution Control Act in order to provide for a more effective program in this area which so vitally affects the Nation's health and welfare.

From the expert testimony that has been presented so ably here by the distinguished gentleman from Minnesota, the author of this bill, it is unquestionably clear that water has become the No. 1 resource problem confronting the United States today.

Although Federal financial assistance has been of great help to the States in dealing with this urgent problem of water pollution control, the evidence before us demonstrates the urgent need for an expansion and extension of the current program.

Over the past 4 years, contract awards for sewage treatment plant construction have averaged almost $360 million annually, an increase of 62 percent over the 5-year average before Federal aid became available.

However, according to the U.S. Public Health Service 4,136 new plants are required for 23 million people in communities now afflicted with health dangerous sewage, and to replace sewage treatment plants that have long been obsolete and operationally deficient. Another 991 communities require major additions and enlargements of existing plants to provide the minimum measure of health safety for 19 million persons.

Mr. Chairman, it is eminently worthy of note that nothing in the measure before us is intended to impair or in any way affect any right or jurisdiction of the States with respect to the waters of the States, including but not limited to the power, authority, and jurisdiction of the States to enforce their own water pollution control laws and regulations.

I submit that the problem of water pollution control is so essential to national welfare and progress that it can be most realistically overcome only by the joint efforts of the States and the Federal Government. Let us bear in mind, however, that under the provisions of this bill the role of the Federal Government is that of a stimulator and helper to keep the important pollution abatement program moving ahead.

Mr. Chairman, the basic duty we all have in the enactment of legislation is the fullest exercise of our reason and intelligence in attempting to provide today, as best we can, a solution for the problems of the future. In my considered judgment, we now have the opportunity, in this measure, to discharge that basic responsibility in great measure.

In order to sensibly forestall the disaster of a growing water pollution and shortage problem, let us approve this bill without extended delay so that the expanded procedures of research, planning, and construction, so necessary to preserve the health, safety, and welfare of American citizens, may begin.

The Future of Naval Aviation

EXTENSION OF REMARKS
OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1961

Mr. SIKES. Mr. Speaker, the attached article concerning the future of naval aviation by Vice Adm. Robert B. Pirie, U.S. Navy, Deputy Chief of Naval Operations for Air, is such an interesting and important one that I felt it should be reprinted in the CONGRESSIONAL RECORD. This article is taken from Sperryscope and I submit it as follows:

THE FUTURE OF NAVAL AVIATION

(By Vice Adm. Robert B. Pirie, U.S. Navy, Deputy Chief of Naval Operations for Air)

(On January 18, 1911, Eugene Ely, a civilian, flew his bailing wire and canvas Curtiss pusher out to the U.S.S. *Pennsylvania* anchored in San Francisco Bay and landed it on a wooden platform built over the ship's stern. What is even more remarkable, he turned his Curtiss around and took off after the deck had been cleared of the sand bags and ropes used as a primitive, but effective, arresting gear. Behind Ely's dramatic flight was the vision and foresight of a Captain Chambers, who had been appointed to look after aviation correspondence the year before. Captain Chambers got together with Glenn Curtiss, and the result was an experimental flight from the deck of the cruiser *Birmingham* in November 1910. This flight convinced Captain Chambers and others that an airplane would be of no advantage to the fleet unless it could both take off and land on the same ship. The U.S.S. *Pennsylvania* was made ready, and when Ely took off and landed on its deck, naval aviation was born.)

This year marks the 50th anniversary of naval aviation; and there will be quite a lot written and said about the accomplishments of Navy and Marine Corps pilots. As we talk with people about the past 50 years and the celebration commemorating them there is one question that is always asked: What is the future of naval aviation? Related to this one are further questions: What of the carrier in the age of the Polaris missile? What of the manned aircraft in the age of the guided missile? In the space offered here, rather than furnishing yet another capsule history or a bare chronology of past achievements, I would like to use the 50 years of naval air warfare evolution as a vantage point from which to survey the air Navy of today and tomorrow.

Naval aviation, is defined by law as such aviation as may be organic to the naval forces of the United States of America, including the organic aviation components of the Marine Corps.

It consists therefore, of such integral air components as are necessary to carry out the Navy's missions and tasks around the world.

Since the air is but one of several inseparable dimensions of a combat commander's sphere of influence, air combat units of the Navy are organized, are assigned, and operate as appropriate and responsive elements of the larger task organizations.

In its broadest divisions, naval aviation can be said to consist of the fleet or combat elements, direct fleet support elements, indirect support elements, aviation training activities, and Aviation Reserve Forces. Marine Corps aviation is a part of each of the segments; and its organization parallels, or is integral with it, as is most appropriate.

All other elements of naval aviation are concerned with furnishing the fleet and fleet aviation units with goods, services, and properly trained personnel. The missions and tasks of the fleet air elements, therefore, are the proper context in which to consider the present and future of naval aviation.

PATROL RESPONSIBILITY

The international waters of the earth are extensive and public. In an era when potential enemies are strong, aggressive, and unpredictable, the sea lanes may hold highwaymen as well as peaceful merchants. As a consequence, a great deal of the air Navy's work is involved with patroling the sea roads of the world.

These patrol commitments and other specialized scouting and patrol (reconnaissance) functions comprise one of the primary missions of naval aviation. Land-based patrol planes; seaplanes; lighter-than-air ships; photographic, weather, radar, and observation aircraft all contribute to the Navy's continuous surveillance of all manner of activity in, over, and on the sea. Needless to say, these observation tasks are continuing ones and ones which require continuous evolution to keep ahead of a potential enemy's technology.

Patrol aircraft are not just observers of the seas' traffic. In addition to their eyes, most of them have an offensive capability against submarine operators. A high percentage of the patrol aircraft are assigned to antisubmarine task elements. Observation can become antisubmarine attack with the flip of a switch. This responsibility will

continue as new weapons evolve from those presently in use.

In addition to the patrol type of antisubmarine activity, naval aviation furnishes fleet commanders with other antisubmarine forces. These are the antisubmarine carrier forces, and, like their attack carrier counterparts, they are prepared to operate as a moving area of national sovereignty; not necessarily playing cat and mouse with a single submarine, but rather, ready to aggressively purge the seas of submarine opposition. These hunter-killer groups, as they are sometimes called, are composed of surface units, conventional aircraft, and helicopters. They can move anywhere there may be submarines, untrammeled by the need for bases and special supply lines—an irresistible nemesis of underseas craft. As submarines continue to increase in speed, range, and maneuverability, there will be a corresponding need for the higher speed and wider coverage that only aircraft can provide. As the number of modern Soviet submarines grows, there will be an increasing need for all types of air antisubmarine offenses.

Closer air support aviation has been called the modern, longer-range, flexible artillery of amphibious forces. The Navy and Marine Corps implement this philosophy by attaching a Marine air wing to each Marine Corps division. By this integral association, the immediate responsiveness, so necessary to amphibious assault, is furnished to the combat troops by the wing. Its aircraft are the airborne guns, the airborne eyes, the aerial troop carriers, and supply trucks of these modern amphibious task forces. These assignments will continue as all-weather air operation techniques improve, and it is likely that airborne components of Marine forces will be around indefinitely.

ATTACK CARRIER FORCES

The Attack Carrier Forces, historically are the first available sea power at any trouble spot; and they are now the Navy's frontline forces of the cold war.

The fast carrier task force is a mobile, self-contained, self-sustaining, versatile, and nearly irresistible sphere of national sovereignty, influence, and if necessary control. This unique weapons complex has several exclusive advantages over other forces. These advantages are derived from the related characteristics of mobility and location in extra-national territory—the sea.

Mobility removes these forces from preplanned ballistic attack and makes them hard to find, and virtually impossible to hit.

Foreign bases are certainly desirable and necessary for many reasons, but conversely, sea-based strength is free from the effects of some of the factors that are encountered in maintaining bases in foreign lands.

As a brushfire fighter, the attack carrier task force can cover a big neighborhood. From an enemy's point of view, the modern attack carrier task force is so well defended that striking it involves almost unacceptable losses. The carrier furnishes a very practical substitute for vertical takeoff and landing (VT–OL) with the very efficient and economical catapult and arresting system. This system is also available for quick installation ashore by Marine Combat Engineers.

In addition, we build our carriers at home, where we do not contribute to the imbalance of international payments. Supporting the carriers in operation causes no loss of gold in rents, salaries, or supplies. In every sense, they are relatively inexpensive and easy to supply.

Finally, attack carrier task forces are one of the Nation's greatest positive military influences in the cold war. Their value as a maker of friends and supporter, and as a preventer of aggression is a matter of record. The Polaris missile will undoubtedly play a greater nuclear deterrent role, but attack carrier forces do have a nuclear deterrent role as a collateral responsibility. Inasmuch as this is in addition to their limited war role, it is more or less a dividend.

The carrier's desirability as the small war brush fireman is self-evident. The function of the attack carrier as the shock troops of limited wars is a role that appears to have more and more importance in the constant but shifting skirmishes with aggressive communism.

If the study of military history teaches us anything, it is that progress is made through evolution, that there is no ultimate weapon, and that wars are won by being ahead in the evolutionary process of weapon, counter-weapon, and counter-counter-weapon.

NEW FACTORS

A new weapon and a new area of operation have caused an upheaval in the evolutionary process. The new weapon is the nuclear bomb, and the new area of operations is space beyond the earth's atmosphere. But I would like to observe that the nuclear warhead, for all of its size, is only a very advanced evolution of Greek fire and gunpower. And further, the leap into space is no more a departure than was Columbus' first voyage, or the Wright brothers' first flight. It can be strongly contended that assurances for safe recovery of the first astronaut will be greater than they were in either the Columbian venture or the Wright experiment. Nuclear weapons may increase explosions by 10 to the 12th power, and space exploration increase ranges as much, but these increases in destruction and distance, like earlier evolutions, do not displace the ultimate area of contention: The inhabitable land areas of the earth. They simply add new dimensions to the age-old problem of control of people and real estate.

As to participation in the new dimension of space, the Navy's role will undoubtedly be an important one. A great deal can be said for the experience that the Navy has in the construction of heavy, self-contained vehicles and in distant and lengthy voyages, as well as the special knowledge that it has always had of the spacial oceans of the solar system and beyond. The Navy has been the leading pioneer in the development of space equipment and in experiments in space medicine. Four of the seven astronauts now in training are naval aviators, and a large majority of their training has been conducted by naval personnel at naval air installations. It seems quite certain that naval aviation has an important future role in the exploration of space.

In summary, it is true, beyond a shadow of a doubt, that naval aviation occupies a vital and growing role in the defense forces of the free world. Furthermore, it is just as true to assume that this role will continue to grow in size and importance with the shifting conflicts of the cold war and any forthcoming leap into space. As I look back on the first 50 years and turn to look forward to the next, it is hard to decide which era will be the more exciting or offer the greater challenge. Certainly, those of us who have participated, and will participate, in both of these unprecedented periods are fortunate. Those who will play a major part in the future are to be congratulated on their good fortune and wished God speed in their endeavors.

America Dares

EXTENSION OF REMARKS

OF

HON. SIDNEY R. YATES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1961

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from Chicago Sun-Times of Saturday, May 6, 1961 entitled "Safe in Space":

SAFE IN SPACE

The prayers of America rode with Alan B. Shepard, Jr. yesterday. If we judge correctly the faces and the feelings of those who watched with us on TV the orange plume of fire that pushed a human into space, Shepard's countrymen were concerned with his fate, the life of another human being, more than they were with the success of Government test No. 108.

Shepard went into space safely and returned no worse for the trip. That's what counted most and, that accomplished, the fete itself could be assessed.

First of all, Americans are proud of their new hero and first spaceman, the 37-year-old New Englander, Shepard, who turned out to be exactly the right man for the job—calm, and scientific, but thrilled as any average person would be at the sight of the entire east coast of the United States below him, "a beautiful sight."

Americans can be proud of their scientists and technicians, especially since they came through in a goldfish bowl performance. And Americans can be proud that they are not so proud that they would forget the value of one human life and rush into an orbital space flight simply to catch up with the Soviet Union.

Measured against the Russian achievement of 23 days ago, when a man was put into orbit for 108 minutes and returned safely, the American flight may seem anticlimactic. But in the long view of history the American achievement must be registered as a classic first in categories not touched by the Soviet space shot. And in the long view of history a few months' head start should not make a great deal of difference.

The grand success of the Shepard flight was magnified by the manner in which it was conducted—before the entire world.

If it had failed, American scientific prestige would have suffered. But it succeeded.

Americans demonstrated that their plans were so well calculated and their equipment so good that they could let the world watch them lift their first man to space. The open manner of the test bespoke a confidence the Russians surely must envy.

Conversely, Russia's secrecy—announcement of their successful flight only after the fact—has created some doubt about its authenticity. Our scientists are satisfied it took place as reported, but there is some belief in world circles that the Soviets sacrificed one or more astronauts in unsuccessful tests before Yuri Gagarin zipped once around the world and returned safely.

No such beliefs are possible about America's spaceman shot.

America showed with meticulous detail every step of the way how precautions were taken to prevent harm to her first astronaut. His life was more important than the experiment or even America's prestige. The concern paid off; stories that America sacrificed lives to learn how to put a man in space would now simply be incredible.

Although Shepard's flight was not as spectacular as Gagarin's some parallels are worth noting.

Fifty miles up, there is not enough air to support airplane wings. Space begins at 100 miles. At this point satellites can go into orbit. Shepard went to 115 miles, Gagarin to 188 miles.

Shepard could have been orbited if the controls had been set to do so. But America chose at this time to forgo the spectacular. Shepard's flight was preliminary to an orbital flight to make sure a pilot can manipulate controls in space at 5,100 miles an hour. Shepard proved this and the world heard the learning of this lesson step by step or rather one tense minute by one tense minute.

The world does not know whether the same precautions for Gagarin's safety were taken by the Soviet Union through preliminary flights such as Shepard's. The world has not been told what information his flight added to mankind's store of scientific knowledge. Russia proved a man could be orbited safely. America showed a space flight can be made publicly, which is a political as well as scientific achievement.

Perhaps America shouldn't have risked her prestige by putting on her first human space shot live on television. But where human life is concerned, America has a reputation for being open and aboveboard. And who can say whether the prayers that went aloft with Shepard, because all America knew he was on his way, did not help make every valve and transistor do its job exactly right?

These Fighters Against Youth Crime Need Your Help

EXTENSION OF REMARKS

OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 4, 1961

Mr. BOW. Mr. Speaker, tomorrow marks the 37th anniversary of the appointment of J. Edgar Hoover as Director of the Federal Bureau of Investigation.

The Nation owes him a debt of eternal gratitude for his contributions to law enforcement, to patriotism, to the fight against internal subversion.

In a recent article in Reader's Digest, which I ask leave to include with my remarks, Mr. Hoover has made a worthwhile contribution to our understanding of the problems of juvenile delinquency. I commend it to your attention:

THESE FIGHTERS AGAINST YOUTH CRIME NEED YOUR HELP

(By John Edgar Hoover)

This Nation is hurtling toward a frightful internal crisis. Indeed, I am convinced that we have already reached a crossroads we have been heading for since the beginning of World War II; and that if we fail to admit the deadly nature of this crisis and to meet it quickly and aggressively, we will pay with the life of our republic.

The crisis manifests itself in what some call juvenile delinquency, and what I call youthful criminality, for that is what it is. I refer to the vicious acts of vandalism, wanton brutality and mounting savagery which typify today's arrogant teenage gangs.

One night last summer, five youths between the ages of 15 and 18 viciously attacked two families in a Chicago park. After beating both husbands senseless with baseball bats, stabbing them with switchblade knives and robbing them, these five terrorists turned upon the two pregnant mothers and brutally raped them while the two children of one mother—aged 3/1½—watched, weeping and horrified.

"They held a knife at my throat and threatened to kill my two little children if I resisted," one of the women said. "We pleaded with them, but they paid no attention."

Convicted of rape and assault, each of the five young thugs received 65-year sentences. The sentencing judge recommended that the youths never be paroled.

Tragically, similar acts of brutal violence are perpetrated daily across the country by rampaging teenage criminals. Blazing headlines of murder, sadism and gang warfare toll the depredations of youthful criminals. An 18-year-old California art student obtained money to purchase books by robbing elderly people. Known as the "mugger bandit," he committed six vicious attacks on elderly victims which netted him $70. Two of the victims, both elderly men, subsequently died as the result of the violent assaults. In describing his actions, the youth commented, "I picked on old men because they could not fight back."

Today youthful offenders account for one-half of the burglary and larceny arrests in this country and nearly two-thirds of the arrests for automobile thefts. And their rate of participation in more serious crimes—assault, robbery, rape, murder—is steadily rising.

If we are to continue living in a free and decent society, we must do much more than halt this trend; we must reverse it. Preoccupied with the pursuit of wealth and luxury, we seem to have lost touch with our basic traditions—work, discipline, duty, honor. But if this Nation is to survive, we must give our youngsters more chance to know and revere the spiritual concepts which are the real sinews of greatness.

We can help them best by committing ourselves unreservedly to a battle that an all-too-small vanguard of dedicated Americans has been fighting for us for years—the professional leaders and part-time volunteer workers of such groups as the Boys' Clubs of America, Girl Scouts and Boy Scouts, YMCA and YWCA, Police Athletic Leagues, and Catholic, Protestant and Jewish youth organizations. The results these groups achieve continually reaffirm my faith in the strength and appeal of the American idea, and my conviction that American youth, if given the opportunity, will eagerly accept honorable challenge.

Here are some heartening examples:

During the 8 years following World War II there was a 61-percent increase in juvenile crime in Louisville, Ky. But during the same period there was a 52-percent decrease in one of Louisville's poorest, toughest areas. No new industry moved into this neighborhood to upgrade incomes; there was no decrease in the youth population; housing conditions were not improved. One thing happened: A boys' club was established there.

Within 5 years after a boys' club was organized in a delinquency-ridden area of Schenectady, N.Y., there was an 80-percent decrease in youthful crime in that neighborhood. Results like these can be found in many of the 383 cities where 575 Boys' Clubs of America serve 600,000 lads.

The formula is simple: It consists of a genuine, active adult interest in youth; a deep respect and sympathy for the individual boy and girl, tempered with rigid, tough-minded adherence to the legal and moral principles which are the cornerstones of any decent society; and, above all, an unwavering faith in our youth, and Job-like patience in helping every youngster realize the best that is in him.

This formula has worked countless times. At the end of World War II one neighborhood just west of Chicago's Loop was virtually an armed camp, torn by bloody juvenile gang wars. The streets were not safe for women, night or day; children could not be sent to the grocery store with cash.

For 10 years various social agencies tried to deal with these gangs with little success. Then, in 1955, a young boys' club extension worker whom we shall call Richard West began hanging about the pool halls and candy stores where the dominant, most vicious gang met. For months he studied the boys, listened to them, tried to talk with them. It wasn't easy. These boys came from homes filled with fearful frictions. Most had quit school. The gang was their refuge from the hostile world around them.

Rebuffed and threatened time and again, West doggedly shadowed the gang. When members were arrested, he would appear in court with them and speak in their behalf. He made the gang aware that arresting officers and judges listened to him. He was on call day and night for advice and whatever help he could provide.

Finally, one by one, gang members began coming to him with their problems. They found he could arrange loans when there was serious need—medical or dental problems, lack of food in the home. West kept watching, waiting for a display of interest he could seize on as a foundation for launching these youngsters into productive lives. Then he found it. Several times each week they would wander to a nearby high school to watch in absorbed silence as an ROTC unit performed military drill. Talking with the boys, West found they had deep respect for the kind of discipline which could produce precision drill. Here was a chance to get them active in a field in which they could win what they needed and wanted most desperately and had never had—adult support and praise.

From Government surplus West obtained Army uniforms. Combat helmets were painted bright blue and white. Drums and bugles were provided. The boys learned fast. As a gang this group had flourished under iron discipline. Now the same discipline drove them toward perfection in military drill. Interest in gang feuds and hoodlumism faded. They concentrated on mastering the fast, tricky cadences of the drill repertoire. Soon they were taking part in civic parades, performing at sports events and on television.

Their success as a drill team fired the imagination of rival gangs. Before long the drill teams in this area included more than 400 youngsters who had once belonged to 17 different gangs. A boys' club was built in the center of the area. Here boys worked off excess energy in all kinds of sports and discovered new interests in handicrafts, science, photography, and drama. Gang structures disintegrated. Boys' club workers stayed in close touch with parents, kept pointing to the worth and potentialities of their sons, awakened parental enthusiasm for the boys.

As a result of concerted adult direction and encouragement, many of these boys returned to high school; others found jobs and completed their high school requirements during evenings in the Boys' Club library.

Today this Boys' Club thrives with a membership of more than 1,000. This area, 5 years ago a spawning ground for big-time crime, is now a respectable neighborhood whose citizens can walk the streets unafraid, with pride in their children and hope for the future.

Some communities have done much to combat youthful criminality through wholesome recreational programs for their children. Great progress is being made in areas where men and women care enough to do something about the problem. Seven years ago, the vast Surrey Lane area of St. Louis, Mo., faced with a growing juvenile-crime problem, did not have a single park or community center. Parents and youngsters of Surrey Lane went into action. With great effort and hard work they converted a tract of land, once a swamp, into a recreational area covering 31 acres. They raised money, cleared the land, built roads and constructed recreational facilities. And they did it as a family project—father and son, mother and daughter, young and old alike, united in the common endeavor. Today, with over 2,000

youths participating in recreational activities, Surrey Lane's juvenile-crime rate is practically nil. Last year, the Freedoms Foundation at Valley Forge, Pa., honored Surrey Lane with the Nation's first-place award for a community program.

The Boy Scout movement, too, has proved that when a worthy challenge is promoted among youngsters, it takes. In 1 year the crime rate in East Harlem was more than double that of any other section of New York City. Youthful gangs kept the 64-square-block area in terror. Scouters moved in. First they sold Scouting to the ruler of the ruling gang, an 18-year-old whom police suspected of organizing the gang wars which rocked the community. Soon that gang—11 boys—was a Scout troop, dedicated to the principle of helping people instead of hurting them.

More than 150 police departments in the United States now sponsor Boy Scout units, with some police officers serving as Scout leaders. We in the FBI are proud of the fact than nearly 50 percent of our FBI agents are former Boy Scouts.

In no instance have the Boys' Clubs of America or Boy Scouts designed special programs for dealing with problem boys. They have succeeded simply by providing adult friendship, guidance, worthy challenge, a desire for the rewards of disciplined living. Their achievements are a monument to the intrinsic worth of our youngsters, and a powerful lesson for us all.

It is long past time that every one of us understood the deadly nature of the sickness in our society and went to work on the cure. Each one of us must help turn back the tide of moral laxity and public apathy which threatens us. Our youth movements have proved it can be done. We must get interested in our children again—in what they read, see, hear, and do.

And we must get tough with ourselves. We must stop governing our lives by expediency. Nothing is so infectious as example. We must measure our every act by the same single, simple, stringent criterion that made us a great Nation: "Is it right?"

Plain Talk About the Administration Plan for Farmers

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mr. ALGER. Mr. Speaker, how do the Democratic campaign promises square with performance in the first months of the new administration? The Democratic candidates for President and Vice President promised to free the farmers from Federal bureaucracy, to eliminate Federal controls. How do these promises fit in with the farm program the administration is now trying to sell to the farmers and to force through Congress? Some interesting facts on this issue are contained in two articles from the forthcoming June issue of the magazine Farm and Ranch. I urge the Members to think carefully about these articles which I insert as a part of my remarks. The editorial, "Blackball, Bribery, and Blackmail," raises some serious questions as to the real purpose of the administration farm program. The interview with Mr. Charles B. Shuman, respected and able farm leader, in the article "A Way To Comfortable Peasantry," points to the dangerous amount of power to be vested in a single individual, the Secretary of Agriculture, in dealing with farm problems:

WASHINGTON WIRE—BLACKBALL, BRIBERY, AND BLACKMAIL

(By Bill Kennedy, editor)

WASHINGTON, D.C.—Two years ago a "mad economist" named Willard Cochrane outlined in the Journal of Farm Economics a plan for complete government takeover in agriculture. Now he has detailed the plan in the form of Secretary Freeman's Omnibus farm bill.

If the farmers of America sit on their grass and let this bill go through Congress * * * they deserve to lose their freedom. For only a grassroots rebellion can stop it.

Every Member of Congress who votes for it—Republican or Democrat, city representative or countryman—must be "turned out to graze" on the government-regimented lands he is helping to create. And you can put him there. This is especially urged for Southern members—because the law is one that surely discriminates against the South.

It gives the Secretary the powers of a farm dictator, with authority to put every phase of agriculture under controls—including livestock, poultry, and the 250-odd plant crops. This in itself is a monstrous crime. But the bill further spells out in its language the possible use of a 10-year production history in setting up allotments.

Any Congressman or farmer can see that this would halt the expansion of livestock and poultry enterprises in the South (fastest expansion of its kind anywhere in the country's agriculture) * * * what's worse, it could set production back to the levels of years ago.

And yet, two southerners—so-called farm leaders Representative COOLEY, Democrat of North Carolina, and Senator ELLENDER, Democrat, of Louisiana, introduced the bill and are helping the administration push the legislation through before you can figure out what it's all about.

Backers of the Freeman bill are using bribes, threats, and deception to try to pass it hurriedly. For example:

Veiled promises have been made by administration leaders that they will "stay off civil rights" (integration) for a year or two if southerners will go along with this and other Kennedy-pushed legislation. (Explains, perhaps, some of the strange votes recorded earlier.)

Judgeships and other appointments have been promised, passed out, to keep some southerners in line.

The Secretary's office has quietly threatened to keep poultry products out of the school lunch program if poultrymen fight this legislation.

That office has also made it plain that organizations fighting the bill will not get appointments to the commodity committees when the program goes into effect. "You'll be left out in the cold."

John Duncan, Assistant Secretary from Georgia, appointed to the staff as an embarrassment to the American Farm Bureau (Georgia is the only State Farm Bureau on record in support of the bill), has said, in effect, to Georgia poultrymen: "If you actively oppose this bill, don't come to Washington again for anything."

ASC committeemen and other paid employees of the Department of Agriculture are being openly used to promote this legislation among farmers.

One State ASC committeeman was quoted in House committee hearings as saying to county committees, "If you don't actively support the Department's views, you'd better resign. Doing nothing is not good enough—we will have State 'shock troops' come in and do the job for you."

In other words, the administration is using every trick in the book to put this over on you. And it is working.

While hearing testimony against the bill, by the American Farm Bureau, Congressman Cooley made the public admission that "I have stacks of mail on my desk this high (measured with his hands), all against this legislation." He then went on to add "But that doesn't frighten us. We have been around Washington long enough to evaluate propaganda when we see it."

This is a clear indication that the pressure being applied from the top is far more important to the Congressman than the reaction he gets from the people he is paid to represent.

Land reform may be next. In a speech before the Nation's farm magazine editors in Washington, Secretary Freeman spoke freely (twice) about the need for land reform. "We are selling land reform to other countries," he said, "while drifting into trouble here in our own country." He did not say whether his land reform would follow the line of Castro's or that of some other systems proposed for Latin America. But after what he has asked for in the omnibus bill it is evident that he wants to be the man to do the dividing up, once the Government decides to take charge of farm real estate.

In this bill he asks power to write the laws; to use committees nominated by his own Government workers and appointed by himself as a front for doing whatever he pleases. He wants to give Congress the veto right instead of the legislative job, with the very two men who introduced the bill sitting in position to prevent the Congress from getting even a chance to vote.

He wants the right to build a government machine, made up of $50-a-day Department workers in every rural county of America.

He asks the unprecedented right to dictate working conditions on the farms of participating farmers. And the power to force every farmer to participate, with referendums in which he gives them a choice between a rock and a hard place.

All this he wants, plus having the taxpayers pick up a $20-billion-a-year tab (estimate) to pay for his machine. That's about half what the whole Defense Department costs.

Would a man like that hesitate to ask for a redivision of our farmlands? We think not. Will Congress give it to him? If it will pass this farm bill, it might.

CHARLES B. SHUMAN, CHAMPION OF AMERICAN FARM FREEDOM—WHAT HE SEES IN NEW AND PROPOSED FARM LAWS; THEIR THREAT TO THE FUTURE OF AGRICULTURE—"A WAY TO COMFORTABLE PEASANTRY"

(Exclusive Farm and Ranch interview by Bill Kennedy)

Question. How do you explain the fact that while Farm Bureau wants a program of less Government in agriculture, many other farm organizations ask for the exact opposite?

Answer: This is not surprising because farmers themselves vary in their views. Three-fourths of the organized farmers are Farm Bureau members and Farm Bureau reflects the majority opinion in our own organization. There is always a small minority which disagrees with any position you take.

Question. You opposed the present feed grain law. Why?

Answer. The temporary feed grain law was a step in the wrong direction—it was clear that it would cause damage to farm income and hamper opportunities to produce what is needed.

Question. What happens if this type of program is continued?

Answer. I think it means that we move step by step toward a completely regimented agriculture with the imposition of specific controls in acres or in pounds, bales, barrels, bushels, cows, sows and hens—and embracing all the trappings that go with a completely controlled agriculture. This is the clear choice that faces us now with the proposals of the Cochrane-Freeman bill currently in Congress.

Question. The "Omnibus" bill! Exactly what is it?

Answer. It is the greatest bid for power that we have ever seen in American agriculture. Power for the Secretary.

Question. But Mr. Freeman explains that nothing will be done without a referendum and a two-thirds vote of the farmers.

Answer. Well, this sounds all right until you examine the Secretary's powers. He has the power to exempt certain producers and certain areas; and when they are exempted from the program they don't vote. He will determine who will vote. Then, he will submit the proposition. The farmers who vote will not vote for or against a proposed program; but for one of two alternatives, both of which may be bad.

The Secretary, by establishing the alternatives, can almost dictate the result of the referendum.

Question. This bill has been touted as a program in which the farmers would write their own ticket. Are you saying that they will neither write it nor have a fair chance to turn it down?

Answer. This proposed legislation is a fraud from beginning to end. It starts out by giving the impression that farmer committees are going to draft proposals. All right, let's look at the farmer advisory committees. They are to be appointed by the Secretary, two-thirds of them from nominees suggested by ASC committeemen—in other words, per diem employees of the Department of Agriculture. Of course, their interest is going to be in perpetuating and expanding control programs. And the Secretary has final selection.

Question. These commodity committeemen will be paid?

Answer. Fifty dollars a day plus expenses. Now, the other third of the commodity committee will be from nominations made by "appropriate" farm organizations. I am sure that after our opposition to the bill we will not be considered "appropriate." This committee is to make suggestions. Only suggestions. It is under the absolute control of the Secretary and, in my opinion, subservient to the wishes of the Department of Agriculture, the Secretary, the administration.

First, the Secretary has the power to establish the committee. Secondly, he appoints the committee. Third, he can decide when to discontinue the committee. And fourth, he dosen't have to accept a single recommendation it makes.

Question. Mr. Shuman, these committeemen will not be subject to regulations on political action?

Answer. They will not. I am convinced, Bill, that the Cochrane-Freeman bill would set up apparatus for one of the most far-reaching and dangerous political machines that we have ever seen anywhere.

Question. But how about the right to veto by Congress?

Answer. Well, Congress has a limited number of days in which to act. Those of us who have been around the Congress know that if the chairman of the House and Senate Agriculture Committees (COOLEY and ELLENDER) didn't see fit to bring this to an issue the Congress would have no opportunity whatsoever to veto.

Question. One accusation is that the Secretary could enforce certain regulations about the use of labor, etc., by the participants in various programs. Is that also in the package?

Answer. Yes, the Secretary is authorized to establish terms and conditions for price or income support. This could include minimum wages, housing regulations, etc. for farm labor.

Question. What about the check-off feature of the bill?

Answer. The Secretary is authorized to make a check-off from the returns of all farmers producing products covered by these programs for research, promotion and advertising.

Question. This is not subject to farmer vote?

Answer. No! Not as a separate proposition.

Question. The term "socialized agriculture" doesn't seem to scare people anymore, but it appears to me, from your analysis of this bill, that we would be right in the middle of it. You have intimated that you think the No. 1 purpose here is to build a political machine. Do you think this is over and above the effort to socialize agriculture?

Answer. I really believe that the first objective of a group of folks who are most aggressive in support of this bill is to build a political machine which will change the farmer vote.

Question. Mr. Shuman, there has been a lot of talk about farm freedom. Will this law destroy it?

Answer. I think there is a very real danger that this bill would take us beyond the point of no return and move in the direction of a completely regimented, comfortable peasantry in agriculture. I am equally sure (I have observed this in foreign countries, where they tried it) that this kind of an agriculture means lower income, lower opportunity and not an improved standard of living for farmers.

Question. If this bill passed would the Secretary of Agriculture have as much power as Minister of Agriculture in Russia?

Answer. Well, I know very little about the powers of Russia's Minister of Agriculture. But I would say this—the Secretary of Agriculture in the United States would have more absolute power over the farm management and operating decisions of farmers than any other government official in the world outside the iron curtain.

Question. The Secretary has said he probably wouldn't bother the livestock people.

Answer. But there is nothing in this bill to prevent it. In fact, it is contemplated in the legislation, because livestock is specifically named.

Question. There seems to be a great sense of urgency about passing the bill. What is the big hurry?

Answer. Personally, I think the reason they are in such a hurry is that they are afraid farmers back home will find out what it is.

Question. You seem convinced it won't help farmers. Will the bill help consumers?

Answer. Consumers will be its strongest opponents when they understand it—because of the cost.

Question. How much?

Answer. My estimate is that it would be from four to five times the cost of the present (price support) program, which runs in the neighborhood of $3 to $4 billion. So my guess (as good as anybody's) is that it will run from $15 to $20 billion per year.

Question. You have strenuously objected to that part of the bill that will let the Secretary base allotments on a 10-year history. Why?

Answer. Whenever you base a control program on production history, you inevitably penalize the areas—and the farmers in the areas—where production patterns are changing. I cannot believe that the Members of Congress from these areas want this to happen.

Adenauer Reports on His U.S. Visit

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1961

Mr. CELLER. Mr. Speaker, following his return to Bonn from a 6-day visit to the United States, Chancellor Konrad Adenauer reported to the German Bundestag on his talks with President John K. Kennedy, Vice President LYNDON B. JOHNSON, and with other members of the administration. Excerpts from the Chancellor's statement, delivered before the Bundestag on April 21, 1961, follow:

ADENAUER REPORTS OF HIS U.S. VISIT: "WE CAN HAVE UNLIMITED CONFIDENCE IN PRESIDENT KENNEDY"

Our discussions with President Kennedy were not based on any rigid agenda. The number of those present was large or small, depending on the subject under discussion. President Kennedy and I also had a number of conversations between ourselves. Almost all important questions were discussed. The communique issued on these discussions contains a good account of the subjects dealt with. I would recommend a thorough perusal of that very carefully formulated communique.

From the conversations I have had, I have gained the impression and the confident hope that the Federal Republic will cooperate very closely with the United States and that this cooperation will spread increasingly to all spheres which are of importance either to the Federal Government or to the U.S. Government. The talks in Washington have laid the foundation for such cooperation.

NATO

President Kennedy and I went into particular detail on the subject of the North Atlantic defense alliance. We both agreed that NATO constitutes the foundation of our joint defense and common policy and that it should be further developed both in a political and in a military respect in order to be able to carry out the ever-increasing task of defending the free world. Thorough consultation on all questions affecting one or more NATO members must be the paramount principle of political cooperation. It is only on that basis that an alliance of free peoples can be kept alive. The United States, being the most powerful country, is the natural leader in that alliance; among free people, however, leadership does not consist in the strongest member simply notifying his partners of his wishes, but in letting them know his intentions in good time and discussing those intentions with them. The United States follows this principle, and it intends to continue doing so in full measure.

We are at one in considering that the plans for conventional armaments agreed within NATO should be fulfilled. This also applies to valid nuclear armament planning, on the further development of which we shall continue to consult within NATO. There was no doubt and no difference of opinion about the fact that it is indispensable for the

alliance to maintain and develop all military means; i.e., both conventional and nuclear.

GERMANY, BERLIN, AND EUROPEAN UNIFICATION

The President and I have also discussed in detail the problem of Germany, including Berlin. Germany and Berlin can—and of this I am certain—rely on the pledges which the Americans have given to protect the freedom of Berlin. The foundations on which the Federal Government's policy with regard to Germany has rested since 1949, a policy with which our allies solemnly associated themselves in the Paris conventions, remain unaltered. A just and enduring solution for the problem of Germany, including Berlin, is possible only on the basis of the right of self-determination. The restoration of Germany's unity in peace and freedom remains the goal of our joint policy.

The President presented his Government's standpoint on European unification with great emphasis. The new administration, like its predecessor, regards the European Economic Community as the center and motor not only for the economic but also for the political unification of Europe. The President and I agreed that the EEC constitutes an important element of strength for the Atlantic community. As repeatedly stated by the governments of its member states, the EEC is not exclusive, but is open for membership to other European states. We hope that others will decide to take that step. This applies most particularly to Great Britain, with whom the continental European states, like the United States of America, are linked by close political and economic ties. I also think that the realization is growing in Britain that the time has now come for her close association with the EEC, and that such association must not weaken the dynamic political and institutional potential inherent in the European Economic Community.

Another important subject of my talks with the President was economic cooperation with the other countries of Europe and with Canada. We agreed that the nascent organization for economic cooperation and development is to be regarded as a decisive step in the further development of the Atlantic community.

DISARMAMENT

The problem of controlled disarmament occupied an important place in our discussions. We agreed that the goal of our discussions and efforts is general and total peace. Controlled disarmament would be an important milestone on the road to that aim. The statements by the President and his advisers have convinced me that the United States is working with all its vigor on a solution to this problem and is trying to reach an understanding with the Soviet Union. They are, however, not prepared to consent to any solutions that would make the agreed measures pointless from the start. This applies particularly to solutions providing for inadequate controls or none at all.

STRONG EVIDENCE OF FRIENDSHIP

All during our stay, both in Washington and in Texas, we experienced great cordiality and genuine solidarity. These feelings emerged again and again in all our conversations and more particularly during a meeting of the Senate in Washington which I attended at the suggestion of the President of the Senate, Vice President JOHNSON.

We can have unlimited confidence in President Kennedy, in his energy, wisdom and foresight. The energy and human warmth of the Vice President are other essential factors to be highly appreciated in these times.

The President, the U.S. Senate assembled in plenary meeting—I have just mentioned this—as well as the people and Legislature of the State of Texas gave me and, through me, to the German people such strong evidence of their friendship that I cannot be but deeply moved in recalling it all.

It is one of the most momentous happenings of our time, burdened, as it is, with so many difficult problems, that in the course of recent years the United States and Germany have arrived at ever closer relations and firm mutual friendship and that, at the same time, the unification of Europe has constantly progressed with the full agreement of the United States.

Our awareness of all this gives us the strength we need to face with equanimity the difficulties which continue to confront us. A united Europe and the United States of America jointly constitute a haven of freedom and security for all those whose freedom is threatened.

Who Really Controls Our Foreign Policy?

EXTENSION OF REMARKS
OF
HON. WILLIAM FITTS RYAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1961

Mr. RYAN. Mr. Speaker, we continue to read reports that the Central Intelligence Agency isolated certain Cuban revolutionaries and in some instances imprisoned them before the ill-fated invasion. I should like to call the attention of my colleagues to an article in the New York Times of May 7, 1961, by Sam Pope Brewer which describes the experience reported by an anti-Castro Cuban volunteer. Apparently the Central Intelligence Agency was operating a private foreign policy of its own. I certainly hope that Congress will be told the true facts and that steps will be taken to make our intelligence and information agencies responsible to the Congress. Under leave to extend my remarks, I include the article from the Times as follows:

[From the New York Times, May 7, 1961]

ANTI-CASTRO CUBANS SAY CIA IMPRISONED THEM FOR 11 WEEKS—SPOKESMAN ASSERTS 17 WERE MISTREATED FOR OPPOSING ROLE FOR "BATISTA MEN"

(By Sam Pope Brewer, special to the New York Times)

MIAMI, May 5.—An anti-Castro Cuban volunteer declared today that the Central Intelligence Agency had held him and 16 others prisoner and incommunicado for 11 weeks before and during last month's abortive invasion of Cuba.

He said he was in fear of death much of the time.

The statements were made by Dr. Rodolfo Nodal Tarafa, 27-year-old lawyer, 1 of 17 held in a remote camp in the jungle of Petén in northern Guatemala until last Friday. The fact of their imprisonment was well-known in Miami and was reported earlier.

Originally their number was given incorrectly as 18. The full details have not been available until now.

Dr. Nodal and his fellow prisoners have just organized a new Cuban movement to be known as the 17th of April Movement in memory of the invasion they missed. They have called for the cooperation of all Cuban groups to overthrow Premier Fidel Castro but under Cuban leadership and without the participation of the CIA.

Dr. Nodal and his companions maintain that because they opposed Capt. Manuel Artime and other leaders backed by the CIA, they were threatened, handcuffed, kept in "subhuman" prison conditions, accused of being Communists and submitted to lie detector tests at gunpoint.

According to Dr. Nodal, members of the group were neither charged with any offense, nor brought to trial during their 11 weeks of imprisonment. He said that until they landed outside Miami last Friday they had not been able to find out where they were being taken.

They charge that the intelligence agency employed thugs and gangsters who stood between the Cuban volunteers and their own Cuban leaders. Dr. Nodal said that throughout their imprisonment, except for a few days, they were under American guards.

Pressed for details, he said that by American he meant that they were the CIA representatives in charge of the camp who were assumed to be American and whose authority was unchallenged. He said that some spoke English with an accent and were believed by the Cubans to be naturalized U.S. citizens, "perhaps of Central European origin." They were known to the Cubans only by code names.

MOST REFUSE TO TALK

Most of the former prisoners will not discuss their experiences for fear of some form of reprisal.

Dr. Nodal emphasized that the group's resentment was directed not against the United States but against the incredible men who ran the camp. This, in chronological detail, is his story:

Dr. Nodal came to Miami from Cuba to work for the Democratic Revolutionary Front last October. On December 6 he enlisted in Miami and was sent to Guatemala for training.

On January 31 about 300 men in the training camp at Trax, Guatemala, were mustered by their senior military adviser known to them only as Frank. They were told that two Cuban officers who had been in charge had been sent away "for playing politics."

This left Capt. José Perez San Román in charge of the camp as far as Cubans had any control. Captain San Román was one of the leaders of the April 17 invasion and has since been captured by the Cuban Government.

Exile sources here agree that Captain San Román was an officer in Cuba under Fulgencio Batista, whose dictatorial regime was overthrown by Fidel Castro. He is said to have fought against the Castro revolution in the Sierra Maestra, although there is no way to confirm this.

230 SEEK TO RESIGN

Of the 300 men, 230 asked to resign from the force at Camp Trax because of the change in leaders. A new North American agent known to them as Bernie then appeared on the scene. He accused the troops of insubordination as a result of Communist influence.

Bernie said he had authority from the Democratic Revolutionary Front to name commanders and that he had chosen Captain San Román.

The 230 dissenters demanded that their case be heard by a member of the Front within 72 hours. Otherwise they wished to be discharged and returned home.

They elected a committee of five to call on Bernie with their demand. He refused to see more than a single spokesman and Dr. Nodal was chosen by the others.

Dr. Nodal said he explained in detail that they were neither mercenaries nor conscripts but volunteers and that they could not accept leaders who they considered represented the opposite of what they were fighting for.

After discussion it was agreed that the men would continue training for 5 days while they waited to hear when they might expect a representative of the Democratic front.

TROOPS STRIKE AGAIN

When 7 days had gone by without an answer the troops went on strike again.

Frank arrived back from a trip to Washington on that day but would say only that he hoped a representative of the Democratic Revolutionary Front would arrive "within a month."

The next day they were formally ordered back to training. Under the pressure of threats and promises all but 20 gave in during the next few days. The others agreed to resume training with the promise that their demands would be met.

On February 11 the men were ordered out on a field exercise. While the camp was virtually empty one of the advisers called for 8 of the 20 remaining standouts and asked them to go with him. They thought there was to be a further conference.

They were led along a jungle path to a big canvas-covered truck and suddenly found themselves covered by Thompson submachine guns held by three men. They were ordered into the truck and driven away.

At La Suiza, an estate where there was a Guatemalan Army camp, they were surrounded by 8 or 10 men with automatic weapons. The prisoners were taken from the truck one at a time and led away out of sight. They felt they were about to be shot.

Each was taken into a small room, forced to empty all his pockets and remove all his clothes.

"I felt this was it," Dr. Nodal said. "I was sure we were going to be murdered."

When they had given up all their possessions—"even our love letters"—they were told to dress again and taken away to a shed in the camp. As they assembled they found five other men from their unit who had had no connection with the mutiny but who had quarreled with Capt. San Román. Two days later another prisoner was brought in, making their total number 14.

The shed they were in was about 15 by 30 feet with a concrete floor, wooden walls, and a galvanized iron roof. In the sunny Guatemalan highlands it was so hot in the daytime that they lay naked and panting on the floor. But it was bitter cold at night.

Dr. Nodal said they were given black beans, rice, and tortillas without salt to eat.

FIVE PRISONERS QUESTIONED

On February 24 five prisoners were taken away without any explanation. Outside each was put into a pickup truck and driven away to the Halevtia camp not far away.

There they were questioned separately by Pat, the chief security guard. Dr. Nodal described him as "6 feet, 4 inches tall and about 230 pounds and stupid." His questioning, however, was said to be courteous at La Suiza Dr. Nodal said.

Dr. Nodal was then taken into another shed and turned over to a young man operating a lie detector.

Dr. Nodal said the interrogation was aimed at making him say he was a Communist.

The prisoners then were allowed to bathe and shave for the first time in 12 days and were given clean clothes and an edible meal. Then they were taken back to the shack at La Suiza.

Five days later, March 1, an agent known as Pappy, who was said to be the chief of the whole operation in Guatemala, came to say that they were being moved again but he would not say where.

Four were taken away in handcuffs at that time. The next day the remaining 10, including Dr. Nodal, were taken to the airbase at Retalhuleu, and flown to a river in the Petén jungle area.

They were taken up the river for an hour in canoes. There, in a crude camp at the top of a cliff they found their four previous companions and two other men they had not seen since leaving the Trax camp.

They were warned, Dr. Nodal said, that they would be shot if they tried to escape. They found living conditions better than in their last prison. Yet still no one would answer any questions.

Their guards brought in a radio set for an hour a day so they could hear the news programs from Radio Swan, a station operated from Swan Island, off the Honduran coast.

A 17th prisoner was brought in to join them when they had been there 2 days.

On March 25 they heard that Dr. José Miró Cardona was to be named president of the Revolutionary Council. Two days later he arrived to visit them, Dr. Nodal said, with Dr. Manuel A. de Varona, the Council's Secretary of War.

Dr. Miró Cardona said he had no part in their misfortune and that he would see they were set free within a few days. He carried away the first letters they had been able to send out to their families since their arrest.

They awoke April 17 to find that their guard had disappeared. They were still guarded, however, by a detachment of 47 Guatemalan soliders under a lieutenant. "At all other times," Dr. Nodal said, "we were guarded by Americans with automatic weapons."

INVASION NEWS BROADCAST

Later that day they learned by radio of the Cuban invasion. They were discussing their chances for an escape when the Guatemalan lieutenant, who had a direct radio link with Retalhuleu, told them that an American was coming from Retalhuleu to get them.

Two days later five heavily armed men arrived, headed by a short, bald, middle-aged man known to them as Mac.

Dr. Nodal said Mac berated them at length for not being with the invasion forces. He said they had missed their chance to do their patriotic duty and that when the invaders won out the prisoners would be handed over to Capt. San Román "in handcuffs."

Mac then left the camp but four guards stayed with them.

On Friday, April 28, 11 days after the invasion began, their guards suddenly took them by canoe to a village on the mainland and, after an hour's ride in a jeep, they were put into a DC-3 airplane at a jungle airstrip.

They were flown back to Retalhuleu, carefully searched and loaded into a C-54 aircraft, where they found 118 other volunteers who for one reason or another had not taken part in the landing.

Even then, they said, when they asked the security officer, whom they knew as Don, where they were going, the only answer was that they would learn when they got there.

They arrived at a Florida airport before dawn Saturday. Dr. Nodal said he found himself in the same hangar from which he had started out for Guatemala. He did not know where it was except that it was about an hour's ride south of Miami.

That odyssey ended when they were dumped from trucks before daybreak in Miami itself. They found themselves free men again after 11 weeks.

NODAL HEADS NEW GROUP

Dr. Nodal is president of the new 17th of April Group. He was politically active in Cuba in the AAA movement, a code name for the National Revolutionary Front headed by Dr. Aureliano Sanchez Arango during the Batista regime.

The secretary general of the new group is Dr. Omar Castaneda, a lawyer who was a leader in the university students anti-Castro organization.

Their fellow prisoners included: Francisco and Rene Chavez, newspapermen on the staff of the Diario de la Marina; Adalberto Delgado, medical student; Rodolfo Bartelemy Dominicis, captain in the Castro police; Antonio Frontela Gomez, electrical worker; Cecilio Fuentes Rico, bartender; Rolando Fuentes Rico, truckdriver; Epifanio Gonzalez Errasti, laborer and a member of the Castro commandos of the National Institute of Agrarian Reform; Humberto Olivera Perez, former captain in the regular army; Luis Alberto Olivera, student; Ricardo Martinez de la Cruz, customs chief of José Marti Airport, Havana, under the Castro regime; Julio Antonio More, law student; Martin Torres, art student, and two others who concealed their names because they have families in Cuba.

A Heartening Look at Florida

EXTENSION OF REMARKS

OF

HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1961

Mr. ROGERS of Florida. Mr. Speaker, a recent edition of Time magazine took a look at the State of Florida and its forward progress in an article "Fast-Growing Florida, a State That Can Hardly Wait," and the editors have taken note of the sound basis of the Florida economy and our hopes for the future.

The Fort Myers News Press, one of our leading newspapers, has called attention to the Time story and Editor William Spear expresses the interest and appreciation of the people of Florida for the type of reporting found in the Time article. Because the Spear editorial states the high points of the magazine article along with the views of many of our citizens and will be of interest to those people thinking of moving to Florida, or planning to invest in our State, I ask that it be reprinted here in the RECORD:

[From the Fort Myers News-Press, Apr. 13, 1961]

A HEARTENING LOOK AT FLORIDA

"Fast-Growing Florida, a State That Can Hardly Wait," is the title of a 2-page article in the April 14 issue of Time magazine. A great deal has been written and published about Florida in the national magazines, including Time. But its latest article is evidence that its astute editors consider that the State's phenomenal growth is still news and that the story of it still has not been fully told.

As this Florida story is news to northerners, so many of its details also will be news to Floridians who perhaps fail to see the forest for the trees. Especially at this time when uncertainties of the national recession cause some anxiety in Florida, some of the details recounted by Time need to be appreciated by Floridians. Here are some salient excerpts from the article:

"Florida, ending one of its balmiest winters in history, last week greeted the spread of spring across the North with remarkable

equanimity. Once the northward exodus of tourists in the springtime rated with the hurricanes as a natural catastrophe, inevitably followed by a summer-long slump. Now Florida is the focus of a permanent population shift that has made it the fastest-growing State in the Union and a bustling, year-round center of industry, commerce, and building.

"More than 3,000 new residents pour into Florida every week and 76 percent of them come to settle permanently. Last year its new citizens demanded 104,000 new dwellings. Beyond Florida's tawdry nightclubs, neon facades and kidney-shaped swimming pools lies a new and sustaining domain of factories, fresh communities, and solid citizens.

"Florida has already attracted 177 electronics plants with a total of 20,000 employees and payrolls of $100 million. Florida's climate is so strong a lure that few Florida firms have trouble getting skilled workers. Many firms find that men will even leave California for Florida, where they feel closer to home ties in the East and Midwest.

"Florida has plenty of homegrown industry as well, ranging from fashions to phosphates, from oranges to oysters—which are having one of their best years. Florida's oranges, grapefruit, tangerines, and limes and its fresh and frozen orange juice account for 65 percent of the U.S. citrus crop, a third of the world crop.

"The airlines, which have helped to change the kind of sun lovers that Miami Beach draws, are also making Miami a springboard to Latin American markets. Miami has more direct air connections to the 21 principal U.S. air hubs than has either Boston or San Francisco, and more flights to Midwestern manufacturing cities than any other city in the United States.

"Retirement is still big business to the State. But people are retiring younger than ever before. Mackle's Port Charlotte has so many young retired servicemen that the city's average age is only 42. And more and more young Floridians are staying home. Half of the 12 colleges started in the United States last year were in Florida.

"Florida has become a state of mind, an American dream of rejuvenation, of living the simple life, of going back to the outdoors—even if that outdoors becomes one long, neat stretch of suburbia. To many industries and individuals alike, Florida suggests an escape from the ugliness of old, tired, industrial cities with their dark pewter skies and soot-covered bricks."

It is always helpful to see how one looks to others. This view of Florida from the outside looking in should be heartening to all Floridians at this time.

Finding Housing for Those Displaced by Urban Renewal—A Study and Report by the Missouri Advisory Committee of the U.S. Commission on Civil Rights

---

EXTENSION OF REMARKS

OF

HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1961

Mrs. SULLIVAN. Mr. Speaker, one of the most serious problems we have been encountering in our cities in carrying out extensive urban redevelopment programs is the problem of finding suitable housing for families forced out of their homes by the bulldozers and wrecking cranes of municipal progress. This is, of course, a difficult problem also for small businesses faced by the same need for temporary or permanent relocation.

Urban renewal programs by and large are planned for areas of blight and deteriorating values. In those areas, however, there are usually good housing facilities, owned or rented by families of moderate income, as well as slum housing occupied by families eligible for relocation to public housing. But for the family which has an income above the level of eligibility for public housing, but below that needed to purchase or rent comparable housing in a stable neighborhood, the urban renewal program constitutes a real personal hardship. We are very much aware of this problem in the Housing Subcommittee of the House Committee on Banking and Currency, and in our hearings we have discussed at length various plans or programs for meeting it.

MINORITY GROUPS FIND PROBLEM HARDEST TO SOLVE

It is a particularly serious problem for minority groups who often find certain neighborhoods or facilities closed to them, even if they can afford to buy or rent at prevailing prices. This situation has been the subject of a comprehensive survey in my State of Missouri by the Missouri Advisory Committee of the U.S. Commission on Civil Rights, as outlined in a report by the committee's subcommittee on housing and urban renewal and adopted by the entire committee at a meeting in St. Louis last month.

In our deliberations on a new housing bill, the housing subcommittee has been considering such ideas as the President's proposal for 40-year mortgages on new sale housing constructed primarily for families displaced by urban renewal. I personally do not see how we can solve our problems in St. Louis in that fashion, but such a plan may be a useful addition to other programs.

VALUE OF LONG-TERM REHABILITATION LOANS

More important as a weapon in attacking the lower middle-income housing problem may be long-term rehabilitation and modernization loans which we have been discussing in the subcommittee. By making it possible for good, solid, but deteriorating housing in good, stable neighborhoods to be renovated and improved on a 25-year-plan basis, we can provide a substantial amount of good housing at reasonable prices and also prevent the slippage of additional areas into the so-called slum category.

The report of the Missouri Advisory Committee to the Civil Rights Commission points up the extent of the problem of finding suitable replacement housing for Negroes, particularly, in our State. This is an interesting and important contribution to our information in this field of urban renewal, and I commend its contents to all Members of Congress conscientiously concerned in achieving the modernization of our cities while at the same time achieving decent housing accommodatons for those forced to move in the name of municipal progress.

MRS. FRANKIE M. FREEMAN, CHAIRMAN OF SPECIAL STUDY GROUP

The chairman of the Subcommittee on Housing and Urban Renewal of the Missouri Advisory Committee of the U.S. Commission on Civil Rights, Mrs. Frankie M. Freeman, has, I believe, done an outstanding research job on this project and I congratulate her and the other members of the advisory committee on their report. The recommendations will probably evoke some controversy, but I do not think there is or can be any controversy over the need for solving this serious problem, which is typical of just about every American city now engaged in an urban renewal program.

The report referred to and a covering letter are as follows:

COMMISSION ON CIVIL RIGHTS,
MISSOURI ADVISORY COMMITTEE,
Washington, D.C., May 4, 1961.

Hon. LEONOR SULLIVAN,
House of Representatives,
Washington, D.C.

DEAR MRS. SULLIVAN: Enclosed for your information is one copy of the Report of the Missouri Advisory Committee to the U.S. Commission on Civil Rights on Housing and Urban Renewal in Missouri which was adopted by the committee at its meeting in St. Louis on April 24, 1961.

Yours very truly,

FRANKIE M. FREEMAN,
Vice Chairman and Secretary.

REPORT TO THE U.S. COMMISSION ON CIVIL RIGHTS ON HOUSING AND URBAN RENEWAL IN MISSOURI

On April 4, 1959, the Missouri Advisory Committee submitted its report to the Commission on Civil Rights on housing problems of minorities in Missouri. Included in its summary was the finding "that racial and religious discrimination and segregation in housing exist in varying degrees in all sections of the State * * * restrictions are practiced in both the sale and rental of housing. Kansas City and St. Louis each report cases of discrimination against Jews in private housing sales and rentals. Negroes are generally excluded from suburban and other outlying residential districts and are concentrated mainly in the older and blighted areas in the center section of the cities. Discrimination against racial and religious minorities in the operations of the housing market has become a controlling factor in establishing, reinforcing and extending patterns of segregation and discrimination in Missouri."

The Missouri Commission on Human Rights was created as a permanent State agency by the Missouri Legislature in 1959. The 1959 act charged the commission to conduct research projects and make studies into and publish reports on discrimination in Missouri. In its report to the Governor of Missouri, dated December 1, 1960, the commission submitted data on verious civil rights areas affecting 97.56 percent of the Negro population of the State. In a summary of its findings in housing, the report stated: "Discounting those counties which reported few or no Negroes living in the county, every unit (responses from 78 counties and 2 cities) reported some type of residential segregation. Five of the units reported segregation in public housing. Negroes experience difficulty in obtaining FHA and VA loans when they contemplate buying or building in integrated areas. Discrimination in housing may also be associated with (1) discrimination by real estate agents in the advertisement, listing, sale, rental or lease of private housing and in

unethical real estate practices which cause panic selling and subsequent increased cost; (2) discrimination by lending institutions in lending money, guaranteeing loans, accepting mortgages or otherwise making available funds for the purchase, construction or repair of housing. ("Study of Human Rights in Missouri, 1960 Report of Missouri Commission on Human Rights." p. 41. Report is attached.)

Based upon the foregoing findings of the Missouri Commission on Human Rights, and the reports of other intergroup organizations and agencies working in this State, in addition to reports made to this committee, it is the conclusion of this committee that the findings, conclusions, and recommendations contained in its summary statement, dated April 14, 1959, continue to reflect the housing problems and needs facing Negroes in Missouri today.

The Missouri Advisory Committee has considered those problems as extensively as possible within the framework and limitations of its structure, functions and authority. However, one of its first recognitions was that the subject of housing and urban renewal is so complex and multifaceted that this committee was not equipped to conduct the kind of study the urgency of the problem requires.

The Missouri Legislature has made the following declaration of policy: "It is hereby found and declared that there exists in municipalities of the State insanitary, blighted, deteriorated and deteriorating areas which constitute a serious and growing menace injurious to the public health, safety, morals and welfare of the residents; that the existence of such areas contributes substantially and increasingly to the spread of disease and crime, necessitating excessive and disproportionate expenditures of public funds for the preservation of the public health and safety, for crime prevention, correction, prosecution, punishment and the treatment of juvenile delinquency and for the maintenance of adequate police, fire and accident protection and other public services and facilities, constitutes an economic and social liability, substantially impairs or arrests the sound growth of communities and retards the provision of housing accommodations." The State law creates land clearance for redevelopment authorities and prescribes their area of operations, powers, and duties. Thus urban renewal activities in Missouri are declared by law to be public uses and purposes.

In accordance with the request of the Commission on Civil Rights Urban Renewal questionnaires were sent by the Subcommittee on Housing and Urban Renewal to the 17 localities within the State where urban renewal activities are under consideration, planning or execution.

Replies were received from St. Louis, Kansas City, Joplin, St. Charles, Mexico, Columbia, University City, Sikeston, Webster Groves, Kirkwood, Fulton, St. Louis County and Olivette. Of the agencies responding, only two (Fulton and Sikeston) do not have urban renewal programs. The following localities have urban renewal programs, but do not have low rent housing programs: Joplin, University City, St. Louis County (PHA projects at Jefferson Barracks and Webster Heights were halted through litigation), Kirkwood, Webster Groves and Olivette. Thus six localities in the State with urban renewal programs do not have low rent public housing programs. The five localities in this State that have both urban renewal and low rent public housing programs are: Kansas City, Columbia, Mexico, St. Charles and city of St. Louis.

All agencies except one (University City) identified the minority as Negro.

The first questionnaire that was mailed to the agencies requested data concerning name of agency, number of board members and minority representation, information concerning professional staff and activities of citizens advisory committees. From a review of the responses, a determination was made to seek further information concerning the nature of the urban renewal program and its effect on each community. A second questionnaire entitled "Urban Renewal Questionnaire—Part 2", was prepared and sent to those agencies that had indicated they were engaging in urban renewal activities. The responses to parts 1 and 2 are attached hereto and made a part of this report. The committee could not attempt a comprehensive analysis of the date obtained; however, some questions and responses will be noted because they give support to the conclusions reached by this committee in its 1959 report and to the December 1960 report of the Missouri Commission on Human Rights.

In response to the question concerning representation of the board or commission of members of the minority in that locality, the following agencies reported that they have minority group board members: City of St. Louis, St. Charles, Mexico, University City, Columbia, Kirkwood, and Webster Groves. Four agencies reported that the Urban Renewal Agency has no minority group board members. They are Joplin, St. Louis County, Kansas City, and Olivette.

With respect to professional staff employed, reports indicated that St. Louis, Kansas City, Webster Groves, St. Louis County, University City, Columbia, St. Charles employ minority group professional staff. It would appear from some of the replies, however, that the definition of professional staff tends to vary with the locality. It was not indicated also whether the staff was temporary or permanent, part time or full time.

In part 2 of the questionnaire the agencies were asked to identify each project and to indicate the number of white and nonwhite to be relocated. They reported as follows:

Locality	Number of projects	Families to be relocated		Percent nonwhite	Total
		White	Nonwhite		
Kansas City	4	326	398	55.7	714
St. Louis	2	1,110	2,320	64.7	3,430
Joplin	2	49	10	17.0	59
St. Louis County	2	20	516	96.0	536
Columbia	1	10	400	97.6	410
Mexico	1	11	156	93.4	167
Webster Groves	2	124	477	79.4	601
Kirkwood	2	41	72	65.0	111
St. Charles	1	0	18	100.0	18

The above figures indicate that the percentage of nonwhite to be relocated ranges from 17 percent in Joplin to over 90 percent in St. Louis County, Columbia, Mexico, and St. Charles. In only one locality is the number of nonwhite to be displaced less than 55 percent of the total and in four localities the number exceeds 90 percent.

Most of the replies to the question, "Into what areas are the displaced nonwhite families moving?" indicated that the nonwhite persons are moving into "areas adjacent to Negro areas, public housing, or other Negro areas." All agencies replied that the new housing or rehabilitated housing on the urban renewal site will be available to all, but several questioned whether those displaced would be able to afford it. In St. Charles where all of the families that were displaced are Negro, the agency reported that 80 percent moved into low-rent public housing and others bought property in outlying areas. Webster Groves reports that its urban renewal project will be construction of private, single-family housing which is being built on a "controlled-price basis for persons who live in the area, primarily." In Columbia 17 percent of the displaced families have been relocated into low-rent public housing. In St. Louis County the response indicated that the new housing in the project area would be primarily Negro. The city of St. Louis reports 10 percent of the displaced families moved into public housing and that rental scale for new housing will be too high for most displaced families.

Thus, given the situation (1) that the mobility of the Negro in Missouri is restricted by discriminatory housing practices coupled with an inability to afford most of the new housing to be constructed in urban renewal areas after slum clearance; (2) that the Negro resides in the blighted and deteriorating areas within a locality and (3) that generally the larger percentage of persons to be relocated from an urban renewal area are Negro, the process of relocation takes on real significance in an evaluation of the urban renewal concept and the realization of the goal of a decent home and suitable living environment for every American family. If the new construction continues to be priced beyond the ability to pay of the majority of the persons displaced by urban renewal areas, and if large areas of a community remain closed to such persons, the problems of slums will not be solved.

If the national housing goal is to be achieved and urban renewal is to be a success the following is required:

1. The Federal Government should declare its policy of a decent home and suitable living environment for every American family in a free and open housing market.

2. Where Federal assistance is used, all housing should be available to all persons without regard to race, creed, color or national origin.

3. All Federal agencies charged with administering Federal assistance should assume the responsibility not only to adopt a policy of nondiscrimination, but to take such affirmative action as is necessary to enforce such policy.

4. Contracts for Federal assistance between agencies of the Federal Government and developers, builders, and lenders, and public agencies should include nondiscrimination clauses with respect to sale, resale, lease, and occupancy of the dwellings. Such provisions should have the same force and effect as other provisions of the contracts, and Federal agencies must recognize their responsibility to employ adequate manpower to obtain compliance with such provisions.

5. Federal agencies should employ an adequate number of technical assistants who will be available for assistance to communities, investors, planning agencies, builders, and sellers in the early planning stages and throughout the program.

6. The Commission on Civil Rights should be a permanent agency of the Federal Government with powers and functions to include additional responsibilities in the field of housing.

7. The President of the United States should be asked to appoint a National Committee on Equality of Opportunity in Housing, to assure that benefits of all Federal housing laws are available to all persons on the same conditions and without regard to race, creed, or color.

Respectfully submitted.

FRANKIE M. FREEMAN,
Chairman, Subcommittee on Housing and Urban Renewal.

Missouri Advisory Committee: Dean J. Norman McDonough, chairman, St. Louis, Mo.; Mrs. Frankie M. Freeman, vice chairman and Secretary, St. Louis, Mo.; Dr. Lorenzo J. Greene, Jefferson City, Mo.; Abe J. Kaplan, Kansas City, Mo.; John I. Rollings, St. Louis, Mo.; Judge Edmund B. Smith, Kansas City, Mo.; Rev. Arnold A. Wessler, St. Louis, Mo.; Mrs. Hugh P. Williamson, Fulton, Mo.

The Remaking of American Education

EXTENSION OF REMARKS
OF

HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1961

Mr. YOUNGER. Mr. Speaker, the following article on "The Remaking of American Education," appearing in the April 1961 issue of Fortune magazine, is not only timely but is worthy of careful consideration by all of those who pin their faith in Federal aid to education as the sole solution to our educational problems:

THE REMAKING OF AMERICAN EDUCATION

(By Charles E. Silberman)

Traveling about the country in the winter of 1961, a visitor might wonder what was happening to the American public school. In Snowflake, Ariz., in Red Wing, Minn., in Humboldt, Iowa, and in, roughly, a thousand other cities and towns, high school students were studying a rigorous new physics course developed by some of the Nation's leading nuclear physicists. Teachers in several thousand schools were trying out a new math curriculum designed to take students further into the basic concepts and structure of mathematics than had ever been attempted at that level. In Carson City, Mich., in Melbourne, Fla., and in several suburbs of New York City, schools had abolished grade levels in some or all subjects and were moving students along according to how much they learned rather than their age. In Sacramento, the California Legislature was considering some 14 bills to raise standards in the State's public schools—for example, by reducing drastically the number of methods courses and increasing the number of content courses required for a teaching license. And in Normal, Ill., competition for college admission was leading students to drop out of industrial arts and home economics courses and to aim for higher grades. "No one wants a C grade any longer," the town superintendent of schools, Lowell Krutsinger, told the local Rotarians. In some bewilderment, he asked, "Where are we going?"

Where we are going is toward a major overhaul of U.S. education. The current controversy over Federal aid to education—important though it is—obscures the far more significant fact that American society has embarked on an effort to lift the quality and change the direction of its schooling.

The present ferment has gone beyond a restless discontent with the educational ideas of the recent past. Nearly all of the change and experimentation now apparent turns around a central idea: the pursuit of intellectual excellence. For two generations intellectual training has not been the main goal of the U.S. public school system; indeed, it has never been the main goal of any school system designed for the broad mass of a population. To focus mass education on intellectual development will require nothing less than an educational revolution, and, like all revolutions, it will have to overcome enormous inertia. It is still true today, as Nicholas Murray Butler wrote in 1893, that "school superintendents, principals, and teachers are to the last degree impatient of criticism and suggestion." Although the present tide of change has the approval of many teachers and school administrators, it has to buck entrenched theory protected by powerful organizations. The tide would never have begun to flow if parents, scholars, scientists, members of school boards, had not come to the conclusion that the educational needs of the U.S. future would be very different from those of the past. And the new movement will not carry through to success unless the leaders of American public opinion deepen their understanding of what is stirring in the schools—and why.

The task ahead cannot be understood without a brief look back at how the present system, now obsolete and inadequate, evolved from other systems that were discarded by a dynamic society aware that education was an essential part of the public business. In the early years of the Republic, education was a concern chiefly of the social and economic elite. The content was largely classical, the purpose principally to train clergymen, lawyers, and other community leaders. For the rest of the population, as Abraham Lincoln recalled, "there were some schools, so-called; but no qualification was ever required of a teacher beyond 'readin', writin', and cipherin' to the rule of three.'" Sparked by men like Horace Mann, however, the conviction that everyone ought to be educated spread gradually and led to the creation of public schools; but the classical curriculum remained largely unchanged.

Toward the end of the last century the rise of industry was creating the need for a literate working class, and was shifting hordes of illiterate people from the farms to the cities, where there were no chores to keep the children occupied all day. At the same time, the large cities were being engulfed by waves of immigration from southern and eastern Europe. The traditional curriculum obviously was not suited either to the capacities or to the needs of children from peasant and frequently alien backgrounds—particularly with the teachers available. Instruction, as a result, degenerated into singsong concert drill and recitation by rote, and children in droves deserted the schools as irrelevant to the world in which they lived.

It was against this background that the last great change in American education began. "Progressive education" and the "life adjustment" curriculum did not spring full-blown from the head of John Dewey. His theories were adopted largely because they met needs strongly felt in American society around the turn of the century. The demands for change came from all sides, as Prof. Lawrence A. Cremin has reminded us in "The Transformation of the School." Social reformers saw the school as the only public agency able to Americanize the immigrants and lift them out of their squalor. Psychologists and philosophers at Chicago, Clark, and Columbia Universities and elsewhere were developing new theories of behavior and learing that emphasized the interaction between the child and his environment, and that saw learning as a process affecting behavior and social attitudes as well as intellectual skills. And business leaders saw a program of vocational education as the only way in which the United States could keep its place in the international economic race. "You know, as does every manufacturer in this Nation know," Frank A. Vanderlip, of the National City Bank, told a worried business audience in 1906, "that Germany's superiority in international commerce rests almost wholly on Germany's superior school system"—a system, Vanderlip proclaimed, that aimed "to make of each citizen an efficient economic unit." The National Association of Manufacturers had been pushing for a good many years for a broadening of the school's role. "The classical and the general literary studies have their place in all educational systems," President Theodore Search told the National Association of Manufacturers convention in 1898, "but it is unfair and unjust to the great material interests of the land to leave out of account the obvious demands of industry and commerce."

And so the schools, tailoring their curriculum to the needs of the times, took the emphasis off intellectual discipline and broadened their function to include a concern for health, vocational training, and the quality of community life.

For 50 years this system helped the United States to make more smoothly than any other nation the difficult transition from a farming to an industrial society, at the same time absorbing and Americanizing the children of millions of immigrants. Adjustment was what the American school child needed—and the schools of yesterday supplied it.

But recently the feeling has been growing that the educational system we have is not right for the future needs and responsibilities of American society. For a decade or more, critics have been clobbering the professional educators for their failure to teach reading, for their excessive interest in children's social adjustment at the expense of intellectual achievement, and for their naive faith that a simple dose of more money would solve all the school's ills. Philip H. Coombs, of the Ford Foundation, now Assistant Secretary of State for Educational and Cultural Affairs, with only slight exaggeration, put the verdict this way: "Almost everything that the schools and colleges are doing is obsolete and inadequate today. This applies to the curriculum, to the arrangements for teacher training, to textbooks, to organization, to methods of teaching and learning, to school architecture." Education's greatest need was not for more money from the outside, but for sweeping change on the inside.

The United States today is moving away from progressivism not because it is false in some absolute sense, but because it badly serves the needs of our own time. The growing complexity of organization and the explosive pace of technological and social change are creating an enormous demand that is without historical precedent. Society has always needed a few men with highly developed and disciplined intellects; industrial society needed masses of literate but not necessarily intellectual men. Tomorrow requires something that the world has never seen—masses of intellectuals.

The kind of deadly monotonous assembly line Chaplin satirized in "Modern Times" no longer reflects the reality of industrial life. Rather, as Peter F. Drucker has cogently suggested, the prototoype of the large productive organization seems increasingly to be the Strategic Air Command base, which must integrate the highly developed skills of thousands of people—pilots, navigators, and meteorologists, radio technicians, doctors, mechanics, operations researchers, computer programers, operators, repairmen, and the like.

The U.S. need for educated men is sometimes stated in terms of specific skills said to be in short supply—electronics engineers or nuclear physicists. Educationally, this is the wrong way to approach the problem because it is impossible to predict today what skills will be needed 10 years from now. Nothing could be more wildly impractical, therefore—and nothing more destructive to the future of an individual or of society—than an education designed to prepare people for specific vocations and professions or to facilitate their "adjustment" to the world as it is. To be practical, an education now must prepare a man for work that doesn't yet exist and whose nature can't even be imagined. This can be done only by teaching people how to learn, by giving them the kind of intellectual discipline and the depth of understanding that will enable them to apply man's accumulated wisdom to new conditions as they arise. "The qualities essential to employability and productivity," Francis S. Chase, dean of the Graduate School of Education of the University of

Chicago, has observed, "are coming closer and closer to the characteristics that have long been attributed to the educated person."

How far has the United States come toward accepting the new goal—an educational system able to turn out vast numbers of people educated up to and considerably beyond the level that the 19th century demanded only of its ruling elite? Certainly the idea has made substantial progress in professional educational circles in recent years. Even Columbia's Teachers College, for 50 years the stronghold of "life adjustment" educational philosophy, is now beginning to adjust to higher intellectual standards. "We need now to recognize," the college's new dean, John H. Fischer, told his colleagues last fall in an article provocatively (for a Teachers College dean) entitled "Schools Are for Learning," that "in the last half-century a whole network of services has come into existence to do many of the things only schools were in a position to undertake when Teachers College was founded." Dean Fischer urged the schools to shuck off their extraneous functions so that they can begin to fulfill their overriding responsibility for intellectual development.

It was public opinion that changed the attitudes of a good many educationists, who, like politicians, keep their fingers to the wind. "Over the years, studying different school systems across the country," San Francisco Superintendent Harold Spears, once a leading light of the "life adjusters," says, "I came to appreciate that education is a matter of time and place; you've got to retool your plant to fit the needs." The needs have clearly changed, and with them Spears' own aims. "Right now," he says, "I'm for quality education." And Spears is improving the quality of San Francisco's education, though his critics are unwilling to admit the fact. In line with the vehement recommendations of a group of Stanford and University of California professors, who studied the city's curriculum at the board of education's request, he is increasing the time devoted to the three R's and dropping the life-adjustment courses.

Throughout California a so-called conservative revolution is forcing an overhaul of the State educational system. Last November a citizens' commission of 27 members appointed by the legislature issued a report that thumpingly affirmed the intellectual aims of education. The citizens demanded a number of drastic changes in the State educational code—e.g., increasing the minimum time allotted to the three R's from half to two-thirds of the elementary school day; elimination of courses in driving automobiles; creation of a system of statewide exams for high-school students; and a thorough upgrading of teacher certification standards. The report has been supported by Governor Brown, and bills embodying the bulk of its recommendations are now before the California Legisalture. A poll of 2,000 randomly selected high school teachers in the State showed that 84 percent agreed with the citizens' commission's criticism of life adjustment, social adaptation, and similar nonintellectual goals of education. Even the California Department of Education—until recently one of the chief citadels of life adjustment—has swung behind the most important of the changes. State Superintendent of Public Instruction Roy E. Simpson laid down the new line early this year at the annual education department meeting. "The dogmas of the quiet past are inadequate to the stormy present," he told his staff, quoting Lincoln. "We must disenthrall ourselves."

MIT physics Prof. Jerrold Zacharias compares education to high fidelity. To have good hi-fi, you need a good performer on a good day, a good recording, a good pressing of it, and a good pickup and amplifier; you need a room with good acoustical qualities and a person with the intent to listen. "But most important of all," says Zacharias, "is the composition itself; without a great composition, everything else is pointless." The most profound change taking place in U.S. education today is that the schools are beginning to be supplied with "great compositions"—that is to say, with new courses and textbooks created by the Nation's leading scholars.

In this new attention to curriculum, no one has played a more important role than Zacharias himself. A distinguished nuclear physicist, director of MIT's famous radiation laboratory, and member of the President's Science Advisory Board, Zacharias 5 years ago dedicated himself to the task of improving the high school teaching of physics—indeed, high school teaching in general. At the cost of $1 million a year, supplied principally by the National Science Foundation, his physical science study committee not only developed a new high school physics course, it has revolutionized the whole approach to the teaching of science.

The most radical innovation has been to enlist the best scientific minds in the country for the job of developing a public-school course. The physicists dropped perhaps 50 percent of the material treated in the conventional course—e.g., hydrostatics, hydromechanics, surface tension—in order to expand the treatment of such critical subjects as electricity and the atom. (In discussing the subject of mechanics, the new course starts right in with dynamics, treating statics as a special case.) And instead of presenting the material on the basis of authority, the new course tries to lead students to think like physicists—i.e., to test every hypothesis and accept nothing until demonstrated. Creating the new course proved to be a lot tougher than the scientists had anticipated. "You have no idea how hard it was to get the subject right," Zacharias recalls. "We had to work on it until it was crystal clear in our own minds."

They had to do more than get it right. Zacharias and his colleagues had made a fundamental decision that they would not merely try to train future scientists, but would attempt to make physics appealing to the majority of students. If they were to close the gap between the two cultures of science and the humanities, they needed a great composition that could be taught by ordinary teachers to ordinary students. The regular students' textbook is supported by a four-volume teachers' guide and a laboratory workbook containing instructions for a complete set of experiments requiring inexpensive and frequently homemade equipment—e.g., a microbalance made out of a straw, a book of matches, a needle, and a wood screw. The physical science study committee has also produced a set of 60 films to explain fundamental concepts and to demonstrate phenomena too big or too small or too complicated for ordinary classroom presentation. In addition, the committee has organized innumerable courses and conferences to give high school teachers the considerable retraining they need to handle the new course. Today more than 10 percent of the high school physics students in the United States are taking the Zacharias course.

The effects of Zacharias' work reach far beyond the physics classroom; his example has stimulated similar attempts to revise the curriculum in chemistry, in biology, and in mathematics. Biology, for example, is studied by 75 to 80 percent of all high school students in the United States, most of whom take no other science; it is the widest opportunity, therefore, to impart the excitement of the scientific process. And yet biology is usually presented as a deadly exercise in the classification and memorization of the types of plant and animal life. The biological sciences curriculum study is working to develop new courses that will give students an appreciation of the complexity of living things and of their interrelation. Some laboratory experiments permit several results, in order to familiarize students with the principles of scientific criticism and controversy. And to encourage further work by gifted students, the group has devised a series of 100 experiments students can do on their own, but for which there are no answers in scientific literature; the students are encouraged to correspond with working scientists concerning their results.

All students study mathematics at least through the junior high school (9th grade) level. The President's Commission on National Goals gave math a priority second only to reading. A number of groups are working on new courses; the largest—the school mathematics study group headed by Professor Edward Begle of Yale—is attempting to reconstruction of the entire math curriculum from the fourth through the twelfth grade. Without dropping the traditional training in computation, the courses place a new emphasis on giving students an understanding of the logic of the number system and an appreciation of the intellectual grandeur and elegance that mathematics can provide. The object is to teach students why they can do things with numbers and symbols instead of just teaching them how.

Revising the sciences alone is not enough, of course. "A sense of tragedy and triumph achieved through the study of history and literature," as Prof. Jerome S. Bruner has written, "is surely as important to modern man as a sense of the structure of matter achieved through the study of physics." So, one might add, is the ability to speak and write lucid, grammatical English. The public schools have not been notably successful in either venture, nor have the humanists or social scientists evinced much interest in correcting the situation. And yet there are some hopeful signs even here. Having heard colleges bellyaching for years about the dreadful inadequacy of high school preparation in English, the college entrance examination board decided to take matters in its own hands so far as that subject is concerned. Eighteen months ago it established a commission on English, headed by Harold C. Martin of the Harvard English Department. The commission is running summer institutes for high school teachers and is revising the high school English curriculum with an emphasis on teaching the students to write.

These efforts at curriculum revision have had important byproducts, notably a radical reorientation of educational research in psychology. For over half a century educational psychologists have neglected the question of what and how much children can learn—perhaps because no one was terribly interested. They addressed themselves instead to the measurement of aptitude and achievement and to the study of how a child's social and psychological background affects his motivation to learn—not to the way learning occurs in the classroom. "It seems as if all of us were afraid to do anything to the child," Prof. John B. Carroll of Harvard recently confessed. "All we do is measure him, and this doesn't get us very far."

Some theories of learning now emerging may accelerate the educational process. These new theories and insights have been set down lucidly and persuasively in "The Process of Education," a little volume published last fall by Professor Bruner of Harvard's psychology department, which already ranks as one of the most important and influential works on education in some time. Bruner emphasizes the importance of giving students an understanding of the

fundamental structure of whatever subjects they are studying. To teach structure is to enable them to bring knowledge to bear on problems and events they will encounter outside the classroom. To know facts is not enough. Bruner wants to improve students' ability to guess intelligently, for in research, in business, and throughout life itself we are almost always forced to choose on the basis of incomplete knowledge—i.e., to guess. "The shrewd guess, the fertile hypothesis, the courageous leap to a tentative conclusion," Bruner writes, "these are the most valuable coin of the thinker at work, whatever his line of work."

Structure can be taught, however, only if teachers have a real mastery of their subjects; the younger the students being taught, paradoxically enough, the more important it is for the teacher fully to understand the subject in order to present its structure in the simplest possible way. Prof. David Page of the University of Illinois, an experienced teacher of elementary mathematics and the head of the university's elementary mathematics curriculum project, says, "Young children learn almost anything faster than adults do if given to them in terms they understand." Prof. O. K. Moore of Yale has shown that even 2- and 3-year-olds of average intelligence can learn to read, write, and type.

Public schools have been wasting valuable years by postponing the teaching of many important subjects on the ground that they are too difficult. In fact, the basic ideas of science and mathematics and the basic themes of literature and history should form the heart of the curriculum from the elementary grades on. The progression in each field should resemble a widening spiral, in which students continually expand their knowledge of the basic concepts by learning to use them in more and more complex and sophisticated ways. Contrariwise, a tremendous amount of material that's needlessly cluttering up the curriculum today should be discarded.

It follows also that the most pressing need of the public schools is not for more classrooms or even for higher teachers' pay (though both are surely needed), but for curriculums that present clearly the basic principles of all the major fields of inquiry and that can be taught by ordinary teachers to ordinary students. It's necessary to revamp the basic courses and to gear the materials to the capacities of students of different abilities and in different grades. Obviously this is an enormous job that would take years to complete. But the new science courses have shown how much can be done with relatively small amounts of money when the best academic minds in the country work with curriculum specialists and classroom teachers. Given $100 million a year to spend on new courses, texts, films, and the like (a sum equal to one-half of 1 percent of total U.S. educational expenditures), Professor Zacharias believes he could work a revolution in the quality of U.S. education.

The growing emphasis on the pursuit of intellectual excellence does not mean, however, that the schools should concern themselves only with the high I.Q.'s. On the contrary, as the Rockefeller Report on Education argued, the idea of excellence embraces many kinds of achievement at many levels. And yet it is by no means clear just how much "intellectual discipline" can be taught to that large group of students who fall between "normal intelligence" (an I.Q. of 100) and mental retardation (an I.Q. of 75). These students make up 45 percent of the student body of the average comprehensive high school, and they tend to be apathetic or actively resistant when offered academic subjects. But these same students, Dean Fischer of Teachers College points out, are going to participate in the decisions made by political clubs, trade unions, and groups of all sorts, and they will need to grapple with the fundamental concepts of science and the humanities in the course of living their lives. "I can't see why these students can't deal with them in school," Fischer says. "We really haven't tried to do it yet; we've just brought them to the minimum of literacy." What's necessary, he says, is a good deal of experimentation to discover how and how much these students can be taught.

For the 50 percent or so of high school students who will not go to college in the sixties, some amount of vocational education is inevitable. But in a dynamic and fluid society it does no good to anyone—least of all to the students involved—to tie the vocational program to the specific present employment opportunities in each community, as Dr. James B. Conant suggested in his widely publicized but disappointing report on "The American High School Today." For employment opportunities change from year to year; industries move away or decline in importance and new ones spring up; specific skills and even whole occupations are automated out of existence and new ones created in their place. A program for the student who is not college bound should emphasize fundamental skills and fundamental ways of approaching problems, and leave much of the specific job training to industry. And industry has created a huge system of vocational education that did not exist when high school vocational programs were started. International Business Machine's annual educational outlays, for example, run to $45 million a year—almost as much as the budget of Columbia University.

It may even be true, as Thomas Bledsoe, executive director of the Council for Basic Education, has suggested, that a solid training in the skills of reading and writing is the best vocational training of all. Most complaints about secretaries, for instance, concern their spelling and grammar, not their typing and shorthand.

READING IN THE SLUMS

Interestingly, the emphasis on intellectual training may even be applicable to the most intransigent problem of all—that of educating the children of the big city slums. The problem chiefly concerns 10 or 12 big cities, though it is spreading, with industry itself, to a host of smaller towns and suburbs; it involves several million children. Coming from culturally deprived rural backgrounds, quite frequently with one or both parents missing, and moving about from sordid neighborhood to sordid neighborhood, these children usually appear uneducable. Their IQ scores are low—an average of 90 or less in New York City slum schools—their reading ability poor, and their attitude increasingly hostile as they are forced to stay in school until the legal age for quitting. (Then, when they do leave school, these youngsters turn out to be unemployable because of their illiteracy.) The largest number are Negroes recently moved from the South and, in New York, Puerto Ricans new to the mainland. But the Anglo-Saxon hillbillies and Ozark whites in Baltimore, Chicago, Detroit, Dayton, Columbus, and Cincinnati pose the same problem.

It seems that these children can be educated. New York City's board of education has shown that it is possible to salvage a large amount of hidden talent, to raise IQ scores by 30 or 40 points, to educate a large proportion of these children at least through the high school level, and to gain college admission for significant numbers. According to Daniel Schreiber, coordinator of the city's Higher Horizons program, it's necessary to do two things that lie far outside the school's normal operations. The school must persuade the children and their parents that education is useful, which means persuading them that education makes occupational mobility possible. And the school must give the children synthetically the experiences and cultural background that can be taken for granted in most schools. To do the first, the school needs a whole panoply of guidance counselors, psychologists, etc., to work during and after school hours with the children and their families. To do the second, the school must take the children on trips around the city, introducing them to air, grass, music, art, etc.

At first glance, the approach sounds like an extreme form of "life adjustment." It is, but with a crucial difference. All of the counseling and all of the trips are designed to develop an interest in the intellect, and specifically, to teach the children how to read. "Our basic approach is through reading," Schreiber explains; extra teachers are assigned to each school to help with remedial reading, and the counseling, trips, etc., are all used to stimulate an interest in reading. Unless a special effort is made, the slum-school children in the third grade read a half-year behind the city average. The gap widens rapidly—by eighth grade they average 2 years below the city level—and so the children are increasingly unable to cope with any subject. The results of Schreiber's program have been striking. After only 1 year of concentration on the third grade, the average retardation was cut from 6 months to just 1 month.

BREAKING THE LOCKSTEP

To give all students—slow, bright, and average—the education and training they need, to develop their intellectual capacities to the fullest, the schools will have to do more than revise the curriculum (though this is the starting point). They must also learn how to deal more effectively with individual differences among the students and among the teachers and how to utilize teachers in more efficient ways. On both scores, some notable progress is being made, adding up to a thorough reorganization of the classroom and of the school itself.

The most important change in school organization—though not the most dramatic—is the rapid spread of socalled homogenous grouping, i.e., grouping students within a given course or grade according to their intellectual ability and achievement. There has always been a tug of war in the American mind between appreciation of excellence and a fear that to admit the existence of differences was somehow undemocratic. This fear is rapidly dying down. According to Dr. Charles E. Bish, director of the National Education Association's Project on the Academically Talented Student, high schools enrolling approximately 80 percent of the student population have already established some sort of special program for the top 15 to 20 percent. Ability grouping is useful not just because it lets the brighter children learn more but also because it lets the school establish separate curriculums for different levels of understanding. It would be unfortunate if the schools in their new concern for the gifted were to neglect the needs of the average child, who can also reach much higher intellectual levels than has usually been assumed.

Ideally, schools should allow each student to go ahead in each subject as rapidly as he can. Where abolition of grades is combined with an emphasis on intellectual excellence, the result is extremely interesting. Perhaps the most stimulating high school in the United States is located in Melbourne, Fla., near Cape Canaveral. Melbourne High has completely abandoned grades. Each course is given on four levels—advanced college placement, accelerated, average, and remedial—and each student's admission to each course is determined solely by how much he knows; how much he knows is

measured by his score on an achievement test—not on an IQ test. Students thus may leapfrog the usual sequence of courses conceivably, a student could be taking calculus at the advanced college placement level and at the same time be put in a remedial English course in which reading is being taught at the fourth grade level. To accommodate students who move through the usual curriculum at a rapid pace, the school offers a large number of courses at the college level, for which college credit may be granted. It also offers a wider range of courses than most high schools—e.g., Chinese and Russian in addition to French, German, Spanish, and Latin. Melbourne High Principal B. Frank Brown has even substituted the motto "in search of intellectual excellence" for the school emblem (a bulldog) embossed on the pencils sold in the school's canteen. "It hasn't hurt the sale of pencils any," he says. Proximity to Cape Canaveral, in Brown's view, does not account for the plan's success; he claims that any high school anywhere in the country with a large enough student body—e.g., 1,200—can do the same thing.

AN IMMEMORIAL FUNCTION

In the end, if education is to be improved, Mortimer Smith, of the Council for Basic Education, has written, it must come through individual teachers "carrying on their immemorial function of stirring young minds to learn about, and think about, the history of man and his world."

It is an unpleasant fact that the public schools are not attracting as many very able individuals as they should. One reason is that a kind of cultural Gresham's law has been operating to drive out the better ones. To qualify for a teaching license in most States, students must take an inordinate number of dreary and trivial courses in "education" rather than in the subjects they will teach. And if the certification requirements are not enough to repel the intellectually able, the low academic standards of most teachers' colleges do.

On the other hand, Harvard, Chicago, and New York City's municipal colleges have shown that high academic standards can attract able undergraduates into teaching, and that education courses can be made meaningful. Columbia's Teachers' College, which has always accepted any college graduate, will henceforth require a minimum of a B average in undergraduate work. Teacher certification requirements are being revised radically in a good many States.

Raising standards isn't enough, of course; salaries must also be increased. After a decade and a half of pressure, the starting pay for public-school teachers has risen to quite respectable levels (a $4,400 average for metropolitan areas) compared to the starting pay for college graduates in other fields. But there is too low a salary ceiling thereafter. In metropolitan areas the statutory maximum averages only 60 percent above the minimum, and it probably averages less in smaller communities. Equally important, teaching is the only profession that neither recognizes nor rewards individual excellence; public schoolteachers with the same number of years of experience are generally paid the same salary, regardless of ability, interest, or initiative.

If the public schools are to attract and keep able people, they must develop a salary structure that encourages and rewards superior performance. The trend is clearly in that direction, despite continued though weakening opposition by teacher organizations and unions.[1] A growing number of communities—e.g., Summit, N.J., Ladue, Mo., and Evanston Township High School, Evanston, Ill.—have installed systems of merit pay. Other communities are giving teachers a chance to break out of the salary straightjacket by establishing the position of "master teacher," or by experimenting with team teaching. In the Franklin elementary school in Lexington, Mass., for example, the 20 teachers are divided into three teams, each handling two grades of roughly 175 children. Each team includes a team leader, responsible for curriculum, student grouping, etc.; one or more senior teachers, who hold the rank because of particular competence in one or more fields; and a number of garden-variety teachers. Team teaching offers greater flexibility in student grouping and permits elementary school teachers to specialize. But its principal virtue, in the eyes of the Harvard Graduate School of Education professors who designed and supervise the experiment, is that it establishes a career line that enables teachers to advance in status and salary without going into administration, or into some other line of work altogether.

THE FIRST SHIBBOLETH

No reconstruction of salary schedules, however, will fully solve the teacher shortage. There never can be enough truly gifted teachers; the qualities that make for greatness in teaching—like those that make for greatness in any field—are rare. And given the current ratio of students to teachers, the supply even of ordinarily competent teachers is almost bound to fall short of the demand. To take care of expanded enrollments and to replace teachers who leave to get married or take other jobs, between one-third and one-half of all students graduating from college in the next 10 years would have to go into public school teaching. It's wildly unrealistic to expect anything like that number to enter teaching; the current ratio is 20 to 25 percent.

It is clear that the schools must learn to utilize their teachers, especially their gifted teachers, more effectively than they do now. A search for improved methods of instruction and of school organization has in fact been going on around the country, in large part stimulated and financed by the Ford Foundation and its fund for the advancement of education.

"Because so much in education depends upon it," Dr. Alvin C. Eurich, vice president of the fund for the advancement of education, told the Governors of 50 States at their annual conference last June, "the first shibboleth that requires critical examination is the fixed teacher-student ratio" of 25 or 30 to 1.[2] Far from being the optimum, the usual class of 25 or 30 children now seems a very undesirable size; it is too large for active dialog and discussion, and unnecessarily small for the kind of learning that can be imparted through lectures or demonstrations. Thus, Dr. J. Lloyd Trump, who has been directing a major study on teacher utilization for the National Association of Secondary School Principals, recommends that students spend roughly 40 percent of their time in large group instruction (with classes of a hundred or more), 20 percent in small seminars of 10 to 15, and 40 percent in individual study (see diagram, p. 131). Whether abandoning the standard class size permits any increase in the overall ratio of students to teachers is not yet clear, but it does seem to be established that flexible class size raises the level of instruction, by using the best teachers to reach a maximum number of students, and by giving teachers more time for preparation.

EXPOSURE TO GREATNESS

Since students in a large class taught by a superior teacher will learn more than students in a small class taught by an inferior teacher, the Ford Foundation has been enthusiastically promoting the use of educational television as a means of exposing the maximum number of students to superior teaching. Whether TV or films (which serve the same purpose) will let schools increase the student-teacher ratio without reducing the quality of instruction remains to be seen; the evidence so far is ambiguous. But there is no question that their use can improve the quality of teaching; at the very least, TV and films make it possible for every student to have that exposure to greatness which Alfred North Whitehead thought was essential to the process of education.

Among other new devices are language laboratories employing tape recorders; these seem to improve students' verbal command of a foreign language, and they are rapidly becoming standard equipment in most high schools. A good deal more controversy surrounds the so-called teaching machine (see "Can People Be Taught Like Pigeons?" Fortune, October 1960). But enough experiments have been performed to indicate that with programed instruction, as its advocates prefer to call it, students learn some subjects faster and retain a remarkably high proportion of what they learn. Experience in Roanoke, Va.; suggests that the average student can learn math in half the time required by conventional methods. And when children who had taken algebra on machines last year were retested in February, they answered correctly 90 percent of the questions they had answered the preceding June. What's crucial in the use of teaching machines, of course, is not the machine itself but the way the material is organized for presentation. At the Collegiate School in New York, for example, teachers are using the machine programs without the machines.

The most important technological device of all is the printing press. "I think the biggest revolution in education will come from better use of books," says Dean Chase of Chicago, "not from television and teaching machines. We've never really taken advantage of the printing press." A growing number of educators share Chase's conviction that U.S. schools have not given students enough responsibility for their own education; the emphasis, Chase holds, should be on learning rather than teaching, with the latter used less to impart knowledge directly than to stimulate and direct learning. In the model school, as Chase sees it, the library would be the focal point, and students would devote a substantial part of the day to independent study.

There is a good deal of faddism, to be sure, behind the current experimentation with new techniques of teaching and school organization, and a certain amount of disillusionment among school-board members and parents may result when panaceas turn out to be only partial cures. The faddism, however, does not result from mere restlessness. Almost anything going on in the schools today either proceeds from or contributes to a reemphasis on the intellectual aims of education. And in their search for new ways to transmit knowledge, the schools are once again learning that there must be something to transmit. The principal payoff of the team-teaching experiment in Lexington, for example, has been to demonstrate the need for a thorough overhaul of the elementary curriculum. When the teaching teams met to discuss what they were teaching and why—the first time this had ever been done—they discovered that the curriculum was a "mishmash" of unrelated and frequently irrelevant detail. And in Washington County, Md., preparation of math and science programs for use over a closed-circuit TV net-

[1] The National Education Association favors merit pay in principle but opposes it in practice; the NEA doesn't even use the term, preferring "salary recognition of quality of service."

[2] The rule that class size should not exceed 25, Eurich discovered, goes back to the Babylonian Talmud, written in the third century, A.D.

work revealed that the old curriculum had been inordinately repetitious. As a result, School Superintendent William Brish eliminated the old eighth grade math course, thereby starting the high school sequence a year earlier, and he dropped the ninth grade general science course, moving biology up a year and adding advanced courses in physics and chemistry.

THE UPHILL PURSUIT

Although evidence appears on every side of a great tide of change that can carry the schools to a new standard of excellence, there is no assurance that this movement will succeed. Students, parents, teachers, administrators, school boards, and taxpayers will have to make millions of right decisions on the road to excellence, which is always uphill. There will be resistance from parents who prefer the easy way and from educators reluctant to try any new way. It's never easy for any group to abandon ideas and practices of long standing, and educators are perhaps more hidebound than most where their own work is concerned. But this Nation will be unable to hold its own in the hard and exciting years ahead unless the great change now beginning in public education comes to fruition. Community leaders throughout the United States have no graver responsibility and no more inspiring opportunity than to lend a hand in the remaking of American education.

The Courier-Journal and Times Best Daily Combination in United States

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1961

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article entitled "The Courier-Journal and Times Best Daily Combination in United States" which appeared in the May 8 issue of the Courier-Journal of Louisville, Ky.:

THE COURIER-JOURNAL AND TIMES BEST DAILY COMBINATION IN UNITED STATES

The Courier-Journal and the Louisville Times were rated the best pair of newspapers in America, morning and evening, published by the same organization, in a survey announced today by the Saturday Review.

And for the second time this year the Courier-Journal was rated among the 10 best individual newspapers in the Nation.

The voters in the poll were those who, according to the sponsor, should know newspapers best—the men and women who teach journalism in colleges and universities.

The survey was conducted by Benson & Benson, a professional polling organization in Princeton, N.J. Only professors in schools accredited by the American Council on Education for Journalism were questioned.

Three months ago, Edward Bernays, New York publicist, announced the result of a poll of newspaper publishers which for the third straight time rated the Courier-Journal in the top five newspapers.

ONLY FOUR COMBINATION PAPERS GET HIGH RATING

Out of 18 combinations of morning and evening papers jointly owned, the Saturday Review ranking was: the Courier-Journal and the Louisville Times, the Minneapolis Star and Tribune, the Des Moines Register and Tribune, the Baltimore Sun papers. No others received enough votes to be listed.

The poll gave this rating of the top 10 individual newspapers: New York Times, Christian Science Monitor, Wall Street Journal, St. Louis Post-Dispatch, Milwaukee Journal, Washington Post, New York Herald Tribune, the Courier-Journal, Chicago Tribune, Chicago Daily News.

The announcement said: "A Courier-Journal reader observed: 'When many papers are omitting and cutting down serious news, it rises above provincialism and sensationalism.' "Another (Courier-Journal) summary: 'Editorial page in its entirety—editorials, Editorial Notebook, letters to editor; columns (syndicated), including those of differing political hue; broad scope of foreign and national news; typographical makeup; sports page—among the best.' "

MANY CRITERIA MENTIONED IN RATING PAPERS

One breakdown showed which newspapers had received the most votes for "best."

"On this basis the St. Louis Post-Dispatch scored highest (86 percent); Milwaukee Journal and New York Times 83 percent each; Christian Science Monitor 80 percent; Washington Post 79 percent, and the Courier-Journal 74 percent.

"After this, scores fell off sharply."

John Tebbel, who wrote the analysis for the Saturday Review, said: "When this audience (journalism teachers in accredited schools) chooses the best newspapers in the Nation, one must attach more significance to the results than to a survey of nonprofessional readers who simply know what they like."

Many criteria were mentioned as valid in rating a newspaper as "best"—complete news, comprehensive treatment, 66 percent; unbiased, objective treatment of news, 47 percent; judgment in selection of news, 28 percent; layout, typography, 28 percent; good writing, style, 26 percent; accuracy, 25 percent.

J. R. Cominsky, publisher of the Saturday Review, said of the survey: "We are confident that this constructive study will be helpful to the American press in maintaining its high standards and better serving the needs of the community and of the Nation."

Castro's Prize

EXTENSION OF REMARKS
OF
HON. F. BRADFORD MORSE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. MORSE. Mr. Speaker, in a few, well-chosen words, my hometown newspaper, the Lowell Sun, comments on the irony of the peace prize awarded by the Kremlin to Fidel Castro—the irony both in the giving and the receiving. Under leave to extend my remarks, I include the editorial in the RECORD:

CASTRO'S PRIZE

The Soviet Government has awarded one of the Lenin peace prizes to Cuba's Castro, who was cited as "a public leader and statesman whose entire life is dedicated to the noble cause of the peoples for freedom and independence."

That's one way of puffing up the Cuban dictator who feels he has become a kingpin in the society of nations.

It is also another way of keeping him in line by strong appeal to his ego—of which he has plenty.

The citation, however, could have been written differently and more to the point. Rather than a peace prize, it should be a turmoil prize, if it is to fit Castro.

It should also be awarded because Castro has dedicated himself to totalitarianism and has become a stooge for Moscow. For such things it would be natural for the Soviets to pay him tribute.

Missile Program Sabotaged

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1961

Mr. UTT. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the San Diego Union, San Diego, Calif., of May 4, 1961, entitled "Strikes, Greed, and Graft." This editorial succinctly expresses the deplorable situation existing at our missile bases with regard to deliberate union strikes and slowdowns.

STRIKES, GREED, AND GRAFT: MISSILE PROGRAM SABOTAGED

America's missile program has been sabotaged on the launching pad by greed, graft, and confusion.

A parade of witnesses before a Senate investigating subcommittee have testified that strikes, slowdowns, and excessive overtime payments have endangered national security and put this country behind Russia in important phases of the space race.

The chief test officer for Convair-Astronautics charged that the Project Mercury man-in-space program has been delayed for several months because of labor troubles at Cape Canaveral.

Other witnesses have told these shocking and disgusting examples of waste and mismanagement:

There have been 327 strikes at 22 missile bases in 4½ years. Many of these were used as blackmail to force payment of exorbitant, needless overtime to workers.

Wildcat strikes and deliberate union slowdowns have cost the missile site programs 162,872 man-days since mid-1956. They have resulted in overtime wages as high as $1,000 weekly to some union craftsmen.

Ditchdiggers are getting fatter paychecks than U.S. astronauts. Plumbers are being paid more than the commanding general at Vandenberg Air Force Base.

One subcontractor, who was doing satisfactory work on a 40-hour week, was permitted to match another contractor's 53-hour week at a cost to the Government of $70,000.

The Air Force could have saved $3 million by having plugs attached to electric cords at the factory instead of letting workers do it at missile sites.

In his testimony, one electrical contractor charged that unions are doing more damage to the Nation's missile programs than the Communists ever could. Yet he insisted that none of the union sabotage was Communist inspired.

Greedy laborers and contractors who haven't the will to make them work are not the only reason for this tragic situation.

The Pentagon and its representatives at the missile sites must share the responsibility. So must Congress, which finally is facing up to the facts.

A typical attitude was expressed by the Army colonel who refused to intervene in

work stoppages at Cape Canaveral. The colonel said Congress has been prolabor since 1951 and that "all hell would break loose politically" if he tried to use military authority.

It is time for "all hell to break loose politically" on those who are obstructing our missile program. The national prestige and survival of the United States is dependent on a solution.

Perhaps Congress and the Defense Department should designate a single boss with responsibility for all missile base construction. Somebody must eliminate featherbedding on the firing pads.

The Survival of the Theater

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. LINDSAY. Mr. Speaker, Arthur Gelb, of the New York Times, has written an informative and necessary article summarizing a 105-page study, prepared by Dr. O. Glenn Saxon, professor of economics at Yale University, on "The Plight of the Living Theater in the United States."

The survival of the living theater is of vital concern to the Nation. In January I introduced H.R. 2043 to repeal the 10-percent admissions tax on live dramatic theater performances, including musicals.

Mr. Gelb's article on the Saxon report draws attention to an inescapable conclusion drawn by Dr. Saxon that the "only real and last chance of survival for the theater as a free, private, competitive enterprise depends on the elimination of the 5-percent city tax and the 10-percent Federal tax on tickets."

Mr. Gelb reports that the 1960 season has been described by Robert Whitehead, president of the League of New York Theaters, as "the most disastrous year on Broadway" even though it occurred during a period of relatively high prosperity.

Out of a total capital investment of over $8 million in 56 productions, over $4 million was last, more than half of the total investment—

Whitehead said:

The current 1961 season shapes up to be even more disastrous.

Under unanimous consent, I include in the RECORD at this point additional excerpts from the Gelb summary which clearly bespeaks the need for prompt hearings on my bill:

The report, according to Dr. Saxon, is an extension of a research study he made in 1953. The men declared that the theater's financial position was much worse today than it was 8 years ago. It was reported then that Broadway had taken a precipitous economic drop since its heyday in the twenties.

According to the report, 636 new commercial shows were produced on Broadway during the last 12 seasons, and of these, 470—or 74 percent—were flops and 166—or 26 percent—were financial hits.

The profits of the 166 hits, the report said, have amounted to $47,300,000 from all sources, a return of 236 percent on their combined capital investment of $19,964,000.

During the same period, the losses of the 470 failures amounted to $42,300,000; capital investments of flops are available only for the last 9 of the 12 seasons. During these nine seasons, the 334 failures suffered combined losses of $30,972,000, or 90.2 percent of their total capital investment of $34,300,000.

NUMBER OF THEATERS DROPS

The report also stressed Broadway's decline by noting that there were 66 playhouses in 1931 and only 33 in 1960 and that there were 264 productions in 1928 and only 57 in 1960.

Between 1930 and 1960, the report added, total Broadway attendance fell from 12,300,000 to 8,100,000, a decline of more than a third.

Meanwhile, Dr. Saxon pointed out, the population of the United States increase 46 percent and "the disposable personal income" rose 355 percent.

Other statistics showed that between 1944 and 1959 the average maximum box office price of dramas rose 105.5 percent while the price of musicals rose 77.1 percent.

"The Consumer Price Index between 1944 and 1959," the report emphasized, "rose only 65.9 percent. It appears, therefore, that theater ticket prices on Broadway have risen considerably more than the Consumer Price Index since the end of World War II."

The report noted that the theater like other profit-seeking industries in the country, "has been the victim of the cost-price squeeze since 1939."

"As a consequence," it said, "profits of the industry have been greatly reduced and a major and increasing percentage of each season's productions is forced to suspend because of operating losses or the imminent threat thereof."

The report said the United States and Norway stood alone as the only major nations that "have not experienced a rise in theater popularity and attendance since the end of World War II." Most of the foreign theaters are aided by government subsidy, the study noted.

"The American theater cherishes that competitive independence," it said. "It now seeks only to be left free to continue to earn and pay its own way—free from all governmental subsidies, free from all socialistic controls, but also free from all unfair and discriminatory taxation."

Following Dr. Saxon's earlier study the 20 percent Federal tax on tickets was reduced to 10 percent in 1954; the following year, however, New York City voted its own 5-percent tax.

Either for or Against

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 4, 1961

Mr. BOW. Mr. Speaker, Stark County, Ohio, my home county, has developed an active and alert civil defense staff which publishes an unusual and interesting newsletter edited by Mrs. Kay Nimon, deputy county director.

Under leave to extend my remarks, I offer Mrs. Nimon's excellent editorial from the May 20 Home Guardian:

EITHER FOR OR AGAINST

(By Kay Nimon)

There seems to be a new and spreading outburst of agitation against loyalty oaths to the U.S. Government and the Constitution. Last month the loyalty oath was discarded from the New York public school systems, to be replaced by an oral oath to be recited voluntarily at graduation exercises.

Why should the question arise as to whether we pledge loyalty to the United States? To be a mere citizen, who loves her country and all the freedom it gives us, there appears to be only one question: "Are you for or against the U.S. Government and the system of individual liberty maintained by this Government under its Constitution?"

Those of us who are for the United States should be proud to stand up in public and swear our loyalty. Those who refuse to give this pledge (unless for religious reasons) would seem to have other loyalties which come before the United States.

In these days when the world is divided into two groups, freedom and communism, and when the cold war makes the hot war danger very grace, there is no room in the United States for halfway people. You are either for American, with no limitations or reservations, and willing to stand up and be counted as a loyal American, or you are against America and may be counted as its enemy.

We have two loyalties that we must maintain—or lose them both—loyalty to our God and loyalty to our country.

You Can't Buy Friends

EXTENSION OF REMARKS
OF
HON. JAMES A. HALEY
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mr. HALEY. Mr. Speaker, under permission to extend my remarks, I wish to insert in the CONGRESSIONAL RECORD two editorials which appeared in the Sunday, April 23, 1961, issue of the Winter Haven News-Chief, which is published at Winter Haven, Fla.

The editorials entitled "You Can't Buy Friends" and "Now If We Get Blamed," emphasize the failure of our "checkbook" foreign policy and point to the fact that it has become imperative that we establish and follow a firm positive foreign policy.

The editorials follow:

YOU CAN'T BUY FRIENDS

Thirteen years ago that same editorial heading was used in this paper. We said then that our extensive foreign aid plan would never win friends or influence people. Thirteen years later with some $90 billion spent, we have failed to win friends or influence people. And yet we are planning more and more such nonsense, more and more billions and to top it off, a Peace Corps.

All over the world people are marching because a crafty foe, the Russian Communist, is telling Hitler-sized lies and people are believing that we are nothing but a bunch of dollar-worshiping imperialists. Even in our own country the Communists have enough power to mount demonstrations in New York, San Francisco, and even Washington.

Nehru, the Prime Minister of India, in his two-faced way of doing business will accept our dollars, our grain, our machinery and then turn right around and give a speech in

his parliament condemning us for the internal strife in Cuba. It's about time we stop trying to buy friends. It's about time that we get some commonsense in our heads and heed President Washington's admonition to stay out of foreign entanglements.

NOW IF WE GET BLAMED

If we are going to get blamed all over the world, it's about time that we show our tougher side. We have been all light and sweetness, have repeatedly turned the other cheek. Have taken insult after insult and tried to laugh it off. If we are going to be accused of being warmongers etc., let's try the other tack.

For instance, let's go into Cuba, regardless of the consequences, throw the communistic Castro government out, including thousands of Russians and Chinese, set up a provisional government, stabilize the situation and see what develops. Nothing will happen except instead of being loved or hated, we'll be respected.

The cries would soon change from Yankee no to Yankee si, fine fellow.

Dedicated to the Memory of Dr. Hugh Bennett

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1961

Mr. JENSEN. Mr. Speaker, under leave to extend my own remarks in the RECORD, I am pleased to include a letter—in part—to me from Mr. H. Wayne Pritchard, executive secretary of the Soil Conservation Society of America, Des Moines, Iowa. Also included is a copy of the resolution adopted by the Iowa Legislature commending the Soil Conservation Society of America, of which I am proud to be an honorary member, for selecting the great agricultural State of Iowa as its permanent home and honoring Dr. Hugh Bennett, the father of the Soil Conservation Service. Mr. Pritchard's letter refers to a new building which, when completed, will be the permanent home of the Soil Conservation Society of America and will be a beautifully and suitably designed building, located a few miles west of the city of Des Moines.

This building will be dedicated to the memory of "Big Hugh" as he was admirably called by millions of his admirers for his great and good work in conserving our priceless topsoil on which every American depends for his bountiful supply of good food and fiber.

The new home will be built with contributions from thousands of the American people who will, by their contributions, pay their respects to Dr. Hugh Bennett and make this home a reality. As reported by Mr. Pritchard $70,000 is still needed.

The above-mentioned letter follows:

MAY 4, 1961.

DEAR BEN: I wanted to bring you up to date on the society's housing situation. You will be interested to know that the House and Senate of the Iowa Legislature have passed a concurrent resolution commending the society for locating its building here in Iowa and I am sending you a copy of the Iowa State Senate Journal for Wednesday, April 12, that contains the resolution on page 812.

Considerable progress is being made as we have $30,000 of the necessary $100,000 on hand. We are getting a finance drive under way in the Des Moines area now and also the tempo is increasing throughout the society. I have just written to E. A. Norton giving him some additional information and asking him to pass it on to Mrs. Bennett.

I thought you would want to be brought up to date on this situation. Best personal regards.

Sincerely,

H. WAYNE PRITCHARD,
Executive Secretary,
The Soil Conservation Society of America.

SENATE CONCURRENT RESOLUTION 23
(By Schroeder)

Whereas within the boundaries of the State of Iowa lies a large part of the world's most fertile and productive soil—mankind's basic resource; and

Whereas the general assembly and the officials of the State of Iowa have supported with vigor the conservation of the soil and water resources of their State; and

Whereas the Soil Conservation Society of America is dedicated to advancing the science and art of good land use; and

Whereas the international headquarters offices of the Soil Conservation Society of America have been permanently established in Iowa and will serve the more than 10,700 members in every State of this Nation and in 84 other countries of the world; and

Whereas the Soil Conservation Society of America was founded by the late Dr. Hugh Hammond Bennett, whose efforts brought forth effective programs in soil conservation districts and by others, whereby the soil and water resources of the State of Iowa, the United States of America, and all countries on earth can be wisely husbanded, managed and developed for the everlasting benefits of man; and

Whereas the Soil Conservation Society of America is now building a permanent home within the borders of the State of Iowa, dedicated to the memory of Hugh Hammond Bennett: Now, therefore, be it

Resolved, That the General Assembly of the State of Iowa commend the Soil Conservation Society of America for selecting the great agricultural State of Iowa for its permanent home, that the General Assembly of the State of Iowa extend appreciation to the Iowa leaders who have assisted in bringing their international office to Iowa, and that the general assembly, through this action, call to the attention of all Iowa citizens this action, which will show the world that Iowa is proud of her soil and water resources and treasures them beyond value in her recognition of the need for careful husbandry of them.

What Do We Do, Mr. President?

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1961

Mr. DEROUNIAN. Mr. Speaker, here is a letter to the President from his supporter, the editor and publisher of Nassau County's Newsday. The date of the editorial is May 5:

AN OPEN LETTER

DEAR MR. PRESIDENT: In your great inaugural speech January 20, you called upon the citizens of the United States to bear the burden of a long twilight struggle, year in and year out. You reminded us that only a few generations have been granted the role of defending freedom in its hour of maximum dangers. And you said to us: "Ask not what your country can do for you—ask what you can do for your country."

These were words in the tradition of Winston Churchill when, in the hour of England's greatest danger, he offered its people only "blood, toil, sweat, and tears" if they wished to remain free of Nazi tyranny.

All of us wanted to respond to your call, although you did not spell out what the American people must do in order to measure up to the challenge. We have heard the same message from you again and again, most recently in Chicago the last weekend in April. At that time you said: "Our greatest adversary is not the Russians. It is our own unwillingness to do what must be done."

But still we do not know what it is that must be done, and how you as our elected leader want us to do it. The American people are willing to make any sacrifice to preserve this system of government and the freedom that is its warp and woof. What do we do? Where do we sacrifice?

We want to know so that we can let our readers know. For "If the trumpet give an uncertain sound, who shall prepare himself to the battle?" (I Corinthians 14: 8).

ALICIA PATTERSON,
Editor and Publisher.

New York City's Public Housing Program

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 4, 1961

Mr. MULTER. Mr. Speaker, the New York City Housing Authority is doing an excellent job in providing low-cost housing for the people of New York.

As of May 1, 1961, the housing authority had 93 developments in full operation and 5 new developments partially occupied. When fully occupied, these 98 developments will provide 114,829 apartments for approximately 460,000 persons. Under construction are 18 other developments containing 14,962 apartments. In the planning stage are 35 developments containing 20,539 more apartments and 3 developments containing 1,216 apartments are under study at this time.

When this program is completed, it will total 154 developments for 151,546 families whose incomes are too low to enable them to secure decent and adequate housing at present. These developments will house approximately 600,000 persons in comfortable, modern homes in beautiful environmental surroundings at rents which they can afford to pay.

The total of this investment of Federal, State, and city funds is nearly $2 billion—an investment in the future of America and hundreds of thousands of its citizens.

To afford our colleagues the opportunity to examine the details of this program, I have appended a press release of the New York City Housing Authority dated April 25, 1961, and an editorial from the New York Journal American of April 29, 1961:

PRESS RELEASE OF THE NEW YORK CITY HOUSING AUTHORITY, APRIL 25, 1961

In filing building plans for six new public housing developments with Building Commissioner Peter J. Reidy, New York City Housing Authority Chairman William Reid today, April 25, 1961, said: "This represents the largest number of building plans ever filed at one time in the 26-year history of public housing in New York City."

"This unprecedented activity is in keeping with the directive of President Kennedy and Mayor Wagner to step-up the public housing building program in New York City," Mr. Reid added.

By the end of the year a total of 16 building plans are expected to be filed—another all-time high in the history of the New York City Housing Authority.

Plans for the 6 low-rent developments filed today will provide 4,739 apartments for an estimated population of 18,000 persons. Development costs are expected to total $83,200,000.

This will provide employment in the various construction trades for about 3,300 workers over a 2-year period. This will be the equivalent of approximately 1,220,000 man-days of work.

The six developments are: Tompkins houses, Brooklyn (federally aided), Jonathan Williams houses, Brooklyn (State aided), John Purroy Mitchell houses, Bronx (federally aided), Chelsea houses, Manhattan (State aided), Gerard Swope houses, Manhattan (federally aided), and Richmond Terrace houses, Staten Island (federally aided).

BROOKLYN

Tompkins houses: A $17,185,000 federally aided development to be set on 11.98 acres bounded by Park, Myrtle, Tompkins, and Throop Avenues. Will consist of eight buildings (four 8-story and four 16-story), with 1,046 apartments (90 reserved for elderly tenants); estimated population, 4,5111. Construction is scheduled to start in August. Architects: Unger & Unger. Facilities include five-room children's center and a small community center.

Jonathan Williams houses: A $10,855,000 State-aided development. Will be erected on 5.28 acres, bounded by Roebling Street, Division Avenue, Marcy Avenue, and Broadway. To consist of five buildings (two 14-story, three 21-story), with 577 apartments (59 reserved for the elderly). Estimated population, 2,129. Construction is scheduled for September. Architects: Eggers Higgins.

BRONX

John Purroy Mitchel houses: A $28,175,000 federally aided development to be built on 15.6 acres bounded by Lincoln and Willis Avenues, and East 135th and East 138th Streets. Will consist of nine 20-story buildings; 1,567 apartments, 270 of which will be reserved for the elderly, with an estimated population of 6,250. Construction is scheduled for early next year. Architects: Greenberg & Ames.

MANHATTAN

Chelsea houses: An $8,390,000 State-aided development to be set on 1.93 acres, bounded by Ninth Avenue, the John L. Elliott Houses, and West 25th and 26th Streets. Will consist of two 21-story buildings; 424 apartments (60 reserved for elderly), with an estimated population of 1,525. Construction is scheduled to start in September. Architects: Paul L. Wood & Associates. Community center to be operated by Hudson Guild, which also operates the Elliott Houses Center.

Gerard Swope houses: A $9,970,000 federally aided development to be set on a 3.52-acre site, bounded by East 93d and 95th Streets, First Avenue and Franklin D. Roosevelt Drive. Will consist of three 24-story buildings, containing 636 apartments, including 282 for the elderly. Estimated population has been set at 1,757. Construction is scheduled for November. Architects: Frederick G. Frost, Jr. & Associates. Plans provide for a large community center including meeting rooms, craft rooms, cafeteria, and health center.

STATEN ISLAND

Richmond Terrace houses: An $8,627,000 federally aided project to be erected on 10½ acres bounded by Richmond Terrace, Westervelt Avenue, Cleveland Street, Crescent Avenue, and Jersey Street. The project will consist of six 8-story buildings, and will provide 489 apartments, including 65 reserved for the elderly. Estimated population, 1,800. Construction is scheduled to begin in October. Architects: LaPierre Litchfield & Partners. Among the project's features are several play areas and a large community center including an auditorium, recreational facilities, and two meeting rooms for elderly tenants.

[From the New York Journal American, Apr. 29, 1961]

MORE HOUSING

We commend William Reid, chairman of the New York City Housing Authority, and his associates for the promptness with which they have moved to comply with President Kennedy's urging to speed up housing construction as an aid to the economy.

The plans for six new housing developments which Mr. Reid filed with the buildings department represent the biggest group of such projects this city ever scheduled at one time in the 26-year history of public housing.

The 6 new developments will cost $83,200,000 and provide 4,739 low-rent apartments for an estimated 18,000 persons. One feature we like is that each of the projects has a group of apartments specifically earmarked for the elderly.

From the economic standpoint, Mr. Reid points out that construction of these buildings will provide 3,300 jobs over a 2-year period. And he promises that by the end of the year the authority will have a total of 16 new projects in the works, and alltime high.

If the Federal Government speeds funds for this housing as the President promised, this is good for New York and for the Nation.

But much as we need low-rent housing, we need apartments for middle-income families even more. This city cannot exist as a community of the very rich and the very poor.

With the Federal Government anxious to speed funds for urban renewal, let's take advantage of this opportunity to provide more middle-income housing.

They Keep on Pushing

EXTENSION OF REMARKS

OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1961

Mr. HARVEY of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial published in the Shelbyville (Ind.) News, of April 8, 1961:

THEY KEEP ON PUSHING

A great many people in America who are in a position to know, have warned repeatedly that Communist infiltration in the United States is increasing. They continue to warn that there are more Communist spies in the world today than ever before. Yet many Americans who are loyal to our country continue to be used by the Red conspiracy.

We can be quite sure that this conspiracy has given its full support to efforts to cripple the House Committee on Un-American Activities and the Senate Internal Security Subcommittee. These are the only two congressional groups which constantly expose to public view the conspiracy's operations within the United States. Thus they are a principal target.

These two committees have performed an especially valuable service in turning the spotlight on Communist agitation among young Americans. The danger to our young people is very real. Some of them on the west coast were led—or misled—into rioting against a hearing of the House Committee in San Francisco last May. Riot charges against the demonstrators were dismissed by a local judge for what he called practical reasons, but he has made it clear since then that his action did not mean he condoned what happened in San Francisco.

The judge said: "I very definitely agree with the view of FBI Director Hoover that the city hall riot on May 13 was instigated by Communist subversives."

Unfortunately, some Americans pooh-pooh the menace of communism within our own country, pointing out that it is simply a belief or the dogma of a political party which happens to differ with our two big political parties. That idea is both naive and dangerous.

Communism is a worldwide conspiracy against human freedom and the dignity of man. The members of this conspiracy in the United States constitute a deadly danger to our future. To dismiss lightly the existence of the subversive threat to the United States is to deliberately commit national suicide.

We must face honestly the gravity of the situation. We must give it top priority in our thinking and in our actions.

If you were a member of a conspiracy set upon destroying America from within, what plan of action would you follow?

The most obvious answer in view of the nature of the problem, would be first of all to lull the people, the lawmakers, and the courts of this country into the belief that there is no serious subversive threat to freedom in our Nation and therefore no cause for worry or concern.

Patriotic Americans must not be deceived. They must remember that the attack on freedom takes many guises. It is well for us to give our attention to some of the things that happen when personal rights come into conflict with what some would tell us is the public welfare. When individual freedom is lost to any man, the freedom of all men is threatened.

How can we help to maintain freedom in America?

First of all, we must march straight down the road of personal enterprise. We must have faith in a man's reliance upon himself. If we fall victim to the Federal Government's free this and free that, we cannot escape weakening ourselves in character, and the only end is serfdom.

It is not too late to save freedom if patriotic Americans will act with knowledge, with decisiveness, with firmness. There is work for all men and women who love freedom and who feel a deep-seated loyalty to America and all that America means.

Never forget that the Communist conspiracy is on the job constantly. We who want to keep our traditional freedom must be no less diligent. Our freedom is at stake. Western civilization is at stake. Our Christian way of life itself is at stake.

Nehru's "Thank You" for Massive U.S. Aid

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mr. ALGER. Mr. Speaker, it is reliably reported to me that the following statement are the words of Mr. Nehru, the Prime Minister of India.

It is true he is entitled to his view but that is all he is entitled to. We, of course, are entitled to our view and it is high time we let the world know that we intend that our view will prevail.

It is high time we stopped worrying about a public image based on trying to buy friends and giving ourselves away to build others.

Here, of course, is Mr. Nehru's thank you after receiving billions of dollars of aid from the United States.

It is high time for us to adopt and follow a policy solely in U.S. self-interest with no apologies and no "with your permission" of our world neighbors. As the leader of the free world there comes a time to be the leader, not the follower. To lead we must set the policy, not dance to someone else's tune.

Now let us set the policy of restating and backing up the Monroe Doctrine and let others fall in line behind us. Let us reassure others following our leadership that we will protect them if they are with us. Then let us get out of those areas of the world where we are not prepared to back up tough talk by tough action.

Here now is the thanks we get from Mr. Nehru:

NEHRU'S "THANK YOU" FOR MASSIVE U.S. AID

Speaking in the Rjya Sabha, i.e., the Upper House of Parliament of India, on April 20, Mr. Nehru, the Prime Minister of India, said:

"News is scanty, but some facts are clear and one of these is that some kind of invasion of Cuba from outside has taken place and that invasion could only have taken place from American mainland. We feel that this invasion and manner in which it has taken place is bad and is dangerous.

"It was fairly well known that Cuban exiles had been collecting in various places in Florida and possibly in Guatemala and elsewhere and training there and supplied arms and encouraged to go and invade Cuba. And now this invasion has taken place. It does appear to be a case of intervention. I say so because in a recent statement issued by President Kennedy he had stated very clearly that he will not permit American armed intervention in Cuba on any account. That statement is to be welcomed. But I find it a little difficult to understand the major difference between that type of intervention and intervention like encouraging and supplying arms and training to Cuban exiles to go over there and invade."

The American Field Service Program

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mr. BOLLING. Mr. Speaker, the following fine speech was given by Mrs. William R. Brown, of Kansas City, Mo., chairman, American Field Service, Greater Kansas City area, at a rally for American Field Service Day in Kansas City, Friday, April 14, 1961. I hope it will be the inspiration it should be to all who read it:

This program will be broadcast in September from Recife, Brazil. Maria Xavier has a contract for one-half hour every day on the air when she returns home and she will use some of this time to tell about Kansas City.

In Athens, Greece, today a surgeon is operating and when he goes home tonight he will eagerly ask, "Is there a letter from Nicos in Kansas City?"

There's a grandmother in East Germany behind the Iron Curtain who thinks of her granddaughter, Gina, in Kansas City who made the National Honor Society.

On a farm outside Tokyo a mother who is a Christian bows her head to bless America and the home in Kansas City where her son, Hidetaka, is living.

In Norway two parents are talking and because they are deaf they speak with their hands. "How fine that our daughter, Mary, can help teach the deaf children at Troost School in Kansas City."

And tonight a father may have worked late in his shop in Udine, Italy. Shelves around him are stacked with beautiful Italian silks from which he makes the finest men's ties. He may be wondering how he can get enough money to give his son a college education. You have heard that son, Italo, speak tonight.

Add to all these families ones in Indonesia, Costa Rica, Sweden, Denmark, Holland, France, England, Argentina.

Add to these the families our Kansas City young people lived with this year in Japan, Finland, Belgium, Holland, Sweden, Germany, Brazil, etc.

Add to these the 2,000 families all over the world who have sons and daughters at this moment living in American homes, going to our high schools—experiencing our free way of life and telling us of their countries—broadening our understanding and knowledge.

Add to this the 975 homes all over the world where our best American young people lived last summer—with sacrifice. This is the American Field Service program—not projects or plans, but people. This is our audience.

The future? Why this program especially? Three reasons for American Field Service.

1. Carefully selected young people whose ideology is not solidified—clear eyed—open-minded—idealistic about the future.

2. They live in our free way of life and do not look at it from the isolation of a college campus or a tourist bus. This becomes not only an intellectual experience but an emotional one which will give dynamics to their future attitudes.

3. They have more time and opportunity when they return to their own families and countries to influence them.

We of the free world have run interference for the Communists who have proceeded to exploit and direct the hopes we raised but did not fulfill.

To all you young people, I say freedom is not something you inherit—a free deal—each generation has to reearn it and fight for it. This is the heroism of peace which is greater than the heroism of war.

A wind of change is blowing over the continent of Africa. A forest fire of revolution is ravaging the black continent devouring the cobweb and dry weed of imperialism to the last straw. We have the chance of burning the rubbish heap of our colonial and corrupt traditions and of clearing the field for a new society and a new way of life. Thanks to the Russian October Revolution which hatched the greatest single anticolonial force in the world. Thanks to the rise of China. Thanks to the struggle of Jomo Kenyata.

To the young men of Africa, at least, the sons of Washington and Jeffrson are no longer the vanguard of the forces of liberation.

This is an interesting figure: The United States spends $70 million a year to support the United Nations. New York City spends $140 million a year—twice as much—to collect its garbage.

WHAT OF THE FUTURE?

Not many of us in this room can directly do much about missiles, Hydrogen bombs, or Astronauts shot into space except with our taxes to pay for them. By tomorrow night at midnight about 45¢ of each of your tax dollars will go for armaments. Has history shown this to be the answer? The A.F.S. started in the war to end all wars. Did it work? How about investing in peace? This program needs money to increase the number of students and to carry on an important alumni program all over the world, especially in undecided areas. Not many of us can directly do much about the Pentagon but you could offer to share your home. We need homes for our increasing program.

Of him who hath, much shall be required.

Never has our land been invaded by war. How blest we have been in America. Mr. Galatti has been asked by the State Department to double our program in 3 years. What of the future? Well—

Where is the Secretary General of the United Nations in 1980 coming from? A Danish student who was in Kansas City in 1959?

Who will be the Prime Minister of the Congo, Nigeria, Guinea? Who will represent Japan, Pakistan, Indonesia in SEATO? Whose voice of leadership will be raised in Iceland, Turkey, Costa Rica, Argentina?

Will the top young people of the world from 16 to 18 years of age accept the easy-to-get scholarships to Moscow or will they, through American Field Service and other groups, come to America which still is the land of the free and the home of the brave?

The best way to export an idea is to wrap it up in a person. Our American outstanding young people who will be our leaders of 1980 will bring experience and understanding to their responsibilities—not bigoted superiority and the use protection of the clique it (war) can't happen here. They know it can happen in Kansas City as easily as Hiroshima.

What can we do? Here's a handle behind which to throw the stubborn ounces of our strength.

Perhaps, at last, we are driven by fear of annihilation—confronted by the witness of history that power does not bring peace—that the way of a Dr. Thomas Dooley, an Albert Schweitzer, a Gandhi, a Ralph Bunche, or a Stephen Galatti does get the job done, we now have the full support of our administration in Washington. This is the New Frontier.

Or is this a New Frontier? Over 1,900 years ago Jesus taught that "love is the greatest force on earth." He brought the good news, "Peace on earth, good will to all men."

The future? Yes, I believe there will be a peace if we build it with knowledge, sacrifice, good sense, understanding, and heroism, and ask God to give us love.

There will be peace and may that peace begin with me.

Good-Will Ship Rewarding

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mr. HORAN. Mr. Speaker, under leave to extend my remarks, I wish to include a copy of a newspaper article which appeared in a recent edition of the Spokesman-Review newspaper, Spokane, Wash.

I am certain my colleagues share with me the feeling of pride and humility for the many members of the medical and dental profession who are serving on the SS *Hope*, the former Navy hospital ship currently sailing on a privately sponsored good-will trip to underdeveloped nations. I am particularly proud to learn of the activities of one of my constituents, Dr. Stanley E. Mayall, D.D.S., and his service aboard the SS *Hope*. His participation in this venture is another manifestation of the dedication of our American medical personnel who serve with *Hope* in their unselfish desire to help those less fortunate to help themselves.

GOOD-WILL SHIP REWARDING

"This is a wonderful experience and what a terrific opportunity to learn as well as to teach. One sees more in a day out here than in a lifetime at home, medically and dentally speaking.

So wrote Dr. Stanley E. Mayall, Spokane dentist, on March 9 from Djakarta, Indonesia, where he was waiting to join the staff of the S.S. *Hope* in Far East waters. The former Navy hospital ship is on a privately sponsored year's cruise—and good-will trip—to underdeveloped nations.

"It would be utterly impossible to put it all (his experiences) down in writing," Dr. Mayall wrote. "In the United States there is 1 dentist per 1,000 population, while out here there is 1 for each 270,000 * * * so you can imagine the very great need for help and encouragement—and the people are so very grateful for anything you can do."

When the Spokane native arrived in Djakarta, where he was slated to board the *Hope*, he discovered the vessel was 2,000 miles away—at Kupang, Timor, Eastern Masatenggara. Earlier it had been anchored at Ambon Island. During a 1-month stay there, according to a Djakarta newspaper clipping from Dr. Mayall received here yesterday, 20 operations were performed and 1,800 outpatients were treated. Of the latter number 500 were dental patients, it was said.

VOLUNTEERED AID

Arriving on the same plane from the United States with Dr. Mayall were two X-ray technicians from California and an eye surgeon from Illinois. The foursome, upon learning there was a dental school on Bali, volunteered their services there until they obtained transportation to the *Hope* in Kupang Harbor.

"It would be a wonderful thing if * * * you could encourage qualified ethical men to offer their services for a 4-month tour of duty (aboard the *Hope*). And even though they receive no salary, their spiritual and mental rewards would pay them one hundred times over. If you hear of anyone interested, they should contact the Hope office in Washington, D.C.," the letter continued.

Dr. Mayall indicated he would be replaced (as one of two dentists aboard the *Hope*) in September. His main work with the *Hope* will be to teach modern dental techniques to medical men and laymen of the region. Dr. Mayall's offices at W-904 Bishop Court are being maintained by his associate, Dr. M. Allen Peery.

How Important Is the Individual in America?

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mr. UTT. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I wish to include the winning essay of the Orange Council No. 4922, Knights of Columbus 1961 Essay Contest, written by Mary Anne Bogucki, a senior at Orange High School, Orange, Calif. The essay is entitled "How Important Is the Individual in America?" I believe this essay is indicative of the true Americanism to be found in our youth of today, who will hold the fate of our Nation in their hands tomorrow:

HOW IMPORTANT IS THE INDIVIDUAL IN AMERICA?

Without the individual, there could not or would not be an America. Our whole society is based on the rights and privileges of the individual. Our Constitution's main purpose is to provide a form of government which will protect the individual.

Since the individual is so important in this country, each one must do his part, however small, to keep America strong and active. There is an old saying which says that "a chain is only as strong as its weakest link." If one link begins to corrode and rust, it will eventually break off and the chain will no longer be whole. In a way, one can compare America with a chain, each link representing a segment of our society. As with the chain, this country cannot last or remain whole and strong if corruption begins to tear away at its vitals, and finally, destroy its unity. The whole of anything cannot be good unless each individual part is not equally good. Here, again, we come right back to the inidividual. He must be strong if our country is to be strong. He must have a sincere desire to serve if he expects his country is to serve him. He must remain free from corruption if his country is to remain free from corruption. He must have loyalty and patriotism if he wants his country to stand tall in the eyes of the world.

The individual has been the glorious past, continues to be the triumphant present, and is the hopeful future of this great land. Her very life and existence depends on how much each individual loves her and wishes to protect her. As with the chain, each person must strive to keep his link strong if the whole is to remain strong. Yes, the individual is not merely important in America—he is America.

Public Law 78, a National Disgrace

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1961

Mr. COHELAN. Mr. Speaker, tomorrow the House is scheduled to consider the bill reported by the Committee on Agriculture which would extend the program of importing Mexican farm laborers—Public Law 78—for another 2 years.

Mr. Speaker, the May Newsletter of the National Advisory Committee on Farm Labor has pointed out the shameful fact that at the present time American farmworkers can expect to earn less than $900 a year from farm employment; that they can expect to be out of work and without unemployment compensation about half the year. This condition is a disgrace to a country such as ours which prides itself on its affluence and high standard of living; it is a disgraceful condition which will continue to plague us so long as a few, large farm employers are allowed their present access to an unlimited supply of low-cost imported labor from Mexico.

Mr. Speaker, I urge my colleagues to read this newsletter carefully before the House meets tomorrow, and I trust that we will be able to deal effectively with the searching questions which it raises:

PUBLIC LAW 78

This information letter is devoted entirely to the Mexican farm labor program and Public Law 78 which authorizes it. Because House action on H.R. 2010, which would extend Public Law 78 without any reforms, seems imminent, we are concentrating on the importation program and the proposed reforms contained in H.R. 6032.

This reflects our belief that reform of the Mexican Farm Labor Program is essential to achieving any real improvements in the conditions of American farm workers. So long as farm employers can hire all the contract labor they want, at whatever price they choose to pay, so long as Public Law 78 does not contain any effective safeguards to protect the wages and job priorities of domestic workers, American farm workers will remain underpaid and underemployed.

Public Law 78 was enacted in 1951 to provide temporary supplemental Mexican labor to work in unskilled agricultural jobs on essential crops. It was proposed as an emergency measure to meet a labor shortage during the Korean conflict. Although the program was not intended to displace domestic workers nor to depress their wages, these results have occurred because the clauses supposed to protect American workers are at present ambiguous and ineffectual. In recent years, over 400,000 Mexican contract workers or braceros have been imported annually. Last year, the number dropped to 315,000. A major decline took place in California where the AWOC cam-

paign had pushed wages up to a level that attracted far more domestic workers than had sought farm jobs in recent years. Despite this decline, the U.S. Department of Labor again found that—

"In some areas entire crop activities were dominated by foreign nationals. At the peak of the season, approximately 95 percent of the melon harvesters in the Yuma area of Arizona and of the cotton harvesters in the Trans Pecos area of Texas were foreign workers. About 9 out of 10 workers in the California lettuce harvest, in the tomato harvest of California's Sacramento and San Joaquin Valleys, and in the New Mexico cotton harvest were Mexican. Three-fourths of those employed at the peak of Michigan's pickle harvest were foreign workers."

About 95 percent of the imported labor force is employed in just 7 States. Less than 2 percent of the Nation's farmers employ braceros. These farmers are typically large-scale operators or corporation farmers and their use of low-cost contract labor gives then a considerable advantage over family farmers with whom they compete.

REFORM OF THE MEXICAN FARM LABOR PROGRAM

Major reforms of the Mexican farm labor program are contained in H.R. 6032, introduced by Representative MERWIN COAD. The bill incorporates the proposals of the Kennedy administration to check the restrictive effects of the program on the wages and employment opportunities of domestic workers. In brief, the reforms would require that wages in bracero-using areas keep pace with farm wages generally and that domestic farm workers are offered conditions comparable to those guaranteed Mexican contract workers.

Representative COAD was one of the minority members of the House Agriculture Subcommitee who last year issued a blistering attack on Public Law 78. Their minority report stated in part:

"Public Law 78 is a major factor in creating the extremely low income and the great underemployment of American farm workers. It not only helps to prevent wages and working conditions from improving but in many areas it actually makes them worse. The Mexican farm labor importation program quite simply exploits the poverty among Mexicans to increase poverty among farm workers in the United States * * *. It provides corporation farms with a means of competing unfairly with the family farm."

Supporters of the Coad bill face an uphill fight. Despite widespread criticism of Public Law 78, the small percentage of growers who hire braceros have so far been successful in their efforts to continue the importation without any reforms. The House Agriculture Committee, traditionally more sympathetic to growers than to farm workers, has already approved H.R. 2010, which would extend the present program with no reforms, for another 2 years. The House may act on Public Law 78 at any time.

PROPOSED AMENDMENTS

The Coad bill contains the following provisions:

1. Eligibility to employ Mexican workers would be limited to employers who attempt to recruit U.S. workers by offering them wages at least equal to average farm wages in the State or the Nation, whichever is lower. Employers would not be required to raise their wage offers by more than 10 cents per hour in any 1 year.

Comments: Farm wages in bracero-using areas have lagged materially behind farm wages generally. In many cases, wages have actually declined in these areas. The only visible solution, if the program is to be continued, is to assure that the availability of Mexican labor is made dependent upon upward wage adjustments of the type to be expected in a labor shortage market.

2. Eligibility to employ bracero labor would be restricted to employers making reasonable efforts to attract domestic workers by offering—and actually providing—terms and conditions of employment roughly comparable to those offered imported workers.

Comments: The contract governing the employment of braceros guarantees them many benefits that, with few exceptions, domestics do not enjoy. These include: workmen's compensation, occupation insurance, free housing and transportation, minimum work guarantees, written contracts and grievance procedures, and subsistence when work is not available.

3. Imported Mexican workers would be confined to employment in seasonal and temporary jobs and to work not involving the operation of machinery, except in "hardship cases" certified by the Secretary of Labor.

Comments: Tens of thousands of braceros have been hired in skilled jobs and on a year-round basis, contradicting the original intention behind the Act.

4. The Secretary of Labor would be authorized to limit the number of foreign workers who could be employed by any one farmer to the extent necessary to assure active competition for domestic farm labor.

5. If amended in these respects, Public Law 78 would be extended for 2 years, terminating December 31, 1963.

PUBLIC LAW 78 AND INDUSTRIALIZED FARMING

In major bracero-using areas the importation program plays a crucial role in the overall farm-labor situation. The small percentage of farmers who hire braceros are typically large-scale operators. Their position vis-a-vis both farmworkers and family farmers is strengthened by their reliance on low-cost imported workers. A close examination of a particular case, the Imperial Valley, is instructive.

California's Imperial Valley is one of the richest and most productive farming areas in the world. With a growing season that lasts the year around and with rich irrigated soil, growers in the county dominate the Nation's production of winter lettuce and carrots, spring melons, and several other crops. In 1959, the average farm in the valley was valued at $205,000 with estimated sales of $100,000, about four times the statewide average. Value of the winter lettuce crop, which has just been harvested, was estimated at $20 million. Just 16 of the 112 lettuce farms in the valley accounted for two-thirds of the 40,000 acres of lettuce and hired most of the workers. As of the end of January, the smallest of the truck farms had some 700 acres of lettuce under cultivation. Many of the big growers are also packers and shippers, thus eliminating (and enjoying the profits of) the middlemen with whom most farmers must do business.

Once the Imperial Valley provided employment for thousands of domestic farmworkers, but now most of the work is done by Mexican nationals. Unable to compete with the braceros, an estimated 7,000 to 8,000 American farmworkers, plus their families, have left the area altogether in the past 10 years. The decline in the domestic payroll has had predictable results. According to one count, about 250 stores have closed for lack of sales, a dozen big chainstores among them.

DISPLACEMENT OF AMERICAN WORKERS

The recent attempt to organize workers in the winter lettuce harvest was handicapped by the fact that at the start of the season close to 9,000 of the 11,000 lettuce workers were Mexican contract workers. Hundreds of domestics in the valley were unable to find jobs, or were laid off and replaced by braceros. A letter appearing in the Brawley News, a valley newspaper, on March 1, 1961, bears this out. Written by a farm-labor contractor and signed by the 35 members of his crew, all citizens born in Imperial Valley, it told how they lost their jobs to braceros. The letter states in part: "Last week the men and women were employed on one particular field by a farmer near Holtville and were promised work on an additional field by the same company. However, they were laid off, and subsequently it was discovered that the work was being done by braceros."

Another instance of displacement by braceros, involving 125 domestics working on the Danenberg ranch—one of the 20 struck by the unions—was reported by two crew leaders on March 27, 1961. On that day, both crews were laid off and work was resumed with Mexican nationals.

THE PREFERENCE FOR BRACEROS

There are many reasons why these large growers prefer bracero labor, and the fact that they can be hired for comparatively low wages—between the advent of bracero labor and this past lettuce harvest, average wages in the Imperial Valley were frozen at 70 cents an hour—is only part of the story. By hiring braceros, growers think that they have solved their labor problems. Like indentured workers, braceros are bound to one employer or to one association of farmers. If they are dissatisfied with their wages or conditions, they are not free to seek employment elsewhere. They may complain, but those who do are often deported and blacklisted for future employment in this country. Even the complaints or requests registered by their own Government are often ignored, as the recent inability of the Mexican Government to remove braceros from struck farms demonstrates.

WHAT PRODUCES LABOR SHORTAGES

The availability of domestic labor depends greatly on proffered wages. Extremely low wages will create a labor shortage because local workers will migrate in search of better pay. On the other hand wage hikes will attract workers, just as happened in California last year. In 1960, about 100,000 braceros were brought into Texas. About the same number of Texas citizens left their homes to look for farm employment in areas which were not dominated by braceros and where wages were significantly higher. A recent study on the effects of Public Law 78 in Texas showed consistent positive correlations between the numbers of braceros, low wage levels, and the origins of domestic migrants. Wages were lowest in heavy bracero-using areas, and in some cases declined from their 1951 levels. These same areas produced the greatest number of Texas migrants.

Labor shortages are sometimes the result of a lack of housing suitable for domestic migrants. Instead of family-type dwellings, many farm employers offer only barracks for single men. In 1951, 82 percent of farm housing in California was designed for family groups; in 1960, only 26 percent of the housing was suitable for family dwelling. Last summer, a spokesman for the Agricultural Workers Organizing Committee told the U.S. Senate Subcommittee on Migratory Labor that:

"A family wishing to work in apples, berries, beans, or other crops in Santa Cruz County will find no family facilities whatever. The same is true in horticultural and agricultural work in San Mateo County. Family housing is no longer to be found in Santa Clara County, even in the prune harvest which is probably the State's largest user of migratory family labor. There is no family housing in the Lake County pear harvest, the Mendocino hop harvest, the Napa County grape harvest, or the Sonoma County apple harvest. There is no family housing to be had in San Joaquin County, with its immense tomato, grape, and other harvests; none in Stanislaus County, with its rich peach, almond, and walnut harvests; none in

any of the harvests of Sacramento, Solano, Yolo, Alameda, or Contra Costa Counties. All of these areas and all of these crops are heavy users of bracero labor."

CONCLUSION

Hired farmworkers can expect to earn less than $900 a year from farm employment. They can expect to be out of work, without unemployment compensation, about half the year. Growers are supposed to make positive efforts to attract domestic workers before they are eligible for Mexican contract labor. The record shows that many do not. Present provisions of Public Law 78 are not sufficient to insure that they do. Unless reforms, such as those proposed in H.R. 6032, are enacted, the hypothetical priority of employment for domestic workers will continue to be mocked in practice. Low wages, underemployment, and substandard conditions of work and life will continue to plague domestic farmworkers so long as farm employers are allowed their present access to an unlimited supply of low-cost imported labor.

Back-Door Spending Is Fiscal Insanity

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. PELLY. Mr. Speaker, it is only through editorials such as recently appeared in the Washington Daily News that the public can learn of the evils of funding Government programs without control or scrutiny of the Congress.

I count on public opinion when the facts about this device called back-door spending are fully understood to bring about a change so that the Congress again will exercise its constitutional responsibility over Federal expenditures.

The editorial referred to reads as follows:

SWING THE DOOR OPEN

Early in this session of Congress, there was a strong movement started in the House to stop the back-door spending method of financing Government do-good projects.

This is a system, invented in the thirties, which permits Federal agencies to spend freely without the traditional—and constitutional—control by Congress. The agency simply notifies the Treasury it wishes to borrow $300 million, say. The Treasury hands over the money and goes into the money market and borrows enough to replace the $300 million.

Congress passes no bill saying to the agency you may spend so much, and how. The spending is not counted in the budget. There is no revenue raising—just borrowing.

This is one of the reasons the Federal debt is now at $288 billion and headed higher. This is the way Congress has lost control of Government spending.

The strong movement to stop this back-door system of spending the taxpayers' money has just been dealt a fatal blow. Congress has passed and the President has signed the so-called depressed areas bill—and $300 million of the money to be spent on this project will be obtained through the back door. No budget accounting. No real strings on the spending.

No wonder the veteran chairman of the House Appropriations Committee, CLARENCE CANNON, cried out from the well of the House: "It is financial duplicity. It is fiscal insanity."

Whether the depressed areas bill ever will do anything for the areas it is supposed to help is a good question; 193 Members of the House, including 56 Members of the President's own party, didn't think so.

But one thing is pretty sure: this reckless raiding on the Treasury can depress the value of the dollar, already down to less than half its old worth. For it was just this type of finagling which got us our present 48-cent dollar.

Meet the Secretary

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. LINDSAY. Mr. Speaker, in the past months an outstanding series of informative television programs have been aired with marked success. The news program entitled "CBS Reports," has been well received by the public, which further proves that horses, guns, rum, and mayhem are not the only essentials for audience appeal.

I am pleased to note that one of the unheralded heroines of this successful venture is Miss Elizabeth Sweeney, who is a resident of the 17th Congressional District.

The March issue of Today's Secretary pays deserved tribute to Miss Sweeney, secretary, researcher, and general assistant to one of the producers of "CBS Reports."

To borrow from one of the recent productions of the network's series she is indeed "An Influential American."

Under unanimous consent, I include in the RECORD an article entitled "Meet the Secretary":

MEET THE SECRETARY

Elizabeth Sweeney—called Betty by all but her boss—seems to have a knack for making valuable contributions in almost any job she tackles. "I don't know her secret," Arthur Morse says, "but I think it's just a matter of keeping her eyes open. Elizabeth is much more than just a secretary—she's a fund of pertinent information and a pretty good judge of quality. We may not use every one of her suggestions—but we welcome all of them."

This is one reason why Elizabeth enjoys her work as CBS. "It's a free wheeling operation," she explains, "with absolutely no routine. Often we just sit around exchanging ideas— and they listen to me as if my thoughts really mattered. Other times it's the hectic pace of getting scripts typed, answering mail, pouring over newspaper clips and hundreds of little details. But it's always stimulating."

Elizabeth began her secretarial career at CBS. "It was June of 1955 and I had just received a B.A. degree in English from Marymount College," she reminisces. "I wanted to get into the communications field—but it took a summer of training in Gregg and typing before I was able to get my foot in the door."

She started as a typist-receptionist but soon was promoted to secretary to the information specialist in the public affairs department. "It was public relations work and they let me do a lot on my own. That's where I got my basic training in television."

But the job was limited—and she was anxious to move on. When a sister and brother-in-law, living in Hollywood, asked her to come to the coast, Elizabeth grabbed the opportunity. Within a short time, she was working for the Republican Senator from California, THOMAS H. KUCHEL.

"That was only a temporary job," she explains, "filling in at his Los Angeles office during the Senate recess. But it fit in perfectly with my own plans. I thought the position would last just long enough so that I could earn enough money for my return to New York."

Elizabeth found working for a U.S. Senator interesting—but far from glamorous. "There's a tremendous amount of mail to answer, plus piles of other routine correspondence."

About that time the world was beginning to look toward Brussels, Belgium, where a fair was taking shape. "I heard they were looking for guides and, almost as a lark, sent for an application."

Elizabeth's working knowledge of French—plus her excellence appearance and background—made her a natural for acceptance. Almost before the breathless young lady know what was happening, she was living in a beautiful Brussels' apartment and wearing the smart uniform of an official guide.

"I'll never be able to measure my 8 months overseas," she says. "It was a wonderful, once-in-a-lifetime experience."

Elizabeth was put on the fair's special list of guides—a select group used primarily for escorting VIP's. One of her first customers was former Secretary of State Christian Herter.

"He's a marvelous man, and I'll never forget him. The day was cold and rainy—and he seemed to be in great pain from his arthritis. Yet he was never anything but friendly and courteous—and we had many laughs together."

The laughs stemmed from Elizabeth's attempts to be an all-knowing guide. "The fair had been only only a few days and I wasn't familiar with all the buildings yet. As we rode along in an electric scooter, I'd steal a quick look at the name on the pavilion and then repeat it almost verbatim. Of course, Secretary Herter saw through my little subterfuge right away. But he understood—and we had a wonderful time exploring the fair."

Elizabeth Sweeney stayed in Brussels for the duration of the fair and then, with another girl, spent 7 weeks touring Spain, Italy, and Switzerland. "We spent every penny we had saved—but it was great."

Once back in the United States, Elizabeth went to work at Life magazine as secretary to the art director, but soon decided she wanted more responsibility. "When a friend told me that Arthur Morse was looking for a secretary-researcher, I applied for the job."

The book "Schools of Tomorrow—Today" was their first project together. While Morse spent most of his time traveling, Elizabeth took over the office.

"It was an exciting experience," she says, "watching an important book grow from just an idea to the finished product."

What must have made it doubly exciting was the last line in the foreword of the book. It reads: "A special word of acknowledgment is due Miss Elizabeth Sweeney who, as secretary-researcher, made a valuable contribution to this project."

The next step was "CBS Reports." Morse asked Elizabeth to come along when he was appointed a staff producer. At first, she worked as secretary to both Morse and another CBS producer, David Lowe. Later, she worked for Morse exclusively.

"There's no telling where Elizabeth is going to make a contribution during a project," Morse says. "In Massachusetts she worked with the children on 'The influential Amer-

icans.' In Washington she transcribed Howard K. Smith's questions to Congressman Howard W. Smith. She selects pictures for publicity layouts, suggests program titles and most recently made a report on the college crisis."

"I'd say my most interesting job is gathering research material for projects underway—and projects we might take on in the near future," Elizabeth says. "Usually, there are about 10 possible programs under consideration. And it's part of my job to constantly scan newspapers and periodicals for information pertaining to them—or to check the various libraries for background material."

"Just about every job she does," her boss comments, "she does well. I often ask her to screenings of shows just to get her reaction. Although officially she's a secretary, I think she has the ability to go on much farther."

We think so too—and, from now on, we'll keep our eye on Elizabeth Sweeney of "CBS Reports."

Eliminating the Age Barrier to Employment

EXTENSION OF REMARKS
OF
HON. WILLIAM S. MOORHEAD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mr. MOORHEAD of Pennsylvania. Mr. Speaker, the age barrier to employment has caused harsh and unnecessary hardship to mature jobseekers who want no more than an even break in the labor market. During his term of office Gov. David L. Lawrence, of Pennsylvania, has worked unceasingly to solve this problem. He recognizes, however, that the problem has not been solved and he seeks suggestions and cooperation from employers and all citizens who are concerned with the problems of older workers.

Under leave heretofore granted, I insert a letter from Governor Lawrence and a folder entitled "10 Reasons Why You Should Disregard Age When Hiring New Employees":

DEAR SIR: We need your help.

We are continuing to experience great difficulty helping job applicants over 40 years of age. Arbitrary age barriers to employment make it hard for many jobseekers to find employment in work for which they are otherwise well qualified.

The law in Pennsylvania forbids discrimination in employment because of age, and there has been some improvement since its passage. Nevertheless, we know that the problem will never be fully solved until we get the wholehearted cooperation of enlightened employers.

Enclosed you will find a folder which gives 10 documented reasons why age should be disregarded when hiring new employees. I would appreciate having your reaction to this information.

In addition, I would appreciate having your comments on the following questions: (1) What more should we do to remove unjust discrimination against older workers? (2) What have you done in your business and what more can you do? (3) What should other employers do?

You can be sure that we will be grateful for any help you can give in breaking down age barriers that deny mature jobseekers an even break in the labor market.

Very truly yours,

DAVID L. LAWRENCE.

TEN REASONS WHY YOU SHOULD DISREGARD AGE WHEN HIRING NEW EMPLOYEES

1. Ability is ageless: U.S. Department of Labor studies show that output and work performance vary greatly among individuals of the same age. Many older workers perform better than the average younger worker. (See "Comparative Job Performance by Age: Large Plants in the Men's Footwear and Household Furniture Industries," Bulletin No. 1223 of the U.S. Department of Labor; and Bulletin No. 1273 reporting a similar study on office workers.)

2. Older workers are capable: Over 90 percent of employers asked by the National Association of Manufacturers rated older workers equal to or better than younger workers in work performance. (See "Report on Employment of Mature Workers," NAM, September 1960.)

3. Older workers are dependable: Virtually every plant executive asked by Factory magazine rated older workers better than or equal to younger workers in dependability. (See "Factory Management and Maintenance," March 1958.)

4. Older workers are more available: Persons in the 25–44-year-age bracket will be relatively scarce in the coming years. Rigid age requirements for jobs will create unnecessary and costly labor shortages. (See "Manpower, Challenge of the 1960's," U.S. Department of Labor, Washington, D.C.)

5. Older workers are trainable: Experts report that older workers can be successfully trained for new jobs, and once retrained, outperform younger workers in the same jobs. (See "How to Achieve a Better Balanced Labor Force by Removing Age Barriers to Employment," Pennsylvania Department of Labor and Industry, 1958, pp. 163–173.)

6. Older workers are careful: Surveys show that older workers are more careful, have fewer accidents than younger workers. (See "The Problem of Making a Living While Growing Old," proceedings of the Second Conference on Age Barriers to Employment, pp. 292–314.)

7. Older workers are steadier: Many businessmen find that older employees have a steadying influence on the work force—are less likely to become restless with routine tasks. Older workers are more likely to stay on the job. (See "Older Worker Adjustment to Labor Market Practices," BES No. R151, U.S. Department of Labor.)

8. It costs about the same to hire mature workers as it does younger workers: When all fringe benefits are considered together—pension plans, accident, health and life insurance—the experts say it costs just about the same for younger workers as for older workers. (See "Pension Costs—In Relation to the Hiring of Older Workers," BES No. E150, U.S. Department of Labor.)

9. It is illegal to discriminate in employment on account of age in Pennsylvania: The Pennsylvania Fair Employment Practice Act requires employers to refrain from denying employment to an individual solely because of age. (See act of the general assembly No. 222, approved Oct. 27, 1955, amended Mar. 28, 1956.)

10. It is unfair to discriminate in employment on account of age: Nothing could be more unjust than to tell a person he is disqualified from earning a living solely because of his chronological age. (See your Bible, Psalms 71, verse 9.)

New York Mirror Series on Italian-Americans

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1961

Mr. ANFUSO. Mr. Speaker, the New York Daily Mirror is currently publishing a series of articles on eminent American citizens of Italian descent, depicting their rise to eminence and their contributions to the American way of life and its culture. The Mirror is to be congratulated for undertaking this series, especially at a time when certain individuals in our press, television, and other media of public information are presenting Americans of Italian origin in an ugly stereotype and in a false image which is an insult to millions of Americans.

In this respect, the Mirror is rendering a public service in presenting a true image.

The series is written by Miss Ara Piastro and Harry Altshuler, and their articles show a great deal of understanding on their part of the role and significance of the people they portray. I want to commend them for an excellent job.

Under leave to extend my remarks, I wish to insert into the RECORD, two articles of this series, one about Judge S. Samuel DiFalco and the other about Prof. Mario A. Pei of Columbia University. The articles read as follows:

[From the New York Mirror, May 8, 1961]

THE ITALIAN WHO MADE SURROGATE

(By Ara Piastro and Harry Altshuler)

There was no printed program by which you could recognize the players, there on the teeming East Side of New York half a century ago. There was no label on little S. Samuel DiFalco, saying "future surrogate."

You couldn't tell by the dirty faces of the youngsters, playing stickball in the street or potsie on the sidewalk, how they were going to grow up.

One might be destined for jail, and another for the judge's bench. There was no knowing.

Nowadays it seems fashionable to blame crime and misused lives on environment, neighborhood influences, poverty and youthful hardship.

But you could hardly prove that point by naming the few bad eggs who came out of the Lower East Side. For there are so many others—so many notables, honored citizens and torchbearers of the American dream—who also originated there.

One of those who seems to have thrived on hardships, turning each difficulty into a steppingstone, is DiFalco, Surrogate of New York County and an honored leader in numerous areas of community life.

Actually he was 6 months old before he was brought to New York and the Lower East Side. He was born in Sicily in 1907. In New York his father, Antonino opened a small business, while his mother, Rose, was busy bringing up young Sam and his sister and brother.

Maybe the distinguishing mark on Sam was work. He cannot remember when he wasn't working. Going to Stuyvesant High, he worked after school as a postal telegraph messenger. Later attending the New York University School of Commerce, and New York University Law School, he worked out a frantic schedule like this:

Morning: work as a customer's man in a Wall Street stockbroker's office. Afternoon: attend classes. Evening: work on a newspaper, soliciting phone ads or reading copy.

By 1930, he had a law degree, but that was only the beginning. A young lawyer's struggle to get a foot in the door is notoriously hard. He clerked in a law office for a year, then hung out his own shingle at 401 Broadway, waiting for someone to entrust a case to him and filling up the long hours of waiting by taking a hand in local Democratic politics.

He was a member of the Manhattan Democratic Club, president of the Italian-American Democratic Club, and he was busy with church and other community activities.

Then in 1935 he took a serious step: He ran as an insurgent against the organization candidate for assemblyman in the 8th assembly district, in the primaries. He lost—but only by 80 votes, a showing that demonstrated remarkable strength.

For 4 years then, he gave up his growing private practice to serve the Government as Associate Counsel in the Interior Department. He came back to general practice in 1939 in the firm of DiFalco, Field and DiGiovanna, and in 1941 really emerged on the political scene when he was nominated by the Democrats for city council. He was elected, then reelected in 1948.

The rest of the story, to date, is one of winning more nominations and elections: State supreme court, and then in 1957, surrogate, for which he had both Democratic and Liberal support.

He lives at 983 Park Avenue with his wife, Emma, and their two children, Anthony, 22, a Fordham Law School student and Elisa, 15, a student at Marymount.

The political milestones tell only the results, not the why and wherefore. The numerous awards and citations bestowed on the man tell part of the rest. The votes came in because, in all walks of life, a great many people had come to know DiFalco, to respect and trust him and depend on him. He could be counted on to be in the forefront in charitable and civic activities covering a wide range of interests.

Hospitals, for instance, have been one of his special concerns. He is a director of Stuyvesant-Polyclinic and Grand Central Hospital; a trustee of Long Beach Hospital and the Children's Blood Foundation of New York Hospital, a director of the Home of Sons and Daughters of Israel.

He is a founder and director of the Columbus Day Citizens Committee. He is active in the Knights of Columbus and the Catholic Lawyers Guild.

For promoting tolerance and understanding among peoples of all faiths, he was honored in 1958 with the Eternal Light Award. The Israel Bond Committee named him its man of the year in 1954. He belongs, of course, to numerous professional, philanthropic, and social groups. He is chairman of the National Italian-American League To Combat Defamation, which he helped organize in 1959 with other outstanding Italian-Americans.

"We felt," he recalls, "that the presentation of the Italian-American to the American public through many media—television, radio, press, and movies—was not only unfavorable, it was untruthful and defamatory. There was overreporting, out of all proportion, of the actual activities of an infinitesimal few, as against the positive contributions of the great masses of Italian-Americans in all walks of life. We don't advocate censorship; we aren't against the truth, but mere repetition of errors is brainwashing, likely to mislead the public into regarding with suspicion anyone with an Italian name."

To make the point, he displayed a clipping from a minor California newspaper, with a headline that screamed, "Mafia Involved in Stock Fraud." The story concerned an indictment against 17 men, just 2 of whom had Italian-sounding names.

Speaking for himself, and all the others who came here as immigrants or struggled upward through the obstacles of underprivilege and harsh environment DiFalco said, "We feel a deep debt of gratitude to America, the land we came to for opportunity, for making it possible for us to achieve any success we have."

He himself is a shining example that it can be done.

[From the New York Mirror, May 9, 1961]

COLUMBIA'S DR. PEI, A FAMOUS LINGUIST—HELPED MAKE UNITED STATES GREAT

(By Ara Piastro and Harry Altshuler)

Just what song the sirens sang and what language they sang it in, on that distant day when Ulysses sailed by lashed to his mast, is a mystery of antiquity which has always intrigued scholarly folk.

If anyone can fathom the answer, it might well be Dr. Mario A. Pei, professor of roman philology at Columbia University, world-renowned authority on languages—and quite an expert amateur in the field of folksongs as well.

He speaks four languages—Italian, French and Spanish, as well as English—admits that he can manage 12 or 15 others "rather well," and is modest about his ability to "stumble around" in 30 to 40 more.

Currently he's on a sabbatical leave from Columbia and is due back in the fall. He's spending the holiday by teaching at the university in Lisbon, Portugal, under an arrangement with NATO. He picked up Portuguese in the last year or so—just for fun. The earlier part of the sabbatical year, he spent as acting dean of the U.S. Army language school in Monterey, Calif.

Dr. Pei was born in Rome on February 16, 1901. The family—Francesco Pei, a businessman; his wife Luisa; Mario and his sister—moved to New York in 1908. Mario attended a parochial school, St. Francis Xavier, took his bachelor's degree at City College, then skipped right on to a Ph. D. at Columbia.

There was never any doubt about the field he wanted to work in. He had a gift for languages, originating, his wife Pearl suggests, in the remarkable keeness of his ear.

"He never forgets the sound of anything he's heard," she said. "He can remember folk songs he listened to years ago—not only the words, but the tune, also. He hums them for me and I pick them out on the piano."

Very quickly, too, it was apparent he had a gift for teaching, which has occupied much of the rest of his life. But before he became a teacher, it was a point of pride with him to pay for his own education: He did it with jobs as a floorwalker at Macy's, a salesman in a jewelry store, and tutoring less gifted students.

His doctoral thesis on "The Language of the Eighth-Century Texts in Northern France" created a stir among scholars around the world, and is still considered one of the best dissertations ever to come out of Columbia.

But for all the vast, erudite research that went into it, and his other studies of the languages of Charlemagne's time, here is no dry-as-dust scholar picking musty texts to pieces. His feeling for languages is a romantic one.

"Language is people," he says. "It's history and politics. It's civilization."

Something that underlines this point is his one venture into popular fiction, "Swords of Anjou," a historical novel.

It's a cloak-and-sword romance, swashbuckling with the best of them, and must have given him as much joy to write as it has given many a reader.

On another level, a great deal of his serious work has been popular also. "The Story of Language," his volume tracing the tongues of the world and their interrelationships, was written with such deceptive ease and compelling color that it became a Book-of-the-Month Club selection.

He has written many other books from the scholarly, "French Precursors of the Chanson de Roland," to the lively "Our Names" which traces the fascinating origins of what we are called, and other books that are used as texts.

Dr. Pei travels widely. Everywhere he goes, he's teaching—and learning. When home in New York (at 35 Hamilton Place) he and his wife like to have friends in for parties and trot out the folksongs he's picked up here and there.

His studies in phonetics and linguistics have made him one of the world's foremost authorities on language. But his influence goes far beyond academic circles. The Phi Beta Kappa key, the gold and silver medals from various schools, testify to his excellence as a scholar; the Bronze Plaque of the Freedom Foundation of Valley Forge attests to his "outstanding achievement in bringing about a better understanding of the American way of life."

The Italian Government decorated him as Cavaliere Ufficiale in 1958. Even the Soviets have done him the singular honor of publishing a shrill attack on his book, "The World's Chief Languages"—because he didn't put Russian up at the top of the list. They saw his book as a sinister Anglo-American plot to dominate the world—maybe because it was written in English.

Right now, with the growing realization of the free world's urgent need to pull together, the towering and friendly figure of Dr. Pei is being recognized in its true importance.

We need to understand our friends and they need to know us better. Dr. Pei speaks their language and can help us all to communicate.

Federal Aid to Education

EXTENSION OF REMARKS

OF

HON. JAMES HARVEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1961

Mr. HARVEY of Michigan. Mr. Speaker, under leave to extend my remarks, I would like to insert in the RECORD, as requested by the Ashley Board of Education, the following letter setting forth their views on Federal aid to education:

HON. JAMES HARVEY,
Congressman, Eighth Congressional District, Saginaw, Mich.

DEAR CONGRESSMAN HARVEY: The Ashley Board of Education at a regular meeting held on April 27, 1961, unanimously adopted the following resolution:

"Whereas the need for adequate support of public education is a responsibility of parents, school districts, the State of Michigan, and the Federal Government.

"The Ashley Board of Education hereby urges the active support of all citizens to effect legislation whereby the Federal Government assumes its rightful responsibility in American education by providing Federal funds for the construction and operation of public elementary and secondary schools so that a reasonable basic educational system for all children may be maintained.

"Further, That all such funds be disbursed through the State school agency without Federal control."

Mrs. MARGARET BLANCHARD,
Secretary.

Research Will Help Redevelop Coal Areas, but Elimination of Unfair Competitive Practices Is a Prerequisite to Permanent Economic Gains

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mr. VAN ZANDT. Mr. Speaker, on Monday of this week a very distinguished executive in the coal industry, Walter F. Schulten, vice president of the Consolidation Coal Co., spoke before the Altoona Lions Club. His subject was research, and I would like to have unanimous consent to include portions of his address in the RECORD. At the moment, however, I submit this single sentence from Mr. Schulten's address:

The policy of opening our fuel markets to the production of alien refineries has left deep scars upon the economy of this area.

Mr. Schulten was, of course, alluding to the great volume of residual oil imports that have captured east coast fuel markets and left a severe impact back along the right-of-way of the Pennsylvania Railroad—from unloading piers, through the yards and shops of transportation centers, and right up into the coal mines. Over the years that this type of unfair competition has been accepted and even nutured by the Federal Government, many of those mines have had to close and are now hopelessly flooded. Others may possibly be reactivated if sufficient hard work and cold cash are engaged.

These conditions have persisted since foreign oil began to flood traditional coal markets on the Atlantic seaboard shortly after the conclusion of World War II. Except for a control program put into operation by the White House in 1959, the Federal Government has done nothing to check the imports. In fact, since the new administration took office in January, controls have been relaxed to such an extent that the whole program has been rendered ineffectual.

Last February 21 I submitted to the Secretary of Interior a statement explaining the hardship that Pennsylvania is undergoing as a consequence of too much foreign oil. I protested the Department's unexpected increase in residual oil quotas, a decision that took place less than 1 month after Inauguration Day. On the assumption that the new Secretary was unfamiliar with many facets of the import control program, I urged that he reconsider his hasty judgment and cut import volumes at least to the levels provided for when the program was created as a security measure. Last week I received a letter from L. J. O'Connor, oil administrator, acknowledging receipt of my statement but containing no indication that a revision of the allowable import volumes is in prospect. I remind the White House that increasing the quota levels is in direct contradiction to preelection promises to help coal areas bring about economic recovery.

Within the past several weeks the CONGRESSIONAL RECORD has been replete with statements by Members of Congress from all sections of the country whose constituents are experiencing economic suffering as a result of our unwise foreign trade policies. Paradoxically, some members of the New England delegation who vehemently denounce restrictions on residual oil imports have taken lead parts in the chorus clamoring for protection for their native industries. While I am in complete accord with their wishes and demands for safeguards against foreign products that create havoc in America's marketplaces, I trust that the experience of having to endure business losses in home constituencies will tend to make them more sympathetic to the problem perennially facing coal producing areas.

I am convinced that our whole international trade program requires close inspection and a complete going over before any serious thought is given to renewal of the reciprocal trade program next year.

Mr. Schulten was a witness to depressed conditions when he visited Altoona this week. He is not a stranger to our area and for years has recognized that a high degree of unemployment in central Pennsylvania can be directly attributed to excessive imports of residual oil. Never in the past two decades, however, has the mining situation been in such disastrous economic straits as it is at the present time.

We are anticipating better times Mr. Speaker. We are looking to an economic upturn when the new area development program gets rolling. There is no question but that this type of artificial economic stimulus can set many industrial machines back into motion. To keep them running without continuous Government dollar pumping operations however will require a rearrangement of foreign trade policy. America must return to the logical philosophy of enabling products of its own workers to find an outlet in the marketplaces of its own people.

The coal industry has made an heroic effort to keep its product competitive but there is no competition when international oil shippers are allowed to discharge their cargo in defiance of established marketing practices. As Mr. Schulten points out, the coal industry has made spectacular gains in production efficiency; it is going forward with a research program that will unquestionably prove beneficial to the consuming public.

I commend to the attention of Congress the portions of Mr. Schulten's address which I am enclosing in the RECORD. Meanwhile, I ask that you bear in mind that thousands of miners, railroaders, and industrial neighbors in my State and in other areas of the Appalachian region are without work today wholly because of the unreasonable and unrealistic trade policies pursued by the Federal Government.

Unless these policies are revised drastically and based on the premise that protection of American industry and labor is essential to the Nation's economy and security, there will be no permanency in the economic gains anticipated under the depressed area legislation which became effective this week; nor can the United States be assured that adequate fuel resources will be available in an emergency.

Portions of Mr. Schulten's statement follow:

Perhaps the best testimony to coal's progress in research is the stabilized price structure that has prevailed over the past decade or so. Today, coal sells at the mine on an average of variously estimated to be from the same price to 26 cents per ton less than it did in 1948. The answer is mechanization. Through research and development, mining machines and techniques have more than doubled output per man-day in the short space of 10 years. Our skilled American mineworker can now get out as much coal in 1 day as his counterpart elsewhere in the world can produce in a week.

* * * * *

Altoona is a railroad town. It has depended and still depends a great deal upon the coal traffic that moves between our producing fields and the east coast. You will be happy to know that coal and the railroads are cooperating in the constant struggle to keep down the delivered price of coal. The railroads have introduced volume rates and trainload rates in an effort to remain competitive and thus provide coal a greater opportunity to share in the fuels market.

Neither this cooperation nor continued research, however, are adequate to overcome the handicaps that we face in dealing with competition from foreign residual oil and dump natural gas. Congressman VAN ZANDT has carried on a never-ceasing campaign for legislation to protect coal's markets against the rising tide of foreign residual oil engulfing many of our markets on the east coast. The policy of opening our fuel markets to the product of alien refineries has left deep scars upon the economy of this area.

The coal industry and our producing regions have sustained similar losses through the illogical Federal Power Commission policy of permitting natural gas pipeline companies to invade coal markets by offering natural gas to industry at whatever rate is necessary to undersell coal. A recent Supreme Court decision may be instrumental in checking this invasion. The Court affirmed the authority of the Federal Power Commission to take conservation into consideration when deciding on applications for transportation and use of natural gas. In addition, the general public is becoming increasingly resentful of having to pay two or three times as much for natural gas as industrial customers are charged for the same product. These factors can bear heavily in coal's favor and restore at least a modicum of the business that has been lost through prevailing inequitable competitive practices in the fuel industries.

* * * * *

To attempt to predict the outcome of a research effort is hazardous, but at least I can say with confidence that 1961 will be a key year in the field of coal research. If not the year of greatest accomplishments, certainly it will mark the start of more important coal research programs than have ever previously been undertaken in this country.

At Monroeville, near Pittsburgh, is the site of the new Bituminous Coal Research laboratory. To the unsuspecting passerby, this cinder block and grayish brick structure beginning to take form could be the makings of a schoolhouse, an office building, or even a small manufacturing plant. Come back in another 6 months, however, and you will find the likes of which has never before existed in America. You will see scientists and engineers delving into projects designed to do something fast for the coal industry—to develop new markets, to expand old ones, to keep prices down, to get coal to market at less cost and whatever other research approaches seem to be most feasible for quick action. The complete facilities will be valued in excess of a million dollars. There will also be fundamental research activity, but for the time being emphasis will be on applied research and immediate results. The building, incidentally, will be entirely fueled by electricity, "coal by wire," in advancing and increasing utilization for coal.

Capital funds for construction of the research center have come from electric utilities, equipment manufacturers, railroads, chemical companies, and engineering firms. This joint effort reflects the general confidence in the future of coal. Bituminous Coal Research has for some time carried on research activities in smaller laboratories in Columbus, Ohio, and in the Oakland section of Pittsburgh. This work is now being consolidated and expanded.

The Monroeville Research Center cannot alone make 1961 a monument to coal research. There are also things stirring in Washington. Last month with the swearing in of George Lamb as Director, the Office of Coal Research in the Department of the Interior started to get into motion. This office is the outcome of a long effort initiated by Congressman JOHN P. SAYLOR of Johnstown, and supported enthusiastically by Congressman JIMMY VAN ZANDT. In his capacity as director, Mr. Lamb will be charged with responsibility for selecting the research proposals submitted to his office that have the most likelihood of immediate favorable results. He will decide where the best results are likely to be obtained—whether in our own industry laboratory in Pittsburgh, at a university, in the development facilities of an allied industry, or through a private operation.

* * * * *

Coal is, of course, not dependent upon research alone to answer its problems. The national security demands that present coal output be increased by approximately 20 percent if our industry is to have the capacity to meet emergency demands. Idle mines and idle facilities of allied industries are a definite threat to our defense structure. There is a good possibility that research will gradually account for important increases in coal tonnage. Meanwhile, however, every responsible citizen should demand cutbacks in the residual oil imports that are depriving coal of its legitimate markets. Dump sales of natural gas at rates tilted to undercut coal must be checked in the name of fuel security and conservation of a scarce natural resource.

The National Coal Association has invited officials of chambers of commerce from coal areas who are attending the meeting of the U.S. Chamber of Commerce to meet there this afternoon. The local chamber representatives will be informed that the National Coal Association is ready to assist coal areas in attracting new industry. NCA's Economics and Transportation Department has been conducting a pilot study based on business conditions, natural resources, and transportation facilities in Cambria County. The pilot study has now been completed and NCA is ready to make similar information available to interested groups in Blair and all coal-producing counties.

From the foregoing you will deduct that the coal industry is more and more expanding its research activities. Current concentration is upon the development, through research, of immediate ways, means, and processes by which the use of coal may be immediately increased. With population increases and increased energy requirements, coal production and use will increase in the next decade. Our problem now is to develop a market to sustain the present production capacity. To this effort research will make a considerable contribution.

Chancellor Konrad Adenauer's Visit to Texas

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mr. FISHER. Mr. Speaker, it was the privilege of the people of the State of Texas, and of the 21st Congressional District in particular to publicly welcome His Excellency Dr. Konrad Adenauer, Chancellor of the Federal Republic of Germany, on his recent visit to the United States.

In these times of international tensions the importance of the warm personal regards that enveloped the members of the official Germany Party and the people of Texas, cannot be overemphasized.

The public reception for the Chancellor at the Gillespie County Fair Grounds at Fredericksburg, Tex., on April 16, and the visit of Dr. Adenauer to Vice President LYNDON B. JOHNSON's nearby ranch, was a heartwarming occasion.

The spirit in which the elder statesman from Germany was received may be best exemplified in two editorials which appeared in the Fredericksburg Radio Post. I therefore, at this point, include the editorials in the Appendix of the RECORD:

[From the Fredericksburg (Tex.) Standard, Apr. 12, 1961]

WELCOME CHANCELLOR ADENAUER

Fredericksburg and Gillespie County on Sunday and Monday will have in their midst one of the great leaders of the free world, Chancellor Conrad Adenauer.

The intrepid leader of West Germany is the highest ranking official of the government of his country ever to visit in this community, whose origin stems back to his native land, and whose residents today are third and fourth generation descendants of a hearty band of immigrants who left their homeland over a century ago to settle a region of the State that then and now reminds them of the land from which they came.

The eminent visitor will find touches of his country everywhere in the names he sees on mailboxes and on storefronts, in the language many of them still speak, and in a people whose honesty, frugality, hard work, and love for their land is unmatched by any nationality in the Nation.

Here he will see farms and ranches that are the pride of their owners, whose fields and ranges, homes and buildings, many in an architectural style reminiscent of Germany, are kept in perfect condition year in and year out, as exemplified by persons of German extraction everywhere.

He will also learn that descendants of the pioneers who came here in 1846 have risen to become some of the greatest men America has produced.

The man of whom he is a guest, Vice President LYNDON JOHNSON, is a product of these hills and dales, and an example of the great men that have helped lead America to its pinnacle of greatness.

There are Adm. Chester W. Nimitz, the renowned naval leader, and many others who have risen to important positions in the State and Nation, and in virtually every field of endeavor.

It comes as a distinct salute to our community that you, Conrad Adenauer, have taken time from your multitudinous duties, as one of the great leaders of the free world, to come to the hills of Texas, and be our guest.

We know that the hospitality you will receive at the hands of your hosts will be unmatched, but you would find the same hospitality and the same hand of friendship in every home in the community.

Fredericksburg and Gillespie County bid you welcome, hope you enjoy your stay and will some day return. We sincerely hope you leave with the knowledge of the great contribution your nation has made through its people to our own progressive community, and that here in the hills of Texas, are a people who count your friendship and the friendship of your country as one of our Nation's great assets.

[From the Fredericksburg (Tex.) Standard, Apr. 19, 1961]

A DAY TO REMEMBER

Sunday, April 16, 1961, will be a day long to be remembered in the history of Fredericksburg and Gillespie County, as generations to come will recount the occasion on which Fredericksburg was host to one of the world's great leaders, Chancellor Conrad Adenauer, of the Republic of Germany.

It is a day that will go down in history as did such momentous occasions as the centennial of Fredericksburg's founding and the homecoming of Fleet Adm. Chester W. Nimitz.

Few, if any cities the size of Fredericksburg, can lay claim to two of its native sons who have risen to the pinnacle attained by Vice President LYNDON B. JOHNSON and Fleet Adm. Chester W. Nimitz, who joined in honoring the Chancellor.

Fredericksburg's place in the sun never shone brighter than it did Sunday, as the thousands of people joined in the tribute of this trio of great men.

In reality, the visit of the Chancellor is a tribute to the sturdy folks of Gillespie County, who for over a century have never been ashamed of their heritage, and who have never forsaken the ideals of their forefathers.

There are many cities in the Nation today who have slipped away from the principles laid down by their Founding Fathers, who have let the traits of their pioneer forebearers go by the wayside in the onward rush to progress.

Here, however, we have vigilantly sought to retain our ties with the past and use them as our basis in building for the future.

That Fredericksburg has built well through the years is shown by the solidity of the community today, as evidenced by its record of home ownership, high percentage of tax payments, adherence to law and order, and its cleanliness.

That these traits have been retained has been known far and wide for many, many years, but occasions such as the one last Sunday forcibly bring out our good fortune to our own attention, and truly to the attention of the whole free world.

Address by Senator Vance Hartke in New York

EXTENSION OF REMARKS
OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1961

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the text of an address by the very able and distinguished Democratic Senator of Indiana, the Honorable VANCE HARTKE, which he delivered before the New York County Democratic Committee at a dinner on April 27, 1961, at the Commodore Hotel in New York City.

Senator HARTKE, who is the chairman of the Democratic senatorial campaign committee, delivered a very stirring address on the occasion. By his wise counsel, his political sagacity, and his ability to understand the specific problems of the Democratic Party in New York, he played a great part in heelping to unite Democratic forces in our State. I was privileged to hear Senator HARTKE on this occasion and was very pleased to hear the many commendations expressed later.

The text of Senator HARTKE's address follows:

ADDRESS BY SENATOR VANCE HARTKE, OF INDIANA

I consider myself greatly privileged to be in New York tonight in such distinguished company, having been invited by both your leader—my friend Carmine DeSapio—and by the national chairman—my friend John Bailey.

Political dinners are old favorites of mine since I come from a political organization background. In our committee, as in yours, we pride ourselves on uniting old-fashioned political organization with the reform-type service demanded by today's voters.

This is, I submit, uniquely possible within the framework of the Democratic Party. We are at once the oldest political party in continuous existence in the world today and yet we are the party of programs and progress. Our party and its leaders have always had a way of cutting through the fat and getting to the meat of the problem. They have always led when leadership was demanded. They have always had programs when programs were needed. They had all this because they were Democrats and the Democratic Party has always been grounded among the great masses of people.

Thomas Jefferson won the country's first contested election in 1796. His campaign theme was "The Rights of Man." As we look back to then from the problems of 1961, we must conclude that things have not changed much.

Jefferson said there were two kinds of people in political parties. "First, those who fear and distrust the people and wish to draw all powers from them into the hands of the higher classes. Secondly, those who identify themselves with the people, have confidence in them, cherish and consider them as the most honest and safe." Jefferson, of course, belonged to the latter.

In nearly every election since Jefferson's time the basic struggle has been between the people's party and the party of special interest. Last fall was no different. But this Nation saw a bitter campaign in which issues that have no place in American politics were blown far beyond their importance. After this campaign, you people delivered the Nation's largest package of electoral votes to John F. Kennedy. New York State provided 45 of President Kennedy's 303 electoral votes. The Kennedy majority in New York City was 792,000.

Immediately after that election, one of the closest in history, we listened while the Republicans cried "foul" and parroted the party line that they had been robbed. Yet, 2 months after taking office, President Kennedy pulled up with an astounding vote in the Gallup Poll. Dr. Gallup, just a month ago, reported 73 percent of the American people approve of the job the President is doing. That was 6 percent more than the figure recorded by Dr. Gallup for President Eisenhower at a comparable time in his first term. Last Saturday the Nation's newspaper editors voted 104 to 11 that the President is doing a good job.

President Kennedy and his new administration have awed the skeptics and fascinated the admirers. His grasp of presidential responsibilities and his forthright efforts to meet these responsibilities have been wonderful.

Every man and woman comes into this world without any understanding concerning his future, his life, his destiny. Yet, in spite of difference of wealth, position or birth, there is a difference in that individual who ultimately in life says that my soul and mind shall not be dedicated to serving only myself. This to me is President John F. Kennedy. This truly great individual possesses a soul and mind that is trying to comprehend the wonders of this world and trying in some measure to reproduce these wonders into something better for mankind. He is a mirror of the world—alive, not dead, active, not dull; courageous, not a coward. He is always thinking, learning, experimenting and practicing his knowledge. He is the kind of person who has learned that his own personal life is subordinate to achievement of the higher goals.

It is to him that others look for leadership. The world, his community, his party, his friends—and even his enemies—look up to him and expect to learn from him. Sometimes his ability is not immediately recognized or appreciated; in some cases, repelled by envy.

He cannot move in order to expect gratitude—but must move for posterity in the firm confidence that the future will benefit from his efforts. He must be like an acrobat who takes leaps which others cannot execute. He thereby derives a direct and lively pleasure in every accomplishment—in every problem solved, in every election won.

The boredom which haunts the ordinary man can never come close to him. Yet to him there can be a lonely existence in that he can expect little, if any sympathy for apparent failures. He cannot be surprised if society at times wants to repel him. The great and extraordinary work done by him can only be done if he disregards the talk, speeches, and opinions of critics. He must quietly continue on, in spite of their criticism.

The sloganeers have now come up with a new slick trick. They are trying to sell the people on the idea that the President may be popular, but his programs are not. I call this the soft-soap sell. It is not going to work because President Kennedy's programs are the Democratic Party's programs. The Democratic Party is the people's party and the majority party, and it always has been.

What these Republican sloganeers are trying to do is as transparent as glass. They know that President Kennedy is popular. They know he has nudged the ship of state out into the breeze and is piloting it with a firm hand on the rudder while heading it in the direction of progress.

So, the Republicans now know they have another popular Democrat. The Republicans want to turn what was a fact in the last administration into a salable myth for this one.

President Eisenhower was a popular war hero. He had no political affiliations before becoming a candidate and no experience in civil government before becoming President. Ike's idea of the Presidency was to allow the Government and the country to coast along with a minimum of guidance and a minimum of push. He liked to be known as one who was above party.

Yet, with such a popular hero in the White House, we Democrats gained control of Congress in 1954 and kept control throughout the remainder of the Eisenhower years. It was because the Democratic Party and its principles were still speaking for the majority of Americans.

The Republicans think they can suddenly hang a no-party label on President Kennedy, belittle his programs and seize control of Congress in 1962. I say it will not be done. I say we Democrats are going to increase our majority in Congress and get along with the job we have set out to do. And I think New York Democrats are going to do their part in 1962 as they did in 1960.

President Kennedy sought the office and brought to it a lifetime as a Democrat and many years of service in politics. In addition, he is blessed with intelligence, education, sincerity, experience, energy, and capable advisers. What is more, the girls say he is good looking.

With all this going for him, it is no wonder he is popular. The new spirit he has brought to the White House adds to his popularity. Yet, President Kennedy would never set himself apart from his party. He is, indeed, part of the Democratic Party and, happily, its best spokesman and salesman.

In capturing the spirit of the party, President Kennedy has captured the spirit of the Nation—tired of foundering, tired of drifting, worried about health and housing, work and waste, taxes and troubles.

We Democrats know that we cannot solve all the troubles of this Nation overnight. But we also know that these problems cannot be solved unless we dare to try.

In Congress we are working to hammer out the program designed by the President. We have made substantial progress on the antirecession bills, having passed extended jobless benefits, a bill to aid depressed areas, a new higher minimum wage, and measures to help out families suffering from unemployment. We are working on housing, tax reform, highways, incentives for business and industrial expansion.

It is we Democrats who are intent upon an expanded economy so that we can provide not only jobs for the jobless, but 1.2 million jobs for those youngsters who will enter the labor market this year and for the estimated 2.3 million jobs that we are told will be lost to automation and better efficiency.

It is a Democratic administration that is insisting on full protection of the rights of all Americans to work, to vote, to live in peace, and dignity. It is we who are insisting on full application of equal rights. It is we who are tackling problems of spreading communism around the globe, inadequate defense, second best in space, commuter transportation needs, better highways, polluted rivers, recreation needs, juvenile delinquency, not enough schools and teachers. It is we who are setting the pace as good neighbors at home and abroad.

Of course, some of these things may be unpopular with some of the special interests and with some Republican leaders. It is basic Republican belief that government should do as little as possible. It is basic Democratic belief that government should do what is necessary.

These programs are popular. They are being pushed by popular men, men who dare to act and who dare to tell the bald truth and not sweep unpleasant facts under the rug.

If any State in our Union understands leadership of this kind, it is New York. In our lifetime, New York has given us superlative leadership—from Franklin Delano Roosevelt to your present great leaders.

Republicans, too, have had great leaders in this State. The trouble is, when a New York Republican wins prominence in city hall or up in Albany or down in Washington, he ends up fighting a rear-guard action with his own party. This was true in the days of Teddy Roosevent and it still is true today.

In our party the program is clearly laid out. The leadership is firmly established and its goals are clear. The mood of the people is caught up in the program of the party and the determination of the leaders to get the job done.

The opportunity for service is as great as any time in our history. With dedication of purpose and belief in the undying principles of our party, confidence in the leadership, unity in the organization, we will accomplish the job we have set out to accomplish. We shall reach the goal we have set out to reach. We shall move from platform and promise to programs and performance.

The call has come clearly from the man in the White House. Ours, said President Kennedy, is the challenge to "get this Nation moving again. As the party of hope, it is our responsibility and opportunity to call forth the greatness of the American people. In this spirit, we must rededicate ourselves to the continuing service of the rights of man everywhere in America and everywhere on God's earth."

Poland's Constitution Day

SPEECH
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. OSTERTAG. Mr. Speaker, today marks the 170th anniversary of Poland's Constitution Day. It was on May 3, 1791, that the Polish patriots, without bloodshed or disorder, won approval of a Constitution which assured important social, political and educational reforms for the Polish people. The Polish Constitution was adopted only 2 years after the adoption of our own Constitution, and was imbued with the same spirit of freedom and democracy; in fact many Polish patriots had aided us in our own earlier struggle for freedom.

Unfortunately, Poland's 3d of May Constitution is no longer the foundation stone of the Polish Government; instead it has been replaced by a Communist "constitution" forcibly imposed on the Poles in 1953 by the Soviet Union. But the Polish people have not abandoned the ideals and aspirations embodied in their 1791 Constitution. Despite the ruthless Communist oppression, the Poles have not accepted this Russian domination and have not surrendered their love of freedom.

Millions of Poles have emigrated to this country and contributed their strength and vigor to the building of America. Today, I would like to join with them and freedom-loving Poles everywhere to mark this important anniversary of freedom, and to pledge our support for returning to Poland the Liberty and sovereignty she has known in more fortunate periods of her history.

Wake Up, America

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 4, 1961

Mr. BOW. Mr. Speaker, Ohio's 16th Congressional District is honored this week as the home of James Lutz, champion orator in the national contest sponsored by the Sons of the American Revolution at Clearwater, Fla.

James is a senior student at Louisville High School, Louisville, Ohio, where Donald R. Terry, director of forensics, has established a prize-winning department of speech.

The son of Mr. and Mrs. Mervin Lutz, of Louisville, James is an outstanding student who was a certificate winner in the national merit scholarship test this year, winner of the Stark County debate championship for the past 2 years, winner of the McKinley invitational debate tournament for 2 years, debate champion of northeast Ohio district No. 3, winner of the tri-State debate tourney, and winner of second place in the National Forensic League district tournament.

I am pleased to include with my remarks the address that won for James the Ohio original oratory contest of the Sons of the American Revolution and the right to participate in the national contest, which he has also won:

WAKE UP, AMERICA

In 1836 at the dedication of the Concord Battle Monument, Ralph Waldo Emerson wrote this famous statement:

"By the rude bridge that arched the flood,
Their flag to April's breeze unfurled,
Here once the embattled farmers stood
And fired the shot heard around the world."

With that shot our forefathers engaged in a bitter struggle to obtain freedom from a blundering Hanoverian English King George III who ruled the colonies with a hand of tyranny. This tyranny, a lack of political and personal freedom, the Townshend Act, the Quartering Act, and the Stamp Act, became intolerable to the colonists. Unrest appeared. Americans openly voiced their feelings. Patrick Henry in his famous oration to the Virginia House of Burgesses stanchly declared:

"Is life so dear or peace so sweet as to be purchased at the price of chains and slavery? Forbid it Almighty God. I know not what course others may take, but as for me give me liberty or give me death."

Thomas Jefferson's immortal words when he penned the Declaration of Independence rang out:

"We hold these truths to be self evident—that all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness."

Emotions were stirred, feelings were aroused until by a rude bridge that arched the flood some embattled farmers fired a shot heard around the world. That shot was a symbol. It was a symbol of a burning and intense desire for freedom. A desire which burned at Bunker Hill, at Lexington, at Concord;a desire which warmed the souls of men during the dark hours of Valley Forge; a desire which was kindled in the hearts of women and children as they endured hardships to support an army. A desire for which no price was too high to pay; no sacrifice too great to make; or no blood too precious to shed.

Freedom was won. The Colonies were victorious, but only because lowly, humble farmers were willing to die and shed their blood that others might be free. They suffered, they sacrificed, and they died that succeeding generations might know and enjoy the liberties which they so earnestly sought. To those who died, freedom was an unfulfilled dream; to us, a reality.

Have we lived up to the heritage which is ours? In examining ourselves, can we honestly say that we are of the same caliber as our forefathers? Can we say that we honor and cherish freedom as much as did those embattled farmers? In truth we cannot equate ourselves with those dedicated colonists who died for freedom. For you see our people are a people of complacency, a people made up of college students who riot against the House Un-American Activities Committee, a people infiltrated by Communist influence in business, labor, and politics. Ours is a people who are lax in using their rights and a people who no longer practice that all men are created equal.

Freedom is a word for which men have died, a word which we abuse and a word which the Communists want to eliminate from the hearts, minds, and souls of all men. The Communists to realize the values of liberty. Lenin has stated this about liberty:

"It is true that liberty is precious, so precious that it must be rationed."

So wake up, America! The clarion call to duty sounds today with as much imperativeness as it sounded in 1776 for those gallant Americans who answered the call and brought the birth of freedom to our Nation.

Today, we as free Americans stand at the cross roads of human destiny. The choice is ours, will we throw away the priceless heritage passed down to us etched in the blood of gallant Americans or will we pick up the gauntlet and answer the challenge of communism in the tradition of America's past?

What will be your answer, America of today? Will freedom or tyranny be reborn? Wake up, America, wake up before the slumber of apathy becomes the death sleep of the great heritage of 1776.

The Saga of Our Italians—III

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mr. SANTANGELO. Mr. Speaker, a great writer, Emma Lazarus, caught the

spirit of America in her poem "The New Colossus." The words are so beautiful that they bear repetition:

Give me your tired, your poor,
Your huddled masses yearning to breathe free,
The wretched refuse of your teeming shore.
Send these, the homeless, tempest-tost, to me
I lift my lamp beside the golden door.

Millions of immigrants thirsting for freedom have poured through the Golden Door of New York or the Golden Gate of San Francisco. They have contributed mightily to the building of our Nation, the preservation of our institutions and the enhancement of its reputation. Dr. Mario A. Pei, a son of an Italian immigrant, has contributed in a large measure to the growth of education and the enhancement of American prestige, not only in America, but throughout the world.

The New York Mirror on May 9, 1961, continued its series on famous Italians and their contributions to America by writing about the background and the life story of Dr. Mario A. Pei, one of Columbia University's famous sons. Dr. Pei was born in Italy and was brought here by his parents at an early age. I had the pleasure of knowing Dr. Pei when he was a student at Columbia University and also had contact with him when I was a young assistant district attorney and he was a member of the grand jury. This world-renowned scholar has not only affected the lives of public officials, but also the minds of young people searching for education and for knowledge.

Under the byline of Ara Piastro and Harry Altshuler, the story of Mario Pei is unfolded. I believe that the American people would appreciate knowing the contributions of this immigrant boy who helped make the United States great, and whose influence in the minds of his students will project itself for the good of America and for the future. The story of Dr. Pei, Columbia's famous linguist, follows:

COLUMBIA'S DR. PEI, A FAMOUS LINGUIST

(By Ara Piastro and Harry Altshuler)

Just what song the sirens sang and what language they sang it in, on that distant day when Ulysses sailed by lashed to his mast, is a mystery of antiquity which has always intrigued scholarly folk.

If anyone can fathom the answer, it might well be Dr. Mario A. Pei, professor of romance philosophy at Columbia University, world-renowned authority on languages—and quite an expert amateur in the field of folksongs as well.

He speaks four languages—Italian, French, and Spanish, as well as English—admits that he can manage 12 or 15 others "rather well," and is modest about his ability to "stumble around" in 30 to 40 more.

Currently he's on a sabbatical leave from Columbia and is due back in the fall. He's spending the holiday by teaching at the university in Lisbon, Portugal, under an arrangement with NATO. He picked up Portuguese in the last year or so—just for fun. The earlier part of the sabbatical year, he spent as acting dean of the U.S. Army language's school in Monterey, Calif.

Dr. Pei was born in Rome on February 16, 1901. The family—Francesco Pei, a businessman; his wife Luisa; Mario and his sister—moved to New York in 1908. Mario attended a parochial school, St. Francis Xavier, took his bachelor's degree at City College, then skipped right on to a Ph. D. at Columbia.

There was never any doubt about the field he wanted to work in. He had a gift for languages, originating, his wife Pearl suggests, in the remarkable keenness of his ear.

"He never forgets the sound of anything he's heard," she said. "He can remember folksongs he listened to years ago—not only the words, but the tune, also. He hums them for me and I pick them out on the piano."

Very quickly, too, it was apparent he had a gift for teaching, which has occupied much of the rest of his life. But before he became a teacher, it was a point of pride with him to pay for his own education: He did it with jobs as a floorwalker at Macy's, a salesman in a jewelry store, and tutoring less-gifted students.

His dictoral thesis on "The Language of the Eighth-Century Texts in Northern France" created a stir among scholars around the world, and is still considered one of the best disertations ever to come out of Columbia.

But for all the vast, erudite research that went into it, and his other studies of the languages of Charlemagne's time, here is no dry-as-dust scholar picking musty texts to pieces. His feeling for languages is a romantic one.

"Language is people," he says. "It's history and politics. It's civilization."

Something that underlines this point is his one venture into popular fiction, "Swords of Anjou," a historical novel.

It's a cloak-and-sword romance, swashbuckling with the beat of them, and must have given him as much joy to write as it has given many a reader.

On another level, a great deal of his serious work has been popular, also. "The Story of Language," his volume tracing the tongues of the world and their interrelationships, was written with such deceptive ease and compelling color that it became a Book-of-the-Month Club selection.

He has written many other books from the scholarly, "French Precursors of the Chanson de Roland," to the lively "Our Names" which traces the fascinating origins of what we are called, and other books that are used as texts.

Dr. Pei travels widely. Everywhere he goes, he is teaching—and learning. When home in New York (at 35 Hamilton Pl.) he and his wife like to have friends in for parties and trot out the folksongs he has picked up here and there.

His studies in phonetics and linguistics have made him one of the world's foremost authorities on language. But his influence goes far beyond academic circles. The Phi Beta Kappa key, the gold and silver medals from various schools, testify to his excellence as a scholar; the Bronze Plaque of the Freedom Foundation of Valley Forge attests to his outstanding achievements in bringing about a better understanding of the American way of life.

The Italian Government decorated him as Cavaliere Ufficiale in 1958. Even the Soviets have done him the singular honor of publishing a shrill attack on his book, "The World's Chief Languages"—because he did not put Russian up at the top of the list. They saw his book as a sinister Anglo-American plot to dominate the world—maybe because it was written in English.

Right now, with the growing realization of the free world's urgent need to pull together, the towering and friendly figure of Dr. Pei is being recognized in its true importance.

We need to understand our friends and they need to know us better. Dr. Pei speaks their language and can help us all to communicate.

The C. & O., the B. & O., and the Public Interest

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 4, 1961

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following brief discussion of the current attempt by the Chesapeake & Ohio Railway to gain control of the Baltimore & Ohio Railroad. This April 26, 1961, statement of the New York Central Railroad is to the point and should be of interest to all of us:

ACADEMIC?

By a Wall Street Journal Staff Reporter:

"WHITE SULPHUR SPRINGS, W. VA.—Walter J. Tuohy, president of the Chesapeake & Ohio Railway, told the annual meeting the question of Federal approval of C. & O. control of the Baltimore & Ohio Railroad is 'academic because we're going to get it.'"

This clipping obviously refers to the fact that the Interstate Commerce Commission will open hearings on C. & O.'s application to control B. & O. on June 19, 1961.

We don't believe this question is the least bit academic.

The Interstate Commerce Act is quite clear on the responsibilities of ICC concerning proposed mergers or consolidations of railroads. It says in part:

"In passing upon any proposed transaction under the provisions of this paragraph, the Commission shall give weight to the following considerations, among others: (1) The effect of the proposed transaction upon adequate transportation service to the public; (2) the effect upon the public interest of the inclusion, or failure to include, other railroads in the territory involved in the proposed transaction."

"The Commission shall have authority in the case of a proposed transaction under this paragraph involving a railroad or railroads, as a prerequisite to its approval of the proposed transaction, to require, upon equitable terms, the inclusion of another railroad or other railroads in the territory involved, upon petition by such railroad or railroads requesting such inclusion, and upon finding that such inclusion is consistent with the public interest."

The New York Central Railroad will demonstrate to the ICC that inclusion of the Central in any C. & O.–B. & O. proposal is essential to the public interest. We are absolutely convinced that the proposed haphazard C. & O.–B. & O. plan, without the Central, will do irreparable damage to railroad service east of the Mississippi.

And we are not alone in this conviction.

SENATE STUDY REPORT

An official report to the Senate of the United States, titled "National Transportation Policy"[1] published on January 3, 1961, supports Central's position on the B. & O.–C. & O. proposal.

This exhaustive study, prepared by transportation experts, says today's railroad problems might have been avoided except for "the unfortunate and frustrating experience of falling back on the piecemeal approach" to consolidation of our rail facilities.

[1] Prepared for the Committee in Interstate and Foreign Commerce by the Special Study Group on Transportation Policies in the United States.

The proposed C. & O. control of the B. & O. is nothing but a piecemeal approach to the rail problems east of the Mississippi.

The Senate report says "general consolidation (of rail facilities) must be approached on a regional or national basis."

The C. & O.–B. & O. scheme is neither regional nor national in concept.

The Senate experts say "Furthermore, in the absence of a regional approach there is danger of a merger of the two largest systems which would make impossible the formation of another system in that region that could provide either extensive or intensive competition."

Central is convinced that a strong, competitively balanced two system rail complex is by far the most effective answer to rail problems east of the Mississippi. The Pennsylvania Railroad and its affiliates are forming one such system. A N. Y. C.–B. & O.–C. & O. merger would permit the formation of the second.

THE PUBLIC INTEREST

It is entirely possible that some people with financial interests in the C. & O. would benefit from its control of B. & O.

Here's what the Senate report says about interests.

"The overall public interest must supersede the interests of participating carriers and of opposing interests. This position has been emphasized throughout the report and is the basis of reorientation of national transportation policy. Applied to the subject of railroad consolidation it means that various individual interests may not be permitted to impede a program deemed essential to our national security and economic growth."

CONCERN OF U.S. SENATE

The Senate of the United States is deeply concerned with the problem of rebuilding a vigorous, competitive rail system. In a letter concerning the Senate transportation study, for example, Senator WARREN G. MAGNUSON, chairman of the Senate Committee on Interstate and Foreign Commerce, said: "The increasing challenge of world economic competition makes imperative a transportation system which will assure rapid economic progress and provide adequately for national defense with a minimum expenditure of national manpower and material resources."

We of the Central intend to make the fullest possible contribution toward building such a transportation system. We shall welcome your active support.

THE NEW YORK CENTRAL RAILROAD.

April 26, 1961.

The Need for a Naval Hospital at Long Beach, Calif.

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1961

Mr. HOSMER. Mr. Speaker, on March 23 the House passed H.R. 5000, the military construction authorization bill for this year. Included in its provisions was a sorely needed item for construction of a naval hospital at Long Beach, Calif. The sum authorized was $8,763,000. No cost for land acquisition is involved because land required is being donated to the Government.

Subsequently, the Senate Armed Services Committee deleted this item from the bill. The bill passed the Senate in this form.

The priority for this item is great. The Department of Defense and the Bureau of the Budget fully support the project. It is respectfully submitted that it should be restored. This can be done in conference.

Long Beach, Calif., has the third largest concentration of naval ships in the country, exceeded only by Norfolk, Va., and San Diego, Calif. Long Beach is the home port of 112 Navy ships. There are approximately 32,000 active duty personnel in ships home-ported at Long Beach and 16,700 active duty personnel ashore of all services within a 30-mile radius of the proposed hospital site. Additionally, there are 3,400 Army and 5,900 Air Force personnel stationed in the area requiring medical support.

Long Beach is the hub of the large military community, afloat and ashore, in the entire Los Angeles-Long Beach metropolitan area of over 5 million population. If a naval hospital is not provided, these thousands of active-duty personnel in the Los Angeles-Long Beach area will continue to be without the adequate and timely medical and hospital care to which they are legally and morally entitled, and continued deterioration of the welfare and morale of these personnel can be expected.

The mission of the naval base at Los Angeles is to provide logistic support to fleet units and other designated commands. In addition to assistance to the forces afloat of ships repair, supply, and other support elements, a naval base must provide for the care and the hospitalization of the sick, injured, or wounded entrusted with the complex and hazardous task of maintaining our fleet in readiness for war. To do this adequately, medical facilities must be available. This moral responsibility of our Government is understood and fully met in most instances throughout the Naval Establishment, but in the Los Angeles-Long Beach area it is paradoxical that our naval base, supporting the third largest group of ships homeported in the United States, does not include a naval hospital. Other than an 86-bed Army station hospital at Fort MacArthur and a 40-bed dispensary at the Marine Corps Air Station, El Toro, there is no existing similar-type facility within 80 miles of Long Beach.

The hospital ship *Haven* berthed at the naval station in an in-service-in-reserve status, is being used as an interim hospital facility and although it has an authorized allowance of 425 beds, only 350 of these can be considered to be usable for this interim mission. In addition, the facilities of *Haven* are such that only active duty and retired males can be accommodated. There are no suitable accommodations for servicewomen. The ship is old. It was designed as a seagoing ambulance, which may have been adequate for the evacuation of casualties from forward areas in World War II, but is entirely unsuitable as a substitute for a hospital ashore. Its deficiencies include lack of facilities to promote a healthful, rapid convalescence. Crowded compartments, bunks in tiers of two and three, critically excessive noise levels, lack of accommodations for visiting, and exposed ducts, piping, etc., which preclude proper cleanliness, are included among the factors which militate against fully satisfactory hospital services being provided forces afloat and ashore in the Long Beach area.

This naval base is the only naval base in the continental United States that does not have a naval hospital. Below is a recap of the other naval bases, their attendant naval hospitals, and approximate distance of hospital from base headquarters area:

Naval base	Hospital located at—	Approximate miles from headquarters area
Boston, Mass.	Chelsea, Mass.	0
Newport, R.I.	Newport, R.I.	0
Portsmouth, N.H.	Portsmouth, N.H.	0
New York, Brooklyn, N.Y.	St. Albans, N.Y.	15–20
Philadelphia, Pa.	Philadelphia, Pa.	0
Norfolk, Va.	Portsmouth, Va.	8–10
Key West, Fla.	Key West, Fla.	0
Charleston, S.C.	Charleston, S.C.	0
San Diego, Calif.	San Diego, Calif.	0
San Francisco, Calif.	Oakland, Calif.	15–20
Bremerton, Wash.	Bremerton, Wash.	0
Pearl Harbor, Hawaii.	Pearl Harbor, Hawaii.	0

While there are no naval bases in the 8th or 9th naval districts, a naval hospital is located at Corpus Christi, Tex., and Great Lakes, Ill., to serve the needs of these respective areas.

The limited number of beds previously mentioned at Fort MacArthur, San Pedro, and at the Dispensary, Marine Corps Air Station, El Toro, added to those of the hospital ship *Haven*, whose inadequacies have been previously stated, cannot begin to provide the required and expected medical care for this vast military population. Continual reliance cannot be expected from *Haven* due to the possibility of an emergency commitment elsewhere such as could be caused again by a limited war or disaster. *Haven* was active during the Korean crisis and the "Passage to Freedom" evacuation in Indochina in 1954.

Other than the limited facilities mentioned above, the nearest adequate hospitals are located at Camp Pendleton—600 beds—and at San Diego—1,750 beds—distances of 80 and 110 miles respectively. Long Beach-based personnel use these hospitals, but this situation is analogous to Washington, D.C., personnel traveling to Richmond, Va., or Wilmington, Del.; to Charleston, S.C., personnel traveling to Savannah, Ga.; to Norfolk, Va., personnel traveling to Richmond, Va.; or to Boston personnel traveling to Portland, Maine, for hospital care.

Although of secondary importance as compared to the active forces, the requirements of service dependents and retired personnel should also be consid-

ered. There are 21,800 Navy and Marine Corps retired in the area, 22,900 dependents of active duty personnel, and 21,800 dependents of retired personnel. The disadvantages of the distances to Camp Pendleton and San Diego are obvious, particularly in the case of the dependent women and children who either do not have private cars or do not drive. The net result of the absence of suitable medical and hospital facilities in the Long Beach area is that adequate care is not readily available for the personnel to whom the Government has this responsibility. As a consequence, their welfare and morale have deteriorated and will continue to suffer unless the situation is corrected. The recently expanded Medicare program wherein dependents can consult civilian doctors and use civilian medical facilities under certain restrictions has tended to alleviate this condition. However, it does not authorize outpatient care for many medical needs, and when the medical care is authorized the serviceman pays part of the expense.

With the mounting cost of Medicare in civilian hospitals, it is considered that the Long Beach Naval Hospital would pay for itself in a few years. From information obtained from the Blue Cross office in Los Angeles, 4747 West Sunset Boulevard, in the Greater Los Angeles area alone since January 1960, average monthly hospital cost for Armed Forces dependents under Medicare has been $363,000. This amount does not include approximately $145,000 per month cost of doctors' fees under Medicare. Sixty-five percent of the Medicare costs in the Greater Los Angeles area are incurred by Navy and marine dependents. It is a conservative estimate that funds in the amount of $225,000 per month would be saved in dependent medical costs alone, that is, tonsillectomies, examinations, laboratory tests, X-rays, and the like, if a naval hospital were constructed in the Los Angeles-Long Beach area.

When the former naval hospital, which the Navy had to vacate and transfer to the Veterans' Administration in 1950 under a preemptory order of their Defense Secretary Louis Johnson, was started in 1941, the fleet based here had its own hospital ship. There were so many hospital cases requiring treatment in facilities ashore, however, that a convenient hospital was needed. Before the hospital was completed, the patients were sent by ambulance to San Diego. Traffic conditions were hazardous and numerous accidents occurred. To accommodate such patients, the Long Beach Naval Hospital was built. During the year before it was closed, even during the slump in military activity following World War II, about 550 active military personnel were being cared for at all times.

The proposed hospital will be smaller than the former one but the need for a naval hospital in Long Beach is just as urgent today as it was in 1941. Under today's world conditions the fleet and its shore support activities must operate with much greater intensity than in the period between World War II and Korea. The availability of proper medical care is a necessary prerequisite for the morale and operating efficiency of this fleet.

The logical means of correcting this military medical problem in the Los Angeles-Long Beach area is to construct the 500-bed naval hospital. Approval of this project is urgently needed. This can best be accomplished most economically on the land which the city of Long Beach has so generously set aside for this purpose at the nominal cost to the Government of $10.

House Resolution 211—Special Committee on Captive Nations

EXTENSION OF REMARKS
OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1961

Mr. FLOOD. Mr. Speaker, on March 8, 1961, I introduced a measure calling for the establishment of a Special Committee on Captive Nations in the House of Representatives. This measure is now House Resolution 211. There are not sufficient words to express my profound gratitude and personal delight to the more than 20 Members of the House who joined with me in that most stimulating and very enlightening discussion which took place then on the subject of the captive nations—CONGRESSIONAL RECORD, March 8, 1961, "Russian Colonialism and the Necessity of a Special Captive Nations Committee," pages 3286–3311.

The popular response to House Resolution 211 has been so enthusiastic and impressive that I feel dutybound to disclose the thoughts and feelings of many Americans who have taken the time to write me on this subject. These citizens are cognizant of the basic reasons underlying the necessity of the proposed committee. They understand clearly the vital contribution that such a committee could make to our national security interests. In many cases, they know that no public or private body is in existence today which is devoted to the task of studying continuously, systematically, and objectively all of the captive nations, those in Eastern Europe and Asia, including the numerous captive nations in the Soviet Union itself.

Because their thoughts and sentiments are expressive and valuable, I request that the following responses of our citizens to House Resolution 211 be printed in the Appendix of the RECORD:

APRIL 25, 1961.

DEAR MR. FLOOD: In the CONGRESSIONAL RECORD for April 17, 1961, I read your statement concerning H.R. 211, which would establish a Special Committee on Captive Nations.

Please accept my hearty support for this resolution. It should prove embarrassing to Communists, and therefore will further the cause of freedom everywhere.

Yours truly,

MRS. JOSEPH SHULSINGER.

ANTI-COMMUNIST ASSOCIATION OF UKRAINIANS OF REVOLUTIONARY-DEMOCRATIC PERSUASIONS IN THE U.S.A., INC.,

March 26, 1961.

Hon. DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

DEAR SIR: The Anti-Communist Association of Ukrianians of Revolutionary-Democratic Persuasions in the U.S.A., Inc., expresses support for your resolution introduced in the House of Representatives March 8, 1961. We heartily favor the creation of a special permanent committee to deal with the captive nations in the grip of Soviet Russian tyranny and enslavement.

Sincerely yours,

K. PRYCHODKO,
Chairman of the Association.
M. SEMENEC,
Secretary, the Branch of External Connections by the Association.

MAY 1, 1961.

Hon. DANIEL J. FLOOD,
U.S. House of Representatives,
Washington, D.C.

DEAR SIR: Your leadership in introducing H.R. 211 is most commendable. I feel that there is a pressing need for a special committee on the Captive Nations to counteract the tremendous Communist propaganda machine which has put us to a terrible disadvantage in the waging of the cold war.

I am writing letters both to my Congressman, JOEL T. BROYHILL of the tenth district of Virginia, and to chairman SMITH of the Rules Committee urging them to support this bill. I am also encouraging my friends to support this bill by writing to their Congressmen.

Sincerely yours,

JOHN W. VINTER.

UKRAINIAN CONGRESS COMMITTEE OF AMERICA, TROY, N.Y., BRANCH,
Troy, N.Y., May 3, 1961.

Hon. DANIEL J. FLOOD,
New House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: Our organization the Troy, N.Y., Branch of the Ukrainian Congress Committee of America wishes to congratulate you on your bold move in introducing the resolution calling for the establishment of a permanent Committee on Captive Nations in the House of Representatives. Such a Committee is long overdue.

A Committee on the Captive Nations would be a popular source of information on the various enslaved nations of the U.S.S.R. It would inform the American people and the world at large on the state of affairs behind the Iron Curtain and assist the Government in formulating its policies with respect to the captive nations. We are writing our Congressmen CARELETON KING and LEO O'BRIEN asking them to support your resolution.

Sincerely yours,

PETER TARNOWSKI,
President.

APRIL 21, 1960.

Hon. DANIEL FLOOD,
House of Representatives,
Washington, D.C.

DEAR SIR: In looking through the CONGRESSIONAL RECORD for 1961 I saw House Resolution 211. It was very gratifying to see that our Congress has a man who is deeply interested in captive nations.

It is clear that the Union of Soviet Socialist Republics is not a union by consent of the people, but a union imposed upon them by a dictatorial regime. It is a sign of healthy mind, of sound character and of deep democratic feeling for us Americans to realize this situation. That we should

help these enslaved nations is a duty of brotherhood and a duty to mankind.

I hope, Mr. FLOOD, that your resolution is passed, so that we, as conscientious American citizens know that the cries of the enslaved people under Communist Russia are heard by our Government and that action is taken.

Respectfully,

JESÚS E. JIMÉNEZ.

PHILADELPHIA, PA., *April 30, 1961.*

DEAR CONGRESSMAN: I herewith express my sincere gratitude to you for your prevailing action in the matter of enlightening our fellow Americans on imperialistic Soviet policy and supporting the liberation efforts of nations subjugated by the Russians.

I appeal to you to continue your support of this magnanimous aim.

Very truly yours,

NICHOLAS BOHDAN LUCZAKOWSKY.

MAY 2, 1961.

Hon. DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN: We, Americans of Cossack background, expected your reelection, and we are happy you will continue your activities in the Congress of the United States.

Your reelection signifies the acclaim of your constituents and their approval of your splendid political work. We are glad that you now in position to continue your work for the benefit of the captured peoples. This work, in our opinion, serves at the same time the best aims of the United States.

In the furtherance of your patriotic service to this country, and in pursuance of the best traditions of its glorious past, and for the ideals of the humanity in general, you presented in the Congress a new resolution, proposing to establish a permanent congressional Committee for the Captive Nations. This proposal evoked in us a feeling of deep moral satisfaction because we remain firmly convinced that our enemy can be conquered only by the common efforts of all of us, the peoples of the free world together with the peoples suffering under the yoke of the Communists.

On behalf of the Cossack national liberation movement we offer to you an expression of our deepest gratitude for all that you have done for our common cause, and we ask you to accept our sincere wishes for the realization of your highly humanitarian and politically significant proposal. We are convinced that the acceptance of your proposal will prove to be a great historical event.

Respectfully yours,

IGNAT BILYJ.

MAY 1, 1961.

Mr. DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

DEAR MR. FLOOD: I appreciate receiving news from Washington, D.C. This is it, House Resolution 211, proposing a special Committee on Captive Nations.

The three Baltic States lost their independence under the agreement made between Germany and Soviet Russia. The tremendous merciless power of Soviet Russia swept over Estonian territory in 1940 and those who had been serving their fatherland for the benefit of future generations were treated as the biggest criminals.

The Baltic States are looking forward to free existence again according to human rights in the world, where every nation, big or small, should have the right to live.

Very truly yours,

ROMAN LAES.

1411 Toberman Street,
Los Angeles 15, Calif.

MAY 4, 1961.

DEAR CONGRESSMAN DANIEL J. FLOOD: In respect to Moscow's increasing propaganda on the subject of "liberation" of the colonial nations from capitalism, it is very necessary to coordinate our activities in revealing the Russian tactics of colonizing other nations, which is still continuing but with disguished maneuvers and methods.

In fact, there is no capitalistic or "imperialistic" country in the world which might have one-tenth of that number of colonized nations that Russia has at present. Unfortunately, their lasting struggle for independence had never been supported by any outside power nor had sufficiently been realized. The physically hard and morally humiliating conditions that the captive nations are bearing under the Moscow dictators must be highlighted.

I don't wish to extend this letter to the history of struggle of all captive nations but wish to point out some facts that took place with the Idel-Ural or Volga-Ural nations from where I've come.

The Kazan and the Astrakhan Kingdoms on the Volga had been conquered by Ivan the Terrible in the midst of the 16th century and the native people were slaughtered and scattered all over Russia so that the Tatars were thoroughly weakened. However, in the course of 400 years the Tatars staged many uprisings but every time they were repulsed by the Russian military forces.

Toward the end of the First World War, when Russian power was shaken by the Germans, the Idel-Ural Tatars managed to restore their national independence and established a parliamentary government in November 1917. At the same time, the Russian Communists seized power, not so such by force but by means of propaganda, which even at that time was used by the Communists with astonishing skill. The main theme of their propaganda was: "Liberty to All," which was also interpreted by the former colonial nations that "They may even choose their own way of the future."

But as soon as the Bolsheviks eleminated the Czars remnants, they directed their military forces against the Idel-Ural state and captured it in April 1918.

Where is that promised "Liberty" of 1917? Nowhere. On the contrary, all nations "liberated" by the Russians since 1917, are in the Communist orbit and are the subjects of the Central Communist Party of Moscow.

Moscow can't tolerate when someone dares to speak against it. Thus, your House Resolution 211, which applies to the captive nations in the Russian orbit, is the most powerful blow against its prestige. And that once started, this blow against the Moscow colonizers should be continued with increasing power. With hope.

Yours faithfully,

AHMED GEREY.

APRIL 22, 1961.

Hon. DANIEL J. FLOOD,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: We know from the press that you have introduced the resolution calling for the establishment of a permanent Committee on Captive Nations in the House of Representatives.

We wish to congratulate you on your boldness and wisdom in introducing such a resolution.

We believe that the captive nations problem is steadily growing in importance in world affairs.

The need to realize it, know it, and consider a proper solution of it when the time comes, is becoming more and more evident and necessary.

Your resolution is, in our opinion, a timely and proper answer to this need.

We wish you full success in your action.

We also are writing our Congressman, the honorable HOWARD B. ROBINSON, asking him to lend his support to your resolution.

Respectfully yours,

WOLODYMYR B. SHEMBEL.
WILLIAM IWANONKO.

Castro's Cuba Should Teach Us a Lesson

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1961

Mr. FEIGHAN. Mr. Speaker, under leave previously obtained, I insert in the RECORD an excellent article which appeared in the Cleveland Plain Dealer on May 5, written by Philip W. Porter:

CASTRO'S CUBA SHOULD TEACH US A LESSON

(By Philip W. Porter)

Another useful lesson from the Cuban fiasco—in addition to the discovery that our high Government officials are fallible and human—is the extent and speed with which the Communist-style police state has taken over this island at our back door.

Most Americans, being casual readers and inattentive listeners, knew dimly that Castro had abolished freedom of the press and of the air—that's the first thing all dictators do—and had confiscated American-owned property without compensation.

They knew also that he had steadily increased the size and armament of his militia, and was doing business with Russia, China, and other Iron Curtain countries. And that he and the Catholic church were making faces at each other.

They knew the tourist business with America is shot and it's extremely difficult, if not impossible, for Cuban citizens to leave the country now.

SOME CHERISHED ILLUSIONS

But somehow they had maintained the hope, and probably the belief, that there were enough people in Cuba who hated all this and would stick their necks out when the proper moment for revolt should arise.

The slowly sinking standard of living in Cuba, particularly for the middle classes—shortages of familiar goods, shortages of repair parts, etc., is no particular secret. It has begun to hurt.

Well, the abortive invasion abruptly ripped the veil off those illusions. Castro has apparently scared the daylights out of those remaining in Cuba and established such a tight Gestapo-type espionage that his gangs were able to round up thousands of suspects overnight and keep them in jail until all danger from the invading forces had passed. Most of them may still be in jail. Little verifiable information comes out of Cuba these days.

Now he has started open warfare with the church, which in every country has historically resisted communism. All Catholic priests in Cuba have been put under house arrest, and priests who are foreign citizens will require permits to stay. This means soon they'll be ousted. Church schools are to be "nationalized."

THEY WERE BRAINWASHED

Few civilians, and no militia stuck their necks out when the small band of Cuban patriots landed in the Zapata swamp. Some

might have, had they been out of jail. But the sad fact is that they did not though the resistance forces had counted on them. They had been brainwashed.

And Castro now no longer pretends that some day he is going to have an election.

Even in the Iron Curtain countries they pretend to have elections. The people have no choice among the candidates, and the few dissenters who vote "no" or don't vote at all usually wind up in Siberia or a concentration camp.

But the Communists governments find it useful propaganda to pretend they are holding elections, just as they pretend to have a parliament.

Thus the familiar pattern of dictatorship—from Hitler, through Mussolini, Mao Tse-tung, Stalin, and Khrushchev—unfolds. No freedom of the press, no free passage of citizens in and out of the country, confiscation of foreign property, organization of ignorant camp followers into storm troopers, jailing of suspects without trial, conflict with the church, establishment of an official villain (with Hitler it was the Jews; with Russia, China and Castro it's the United States, particularly "Wall Street").

It's idle to debate whether Castro himself is a Communist. His principal lieutenants are. He is doing business with the Communists. He has been following the pattern of the police state step by step. Now he has cast off all pretense. When you walk like a duck, and act like a duck, you are a duck.

Didn't take long, did it, once he got rolling? Less than 2 years.

"Symbol of the Nation: Shepard Restores the Capital's Faith in Virtues of the American People," an Article by James Reston

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1961

Mr. BRADEMAS. Mr. Speaker, under unanimous consent, I insert in the CONGRESSIONAL RECORD the text of a brilliant article published in the New York Times of May 9, 1961, by the distinguished correspondent of that newspaper, James Reston, concerning the remarkable achievement of America's first astronaut, Comdr. Alan B. Shepard.

The article follows:

SHEPARD RESTORES THE CAPITAL'S FAITH IN VIRTUES OF THE AMERICAN PEOPLE

(By James Reston)

WASHINGTON, May 8.—Comdr. Alan Shepard had a triumph in Washington today because he revived the faith of a sad and disillusioned city.

It was not that he represented the courage of this country's first explorer of outer space—everybody expected that—or that he was something new. On the contrary, it was because he symbolized what Washington was created to celebrate but had begun to doubt: the free and natural man: simple, direct, thoughtful, and modestly confident.

No matter what he had been like, Washington would have been enthusiastic, for Washington, weary of defeat, was prepared to exaggerate any achievement.

What surprised this sophisticated and cynical capital was that Shepard turned out to be that recognizable American character: The kid next door, the dream of the easy athletic all-American boy, with faith in the Lord, and a glorious happy wife, and everybody's mother.

During the troubles in Cuba and Laos, this city has been in a peevish mood. Its theme has been that the American people were letting the Government down. They were selfish and materialistic, uninterested in paying for the education of their children, unwilling to make the sacrifices necessary to meet the challenges of their enemies.

What had happened to the old virtues, Washington was asking. How could we compete against a centralized, conspiratorial Communist society with a free and easy society in which peoples were concentrating on their own personal aims and unwilling to volunteer for the great tasks essential to the Nation's survival?

ASTRONAUT THE ANSWER

Shepard provided at least one dramatic answer to this indictment. He was not the brilliant exception to the rule. He was not top of his class at Annapolis. He was well down in the middle, with over 40 ahead of him, yet he moved in here with a poise that astonished everybody from the President to the lowliest reporter in the press corps.

Even President Kennedy, that cool master of the news conference, never put on a better demonstration of grace and detailed knowledge under fire. Shepard fielded the questions like a pro. He was in command of the situation from the start to finish. He answered the fair questions and refused to answer the imprudent questions. And he was always considerate of the other astronauts who sat behind him on the stage and might have been chosen to take the first dramatic ride into space.

When he was asked whether he had any doubts or fears before he entered the big rocket, he admitted that he had. When he was asked whether he ever had any doubts about the risks he was taking, he replied that that was the easiest question of the day because he had never had a single doubt.

SUSTAINED BY RELIGION

When he was questioned about his faith, he said simply that all of the astronauts were sustained by their religion. When he was asked whether he had called his wife before he took off, he said he had, but that that was a personal question.

Danger he took as part of life and duty without question, and even with a kind of quiet pride. One was reminded of what Albert Camus, the French author and patriot, said just before he died:

"My conclusion will be simple. It will consist of saying in the very midst of sound and fury of our history: 'Let us rejoice.' Let us rejoice at being faced with cruel truths. * * * Let us seek the respite where it is—in the very thick of the battle. * * *"

In a way, Shepard made almost as much of an impression on Washington with his words and spirit as he did with his flight. He reminded the Nation that there are free and able men here unknown to the Nation as a whole, and he talked about himself as if he were very lucky, and that there were many other men who might have had the chance he had to prove the point.

Accordingly, this was a memorable occasion, which cut through the gloom of the last few weeks and provided new hope for the future.

Away back in 1913, Oliver Wendell Holmes reflected on the disappointments of the day and expressed the kind of faith many men felt here today after listening to Shepard.

"If I am right it will be a slow business for our people to reach rational views, assuming that we are allowed to work peaceably to that end. But as I grow older I grow calm. If I feel what are perhaps an old man's apprehensions, that competition from new races will cut deeper than working men's disputes and will test whether we can hang together and can fight. * * * I do not lose my hopes. * * *

"I think it not improbable that man, like the grub that prepares a chamber for the winged thing it never has seen but is to be—that man may have cosmic destinies that he does not understand. And so beyond the vision of battling races and an impoverished earth, I catch a dreaming glimpse of peace."

Federal Control Must Follow Federal Aid

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mr. ALGER. Mr. Speaker, many of us who oppose Federal aid to education because there is no way that such aid will not be followed by Federal control, are in complete agreement with Senator HARRY BYRD, of Virginia, who so eloquently points out that "it would be irresponsible for a Federal agency to pass out billions of dollars without exercising control over the programs for which they are provided." Senator BYRD calls attention to one major field in which Federal control in the schools will cost the taxpayers millions and will result in less school construction for which the money is allegedly being raised—that is in providing that Davis-Bacon wage rates on all public school construction be paid whenever Federal subsidy is used. I sincerely urge that all my colleagues carefully read the editorial, herein inserted, based upon Senator BYRD's statement and printed in the Wall Street Journal:

THE LOGIC OF CONTROL

Speaking of the administration's Federal aid to education bill, Senator BYRD the other day remarked that it would be "irresponsible for a Federal agency to pass out billions of dollars without exercising control over the programs for which they are provided."

We think that sums up the inherent and inescapable logic of the matter. Many people scoff at the danger of Federal control of education; the bill itself contains a specific disclaimer. Yet, how, in fact, is it possible to have a large, costly, long-lasting Federal program and no Federal responsibility?

Actually, despite the disclaimer, the present bill already has control features. For one thing, Senator BYRD notes that it would provide for paying so-called Davis-Bacon labor wage rates on all public school construction wherever Federal subsidy funds are used. He adds that these rates, "almost without exception, are metropolitan rates. To apply them elsewhere for school construction means spending more money for fewer classrooms."

More direct controls could easily be added by amendment. The Federal subsidies might be limited to States which put greatest emphasis on science courses, or which use certain textbooks. It takes no effort of the imagination to see the growth of such controls.

And why not? It is idle to argue that the Federal Government should put up these billions for education and refrain from any say in how and for what purposes they should be spent. The real question is something else: Whether the Nation wants to jeopardize the principle of local control, which continues to yield excellent results,

for the sake of political handouts for which no need has yet been demonstrated?

It is certainly the right of the people to decide either way. But if they choose the Federal road they should at least be in no doubt about its logical destination.

A Big Job For Batt

EXTENSION OF REMARKS
OF
HON. WILLIAM S. MOORHEAD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mr. MOORHEAD of Pennsylvania. Mr. Speaker, I should like to bring the attention of the Congress to an editorial which appeared in the Pittsburgh Post-Gazette and Sun-Telegraph on May 3, 1961. All who know of Mr. William I. Batt, Jr., and of his appointment to be the Administrator of the depressed area program concur with the sentiments expressed in this editorial. We shall look forward with pleasure to the privilege of having his service in the Federal Government after such an able demonstration of his abilities as secretary of labor in the Commonwealth of Pennsylvania:

A BIG JOB FOR BATT

President Kennedy made a good choice in naming William L. Batt, Jr., secretary of Pennsylvania's Department of Labor and Industry, to administer the new program of Federal aid to depressed areas.

Mr. Batt has had wide experience as a Federal and State administrator in the fields of labor and economics. He has been head of this State's labor and industry department since 1957.

Under his leadership, Pennsylvania's first effective program of minimum wages for women was put into force, programs for rehabilitating areas of chronic unemployment and retraining technologically displaced workers were initiated, and the State's labor-management climate was improved despite the stresses of two national recessions.

Prior to his service in this State, Mr. Batt held several positions in the Federal Government, including staff offices in the Department of Labor, Department of Commerce, Office of Production Management and the Lend-Lease Administration.

During the 1960 presidential campaign John F. Kennedy named Mr. Batt to organize and chair the Kennedy Conference on New Jobs and New Growth in Charleston, W. Va. Thus Mr. Batt was tagged from the outset to administer any Federal program to aid depressed areas in a Kennedy administration.

Certainly Mr. Batt knows firsthand the problems of depressed areas in Pennsylvania and West Virginia, including the Pittsburgh area. We are confident that he will move promptly to implement the legislation.

Just what effect the program is likely to have on an area like the Pittsburgh district remains to be seen. Since there is already more plant here than anyone knows how to operate profitably, it may be that the provisions for building new plants will not be particularly useful.

This and other depressed areas might well benefit, however, from the program's provisions for retraining surplus labor. The legislation authorizes the expenditure of $4.5 million per year to finance retraining programs and another $10 million annually for the subsistence of trainees. The Office of Education can, if it will, supplement this program with various forms of help. We hope it will, for this may prove to be for some areas the most valuable part of the depressed areas bill.

The Saga of Our Italians—II

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mr. SANTANGELO. Mr. Speaker, the great New York newspaper, the New York Mirror, has commenced a series of articles publishing the good deeds of persons of Italian ancestry and their contributions to our beloved country. This newspaper recognizes the bad and the good, the debased and decadent, with the sound and vital. It has decided to stress the positive good instead of the negative which other media of communication have so blantly stressed during the past several years.

To the American who was born in freedom, the hopes and aspirations of the foreign born for a new life guaranteed in his liberties, in his rights and privileges are not fully appreciated. A native son of America cannot receive the thrill which the Statue of Liberty generates in the hearts of those going through the Narrows past our Golden Gate. Many of those foreign born who came to America in their early youth have repaid this Nation for the opportunities afforded them by outstanding service to the community in all fields of endeavor. One of those is Judge S. Samuel DiFalco, who was born in Italy and was brought here by his parents when a young boy. He truly represents the spirit of freedom and his story is a demonstration of democracy in action where a person may succeed on his own ability without regard to his place of birth, his race or his ancestry. His work has helped make the United States great. I have the privilege and honor of knowing Judge S. Samuel DiFalco intimately, and I can state that here is an American who has grafted the great traditions of the land of his father, Italy, upon the principles of America. The story of Judge DiFalco's career is set forth in the New York Mirror on Monday, May 8, and I believe that the reading public will find pleasure in understanding the background of the Italian who became surrogate of New York County:

[From the New York Mirror, May 8, 1961]

THE ITALIAN WHO MADE SURROGATE—HELPED MAKE UNITED STATES GREAT

(Less than a month from now, on June 4, the greater New York chapters of the City of Hope, a free nonsectarian hospital for victims of cancer and other illnesses, will honor their man of the year with a dinner at the Waldorf-Astoria. The man is New York's Surrogate S. Samuel DiFalco—who half a century ago was a poor immigrant lad on the lower East Side. The story of his rise to honor and eminence in American life is one of the chapters in the saga of our citizens of Italian birth or heritage, told in a new Mirror series about their many contributions to our culture.)

(By Ara Piastro and Harry Altshuler)

There was no printed program by which you could recognize the players, there on the teeming East Side of New York half a century ago. There was no label on little S. Samuel DiFalco, saying "future surrogate."

You couldn't tell by the dirty faces of the youngsters, playing stickball in the street or potsie on the sidewalk, how they were going to grow up.

One might be destined for jail, and another for the judge's bench. There was no knowing.

Nowadays it seems fashionable to blame crime and misused lives on environment, neighborhood influences, poverty and youthful hardship.

But you could hardly prove that point by naming the few bad eggs who came out of the Lower East Side. For there are so many others—so many notables, honored citizens, and torchbearers of the American dream—who also originated there.

One of those who seems to have thrived on hardships, turning each difficulty into a stepping stone, is DiFalco, Surrogate of New York County and an honored leader in numerous areas of community life.

Actually he was 6 months old before he was brought to New York and the Lower East Side. He was born in Sicily in 1907. In New York his father, Antonino opened a small business, while his mother, Rose, was busy bringing up young Sam and his sister and brother.

Maybe the distinguishing mark on Sam was work. He cannot remember when he wasn't working. Going to Stuyvesant high, he worked after school as a Postal Telegraph messenger. Later, attending the New York University School of Commerce, and New York University Law School, he worked out a frantic schedule like this:

Morning: work as a customer's man in a Wall Street stockbroker's office. Afternoon: attend classes. Evening: work on a newspaper, soliciting phone ads or reading copy.

By 1930, he had a law degree, but that was only the beginning. A young lawyer's struggle to get a foot in the door is notoriously hard. He clerked in a law office for a year, then hung out his own shingle at 401 Broadway, waiting for some one to entrust a case to him and filling up the long hours of waiting by taking a hand in local Democratic politics.

He was a member of the Manhattan Democratic Club, president of the Italian-American Democratic Club, and he was busy with church and other community activities.

Then in 1935 he took a serious step: He ran as an insurgent against the organization candidate for assemblyman in the 8th assembly district, in the primaries. He lost—but only by 80 votes, a showing that demonstrated remarkable strength.

For 4 years then, he gave up his growing private practice to serve the Government as Associate Counsel in the Interior Department. He came back to general practice in 1939 in the firm of DiFalco, Field and DiGiovanna, and in 1941 really emerged on the political scene when he was nominated by the Democrats for city council. He was elected, then reelected in 1948.

The rest of the story, to date, is one of winning more nominations and elections: State supreme court, and then in 1957, surrogate, for which he had both Democratic and Liberal support.

He lives at 983 Park Avenue with his wife, Emma, and their two children, Anthony, 22, a Fordham Law School student and Elisa, 15, a student at Marymount.

The political milestones tell only the results, not the why and wherefore. The

numerous awards and citations bestowed on the man tell part of the rest. The votes came in because, in all walks of life, a great many people had come to know DiFalco, to respect and trust him and depend on him. He could be counted on to be in the forefront in charitable and civic activities covering a wide range of interests.

Hospitals, for instance, have been one of his special concerns. He is a director of Stuyvesant-Polyclinic and Grand Central Hospital; a trustee of Long Beach Hospital and the Children's Blood Foundation of New York Hospital, a director of the Home of Sons and Daughters of Israel.

He is a founder and director of the Columbus Day Citizens Committee. He is active in the Knights of Columbus and the Catholic Lawyers Guild.

For "promoting tolerance and understanding among peoples of all faiths," he was honored in 1956 with the Eternal Light Award. The Israel Bond Committee named him its Man of the Year in 1954. He belongs, of course, to numerous professional, philanthropic and social groups. He is chairman of the National Italian-American League To Combat Defamation, which he helped organize in 1959 with other outstanding Italian-Americans.

"We felt," he recalls, "that the presentation of the Italian-American to the American public through many media—television, radio, press, and movies—was not only unfavorable, it was untruthful and defamatory. There was overreporting, out of all proportion, of the actual activities of an infinitesimal few, as against the positive contributions of the great masses of Italian-Americans in all walks of life. We don't advocate censorship—we aren't against the truth—but mere repetition of errors is brainwashing, likely to mislead the public into regarding with suspicion anyone with an Italian name."

To make the point, he displayed a clipping from a minor California newspaper, with a headline that screamed, "Mafia Involved in Stock Fraud." The story concerned an indictment against 17 men—just 2 of whom had Italian-sounding names.

Speaking for himself, and all the others who came here as immigrants or struggled upward through the obstacles of underprivilege and harsh environment, DiFalco said: "We feel a deep debt of gratitude to America, the land we came to for opportunity, for making it possible for us to achieve any success we have."

He himself is a shining example that it can be done.

Fair Labor Standards Amendments of 1961

SPEECH
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. DONOHUE. Mr. Speaker, I earnestly hope this House will promptly accept and approve this conference report on the minimum wage bill as the most reasonable compromise that can be effected at this time.

Department of Labor statistics show that 665,000 of the workers to whom coverage will be extended under this compromise now earn less than $1 per hour and about 4½ million of the presently and newly covered workers earn less than $1.25 per hour.

Mr. Speaker, I submit that it is difficult, indeed, to understand how anyone living in the United States can regard as in any way excessive a take-home pay of $50, before deductions, to an American working man or woman for a 40-hour week in this economic day and age.

In my opinion, the whole Nation will benefit by the acceptance of this compromise agreement which seeks to provide a firm foundation for the country's wage structure and which embraces a great assistance toward further economic recovery and employment stability.

Of significant import is the objective, contained in this agreement, of eliminating competition among the several States on the basis of low wage standards. As minimum wages are reasonably increased throughout our economy incentives for plant migration to low-wage States are reduced. It is certainly not in the American tradtion to encourage competition for industry among the States solely on the basis of attraction through an available supply of cheap labor. All authorities agree that sort of competition is unfair and serves to encourage only social and economic dispute and disorder in the Nation.

This compromise agreement is as close to the President's recommendations as can now be accomplished and it is as reasonable to everybody involved as can be expected. I earnestly hope it will be adopted by this House without undue delay.

Polish Constitution Day

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1961

Mr. BOGGS. Mr. Speaker, May 3 last week was the 170th anniversary of Poland's Constitution Day. It is celebrated each year as a national holiday to commemorate that date when the Polish Diet enacted a constitution to place the power of the nation in the hands of the people. Poland was a frontrunner among the nations of Europe in asserting the right of men to be free and to chart their own destinies; and although liberty has been wrenched from the Poles by Soviet Russia, the love of freedom—the desire to restore liberty to Poland—still lives in their hearts. Someday, Mr. Speaker, the will of the Polish people will prevail, and they will realize the true destiny of their country—which was sounded on May 3, 1791, with the passage of a constitution inspired by our Declaration of Independence and the French proclamation of the rights of man. Two years ago I visited Warsaw to attend the 48th annual Interparliamentary Union Conference, and I sensed then the fact that the Poles yearn again for freedom. If there is a weak link in the Soviet chain of satellite nations, I think Poland is it. The peoples of free Europe and of our own Nation join the Poles in holding forth the hope that they soon will enjoy liberty under a government truly responsible to the will of the people. It is because the torch of liberty is held so close to the hearts of the Polish people that I call upon my colleagues in the Congress to remember Polish Constitution Day and to cherish their hope for freedom.

The Press and the Cuban Fiasco

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1961

Mr. ROGERS of Florida. Mr. Speaker, during the past few weeks we have heard much about the responsibilities and duties of the free press in this country, especially in regard to the coverage given the Cuban invasion and its failure.

The press, many citizens and the President himself have discussed the need for the press to exercise more self-restraint on matters affecting our national security.

A recent editorial by Jack Gore in the Fort Lauderdale News suggests the need for action by the news media themselves. Editor Gore, winner of the Freedom Foundation Award, summarizes what he sees as the abandonment of the American press.

It is encouraging to see this kind of comment come from within, and I ask that the editorial be printed here in the RECORD:

AMERICAN PRESS CAN SHARE PART OF THE IGNOMINY OF CUBAN FIASCO

(By Jack W. Gore)

In the aftermath of last week's ill-starred invasion of Cuba, and in the rash of recriminations that have followed, it appears to us that the American press, while pointing a critical finger at all those who were at fault, is overlooking some of its own muddy fingers.

In referring to the American press we aren't limiting the term to just newspapers. We include the pundits of television and radio who in their desire last week to be there first with the most and the latest news forgot all about their responsibility to their own Government.

In wartime it is a basic tenet of responsible journalism that the press should not be the medium for giving military information to the enemy nor for providing him with ammunition for his propaganda guns.

Yet, in this Cuban fiasco, the American press failed on both those counts. Not only were our columns and our airwaves filled with military information of value to an enemy, but we provided that same enemy with all the ammunition he needed to pull the rug right out from under our own Govment.

In this latter regard we specifically refer to the manner in which some news agencies and reporters deliberately and almost gleefully went about the business of exposing our own Government's clandestine role in the invasion immediately after President Kennedy had told the world we had not taken an active part in this affair.

Now, perhaps, Mr. Kennedy was guilty of a bit of bad judgment in trying to disguise what we may have done to back up and support the Cuban rebels. But if the President was guilty of bad judgment, then the press was guilty of infinitely worse judgment by making Mr. Kennedy out to be a liar and thereby providing the Communist propaganda machine with the wherewithal to deal American prestige a crippling blow all over the world.

Was it necessary or even in good taste, for instance, for the Columbia Broadcasting System to tell the world via television that the rebel invasion had been planned by our own Central Intelligence Agency and that it had been launched from some tiny islands off the coast of Nicaragua which were under the control of the U.S. Government? Sure, this was juicy information, but whom did it help? Not our own Government or the American people, to be sure. And while CBS may have scooped the world in revealing this little tidbit of information, it was the kind of scoop that must have drawn some real smiles of pleasure from the Kremlin propagandists and the Cuban Communists who couldn't have had their cause served better if they had been over here directing the activities of the American press.

We have the greatest respect for freedom of the press. It is a vital adjunct to the preservation of our way of life and our system of government. But freedom of the press does not carry with it the license to provide information and comfort to the enemy, and the American press was guilty of this in large measure last week.

In World War II the American press did an admirable job of cooperating with our armed services and with the Government in voluntarily censoring itself. On many occasions news agencies and reporters uncovered stories which would have made real headlines if they had appeared in print. But they didn't appear because the news agencies and the reporters were willing to sacrifice a few headlines in the best interests of our war effort, and, as a result of this kind of cooperation, it wasn't necessary for the Government to resort to formal press censorship to keep vital information out of the hands of the enemy.

It can be argued that since this country is not at war at the present time there is no reason for television, radio and newspaper reporters to pull their punches in regard to this country's activities. This argument, however, belies the fact we are engaged in fighting a cold war that is just as much a threat to our security as any hot war we have ever fought.

Under these circumstances is it wise or proper for the American press to bare our secret operations to the whole world under the guise of reporting in depth? Does it make sense for the American press to give Fidel Castro enough information about rebel military operations that he can boast he knows all about what is going to happen from reading American newspapers?

The American press has always been quite skilled at the business of finger-pointing and exposing somebody else's mistakes. After what happened last week, however, we think the American press has some soul-searching of its own to do. It was primarily our fault that the American people and the rest of the world were given the impression that the rebel invasion was much bigger than it actually was, and it was primarily our fault that President Kennedy had the rug pulled out from under him when, for strictly propaganda purposes, he tried to make it appear that the Cuban rebels had our sympathy and little else in their invasion attempt.

Thanks to eager beaver reporters, television newsmen and editors who couldn't wait to display how smart they were in digging up inside confidential information, however, American prestige has been dealt a crippling blow throughout the world and our Government has now been put in the acutely embarrassing position of having to admit it helped plan and stage an invasion that was a costly failure and which may well lead to even further and more dangerous involvements.

Call this good reporting, if you will. In retrospect, however, it adds up to some mighty irresponsible reporting, and, as one small segment of American journalism, we think it is high time the people in our business started using a little more restraint and a bit less freedom in deciding how much of our cold war dirty linen has to be washed right out in front of the whole world.

Good News—Calendar of Events, May 1961, National Gallery of Art, Washington, D.C.

EXTENSION OF REMARKS
OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 19, 1961

Mr. FULTON. Mr. Speaker, as I believe that the wonderful collections, facilities, and programs of the National Gallery of Art in Washington, D.C., are outstanding for the month of May 1961, I am inserting these programs in the CONGRESSIONAL RECORD to call these happy events to the attention of the U.S. Congress and the American people.

I am so tired of reading in the CONGRESSIONAL RECORD what is wrong with our good country and the world in general, that I am submitting this under the heading of "Good News."

David Finley, the former curator as well as John Walker, curator, continue to maintain the high level of excellence in the administration of the National Gallery of Art which has made this one of the outstanding institutions of the world. If you have not seen the National Gallery of Art, or have not participated in its programs recently, you are really missing a high reward:

NATIONAL GALLERY OF ART

MONDAY, MAY 1 THROUGH SUNDAY, MAY 7

Painting of the Week: Reynolds. "Lady Elizabeth Compton" (Mellon Collection). Gallery 63. Tuesday through Saturday, 12 and 2; Sunday, 3:30 and 6:30.

Tour of the week: Harriman exhibition: 19th century painters. Rotunda. Tuesday through Saturday, 1; Sunday, 2:30.

Tour: Introduction to the collection. Rotunda. Tuesday through Saturday, 11; Monday through Saturday, 3; Sunday, 5.

Sunday lecture: "Christian Iconography and the Christian Religion in Antiquity (IV)." Guest speaker, André Grabar. Lecture hall, 4.

Sunday concert: The Alard String Quartet, with Overda Lipp Page, flute. East Garden Court, 8.

MONDAY, MAY 8 THROUGH SUNDAY, MAY 14

Painting of the week: "Canaletto. Venice, the Quay of the Piazzetta" (gift of Mrs. Barbara Hutton). Gallery 55. Tuesday through Saturday, 12 and 2; Sunday, 3:30 and 6:30.

Tour of the week: Harriman exhibition: 20th century painters. Rotunda. Tuesday through Saturday, 1; Sunday, 2:30.

Tour: Introduction to the collection. Rotunda. Tuesday through Saturday, 11; Monday through Saturday, 3; Sunday 5.

Sunday lecture: "Christian Iconography and the Christian Religion in Antiquity (V)." Guest speaker, André Grabar. Lecture Hall, 4.

Sunday concert: Jacob Maxin, pianist. East Garden Court, 8.

MONDAY, MAY 15 THROUGH SUNDAY, MAY 21

Painting of the week: Scorel. "The Rest on the Flight Into Egypt" (Samuel H. Kress collection). Gallery 41. Tuesday through Saturday, 12 and 2; Sunday, 3:30 and 6:30.

Tour of the week: Rubens and the baroque. Rotunda. Tuesday through Saturday, 1; Sunday, 2:30.

Tour: Introduction to the collection. Rotunda. Tuesday through Saturday, 11; Monday through Saturday, 3; Sunday, 5.

Sunday lecture: "Christian Iconography and the Christian Religion in Antiquity (VI)." Guest speaker, André Grabar. Lecture hall, 4.

Sunday concert: National Gallery orchestra. Richard Bales, conductor. (Music performance trust fund concert), east garden court, 8.

MONDAY, MAY 22 THROUGH SUNDAY, MAY 28

Painting of the week: Dufy. "Nude, Reclining" (Chester Dale Collection). Gallery 62. Tuesday through Saturday, 12 and 2; Sunday, 3:30 and 6:30.

Tour for the week: Boucher and the rococo. Rotunda. Tuesday through Saturday, 1; Sunday, 2:30.

Tour: Introduction to the collection. Rotunda. Tuesday through Saturday, 11; Monday through Saturday, 3; Sunday, 5.

Sunday lecture: "Americans in Paris." Guest Speaker: Yvon Bizardel, Honorary Director of Fine Arts of the City of Paris. Lecture Hall, 4.

Sunday concert: National Gallery Orchestra, Richard Bales, Conductor. Church of the Reformation Cantata Choir and Soloists (Civil War Centennial program). East Garden Court, 8.

All concerts, with intermission talks by members of the National Gallery staff, are broadcast by Station WGMS–AM (570) and FM (103.5) in sterophonic sound.

Inquiries concerning the Gallery's educational services should be addressed to the Educational Office, REpublic 7–4215, extension 272.

Gallery hours: Weekdays, 10 a.m. to 5 p.m. Sundays, 2 p.m. to 10 p.m. Admission is free to the Gallery and to all programs scheduled.

Permanent collection: Paintings and sculpture comprising the Mellon, Samuel H. Kress, Widener, and Chester Dale Collections, with gifts from other donors, are located on the main floor. The Widener Collection of decorative arts is on the ground floor.

New exhibition: Chinese art treasures. An exhibition of paintings, calligraphies, porcelains, ancient bronzes, jades, enamels, lacquers, carvings, and silk tapestries, sponsored by the Government of the Republic of China. Central Gallery, G–7 through G–15. May 28 through August 13.

Continuing exhibition: The Marie and Averell Harriman Collection, Galleries 68, 69, 69–A, and 70. Through May 14.

New publication: Chinese art treasuries. Exhibition catalog of 326 pages with text, 140 illustrations and 8 color plates. Size 11 x 9 inches.

Concerts: The Gallery's 18th American Music Festival, sponsored by the Calouste Gulbenkian Foundation, will open on May 7 and continue through May 28.

Tenth annual series of the A. W. Mellon lectures in the fine arts: Lectures by Dr. André Grabar, professor of Byzantine and early Christian archaeology, Collége de

France, Paris, on May 1, 8, and 15 will complete the series.

LecTour: A radio lecture device, running continuously, is installed in 28 exhibition galleries, 10 of which have recently been added. The talks cover most of the periods of art represented by the collections. A visitor may rent a small receiving set for 25 cents to use in hearing these LecTour broadcasts.

Cafeteria: Open to the public Mondays through Saturdays, 11 a.m. to 4 p.m. Sundays, 4 p.m. to 7 p.m.

Giovanni da Verrazano: The Discoverer of the Hudson River

EXTENSION OF REMARKS
OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1961

Mr. SANTANGELO. Mr. Speaker, on Monday, April 17, 1961, at the famous Battery Park in New York City, the Italian Historical Society of America, commemorated the anniversary of the discovery of the Hudson River by Giovanni da Verrazano. The Italian Historical Society of America is spearheaded by the indefatigable John N. La Corte, general director, also publisher and editor. Many dignitaries were present, and the New York Naval Base Band entertained the large audience with its wonderful music. The program was opened with the U.S. National Anthem, sung by Olivia Bonelli, lyric soprano of the Brooklyn Opera Company. The invocation was given by the Most Reverend Joseph M. Pernicone, auxiliary bishop of New York, representing His Excellency, Francis Cardinal Spellman. The Commissioner of Sanitation, Hon. Frank J. Lucia, introduced the honored guests. Thereafter, the general director, Mr. La Corte, read the New York State Verrazano Day proclamation. Words of greeting from the Honorable Robert F. Wagner, mayor of the city of New York, were extended by the commissioner of gas, water, and electricity, the Honorable Armand D'Angelo. The Italian Government sent its representative, the Italian Vice Consul, Dr. Emanuele Scammacca. Inasmuch as Giovanni da Verrazano sailed under the French flag, the French Government was represented by Mr. Bernard Malandain, the French Vice Consul, who extended words of greeting from the French Government. The U.S. Government sent Maj. Gen. Ralph A. Palladino, U.S. Army, who delivered an address which follows hereafter. Telegrams of greetings were read by me.

A highlight of the day was an address by the Honorable Edward D. Re, Chairman of the U.S. Foreign Claims Settlement Commission, a former member of the board of higher education of the city of New York and professor of law, who talked of the "Significance of the Centennials—the U.S. Civil War, and the Unification of Italy." The implications and contrast between the two centennials were so clearly set forth that I believe the readers of the United States would gain extreme enjoyment in reading them. The speeches by Professor Re and Major General Palladino, follow:

THE HISTORICAL SIGNIFICANCE OF TWO CENTENNIAL CELEBRATIONS: THE AMERICAN CIVIL WAR AND THE UNIFICATION OF ITALY

Remarks of Dr. Edward D. Re, Chairman, Foreign Claims Settlement Commission of the United States, on the Occasion of the Eighth Annual Verrazano Day Ceremony, Originated and Sponsored Annually by the Italian Historical Society of America, John N. LaCorte, Founder and General Director, Battery Park, New York City, April 17, 1961

Mr. Chairman, reverend clergy, distinguished public officials, my fellow Americans, and friends, we who enjoy the cherished blessings of liberty and freedom, in a land where we have labored to stamp out both tyranny and oppression, do well on this solemn occasion to reflect upon the significance of the events that we commemorate this day.

We gather at this historic site to pay tribute to a great Florentine navigator, Giovanni da Verrazano, who was the first to open the great portals of New York Harbor to the entire world. Since all of us are in a sense immigrants, each and every one of us owes a real debt of gratitude to Verrazano, who, as the first immigrant, made possible our happy and fruitful life in this land of opportunity. Yes, it was Verrazano who was commissioned by Francis I of France the pilot of the 100-ton caravel named *La Dauphine*. Yes, it was Verrazano who on this day in 1524 sailed into New York Harbor, 85 years before Hudson. He named the land Angouleme in honor of the French sponsorship of the voyage, and the bay, Santa Margarita, in tribute to Verrazano's Italian heritage.

Our story now begins to assume meaning because it shows the combination of efforts and forces that had to unite in order to achieve the historic event. And it has always been thus, as illustrated by the very discovery of America by Christopher Columbus. For the monumental discovery of America in 1492 was only made possible by the indomitable spirit of an Italian sailor, and the generosity and wisdom of a Spanish queen.

Consequently, to the thoughtful student of the lessons of history it becomes readily apparent that the history of America is one of cooperation and joint effort. It reveals the indelible imprint of so many people from different lands.

From the two historic events cited, it is clear that just as the American of Italian heritage derives justifiable pride from the knowledge that his forebears have played a vital role in the discovery and development of this great land, so may Americans of Spanish and French extraction swell with pride because their ancestors too have made an invaluable contribution.

Countless other events of American history can be recounted to attest to the contribution of every other national and ethnic group that forms the total panorama of America and the American way of life. Our national motto, E Pluribus Unum—out of many, one—truly describes this multinational contribution that fused to form a new nation, founded upon principles of freedom and equality of opportunity for all.

This Verrazano Day ceremony takes place at a time when by a coincidence of history, two centennials are being celebrated simultaneously. While we as Americans celebrate the principles of unity and liberty that were vindicated by the Civil War, all Italians are celebrating the centennial of the unification of Italy. Although the common purpose may not at first seem obvious, only a moment's reflection is required to reveal that both events, analogous by reason of time, struggle and bloodshed, were historic landmarks in the cause of national unity and universal liberty. Just as Italians labored and fought to unite, and to expel foreign power from Italian soil, Americans fought to preserve the Union and to make that Union all free. Since clearly we could not survive, in the words of the Great Emancipator, half slave and half free, war was the price that had to be paid for a free America.

Great deeds and great achievements are often only born of even greater sacrifices, and the American Civil War was no exception. Those sacrifices, however, produced an emancipation proclamation, a beacon light of freedom destined to illumine the world. For us Americans this is the true significance of the Civil War, and this is the meaning and inspiration that we hold forth to all peoples everywhere.

On March 16, 1961, I had the privilege to be present at the centennial celebration of the unification of Italy held in the city of Washington in the District of Columbia. This celebration, perhaps the first of its kind, was under the high patronage of the President of the United States and the President of the Republic of Italy. On that occasion it was my high honor to hear President John F. Kennedy pronounce some truly inspirational and reassuring words.

Speaking to a most distinguished audience assembled in the State Department auditorium, President Kennedy stated that "Italy and the United States are inextricably linked in their past, present, and, we believe, in the future." In paying gracious tribute to Italy, President Kennedy added that "Western civilization, as we know it, has risen from the bank of the Tiber." Calling for a "new risorgimento" he declared that what is needed today is "a new awakening of man's ancient aspiration for freedom and progress until the torch lit in ancient Turin one century ago guides the struggle of man everywhere—in Italy, in the United States, and in the world around us."

From this thought, so beautifully expressed, we see a common theme applicable to both centennials. The theme is one of unity, freedom, and, yes, as stated by President Kennedy, progress. Notwithstanding the hardships and calamitous events of the Civil War, that war was a step in the growth, development, and progress of America.

And notwithstanding the hardships endured by Italians such as Cavour, Mazzini, and Garibaldi, the Italian unification too was a step in the development and progress of Italy—culminating in the present Italian Republic. These events on either side of the Atlantic helped make a reality the passion for liberty shared by both Italy and America.

With these thoughts foremost in our hearts, each of us owes a debt of gratitude to patriotic organizations that sponsor celebrations such as this Verrazano Day ceremony. In addition to giving us a sense of history, national pride, and international understanding, they serve the useful purpose of teaching us the lessons of the pages of history, that the liberty that so many take so readily for granted was only achieved by struggle and bloodshed. No nation that boasts of liberty and freedom acquired those blessings without toil and struggle.

We who cherish the liberties that we enjoy must pledge ourselves not only to preserve those liberties for all future generations, but ought to dedicate ourselves anew to the principles that inspired the founding of this great country. We must preserve what is good and we must strive to go forward to achieve the progress that was mentioned by our President. Surely no one ought to be satisfied by merely passing on to posterity what he has received from the past. Rather we of this generation must feel that

our mission will not have been accomplished unless we can say with complete honesty to ourselves, and to the world, that we are striving to pass on to future generations an even better America than was passed on to us.

REMARKS BY MAJ. GEN. RALPH A. PALLADINO, U.S. ARMY, MILITARY EXECUTIVE, RESERVE FORCES POLICY BOARD OF DEPARTMENT OF DEFENSE, AT THE VERRAZANO DAY CEREMONY, APRIL 17, 1961, IN BATTERY PARK, N.Y.

Most Reverend Bishop Pernicone, Mr. Chairman, Congressman SANTANGELO, other distinguished guests, ladies and gentlemen, I am most happy to be with you here today, representing the Chairman of the Joint Chiefs of Staff of all our military forces, that splendid soldier, Gen. Lyman L. Lemnitzer. Let me assure you that I am highly honored at this opportunity to represent such a distinguished leader, as well as to personally visit with so many fellow Americans of Italian heritage.

It is an honor and a privilege to participate with you in this tribute to Giovanni da Verrazano, Italian sailor, navigator, and explorer.

I hope you will not consider it incongruous for an Army officer to participate in ceremonies honoring a sailor—especially one as illustrious as Verrazano. For it appears quite proper for all Americans—whether in uniform or not—to pay homage to this 16th century Florentine, whose explorations in 1524 brought to Europe a new concept of North America.

By one voyage to these shores, Verrazano carved out his place in history. With his maps and the accounts of his discoveries, he gave to the world the first description of the eastern coast of what was to become the United States and, in so doing, helped to guide those millions who were to come to these shores—shores which held out the promise of escape from oppression and tyranny.

It is especially fitting that we honor him during this year, marking the centennial anniversary of Italian unification. History bears witness that much of what we Americans believe originated in that slender finger of land which pushes into the Mediterranean. In a real sense, all that we fight to preserve today had its origins either in Italy or Greece. From the banks of the Tiber rose western civilization as we know it; a civilization whose traditions and spiritual values have great significance for our lives today.

The bonds between the people of Italy and the people of the United States have never been stronger than they now are. These bonds are the natural result of our common love of liberty, our common devotion to representative government, and our common appreciation for the rights of the individual.

Our freedom is written in the histories of our two countries, and on those pages of history, the names of Garibaldi and other great Italians, together with those of Washington and other great Americans, stand out for their dedicated efforts in bringing about freedom for the individual.

America offered our fathers the freedom, the latitude, the opportunity to expand, to express ourselves, to be creative, and we Americans of Italian descent have responded by bringing to this great country our great vitality, our vibrance, and our passion for life, our creative abilities.

These have become an important part of the American character, an important part of the American scene.

The Italian blood which flows among us carries in its stream the stuff from which American sinews are made stronger, the stuff from which American industry and culture have grown. America gave us the opportunity for expression and there never was a more grateful people than we.

You cannot begin to name the many great Italian-Americans who, coming from another heritage, have made so great a contribution to our American way of life.

Beginning with Verrazano, one could name the other great explorers, Columbus and Cabot, to truly tell the story.

Or one can turn to origins of American freedom to find there the words of Philip Mazzei, an early Maryland settler, or William Paca, one of the signers of the Declaration of Independence.

Or to our military, where Americans of Italian descent have provided leadership in our Armed Forces for many years, and one of the most notable was Gen. Luigi Palma De Cesnola, a Civil War general, who not only was among the first of many Americans of Italian descent to receive the Congressional Medal of Honor, but also was the first director of the Metropolitan Museum of Art in this great city of New York.

Or to our public servants of today, where we find Senator PASTORE, of Rhode Island, Governors DiSalle, of Ohio, Rosellini, of Washington, and many others, and then for Congressmen, we have your own ALFRED SANTANGELO, who is on the platform here with us, and many more too numerous to mention, from several sections of our country.

There is no area in American life in which Italian-Americans have failed to make an important contribution. "The fine Italian hand," so frequently referred to, is evident everywhere.

And so I say to all of you, be proud of your heritage. Hold your heads up high and continue to help America and the free world meet the challenge that threatens us today, just as Verrazano, by his faith and courage, met the challenges which faced those intrepid seafaring explorers of the 16th century, and as Italians rose to the challenges which faced them in 1861, and gave birth to the modern freedom-loving country of Italy.

And so, as we pay tribute to Giovanni da Verrazano, during this Centennial Year of Italian unification, we realize that those concepts upon which both Italy and the United States were founded are again being challenged. And from this challenge we must find, as President Kennedy expressed it, "A new reawakening of man's ancient aspirations for freedom and for progress, until the torch lit in ancient Torino one century ago guides the struggle of men everywhere—in Italy, in the United States, in the world around us."

Healthy Economic Growth With Economic Stability

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1961

Mr. MULTER. Mr. Speaker, on April 21, 1961, Secretary of the Treasury, Douglas Dillon, made a most important address at the annual meeting of the American Society of Newspaper Editors. It is worthy of the attention of every Member of Congress. I set it forth in full:

REMARKS OF THE HONORABLE DOUGLAS DILLON, SECRETARY OF THE TREASURY, AT THE ANNUAL MEETING OF THE AMERICAN SOCIETY OF NEWSPAPER EDITORS, STATLER-HILTON HOTEL, WASHINGTON, D.C., APRIL 21, 1961

It is a pleasure to be here and to share with you the administration's thinking about some of the pressing economic problems that have a bearing upon our Nation's present and future well-being.

To begin with, I think one can fairly say that there is a substantial concensus in our country today on national economic goals:

We want a steadily expanding economy, based upon a strengthened system of free enterprise;

We want a rate of growth sufficient to give us an ever-rising standard of living and to provide jobs for all;

We want to assure the education of our youth and the health and security of those who are growing old;

We want an economy that can adequately provide for our national defense and furnish our fair share of the development needs of less fortunate peoples in Africa, Asia, and Latin America;

We want to accomplish all of this in an atmosphere of relative price stability.

Inevitably there will be differences among us over the means we should employ to achieve our objectives. But we must not permit such differences to obscure our basic agreement. We must recognize that unless all elements in our society work together, we cannot mobilize the massive effort required of our Nation in meeting the challenge of the sixties.

Before considering the fiscal and monetary policies we should follow to achieve our objectives, let us look briefly at ourselves as we are today:

We are a people who have built what is clearly the strongest and most advanced economy on earth. But, as recent experience demonstrates, we have not mastered the art of keeping our economy operating at the highest sustainable levels.

The recession from which we are now beginning to emerge has been relatively mild. For example, in terms of constant dollars which allow for inflation, gross national product is now only 2.2 percent below last year's peak, compared with a decline of 4.7 percent in the 1958 recession. Personal income and industrial production have also fallen less than in previous postwar recessions.

However, before we take too much satisfaction from these figures, let us remember that they are relative. The absolute figures tell a far different story: current unemployment, with 6.9 percent of our labor force out of work, approaches the worst days of the 1958 setback. A record number of our cities are classified as areas of substantial unemployment.

Why, in view of the relative mildness of the recession, do we have 5½ million people unemployed?

The answer is clear: We have not been producing at our full capacity for some years. Even last year, at the point of highest production in our history, our economy was operating well below its potential, and we still had 5 percent of our labor force unemployed. We can and must do better in the future. Meanwhile, until we find ways to improve the overall performance of our economy, the extent of current unemployment demands prompt and forthright action by the Federal Government. President Kennedy has, therefore, taken a number of steps to speed recovery:

The annual veterans' dividend of $250 million, ordinarily paid out over the course of a year, was paid in full during March.

Tax refunds were speeded up, and we are now $500 million ahead of last year's pace.

Government programs have been expedited by the prompt obligation of available funds.

Most important, a temporary unemployment compensation bill has been enacted.

These actions, together with increased defense spending that got underway last fall

and reduced revenues stemming from the recession, have created a budgetary deficit of about $2 billion in the current fiscal year. Such a deficit is not a cause for alarm in times like these. On the contrary, it is a stimulus to recovery that can, and should, be readily offset by surpluses as prosperity returns.

Another deficit is in prospect for fiscal 1962: $1 of about $3 billion. This, too, will be entirely appropriate. The economy will require the stimulating effect of a modest deficit in the coming fiscal year if it is to move forward at an adequate pace.

The innate strength of our economy, the increase in Government outlays which I have mentioned, and the automatic action of the so-called builtin budgetary stabilizers, are apparently putting an end to the current recession. Looking backward we may well find that the turning point was reached early in March. But, unless we act energetically, recovery is likely to be sluggish, just as the decline was gradual and slow.

No matter what the pace of our recovery from the recession, there are major problems confronting us which must be solved if we are to realize our full economic potential. We must find ways first to achieve and then to maintain production at full capacity. We must ensure employment for our steadily growing labor force. At the same time, we must preserve reasonable price stability.

If we balance these goals against our accomplishments, I think it obvious that new and forward looking governmental action is called for.

Excessive Federal spending is clearly undesirable. But our minimum national needs must be met. Let me cite those which merit highest priority:

First, after careful reexamination, the President has concluded that we must increase our defense expenditures in the coming fiscal year by 1½ percent, or about $650 million. Surely, no one can logically question our need or our capacity to spend whatever is required for our Nation's security.

Second, we are confronted by a shameful lag in education. More education will, of course, assure the flowering of our national culture. But, beyond this, we must recognize that education today lies at the very root of a Nation's power and well-being. Without adequate education, we cannot hope to achieve the economic growth we desire. Our shortcomings in providing our citizens with education according to their needs and capacities is a blight upon our future. The problem has grown so large that an additional Federal contribution is clearly and urgently required.

Third, we must supply the ever-growing needs of our municipalities: slum clearance, improved transportation, modern sewage facilities, and increased water supply. These needs are placing an unbearable burden upon our larger cities.

We can and we must fulfill these needs. Fortunately, if our economy operates at full capacity, our present tax system can yield a surplus of several billion dollars. Our problem is not, therefore, how to raise additional revenues but to get our economy operating at higher levels. Moreover, in setting tax policy, our most difficult task is not obtaining more revenue but strengthening and modernizing our whole tax system so as to stimulate growth and improve equity. One of our major objectives is thoroughgoing tax reform. An extensive review is now under way and we expect to present concrete recommendations to the Congress next January.

In the meantime, there is one important tax reform that cannot wait: This is legislation to spur the modernization of our plant and equipment. It is an unpleasant fact that our plant equipment is growing older year by year. By contrast, thanks to more liberal investment incentives than are available under our laws, Western Europe and Japan are moderning at a much faster rate. We must step up our rate of modernization if we are to maintain our Nation's competitive position. The installation of new and more efficient equipment is of prime importance in enabling us to meet foreign competition in the drive for export markets which are so essential to improving our balance of payments.

Since the installation of modern equipment means that labor can produce more, we must recognize that it may complicate the problem of unemployment. However, modernization will also increase jobs in the capital goods industries. Indeed, we estimate that the tax incentive President Kennedy has recommended should lead to an increase of from $2 to $3 billion a year in expenditures for plant and equipment. Some 250,000 new jobs would be required to provide this equipment. In addition, at least as many more people would find employment as an indirect result of these expenditures. Although major benefits to economic growth will accrue over the longer run, it is also clear that this tax incentive will have a substantial effect in speeding our recovery from recession. And, as our economy speeds up, increased consumer and business demand will expand the variety and volume of goods produced, thus creating new jobs to replace those eliminated by increased productivity. This is the way of future progress.

The legislation the President has requested is carefully designed to promote increased spending for modernization and expansion. Its enactment is necessary to speed full recovery and promote rapid growth thereafter. Initially, it will result in some loss of revenue. To compensate for this loss, he is asking that a number of serious tax defects be corrected:

First, expense accounts—an area where abuse has virtually become a national scandal. Tighter enforcement of the present law is not an adequate solution, for it would put an unacceptably heavy discretionary burden upon Government tax auditors. What is needed is a new and stricter legislative definition of allowable deductions. This is what we are asking.

Second, we are asking for withholding at the source of interest and dividends. Our best estimate is that about $3 billion of income from interest and dividends goes unreported every year. This situation is clearly unfair to all wage earners and, indeed, to the majority of taxpayers. We are asking that it be corrected by a workable withholding provision that, as in the case of wages, will collect at the source a substantial portion of the tax on interest and dividend income.

Third, we are asking for repeal of the 4 percent dividend credit. This credit was adopted in 1954 in an attempt to lighten the double taxation of dividend income. But, at only 4 percent, it has not served its purpose. Furthermore, it gives considerably greater benefit to those in the higher income brackets than to the vast majority of stockholders. This favoritism in the law is unhealthy and should be ended. The related $50 exemption should also be dropped.

Finally, we seek an end to tax provisions that encourage American business operations abroad through the use of tax havens. We also want to withdraw preferential tax treatment for American capital going into industrially advanced countries, for such treatment discriminates against the investment of capital at home. These changes will have a needed and favorable impact upon our basic balance of payments deficit. We are not, however, recommending changes in tax inducements for investment in underdeveloped countries which are an essential part of our overall program to help these countries grow.

I have briefly outlined our overall fiscal and budgetary thinking. I have also told you something of our plans for the immediate future as regards taxation.

Now, let me take up monetary policy. This is a field where we face an entirely new situation brought about by the recently achieved convertibility of foreign currencies. Convertibility permits owners of liquid funds to shift them freely from one world financial center to another in search of higher interest rates. Therefore, the extremely low short-term interest rates of previous recessions could have dangerous repercussions today. Short-term interest rates much below present levels might well touch off a renewed outflow of dollars that could imperil our balance of payments and the soundness of our dollar.

Nevertheless, we need low long-term rates to stimulate borrowing for modernization, plant expansion, housing construction and the like just as much today as in previous periods of recession. Accordingly, the administration is attempting to promote lower long-term interest rates without putting downward pressure on present short-term rates. For one thing, the Federal Reserve is now purchasing securities of all maturities, instead of restricting itself to short-term Treasury bills. For another, President Kennedy has taken direct action in the housing credit field which has helped to lower average mortgage rates by more than a quarter of 1 percent since the turn of the year.

Far more meaningful than interest rates, however, is the quantity of funds flowing into investments. Here, we see evidence of improvement in the mortgage credit area, where, although rates are still on the high side, availability of credit is no longer an inhibiting factor. We also see increasing evidence of growing municipal and corporate borrowing.

Finally, since the budgetary deficits that are presently envisioned are modest and bear no comparison to the deficit of 1959, monetary policy will remain free to act in support of business recovery. Therefore, the substantial increases in interest rates that characterized the 1958–59 period are not likely to recur this time.

To sum up:

Our policies—be they budgetary, tax, or monetary—should have one overriding goal: the promotion of a healthy rate of economic growth within a reasonable atmosphere of economic stability. We must meet the needs of the day in the fields of defense, education, housing, highway construction, urban development, and other essentials. Fortunately, we are in a position to meet them—this year, and the next, and in the long run—without undue strain on our economy.

We must overhaul our tax system to provide greater fairness and incentives for efficiency and growth, beginning with an investment incentive this year, and following with a basic overhaul next year.

We must maintain an interest rate structure conducive to the steady flow of funds into investment.

To achieve all these things will not be easy. But with determination and perseverance we should be able to attain our goals. In the process, we can look forward to a period of growth and prosperity during the sixties such as this Nation has never known.

Mr. Speaker, I am sure that everyone will agree with the Secretary's statement of national and international goals.

He also properly indicates that there will be some disagreement on the methods to be used to accomplish our desires and our needs.

I, for one, sincerely hope the administration will abandon its attempt to remove the tax exemption on dividends. That request weakens the overall tax plan.

The reason for the exemption was to lighten the burden of double taxation. No one can deny that double taxation is unfair and inequitable. The enactment of this small exemption recognized that principle. We should not now back away from it but should seek an early opportunity to further implement it.

In fact, the same exemption should be extended to interest and dividends paid on savings accounts.

The capital that makes up the backbone of our economy comes from investors' stock purchases and savers' thrift accounts. They supply our long-term funds. They need the incentives to invest that the administration avowedly wishes to encourage.

There is no favoritism in giving everyone an exemption of the first $50. No one should complain that an across the board 4-percent exemption favors the recipient of $1,000 in dividends with a $40 exemption as against a $4 exemption on $100 of dividends. Both dividends are an aliquot part of what was left of corporate earnings after the full share of municipal, State, and Federal taxes were taken out of the profits. The $100 dividend was probably the return on a $2,500 investment, while the $1,000 dividend was on a $25,000 investment. The amounts might differ but the participation was exactly equal. Both investments were undoubtedly made from funds retained as net income from earnings or profits that had already been fully taxed at least once and more likely two or three times.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Our Depressed Gold Mining Industry

EXTENSION OF REMARKS
OF

HON. HAROLD T. JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 10, 1961

Mr. JOHNSON of California. Mr. Speaker, much has been said in the past few months about our declining gold reserves. Efforts have been made to check the outflow of gold, but the basic need is to get at the root of the problem, our steadily declining production of gold. The domestic production of gold has declined to the point where we are not even meeting our industrial and commercial demands for the precious commodity, to say nothing of producing any gold for our reserve stocks.

Mr. L. L. Huelsdonk, vice president, Best Mines Co., Inc., Downieville, Calif., one of the outstanding men in the field of gold production, made an excellent statement on this problem for the hearing this week held by the Mines and Mining Subcommittee of the Committee on Interior and Insular Affairs.

With your permission, I would like to insert this into the RECORD:

OUR DEPRESSED GOLD MINING INDUSTRY

(By L. L. Huelsdonk)

The United States—prior to World War II—was the second largest gold producer in the world. Today Russia holds that position and is now producing at least five times more gold than this country. The Russians have realized the necessity of a large gold reserve for international trade and a sound monetary policy—and thus have given top priority to their gold mining industry.

The United States on the other hand—through Government regulation and national policy—has forced 97 percent of its gold mines to close down. Past decisions have deprived the gold miners of their property and are forcing them to sell their gold at the 1934 price of $35 per ounce—in the face of mining costs which have risen over 300 percent.

By law the miner must sell his gold to the Government and in turn the Government must sell the gold to the domestic user and the foreigner for the same low price. There are then no restrictions on the resale of this gold after it leaves Government hands. It, therefore, forces the gold miner to become a partner with the Government to subsidize the domestic commercial usage of gold and the importation of foreign goods.

Since the end of World War II the Government has sold to the industrial, professional, and artistic users of gold $166 million more than our mines produced in the same period.

These sales—added with the tremendous withdrawal of gold from foreign claims—has caused the United States to lose over $5 billion worth of monetary gold reserves in the past 3 years. Even with this tremendous drawdown of our reserves and the increasing demand for gold, the Government still refuses to help the gold miner. He is even denied the right to sell his product on a free market for a fair price.

During World War II gold was declared nonstrategic to the war effort, so the gold mines were closed by Government order. However, Treasury figures show that within 3 years of warfare, every single ounce of our net gold reserve[1] had been mortgaged in financing our fighting strength and that our war industries had demanded and were granted increasingly enormous amounts of gold from the Treasury stock. By the end of the war, sales to these privileged buyers had risen to more than 270 times the average yearly requirement for peacetime use. This indicates that gold is not only strategic to war—but that it is also a sinew of war—and that under present world tension, our gold supply should not be at the mercy of foreign demand.

In 1945, through the Bretton Woods Agreement, the U.S. dollar was set up to act as gold and with gold as an international standard to set the par values of foreign currency at the given weight and fineness of gold on July 1, 1944. However, no provision was made for adjusting an inflation-bound domestic dollar. Because of this neglect, inflation has persistently divided our dollar into two widely different values. This has upset all of the possibilities of maintaining the dollar as an international standard with gold, simply because American inflation automatically guarantees a decreasing value for the domestic paper dollar—while gold redemption automatically guarantees stability of value for the foreign-held dollar.

The development of this double dollar standard has caused much economic trouble in this country which has been evidenced in our gold losses and in our dwindling ability to compete—not from a productivity basis—but from the exchange depreciation of our domestic paper dollar; which not only generates high-priced exports and low-priced imports—but in turn provides for the exportation of our industries and the domestic jobs which they support.

Even though the dollar price of American goods has more than doubled—and is steadily climbing—the foreigner still has the privilege of purchasing an ounce of gold for $35. In other words, if a foreigner earned 35 of our dollars in 1945, he had a choice to buy either an ounce of our gold or 100 pounds of our goods. Today, he can still buy an ounce of our gold with his $35, but he can only buy 50 pounds of our goods. This is why he buys gold—this is why our industries must move abroad in order to compete—this is why we lose employment at home.

Since the signing of the Bretton Woods Agreement (as an adjustment to internal inflation) practically all of the currencies of the world have been devalued (either officially or defacto) except the American gold dollar. Because of this—and the fact that we, as citizens cannot own gold—our dollars at home are only as good as the management of our money—while abroad—they are as good as gold.

The steadily increasing variation in dollar values forces our industries to move much of their production abroad, rather than keep it at home in a hopeless attempt to defend an export position against the rising tide of international competition. This exportation of our domestic production will increasingly hire more foreign labor and widen the road to our unemployment offices, if positive steps are not taken—because foreign-held dollars are privileged to buy American gold and, therefore, foreign goods at the 1944 price—while American goods steadily increase in price.

While these industries are exporting jobs, Secretary of Labor Goldberg is asking for 10 million new jobs in 1962. The Government is trying to fill this wish by creating federally supported projects, increasing and extending unemployment benefits and raising the minimum wage. This, of course, is commendable, but it does not provide a solution. It can only generate more inflation and widen the gap between the gold and domestic dollar values and thus force more industries abroad where their paper dollar investments can turn into gold worth twice their domestic value.

The true value of all currencies is measured in gold, and those countries which have been unable to hold adequate reserves of gold invariably have degenerated. Since the amount of potential demands for our gold by foreigners far exceeds the amount of gold that we own, a menace to our national solvency rests in the tempers of foreign official banks and governments. It is their decision that can draw out our gold—not ours.

The only positive solution to this dilemma is to equalize and stop the growing difference between the values of our domestic paper dollar and that of our foreign-held gold dollar. By doing this, the billions of our foreign-held dollars would be released from the influence of our gold bargains and become free to purchase American goods on an equal level. This in turn would hire American workers and return American industry on an international competitive basis within its own boundaries.

Without the virtue of equality in exchange, dollars of the same denomination are not equal in value. The disequilibrium that now exists can only be corrected in two ways—either by lowering the value of the foreign-held dollar in terms of gold until it equals the purchasing value of the domestic dollar in the terms of U.S. goods—or by lowering prices and wages in America (via depression) until the value of the domestic dollar is raised to the value of the foreign-held dollar.

In conclusion—it might be pointed out that the complexity of this problem has taxed the brains of our financial experts and economic advisers, but to date no positive, simple, or understandable solution has been devised. In the meantime the United States has lost at least 97 percent of her straight gold-mining industry and over 20 percent of her gold reserve at a time when gold in the world is becoming increasingly important—and for the first time we are facing the possibility of a world war without a net reserve of gold.[2]

Since it seems impossible that our experts will resolve this problem within a reasonable length of time, it is imperative that some-

[1] Gold above claims—over $10 billion.

[2] Gold above foreign claims.

thing be done to stimulate our domestic gold production.

Therefore, I respectfully request that your subcommittee consider and act favorably on House Joint Resolution 185, a bill which is designed to accomplish this purpose and relieve the most depressed industry in the Nation.

The Monroe Doctrine

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 10, 1961

Mr. DEROUNIAN. Mr. Speaker, I commend to you this perceptive article by a former U.S. career diplomat, Francis B. Stevens, as it appeared in the May 15 issue of the U.S. News & World Report:

CAN UNITED STATES STOP CASTRO?—THE RIGHT OF SELF-DEFENSE

(By Francis B. Stevens)

Setbacks to U.S. policy in such remote parts of the world as Laos and the Congo, while serious and damaging, are of secondary importance compared with the failure of the attempt to invade Cuba and overthrow the Castro regime.

The U.S. defense perimeter, formerly on the other side of the great oceans, has been breached and a hostile base established within 90 miles of the United States. The Communist regime in Cuba is a military threat to the United States, endangers U.S. communications in the Caribbean, and provides a springboard for the extension of the Communist system to all Latin Amercia.

It was to avert precisely such a situation that the Monroe Doctrine was proclaimed 138 years ago. In 1823 President Monroe served notice on European powers that any attempt to extend their system to a part of this hemisphere would be regarded as dangerous to our peace and safety. Whenever in the past such attempts were made, the U.S. Government acted vigorously and successfully to oppose them.

For 30 years after the Spanish-American War, the United States intervened repeatedly in countries of the Caribbean, not to defend them against extra-hemisphere designs but to preserve order and protect American business interests. This policy created a revulsion to Yankee imperialism through Latin America—a feeling which persists to this day and, skillfully exploited by the Communists, effectively stymies any form of collective-security action by the Organization of American States.

In 1933, Franklin D. Roosevelt proclaimed the good neighbor policy toward Latin America and withdrew the last of U.S. occupation forces from the Caribbean. Since that time the United States has worked consistently to evolve collective-security arrangements which would make the defense of the hemisphere a joint responsibility, not the task of the United States alone.

The Inter-American Treaty of Reciprocal Assistance of 1947 provides that armed attack against any American state will be considered an attack against all, and obligates all signatories to assist in repelling it. A resolution adopted at the Inter-American Conference at Caracas in 1954 called for consultation in case of attempted Communist subversion of the government of any American state.

But these paper obligations have proved ineffectual. Latin American governments, always touchy about their sovereignty, are reluctant to participate in joint action which can be construed as intervention in the internal affairs of another American state.

To the masses in Latin America, communism is less of an ogre than Uncle Sam. Castro's agrarian policies have wide popular appeal in Latin America; the dictatorial aspects of his regime have little impact on peoples long ruled by local strong men.

President Kennedy has warned Moscow that the United States would protect the hemisphere against outside military intervention in Cuba. This, in effect, is a declaration of intention to go it alone, to enforce the Monroe Doctrine unilaterally if necessary.

But what is "outside military intervention"? The Russians are unlikely to send troops or airmen to Cuba, or to seek base rights there. That is not their way. Does the arming of Castro's forces with Soviet tanks and planes, which foredooms anything but a full-dress invasion to failure, constitute such intervention? If so, what is to be done about it? These are the critical questions facing the President.

In Government circles in Washington, some talk is now heard of possible action against Castro in terms of self-defense, not intervention. This has important legal implications. International law recognizes the right of every sovereign state to act in self-defense against outside aggression. This was precisely the motivation for Soviet action in crushing the Hungarian rebellion in 1956. A hostile, non-Communist regime was considered to be a threat to the security of the Soviet Union, and as such could not be tolerated.

This new emphasis on self-defense is an indication of the seriousness with which the administration views the situation resulting from the failure of the invasion attempt to dislodge Castro.

That ill-starred venture revealed several facts which were either unknown or disbelieved in Washington. Castro was shown to have military forces sufficiently strong and disciplined to deal with incursions by irregulars. His police apparatus was able to repress any show of sympathy by the population for the invaders, and to maintain internal order. And the invaders were exposed as ideologically bankrupt; their program of anti-Castroism was insufficient to arouse support among the masses who have fed at the Castro trough and whose help is essential in any effort to overthrow the regime from within.

Hence the quandary in which the President finds himself. There is now little hope that the anti-Castro forces inside and outside Cuba can gain their ends without solid military support from outside the country. That support can come only from the United States.

The President obviously wishes to avoid an American Hungary which would bring down on the United States the wrath of the world and jeopardize his entire foreign policy. But he cannot tolerate indefinitely the cancer of communism in the Caribbean. In the final analysis, great powers will take whatever steps they consider necessary to guard their national security.

Polish Constitution Day

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 10, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting editorial which appeared in the Chelsea Record, Chelsea, Mass., on May 5, 1961, regarding the heroic efforts of the Polish people to regain their freedom:

POLISH CONSTITUTION DAY

Polish Constitution Day, which was commemorated on May 3 is a tribute to a brave and heroic people and offers a stirring inspiration to freedom-loving people everywhere. The repeated efforts of the Polish people to gain, keep and regain their freedom offers a lesson from which all people may learn.

Though these people are kept under the heels of the Communist tyranny their hopes and determination that they will again regain their freedom and the Polish Constitution will again reign as the supreme law of their homeland still lives and can never be destroyed.

This love for freedom and their willingness to fight for their independence has been carried by the Poles wherever they have scattered. The heroic efforts of such Polish patriots as Kosciuszko and Pulaski were important factors in our Revolutionary War victory and they have done more than their share in every war since then.

Here in Chelsea Polish friends and neighbors have always been active in every phase of our communal life. Their names and contributions are indelibly inscribed in the business, political, communal, religious, fraternal and charitable history of our city.

Such determination, sacrifice and courage cannot continue forever without success. We look forward with them to the day when the flag of an independent and democratic Poland will again wave and the Polish Constitution will again be the law of the land.

The Common Situs Bill

EXTENSION OF REMARKS
OF
HON. DAVE MARTIN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 10, 1961

Mr. MARTIN of Nebraska. Mr. Speaker, the fundamental reason for consideration of common situs legislation, as shown by the testimony, is that there is a basic dispute between unions themselves. This is a family squabble between industrial and craft unions for jurisdiction.

Testimony before the Senate committee in regard to the construction of missile and test centers has brought out a swarm of problems. The chief one is rivalry between craft unions and industrial unions as to whose members are to perform the work. In addition, craft unions have squabbled amongst themselves over jurisdiction. This has resulted in a greatly increased cost of missile site construction and a subsequent delay in our missile program.

The common situs bill would greatly aggravate this situation because it makes legal the secondary boycott on construction jobs. The secondary boycott is the most vicious weapon—and at the present time is outlawed by the statutes. The passage of this bill would greatly aggravate the irregularities which have been disclosed to exist at our missile sites. The unions are treated fairly under the present laws, and the bosses

are not entitled to receive the big whip which the passage of the common situs bill would give them.

Are a few union bosses going to dictate to the Congress of the United States what action should be taken? Is Jimmy Hoffa going to be made more powerful than the very Government of this country?

Such would be the result if this vicious piece of legislation was passed.

The Magnitude of Our Heritage

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. DERWINSKI. Mr. Speaker, with the unfortunate emphasis these days on our Nation's problems and imperfections, it is refreshing to have one of the syndicated columnists take an affirmative position in discussing American virtues. I believe the column by Constantine Brown in the Washington Evening Star, Tuesday, May 9, needs no further comment, and I place it in the RECORD in order that it might provide inspiration to those who read it:

THE MAGNITUDE OF OUR HERITAGE—CHILDREN SINGING "AMERICA THE BEAUTIFUL," STIR MOVING VISION IN AN OLD NEWSMAN

(By Constantine Brown)

A few days ago this reporter sat at lunch with another reporter and three little children ranging in age from 4 to 9. The little ones in unison recited a simple little blessing when their food arrived, a nondenominational, fervent prayer that could as properly be offered by a Moslem or a Jew, as by any Christian.

They did this in a public restaurant, quietly enough so that few seated at tables nearby would know. They began together, without suggestion by any adult, and without self-consciousness. Then, like healthy kids anywhere at any time they tackled their meal with enthusiasm, albeit with politeness.

But that was only the beginning of what seemed to a well-seasoned old writer to be a memorable occasion. A little while later, when the small ones had completed their dessert and milk, they offered another contribution to spirituality and to the soul, if you will, that moved our companion, himself an "old hand" at reporting the news and certainly no sentimentalist, to tears.

Real tears. Not perhaps, entirely unashamed tears, in a sense, because no grown man is fond of such a public display of emotion. So deep was his feeling that he clasped his hands to his head and bowed it low for a moment, perhaps the better to mask his open yielding to his inner self and its loves.

Almost no one nearby, however, noted the little tableau at our table. They did not, many of them, hear what caused this reaction from a veteran newsman with years of experience in a world of cynicism, doubletalk, dubious loyalties, self-seeking, and intrigues.

The children, in bewilderment, wondered why he should weep. He reassured them that they were not the reason; it was only, he said, that the song they had sung had brought back to him, in a few lines, all the wonderful things he felt about his homeland.

The small ones had sung one verse of "America the Beautiful."

When the childish harmony (suitably low-pitched, as befits public singing in grownups' restaurants) smoothed out along "How beautiful for spacious skies, for amber waves of grain; For purple mountains' majesty above thy fruited plain * * *." I saw my friend melt. When the chorus came, he was unable for another instant to repress his response. He wept.

After a few moments he straightened, smiled at the youngsters, thanked them for their singing and praised them for their skill. They gravely acknowledged, explaining that this song was one they learned to sing in school along with others, and that the two older ones explained its words to the little one, who was not yet enrolled at a seat of learning.

Then, when the children were occupied with another ice-cream pie, he apologized to me for the incident. Not in years, he said, had he felt so suddenly and so overpoweringly swept with love of his country, its sweep, its beauty, its nobility. Yes, he added, probably every man loves his motherland like that, and there is no reason to weep with the emotion.

"But I'm too close to it all. Every day in my field of interest, covering international affairs and the business of politics, seeing the dangers, the threats, the contrived enmity, the blunders. All of a sudden the sound of these little voices overwhelmed me with the magnitude of our heritage.

"In a rush I saw the mountains and the prairies and the rivers; I saw the pioneers and the mountain men, the Jeffersons and the Lincolns, the vast spaces of the deserts, the resounding phrases of the Declaration of Indepndence and the Gettysburg Address—all these and much more in one blinding vision. All this because three little children, the future of our country, put their voices together in song as though to tell the world that all this I saw was not to be swept away."

This reporter understood. There was no reason to explain. Probably both of us spent the next few minutes reflecting on the majesty of a simple chorus: "America, America, God shed His grace on thee, and crown thy good with brotherhood, from sea to shining sea."

Golden Spike Anniversary

EXTENSION OF REMARKS
OF
HON. M. BLAINE PETERSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. PETERSON. Mr. Speaker, one of the most significant and dramatic events in the history of our Nation took place exactly 92 years ago today. I refer to the completion of the first transcontinental railroad route in America.

It was at high noon on May 10, 1869, that the famous Golden Spike was driven at a point called Promontory in the mountains north of the Great Salt Lake in my native and historic Utah, connecting the tracks of the Central Pacific—now the Southern Pacific—and the Union Pacific railroads.

In order that nationwide recognition may be given to the 100th anniversary of this great achievement, I have asked the Postmaster General to issue a special stamp. By my advance request I hope to reserve 1969 for the observance of this spectacular and meaningful occasion which, even today, in the age of almost inconceivable ecientific progress remains one of man's greatest engineering feats.

But more important, at least as I see it, is the fact that it marked the beginning of a new and vital era of national development. Immense regions were opened up to farming, mining, lumbering, and manufacturing. Struggling, pioneer settlements found themselves linked to new life and growth. Distance was no longer a barrier to trade.

Early in life my father taught me a respect for the importance of the railroads. He was a conductor on the Southern Pacific for 45 years and remembered the days when towns sprang into being and commerce developed wherever the rails were laid down or were extended. Millions of acres of land were put under cultivation, and land values were multiplied.

In short, the railroads encouraged expansion at a time when both encouragement and expansion were sorely needed, and they have ever since been an indispensable part of everyday American life.

When that first transcontinental rail route was completed, there were about 50,000 miles of railroad in the entire United States. Today, a network of some 220,000 miles of railroad line and 370,000 miles of track stretches between our cities and towns. And for all the vision of those who were present at the driving of the golden spike, for all their faith in the future of transportation by railroad, I feel sure they would still marvel at the transportation job done by the railroads of 1961 and at the tremendous technological advancements which have been brought about in the industry.

Last year, the class I railroads alone produced 572 billion ton-miles of freight service. This is the equivalent of moving nearly 9 tons of freight a mile each day for every man, woman and child in the United States. And in passenger service, they transported more than 325 million travelers.

Altogether, the railroads today carry nearly half of the Nation's intercity freight load, more than a fourth of all commercial passenger traffic and three-fourths of all nonlocal mail. It strikes me that it is worth remembering that were we ever to be without railroads our American way of life, based upon large-scale production and consumption, would be utterly impossible.

In addition, of course, the railroads are major employers with some 800,000 people on their payroll. They provide work for many additional thousands through purchases of the Nation's products to the healthy tune of $2½ billion annually. And their tax payments average a billion dollars a year.

This great transportation complex, representing a total investment of $36 billion, is indeed a far cry from the railroads of 92 years ago. And it is reassuring to see the many evidences of the railroad industry's determination to continue to move ahead.

Thus it is that in taking this opportunity to pay a tribute to these important

facilities on which the welfare of our Nation is so dependent, I am also mindful of the fact that a further safeguard of the national interest would be an updated national transportation policy suited to a truly balanced transportation system. The new and growing demands of an expanding America have need of ever better transportation services and our total effort to that end is essential to the economy and defense of this Nation.

A Great American Marks an Anniversary

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. WEAVER. Mr. Speaker, under leave to extend my remarks, I would like today to join my colleagues in the Congress and millions of Americans across the Nation in wishing Godspeed to a great American who today celebrates his 37th anniversary of incomparable service to his fellow citizens. It was on May 10, 1924, that the then Attorney General, Harlan Stone called in young John Edgar Hoover and told him that he was to head up the Federal Bureau of Investigation.

From that date, the course of American history was changed. Mr. Hoover took command of an agency which had become the haven for political hacks. He changed it promptly into a hard-working organization whose members produced—or got out.

His first great job was to tackle the organized crime of the lawless decade. Under his forceful leadership the FBI developed into an agency capable of meeting the challenge of the Dillingers and their kind. Under his leadership the FBI became the scourge of the underworld and the guiding force in developing sound and scientific police methods throughout America.

To improve this universal police protection to all of our citizens at every level of Government, Mr. Hoover established in 1935 the FBI Academy and since that time more than 4,000 outstanding police officers from every State have attended to improve their ability to cope with crime at the local level.

Mr. Hoover and his many dedicated coworkers in the Bureau have held thousands of conferences with police officers throughout the country, designed to bring to the local level the know-how and organizational ability built up within the FBI itself.

In a real sense of the word, Mr. Hoover's personality has been stamped on law enforcement agencies everywhere.

During World War II the already heavy burden carried by the FBI was increased to include counterespionage and sabotage work within this country. Again, his men made spectacular contributions to the Nation and its safety. As a result of careful, scientific work by the Bureau there was not a single case of enemy-inspired sabotage in our World War II defense effort within the continental United States.

Since then his men have been hard at work protecting the American people against the inroads made by communism. His men uncovered the plot and developed the evidence which brought to justice the atomic spies, Julius and Anna Rosenberg. His agents have been active in trying to prevent subversives from invading the Government to destroy its effectiveness.

Mr. Speaker, a man like J. Edgar Hoover did not win this high position of esteem he holds with his fellow citizens today by being a great personality, a great politician or even a fine administrator. He has won that position because he has done the job so well. He has held the post now for 37 years. If he wishes, I am sure that the American people will want him to keep it another 37.

Encroaching Control

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. UTT. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I wish to include an address which Mr. Ronald Reagan, TV and movie star, is delivering to audiences throughout the United States. Mr. Reagan is an outstanding American patriot who is giving unselfishly of his time to warn the people of America of the disastrous direction in which this country is heading.

Mr. Reagan has been fighting Communist infiltration into the moving picture industry for many years, and recognizes the threat of international Communist conspiracy. He is an outspoken foe of socialism and the welfare state, believing that our survival depends upon the free enterprise system and the preservation of the checks and balances provided in our Constitution.

The address follows:

ENCROACHING CONTROL

(An address by Ronald Reagan)

It must seem presumptuous to some of you for a member of my profession to stand here and attempt to talk on problems of the Nation. It would be strange if it were otherwise. We in Hollywood are not unaware of the concept many of our fellow citizens have of us and of our industry. We realize that our merchandise is made up of tinsel, colored lights, and a large measure of make-believe. It is also true that our business methods and practices have reflected this footlight glamour more than the very real side of our very real business.

However, a few years ago "a funny thing happened to us on the way to the theater." Ugly reality came to our town on direct orders of the Kremlin. Hard-core party organizers infiltrated our business. They created cells, organized Communist fronts, and for a time, deceived numbers of our people, who with the best of intentions, joined these fronts while still ignorant of their true purpose. The aim was to gain economic control of our industry and then subvert our screens to the dissemination of Communist propaganda.

Whatever the shortcomings, Hollywood had achieved a great deal. In the finest traditions of free enterprise, 70 percent of the playing time of all the screens of the world had been captured by the output of the American film capital. You may disagree sometimes with our boy-meets-girl plot, but all over the world our pictures were a window through which less fortunate humans had a glimpse of freedom and of our material comforts as well. The men in the Kremlin wanted this propaganda medium for their own destructive purposes.

Confident of their power, the Reds in our midst made one mistake in judgment. They mistook their ability to deceive for success in conversion. Under the guise of a jurisdictional strike, they made an open effort to destroy the guilds and unions who remained free from their control. Ultimately, they hoped for one vertical union of motion picture people under the umbrella of Harry Bridges' maritime union. After the first shock, the people of the movie colony rallied quickly—we lived through scenes that heretofore had been only make-believe. Thousands of massed pickets overturned cars, homes were bombed, and threats of acid in the face were directed at performers. Months later their power was broken. The studios had remained open thanks to the refusal of management and the majority of our people to be intimidated.

We now know, of course, that we only won an isolated battle. In the spirit of Camp David the Communist Party has ordered once again the infiltration of the picture business as well as the theater and television. They are crawling out from under the rocks; and memories being as short as they are, there are plenty of well meaning but misguided people willing to give them a hand.

We don't mean to present ourselves as "being able to run the circus now that we've seen the monkey," but it is possible we have an awareness not shared by many of our fellow citizens.

Most people agree that the ideological struggle with Russia is the No. 1 problem in the world. Millions of words are used almost daily to record the fluctuating temperature of the cold war. And yet, many men in high places in government and many who mold opinion in the press and on the airwaves, subscribe to a theory that we are at peace, and we must make no overt move which might endanger that peace. "Men cry peace, but there is no peace." The inescapable truth is that we are at war, and we are losing that war simply because we don't, or won't, realize that we are in it.

True, it is a strange war fought with unusual weapons, but we cannot yell foul, because it is a declared war. Karl Marx established the cardinal principle that communism and capitalism cannot coexist in the world together. Our way of life, our system, must be totally destroyed; then the world Communist state will be erected on the ruins. In interpreting Marx, Lenin said, "It is inconceivable that the Soviet Republic should continue to exist for a long period side by side with imperialistic states. Ultimately, one or the other must conquer."

Last November, the Communist parties of 81 countries held a convention in Moscow; and on December 6, reaffirmed this principle of war to the death. In a 20,000-word manifesto, they called on Communists in countries where there were non-Communist governments to be traitors and work for the destruction of their own governments by subversion and treason.

Only in that phase of the war which causes our greatest fear are we ahead—the use of armed force. Thanks to the dedicated patriotism and realistic thinking of our men in uniform we would win a shooting war. But, this isn't a decisive factor in the Communist campaign. They never really intended to conquer us by force unless we yielded to a massive peace campaign and disarmed. Then, the Russians would resort to armed conflict if it could shortcut their timetable with no great risk to themselves.

In 1923, Lenin said that they would take Eastern Europe, next organize the hordes of Asia, then surround the United States, and, he predicted, "* * * that last bastion of capitalism will not have to be taken. It will fall into our outstretched hands like overripe fruit."

Eastern Europe has been taken, and they are organizing the hordes of Asia around the red colossus of China. Even now, it would appear we are preparing to drink the bitter cup of capitulation in Laos only partly diluted by face-saving devices. Cuba is a Soviet beachhead 90 miles offshore, and more than 250,000 Communist organizers are spread up and down Latin America.

Meanwhile, other Communist tactics are also working on schedule. Bulganin said, "The American workingman is too well fed; we cannot appeal to him, but when through inflation America has priced herself out of the world market and unemployment follows—then we will settle our debt with the United States."

American apathy is due at least in part to our belief that the small number of American Communists is evidence of weakness and a lack of threat. But, history makes no secret of the fact that Lenin became the leader of the world conspiracy on just that issue—that the Communist Party would remain a small, dedicated, highly trained cadre which would use and manipulate the masses when necessary. Lenin termed us the willing idiots. In our life time ,this dedicated handful has enslaved one-third of the world's people on one-fourth of the earth's land surface.

The Communists are supremely confident of victory. They believe that you and I, under the constant pressure of the cold war, will give up, one by one, our democratic customs and traditions. We'll adopt emergency temporary totalitarian measures, until one day we'll awaken to find we have grown so much like the enemy that we no longer have any cause for conflict.

Three months before his last visit to this country, Nikita Khrushchev said, "We can't expect the American people to jump from capitalism to communism, but we can assist their elected leaders in giving them small doses of socialism, until they awaken one day to find they have communism." This is not a new thought. In 1788, James Madison told the Virginia convention, "Since the general civilization of mankind, I believe there are more instances of the abridgement of the freedom of the people by gradual and silent encroachment of those in power than by violent and sudden usurpations."

Others much more recently have counted on this with no realization they would one day be furthering the Soviet cause. A Socialist clergyman, writing in the New Leader, the Socialist magazine of 1927, called for a new strategy. He said Socialists should place themselves in Government jobs and work for Government ownership of power, and control of railroads, banking, and key industries. He called his program—"Encroaching Control." Not too long ago, Norman Thomas, six times a candidate for President on the Socialist Party ticket, commented that "the American people would never knowingly vote for socialism but that under the name of liberalism, they would adopt every fragment of the Socialist program."

Appealing not to the worst, but to the best in our natures, they have used our sense of fair play—our willingness to compromise—and have perfected a technique of foot-in-the-door legislation. Get any part of a proposed program accepted, then with the principle of governmental participation in that field established, work for expansion, always aiming at the ultimate goal—a Government that will someday be a big brother to us all.

Traditionally, one of the easiest first steps in imposing statism on a people has been Government-paid medicine. It is the easiest to present as a humanitarian project. No one wants to oppose care for the sick. Today, we have the costliest governmental medical program in the world in our Veterans' Administration hospitals. All of us are agreed that a man wounded in the service of his country is entitled to the finest in medical and hospital care. However, today three out of four Veterans' Administration beds are filled with patients suffering diseases or injuries neither originated by, nor aggravated by military service. There are only 40,000 service-connected disabilities in the United States, yet every year the Federal budget contains millions of dollars for additional Veterans' Administration hospital building and expansion. Counting the 23 million of us who are veterans plus other governmental programs, one of four citizens are entitled to some form of Government-paid medical or hospital care.

It is now proposed that all people of social security age be given Government-paid medical and hospital care. Once again, emergency is invoked, and we are given a picture of millions of senior citizens desperately needing medical care and unable to finance it. In all the emotional presentation, the backers of this program seem strangely reluctant to face the facts. In the last 10 years, 127 million Americans have come under the protection of some form of medical and hospital insurance. This includes more than two-thirds of those of social security age and more than 70 percent of all citizens. If the present rate of increase continues, by 1970 some 90 percent of the population will be so insured. As nearly as can be determined, less than 10 percent of our senior citizens require aid in meeting their medical needs.

The last session of Congress adopted a measure known as the Kerr-Mills bill to provide money for State-administered aid to these people. However, without even waiting to see if this meets the problem, a revised version of the once-defeated Forand bill is advocated to force all people into a compulsory Government health insurance program, regardless of need. Why? Well, ex-Congressman Forand provides the answer. He says, "If we can only break through and get our foot in the door, then we can expand the program after that." Walter Reuther has said his group makes no secret of the fact that they want nationalized health service for all. New American, a Socialist magazine, writes, "The Forand bill will not be paid for on the insurance principle according to factors of estimated risk. It will be paid for through the tax mechanisms of social security * * *. Once the bill is passed, this Nation will be provided with a mechanism for socialized medicine."

In 1935, social security started with a 3-percent contribution on $3,000 of income. Now it is 6 percent of $4,800; and if the proposed expansions plus the medical program are adopted, by 1969 it will be 11 percent of $5,000. It is no secret that pressure is being exerted to remove even the $5,000 ceiling and make social security payments be based on total gross income.

Social security was never intended to replace private savings, pensions, or insurance. It was to provide a basis for savings so that outright destitution would not follow unemployment by reason of death, disability, or old age. In that light, the actuarial experts in charge estimated in 1943 that by 1957 social security benefit payments would total $1.2 billion per year, but, the temptation to politicians to vote people a raise particularly in election years was too great. In 1957, the total outgo was more than $7 billion and in 1959 outgo began exceeding income. The recipients of social security benefits today will collect $65 billion more than they paid in. You and I, who are paying into this program are unfunded to an amount between $300 and $600 billion.

The average citizen has been led to believe he and his employer are contributing to a fund and that some day he will call upon this, his own money, to carry him over his nonearning years. But this isn't what Social Security representatives said before the U.S. Supreme Court. They stated that social security was not an insurance program and was not based on any actuarial standards. They stated that social security dues are a tax for the general use of the Government, and the payment of that tax does not automatically entitle anyone to benefits. Benefit payments are a welfare program which can be curtailed or canceled anytime Congress should so decide.

And what of our sons—the young man joining the work force in the next few years? He will be taxed to try and catch up on that mounting deficit. If he could have his social security tax to invest in private insurance, it would provide for almost double the benefits provided by social security. This is not the only price we are paying in individual freedom.

The press recently told of a group whose religion belief forbade their participation in any Government welfare program. Their property was seized and their cattle sold at auction to enforce their payment of social security taxes.

In education, the foot in the door was the $900 million National Defense Education Act of 1958. The excuse was, as usual, the cold war. Russia had put a sputnik into orbit; obviously, our educational system must be at fault. Now the largest spending lobby in Washington is promoting a $2½ billion program to alleviate allegedly crowded schools, underpaid teachers, and bankrupt school districts.

Again, the facts seem strangely at variance. Ninety-nine and one-half percent of the Nation's school districts have not even approached their bonded limit of indebtedness. A 35-percent increase in students over the last decade has been matched by a 134 percent increase in spending by the local communities. An increase of 10 million students has seen classrooms built for 15 million. Five hundred colleges, as of this moment, can take an additional 200,000 students without adding so much as a desk or chair. We are told we must build 60,000 classrooms a year for the next 10 years, but they forget to tell us we've been building 68,000 a year for the last 5 years and that continuation of this rate will give us a surplus of classrooms by 1970.

Of course, we want teachers to be paid adequately; and we are doing something about it. Their average pay has risen in the last few years from $3,100 to $5,300 annually. The truth is, not one shred of evidence has been presented that Federal aid of any kind is required. Could we possibly believe that three-fourths of $1 billion a year in Federal aid could solve any great emergency when we are spending nearly $20 billion a year at the local level?

Federal aid is the foot in the door to Federal control. In spite of their denials, their own words betray them. The director of public education of the State of Washington tells of the 2-year struggle of his State to meet the rigid requirments of the National Director of Education under the present act. He says, "This is Federal control by indirec-

tion—all the more dangerous because it poses as a Federal handout."

A former president of the National Education Association states publicly, "We might have to have temporary Federal control to bring about integration in the South."

A former chairman of the President's youth fitness program says, "We can no longer afford local management of the schools. We must have a national school system to compete on equal terms with Russia."

The Department of Health, Education, and Welfare has quadrupled its staff and admits it is working to create national standards of education and a national curriculum.

In short, Federal aid is the first step in a Federal school system with teachers and subjects removed from parental control on the theory that a bureau in Washington is better qualified to supervise the upbringing of our youth.

Twenty-seven years ago, our farmers were told that a Federal subsidy did not mean Federal control. Now we have seen a rancher, Evetts Haley, Jr., fined $4,000 for raising wheat on his own land and feeding it to his own cattle. The Supreme Court upheld his conviction with a single sentence ruling—"Yes, an agency of the Federal Government has the right to tell an American citizen what he can grow on his own land for his own use."

This Nation has tried to curb the production of a surplus by making it so financially attractive to produce a surplus that we own enough wheat to bake 25 loaves of bread for every person alive. In the State of New Mexico, citizens learned they could rent State-owned land for 25 cents an acre and immediately apply for and receive $9 an acre from the Federal Government for not planting the land.

All of the farm mess is concerned with the 20 percent of agriculture coming under Government regulation and subsidy. Eighty percent of our agricultural economy is out in the free market of supply and demand. It would seem that the answer to the farm mess would be to free the other 20 percent of governmental regimentation; but, what is being advocated? We are told that the only solution to the problem is to bring the other 80 percent into the Government program. To that end a plan is advanced that would result in the licensing of every farm in the United States with complete governmental regulation of production and price. Proponents of the measure admit it will require thousands of additional Government employees, more subsidy on a permanent basis, and reduction of supply to raise food prices 15 to 25 percent. As an example, it is estimated that meat would be reduced in quantity to about what we knew under rationing in World War II.

Thomas Jefferson said, "If we let Washington tell us when to sow and when to reap, the Nation shall soon want for bread."

Today, no one denies the American people would resist the nationalization of industry. But, in defiance of this attitude the Federal Government owns and operates more than 19,000 businesses covering 47 lines of activity from rum distilling to the manufacture of surgical equipment. The estimated book value of 700 governmental corporations is $260 billion. Operating tax-free, dividend-free, and rent-free in direct competition with its own citizens, the Government loses billions each year in these businesses.

The next time you are caught in traffic take satisfaction in the knowledge that one of these Government corporations built a six-lane highway in Spain. It runs 15 miles from Madrid to a gambling casino.

All of these things have led to the growth of a collection of internal powers and bureaucratic institutions against which the individual citizen is virtually helpless. We now have a permanent structure of Government beyond the reach of Congress and actually capable of dictating policy. This power, under whatever name you choose, is the very essence of totalitarianism.

I quote here a statement by Congressman JAMES B. UTT on this subject:

"We are rapidly coming to a point where a complete change of elected officials, including Congress and the White House, can mean little change in policy. You are governed more and more by people for whom you have never voted, for whom you never will vote, whom you have never seen, and whom you cannot recall by your vote. They are entrenched in the boards, bureaus and commissions, even at the policy level. For example, you may think that the Secretary of Labor sets the policy of his Department, but I know that much of the policy of that Department is set by civil service employees who have been with the Department for 20 years and they have no intention, now or ever, of recommending to the Secretary of Labor any policy which does not fit their personal philosophy of government, and you cannot remove them or replace them by your ballot. This is a form of invisible government and can lead to the most oppressive type of tyranny."

A year ago, a subcommittee of Congress reported its findings in the field of Federal employees. There are almost 2½ million. In 1942, there was 1 top-salaried executive for every 89 employees; today, there is 1 for every 17. The committee further reported it found little evidence that any bureau, agency, or commission created in answer to an emergency ever went out of existence after the emergency disappeared.

A case in point: Congress ordered the liquidation of the Spruce Products Corporation in 1920, but, 30 years later it was still in existence. This Corporation was founded in World War I to find spruce wood for airplane fuselages.

Some people attempt to justify government in business on the grounds of greater efficiency due to central control. An example of this efficiency can be found in the claims department of the Veterans' Administration insurance program. In that department, three Government employees take double the time to perform the task normally assigned to one employee in a private insurance company.

Hopeless as it may seen, we can do something about it. We must inform ourselves on the proposals pending in Congress. Look beyond the foot in the door to the ultimate aim. Weigh the price we must pay in individual liberty and whether these programs qualify as things the people can't do for themselves. Then write to your Congressmen and Senators. Also, don't forget to write now and then just to say "well done" to your Representative when he has acquitted himself well on the firing line.

A basic point to remember is that none of these extensions of socialism can be effected without money. The fodder upon which our Government has fed and grown beyond the consent of the governed is the fruit of the tax system whose only consistency is that a levy once imposed is seldom removed. An excise tax on telephones imposed during the Korean war was to curb telephone use during the emergency and really wasn't intended for revenue. The war is over, but the tax lingers on—the Government has discovered it needs the revenue. This particular tax, plus some of the hundreds of hidden and indirect taxes that burden us, accounts for one-third of your telephone bill. One hundred such taxes account for one-half the price of a loaf of bread, one-fourth the cost of an automobile, one-half your gas and oil.

Once we were told the income tax would never be greater than 2 percent and that only from the rich. In our lifetime, this law has grown from 31 to more than 440,000 words. We have received this progressive tax direct from Karl Marx who designed it as the prime essential of a Socialist state. In the surtax brackets, the steepest rate of increase occurs through the middle income range where are to be found the bulk of our small businessmen, professional people, and supervisory personnel—the people Marx said should be taxed out of existence. At $16,000 to $18,000 of income, a man reaches the 50-percent tax rate. From 50 percent on up to the confiscatory 91 percent rate, the Government can only justify these brackets on a punitive basis, for the gross revenue derived from all the tax of the 50 percent or above is less than three-fourths of $1 billion.

There can be no moral justification of the progressive tax. Perhaps that is why the bureaucrats pretend it is proportionate taxation. Proportionate taxation we would gladly accept on the theory that those better able to pay should remove some of the burden from those least able to pay. The Bible explains this in its instruction on tithing. We are told we should give the Lord one-tenth and if the Lord prospers us 10 times as much, we should give 10 times as much. But, under our progressive income tax, computing Caesar's share is a little different. If a $5,000 a year man today is prospered 10 times, his income tax increases 53 times as much.

Does this help the little man? A man with a gross income of $3,500, a wife and two children, will find when he has finished paying the hidden and indirect taxes, that the tax collector's share of his gross $3,500 is $1,059. Some suggest the answer to his problem is to tax the upper incomes even more—but what leeway is left? If the Government confiscated all personal income above $6,000 a year, the increased revenue wouldn't pay the interest on the national debt.

No nation in history has ever survived a tax burden of one-third of its national income. Today, 31 cents out of every dollar earned is tax and of that 31 cents, 23 cents goes to the Federal Government, leaving 8 cents to be shared by the State, county, and local community. No wonder we are told to ask for Federal aid. But wouldn't it make more sense to keep the money here in the first place instead of running it through that puzzle palace on the Potomac only to get it back minus a sizable carrying charge?

Lenin once said, "The way to destroy capitalism is to debauch the currency. Through a process of planned inflation, a government can quietly and unobservedly confiscate the wealth of its citizens."

Henry VII substituted copper for silver in his coins, and we have been no less deliberate in our inflationary policies. Our dollar has lost more than half its purchasing power in 20 years. Of course, we are told that incomes have kept pace, that we are earning twice as much so we are still holding our own. This reasoning overlooks the part played by the progressive tax which is based on the number of dollars earned—not their value. The man who earned $5,000 a year in 1940 must earn $14,000 today to break even and pay his increased surtax. The $10,000-a-year man faces an increase of $12,000 in his tax bill and must now earn $31,000 just to maintain the same purchasing power.

Project these figures ahead just 15 years, keeping the same annual rate of inflation and the same tax rate, and could anyone even pretend that free enterprise will exist? By 1975, the $5,000-a-year man will have to earn $33,000, and the $10,000-a-year man will have to earn $84,000 just to maintain their 1940 standard of living.

Here is the main battleground. We must reduce the Government's supply of money and deny it the right to borrow.

Two years ago, I appeared before the House Ways and Means Committee as a representative of the motion picture industry

to urge tax reform. This was an experience similar to going over Niagara Falls in a barrel—the hard way, upstream. In a month of hearings, representatives of practically every segment of our society appeared before the committee. All of them urged some kind of tax reform. It was obvious that the majority of the committee had little sympathy with our plea, so it was no surprise when, several months later, the committee decided to hold new hearings. This time no volunteers were allowed. A hand-picked group of predominantly campus economists appeared and talked of plugging loopholes to increase the Government's tax revenue. Most of these so-called loopholes are the legitimate deductions without which the whole tax structure would have long since proved unworkable. The suggestions included disallowance of property taxes and interest on loans for income tax purposes and even the elimination of 100-percent deductions of charitable contributions.

The biggest lobby in Washington pushing tax reform has a bill which will increase the Government's tax take about $18 billion. It is no coincidence that they have, on the other hand, recommendations for $18 billion worth of welfare legislation. This measure will actually be presented as tax reduction with some cut in surtax rates.

Those of the "liberal" persuasion say they "reject the notion that the least government is the best government.' They claim our citizens are not intelligent enough to spend their money properly. They feel the Government should take the money through taxation and then buy the welfare programs for the masses which they are not smart enough to buy for themselves.

When the old-fashioned idea of living within our means and paying something on the national debt is suggested, these same liberals tell us that "only State and local debt is bad." Through some exotic bookkeeping methods, they seem to feel that the Federal debt is meaningless. It is—it is incomprehensible.

If I had a 4-inch stack of thousand dollar bills in my hand, I'd be a millionaire. If we had the national debt of $293 billion before us in thousand dollar bills, the pile would be more than 18 miles high. Maurice Stans, former budget director, has said that this debt is only the part of the iceberg which shows above the surface. Legislation already enacted into law has obligated our Government to more $750 billion. Add to this the local and State debts plus the private debts of our citizens, and we find that we are mortgaged in an amount more than double the market value of every tangible asset and every foot of real estate in the United States.

When we point out the danger of more deficit spending, we are told, "we are sacrificing our security on the false altar of a balanced budget." This is not so. Our individual freedom and our free enterprise system are the very sources of our strength, and there can be little security any place in the free world if there isn't fiscal stability in the United States.

With no one using the term "socialism" to describe these encroaching controls, we find that today 1 out of 7 of the Nation's work force is on the public payroll. In just 15 years a 50 percent increase in employees has been met with a 170 percent increase in the public payroll. One-fourth of our medicine is socialized. Senator Byrd estimates that 40 million Americans receive some form of direct cash payment from government. We have a tax machine that in direct contravention to the Constitution is not designed to solely raise revenue but is used, openly and admittedly, to control and direct the economy and to equalize the earnings of our people.

Do not forsake the other issues; but, as Justice Oliver Wendell Holmes said, "Strike for the jugular. Reduce taxes and spending. Keep government poor and remain free." Write to your Congressmen as individuals. Fifty letters from a group such as this means more than a resolution or a petition. Demand immediate tax reform which will reduce the percentage of the national income taken by Government. There is a bipartisan tax reform bill, the Herlong-Baker bill, now before the House Ways and Means Committee. A 5-year gradual reduction of rates makes it the best planned tax reform bill introduced in the last hundred years. For every billion saved in Government spending, we can have a 2½-percent reduction of income tax.

If your Congressman should say we must cut costs first and then reduce taxes—don't stand for it. Remind him that no government in history has ever voluntarily reduced itself in size. Governments don't tax to get the money they need. Governments will always find a need for the money they get.

There can only be one end to the war we are in. It won't go away if we simply try to outwait it. Wars end in victory or defeat. One of the foremost authorities on communism in the world today has said we have 10 years. Not 10 years to make up our minds, but 10 years to win or lose—by 1970 the world will be all slave or all free.

In this land occurred the only true revolution in man's history. All other revolutions simply exchanged one set of rulers for another. Here for the first time the Founding Fathers—that little band of men so advanced beyond their time that the world has never seen their like since—evolved a government based on the idea that you and I have the God-given right and ability within ourselves to determine our own destiny. Freedom is never more than one generation away from extinction—we didn't pass it on to our children in the bloodstream. It must be fought for, protected, and handed on for them to do the same, or one day we will spend our sunset years telling our children and our children's children, what it once was like in the United States when men were free.

Address by Attorney General Robert F. Kennedy at the University of Georgia Law School, May 6, 1961

EXTENSION OF REMARKS

OF

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 10, 1961

Mr. BRADEMAS. Mr. Speaker, one of the most eloquent and inspiring statements on the problem of civil rights that I have ever seen was the address delivered by the distinguished Attorney General of the United States, the Honorable Robert F. Kennedy, on May 6, 1961, at the Law Day exercises of the University of Georgia Law School, Athens, Ga.

The courage and candor and, I believe, understanding with which the Attorney General spoke in Georgia are clear evidence of the intention of President Kennedy's administration to uphold the rule of law and the Constitution of the United States in the field of human rights.

Indeed, Mr. Speaker, I believe that the Attorney General's address on this occasion will come to be regarded as one of the finest affirmations in many years of the American tradition of equal rights under the law.

The text of the address follows:

ADDRESS BY HON. ROBERT F. KENNEDY, ATTORNEY GENERAL OF THE UNITED STATES

(Prepared for delivery at the Law Day exercises of the University of Georgia Law School)

For the first time since becoming Attorney General, over 3 months ago, I am making something approaching a formal speech, and I am proud that it is in Georgia. Two months ago I had the very great honor to present to the President, Donald Eugene McGregor, of Brunswick, Ga. Donald McGregor came to Washington to receive the Young American Medal for Bravery. In 12 bad hours, he led a family of four to safety from a yacht which broke up in high seas off the Georgia coast. He impressed all of us who met him with his quiet courage. And, as the President said, Donald McGregor is a fine young American—one of a long line of Georgians who have, by their courage, set an outstanding example for their fellow Americans.

They have told me that when you speak in Georgia you should try to tie yourself to Georgia and the South, and even better, claim some Georgia kinfolk. There are a lot of Kennedys in Georgia. But as far as I can tell, I have no relatives here and no direct ties to Georgia, except one. This State gave my brother the biggest percentage majority of any State in the Union and in this last election that was even better than kinfolk.

MUST PRESERVE FREEDOMS

We meet at this great university, in this old State, the fourth of the Original Thirteen, to observe Law Day.

In his proclamation urging us to observe this day, the President emphasized two thoughts. He pointed out that to remain free the people must "cherish their freedoms, understand the responsibilities they entail, and nurture the will to preserve them." He then went on to point out that "law is the strongest link between man and freedom."

I wonder in how many countries of the world people think of law as the "link between man and freedom." We know that in many, law is the instrument of tyranny, and people think of law as little more than the will of the state, or the party, not of the people.

And we know, too, that throughout the long history of mankind, man has had to struggle to create a system of law and of government in which fundamental freedoms would be linked with the enforcement of justice. We know that we cannot live together without rules which tell us what is right and what is wrong, what is permitted and what is prohibited. We know that it is law which enables men to live together, that creates order out of chaos. We know that law is the glue that holds civilization together.

ACCEPT COURT DECISIONS

And, we know that if one man's rights are denied, the rights of all are endangered. In our country the courts have a most important role in safeguarding these rights. The decisions of the courts, however, much we might disagree with them, in the final analysis must be followed and respected. If we disagree with a court decision and, thereafter, irresponsibly assail the court and defy its rulings, we challenge the foundations of our society.

The Supreme Court of Georgia set forth this proposition quite clearly in 1949 in the

case of *Crumb* v. *the State* (205 Ga. 547–552). The court, referring to U.S. Supreme Court decisions, said there and I quote:

"And whatever may be the individual opinion of the members of this court as to the correctness, soundness, and wisdom of these decisions, it becomes our duty to yield thereto just as the other courts of this State must accept and be controlled by the decisions and mandates of this court. This being a government of law and not by men, the jury commissioners in their official conduct are bound by the foregoing ruling of the Supreme Court of the United States, notwithstanding any personal opinion, hereditary instinct, natural impulse or geographical tradition to the contrary."

Respect for the law—in essence that is the meaning of Law Day—and every day must be Law Day or else our society will collapse.

The challenge which international communism hurls against the rule of law is very great. For the past 2 weeks I have been engaged, for a good part of my time, in working with General Taylor, Admiral Burke, and Mr. Dulles, to assess the recent events in Cuba and determine what lessons we can learn for the future.

COMMUNISM CHALLENGES LAW

It already has become crystal clear in our study that as the President has stated so graphically, we must reexamine and reorient our forces of every kind. Not just our military forces, but all our techniques and outlook here in the United States. We must come forward with the answer of how a nation, devoted to freedom and individual rights and respect for the law, can stand effectively against an implacable enemy who plays by different rules and knows only the law of the jungle. With the answer to this rests our future—our destiny—as a nation and as a people.

The events of the last few weeks have demonstrated that the time has long since passed when the people of the United States can be apathetic about their belief and respect for the law and about the necessity of placing our own house in order. As we turn to meet our enemy, to look him full in the face, we cannot afford feet of clay or an arm of glass.

Let me speak to you about three major areas of difficulty within the purview of my responsibilities that sap our national strength, that weaken our people, that require our immediate attention.

CRIME SAPS NATIONAL STRENGTH

In too many major communities of our country, organized crime has become big business. It knows no State lines. It drains off millions of dollars of our national wealth, infecting legitimate businesses, labor unions, and even sports. Tolerating organized crime promotes the cheap philosophy that everything is a racket. It promotes cynicism among adults. It contributes to the confusion of the young and to the increase of juvenile delinquency.

It is not the gangster himself who is of concern. It is what he is doing to our cities, our communities, our moral fiber. Ninety percent of the major racketeers would be out of business by the end of this year if the ordinary citizen, the businessman, the union official, and the public authority stood up to be counted and refused to be corrupted.

This is a problem for all America, not just the FBI or the Department of Justice. Unles the basic attitude changes here in this country, the rackets will prosper and grow. Of this I am convinced.

The racketeers, after all, are professional criminals. But, there are the amateurs—men who have law-abiding backgrounds and respectable positions, who, nevertheless, break the law of the land. We have been particularly concerned lately in the Department of Justice about the spread of illegal price fixing. I would say to you, however, it is merely symptomatic of many other practices commonly accepted in business life.

Our investigations show that in an alarming number of areas of the country businessmen have conspired in secret to fix prices, made collusive deals with union officials, defrauded their customers and even in some instances cheated their own Government.

COMPETITIVE ENTERPRISE BEST HOPE FOR FREEDOM

Our enemies assert that capitalism enslaves the worker and will destroy itself. It is our national faith that the system of competitive enterprise offers the best hope for individual freedom, social development, and economic growth.

Thus, every businessman who cheats on his taxes, fixes prices, or underpays his labor, every union official who makes a collusive deal, misuses union funds, damages the free enterprise system in the eyes of the world and does a disservice to the millions of honest Americans in all walks of life.

Where we have evidence of violation of laws by the respectables, we will take action against the individuals involved, as well as against their companies. But in the end, this also is not a situation which can be cured by the Department of Justice. It can only be cured by the business and unions themselves.

The third area is the one that affects us all the most directly—civil rights.

CONFLICT OF LAW AND LOCAL CUSTOMS

The hardest problems of all in law enforcement are those involving a conflict of law and local customs. History has recorded many occasions when the moral sense of a nation produced judicial decisions, such as the 1954 decision in *Brown* v. *Board of Education*, which required difficult local adjustments.

I have many friends in the U.S. Senate who are southerners. Many of these friendships stem from my work as counsel for the Senate Rackets Committee, headed by Senator JOHN MCCLELLAN of Arkansas for whom I have the greatest admiration and affection.

If these southern friends of mine are representative southerners, and I believe they are, I do not pretend that they believe with me on everything or that I agree with them on everything. But, knowing them as I do, I am convinced of this:

Southerners have a special respect for candor and plain talk. They certainly don't like hypocrisy. So, in discussing this third major problem, I must tell you candidly what our policies are going to be in the field of civil rights and why.

First let me say this: the time has long since arrived when loyal Americans must measure the impact of their actions beyond the limits of their own towns or States. For instance, we must be quite aware of the fact that 50 percent of the countries in the United Nations are not white; that around the world, in Africa, South America, and Asia, people whose skins are a different color than ours are on the move to gain their measure of freedom and liberty.

From the Congo to Cuba, from South Vietnam to Algiers, in India, Brazil, and Iran, men and women and children are straightening their backs and listening, to the evil promises of Communist tyranny and the honorable promises of Anglo-American liberty. And those people will decide not only their future but how the cause of freedom fares in the world.

In the United Nations we are striving to establish a rule of law instead of a rule of force. In that forum and elsewhere around the world our deeds will speak for us.

In the worldwide struggle, the graduation at this University of Charleyne Hunter and Hamilton Holmes will without question aid and assist the fight against Communist political infiltration and guerrilla warfare.

AMERICANS LIVE BY RULE OF LAW

When parents send their children to school this fall in Atlanta, peaceably and in accordance with the rule of law, barefoot Burmese and Congolese will see before their eyes Americans living by the rule of law.

The conflict of views over the original decision in 1954 and our recent move in Prince Edward County is understandable. The decision in 1954 required action of the most difficult, delicate, and complex nature, going to the heart of southern institutions. I know a little of this. I live in Virginia. I studied law at the University of Virginia. I have been privileged to know many able southern soldiers, scholars, lawyers, jurists, journalists, and political leaders who have enriched our national life. From them I have drawn some understanding of the South, but my knowledge is nothing to yours.

It is now being said that the Department of Justice is attempting to close all public schools in Virginia because of the Prince Edward situation. This is not true, nor is the Prince Edward suit a threat against local control.

We are maintaining the orders of the courts. We are doing nothing more nor less. And if any one of you were in my position you would do likewise for it would be required by your oath of office. You might not want to do it, you might not like to do it, but you would do it.

For I cannot believe that anyone can support a principle which prevents more than a thousand of our children in one county from attending public school—especially when this step was taken to circumvent the orders of the court.

Our position is quite clear. We are upholding the law. Our action does not threaten local control. The Federal Government would not be running the schools in Prince Edward County any more than it is running the University of Georgia or the schools in my State of Massachusetts.

In this case—in all cases—I say to you today that if the orders of the court are circumvented, the Department of Justice will act.

We will not stand by or be aloof. We will move.

Here on this campus, not half a year ago, you endured a difficult ordeal. And when your moment of truth came, the voices crying "force" were overridden by the voices pleading for reason.

And for this, I pay my respects to your Governor, your legislature, and most particularly to you, the students and faculty of the University of Georgia. And I say, you are the wave of the future—not those who cry panic. For the country's future you will and must prevail.

ACCEPT 1954 COURT DECISION

I happen to believe that the 1954 decision was right. But, my belief does not matter, it is the law. Some of you may believe the decision was wrong. That does not matter. It is the law. And we both respect the law. By facing this problem honorably, you have shown to all the world that we Americans are moving forward together, solving this problem, under the rule of law.

An integral part of all this is that we make a total effort to guarantee the ballot to every American of voting age, in the North, as well as in the South. The right to vote is the easiest of all rights to grant. The spirit of our democracy, the letter of our Constitution and our laws require that there be no further delay in the achievement of full freedom to vote for all. Our system demands upon the fullest participation of all its citizens.

The problem between the white and colored people is a problem for all sections of

the United States. And as I have said, I believe there has been a great deal of hypocrisy in dealing with it. In fact, I found when I came to the Department of Justice that I need look no further to find evidence of this.

GOVERNMENT ACTS TO HALT DISCRIMINATION

I found that very few Negroes were employed above a custodial level. There were 950 lawyers working in the Department of Justice in Washington, and only 10 of them were Negroes. At the same moment the lawyers of the Department of Justice were bringing legal action to end discrimination, that same discrimination was being practiced within the Department itself.

At a recent review for the visiting leader of a new African state, there was only one Negro in the guard of honor. At the Bureau of the Budget, Negroes were used only for custodial work.

The Federal Government is taking steps to correct this.

Financial leaders from the East who deplore discrimination in the South belong to institutions where no Negroes or Jews are allowed and their children attend private schools where no Negro students are enrolled. Union officials criticize Southern leaders and yet practice discrimination with their unions. Government officials belong to private clubs in Washington where Negroes including ambassadors are not welcomed even at mealtime.

My firm belief is that if we are to make progress in this area—if we are to be truly great as a Nation, then we must make sure that nobody is denied an opportunity because of race, creed, or color. We pledge, by example, to take action in our own backyard, the Department of Justice, we pledge to move to protect the integrity of the courts in the administration of justice. In all this, we ask your help, we need your assistance.

ADVOCATES REASON AND RULE OF LAW

I come to you today and I shall come to you in the years ahead to advocate reason and the rule of law.

It is in this spirit that since taking office I have conferred many times with responsible public officials and civic leaders in the South on specific situations. I shall continue to do so. I do not expect them always to agree with my view of what the law requires, but I believe they share my respect for the law. We are trying to achieve amicable, voluntary solutions without going to court. These discussions have ranged from voting and school cases to incidents of arrest which might lead to violence.

We have sought to be helpful to avert violence and to get voluntary compliance. When our investigations indicate there has been a violation of law, we have asked responsible officials to take steps themselves to correct the situation. In some instances this has happened. When it has not, we have had to take legal action.

These conversations have been devoid of bitterness or hate. They have been carried on with mutual respect, understanding, and good will. National unity is essential and before taking any legal action, we will, where appropriate, invite the southern leaders to make their views known in these cases.

WARNS AGAINST ANOTHER LITTLE ROCK

We, the American people, must avoid another Little Rock, or another New Orleans. We cannot afford them. It is not only that such incidents do incalculable harm to the children involved and to the relations among people. It is not only that such convulsions seriously undermine respect for law and order, and cause serious economic and moral damage. Such incidents hurt our country in the eyes of the world. We just cannot afford another Little Rock or another New Orleans.

For on this generation of Americans falls the full burden of proving to the world that we really mean it when we say all men are created free and are equal before the law. All of us might wish at times that we lived in a more tranquil world, but we don't And if our times are difficult and perplexing, so are they challenging and filled with opportunity.

To the South, perhaps more than any other section of the country, has been given the opportunity and the challenge and the responsibility of demonstrating America at its greatest—at its full potential of liberty under law.

WILL ENFORCE CIVIL RIGHTS STATUTES

You may ask, will we enforce the civil rights statutes. The answer is: "Yes, we will."

We also will enforce the antitrust laws, the antiracketeering laws, the laws against kidnapping and robbing Federal banks, and transporting stolen automobiles across State lines, the illicit traffic in narcotics and all the rest. We can and will do no less.

I hold a constitutional office of the U.S. Government, and I shall perform the duty I have sworn to undertake—to enforce the law, in every field of law and every region.

We will not threaten, we will try to help. We will not persecute, we will prosecute.

We will not make or interpret the laws. We shall enforce them vigorously, without regional bias or political slant.

All this we intend to do. But all the high rhetoric on Law Day about the noble mansions of the law; all the high-sounding speeches about liberty and justice, are meaningless unless people—you and I—breathe meaning and force into it. For our liberties depend upon our respect for the law.

On December 13, 1889, Henry W. Grady of Georgia said these words to an audience in my home State of Massachusetts: "This hour little needs the loyalty that is loyal to one section and yet holds the other in enduring suspicion and estrangement. Give us the broad and perfect loyalty that loves and trusts Georgia alike with Massachusetts—that knows no South, no North, no East, no West, but endears with equal and patriotic love every foot of our soil, every State of our Union.

"A mighty duty, sir, and a mighty inspiration impels every one of us tonight to lose in patriotic consecration whatever estranges, whatever divides. We, sir, are Americans, and we stand for human liberty."

Ten days later Mr. Grady was dead, but his words live today. We stand for human liberty.

The road ahead is full of difficulties and discomforts. But as for me, I welcome the challenge, I welcome the opportunity, and I pledge my best effort—all I have in material things and physical strength and spirit to see that freedom shall advance and that our children will grow old under the rule of law.

A Poem in Honor of President Kennedy

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following poem written in honor of President Kennedy, by Miss Marty Hale, "The Old Spinner," 883 Buena Vista Blvd., Steubenville, Ohio:

WRITTEN IN HONOR OF THE PRESIDENT OF THE UNITED STATES OF AMERICA, JOHN F. KENNEDY

(By Marty Hale, "The Old Spinner," 883 Buena Vista Blvd., Steubenville, Ohio)

He is rocking alone in his old rocking chair,
His young shoulders bearing a world's load of care.
Cramming a lot of work into each day,
He is trying to rock the world's burdens away.
The path he has chosen the boy knew was rough,
But he figured himself as sufficiently tough.
And we think that he is. So our faith we place there,
With this young man who rocks in the old rocking chair.

He must uphold the honor his land has achieved,
Through the years of hard struggle for things we believed.
Strange things sometimes happen, and it just might be so,
The great problems be solved as he rocks to and fro.
Hate and spite are rampant, and the world is so ill,
And its healing must lie in this so-young man's will.
God bless him and guide him we say, with the prayer
That our freedom be saved by his old rocking chair.

What Can We Do for America?

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. RAY. Mr. Speaker, under leave to extend my remarks, I am glad to place in the RECORD a thoughtful and constructive editorial entitled "What Can We Do for America?" It is written by Charles B. Shuman, president of the American Farm Bureau Federation, and appeared in the April 1961 issue of the Federation's magazine Nation's Agriculture. It deserves careful consideration and I hope its conclusions will be reflected in appropriate congressional action:

WHAT CAN WE DO FOR AMERICA?

(By Charles B. Shuman)

In his inaugural message, President Kennedy challenged all of us with the statement—"Ask not what America will do for you, ask what you can do for your country." At times of great crisis Americans have repeatedly demonstrated their loyalty and willingness to sacrifice everything, even life itself, for their homeland.

Freedom is our most precious possession and we do not intend that it shall be taken from us by any other power on earth. Unfortunately, we sometimes forget that freedom must be earned by each generation and unless we are eternally vigilant, it may slip away from us without a single missile being fired.

Many of the slave state dictatorships of the modern world have been established by power-mad minorities who took advantage of the complacency and selfishness of their own citizens—not by major military operations of a foreign power.

Not long ago I was shocked by a letter from a farmer who said, "You talk about

freedom; I would be glad to give up some of my freedom for $1.20 corn."

A factory worker wishes to exchange some of his freedom for increased unemployment compensation.

The schoolteacher wants the entire community to give up certain freedoms in order to get Federal money for school salaries.

The land owner justifies his subsidy for the purchase of agricultural limestone with the cliche—"Others get government subsidies."

The secretary of a local chamber of commerce cannot understand why obtaining a Federal appropriation for the local airport or a dam on a nearby river means the sacrifice of a certain amount of freedom.

Freedom includes many privileges—freedom of worship, of speech and of the press; the opportunity to move about without permit or supervision; the right to choose an occupation or to change jobs; and often overlooked but extremely important—the right to own property and to decide how to spend one's income.

As citizens turn more and more to government for economic gain—for big spending projects—taxes spiral upward and confiscate a higher portion of each person's income. It has been estimated that taxes now take approximately one-third of total national income in the United States.

Since the cost of the basic needs of life—food, shelter, and clothing—now require 50 percent or more of the average family's income, there remains only about 17 percent for free choice spending and for saving.

Each time Congress appropriates money for a sewage disposal plant for a prosperous city, a subsidy for the airlines or the billions of dollars lost in supporting farm prices we all give up an essential part of our freedom—the freedom to decide how to use the income from our work.

The argument is often made that good schools, adequate highways, higher farm prices, and safe airline transportation are highly desirable and that since the politicians are willing to provide these things taxpayers should be happy to give up some of their freedom of choice. The fallacy here is that all of these things can be obtained, and at less cost, without huge Federal spending programs.

Just what did President Kennedy mean when he said "Ask what you can do for your country"? One newly appointed Washington bureau chief contends that he was calling for higher taxes and more regimentation—a modern form of economic slavery. This view is supported by recent recommendations for big increases in Federal spending. In any case, the President has presented a worthy challenge. He is correct in placing the responsibility on the citizens—not Members of Congress or other elected officials. The greatest thing we can do for America is not to "ask."

The Will To Fail

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. DEROUNIAN. Mr. Speaker, on the subject of our foreign relations, I recommend to you this thought-provoking article by Marguerite Higgins as it appeared in the New York Herald Tribune on May 8:

THE WILL TO FAIL
(By Marguerite Higgins)

WASHINGTON.—The swift undoing in Laos of the independence to which the United States has long been publicly committed is due neither to the fighting qualities of the Royal Lao Army nor to the presence of too many Cadillacs in Vientiane.

It is due fundamentally—and—inescapably—to the fact that America's will to defend Laos by force if necessary rather than let it go down the drain appears in doubt before the world. The Communist bloc no longer finds the only real deterrent in its way—the possibility of American counteraction—to be completely credible.

And, Kennedy historians please note, it is this possibility of help to Laos from the outside and this alone that kept the Communist Vietminh neighbors of Laos in Hanoi from sending some of their 300,000-man army to seize the strategic prize that is the mountain kingdom. Alone, Laos could have fallen at any time, irrespective of what particular mode of pressure the Reds decided to bring.

It doesn't matter whether the Vietminh soldiers came into Laos in organized battalion strength or, as in fact happened, as officers and technicians to command and supply so-called Pathet Lao forces. If the Communist world with all its vast resources of guns and ruses could be sure that its sole opponent on the ground would be the 20,000 men of the Royal Lao Army, then Laos was in due course theirs for the taking.

As to the Cadillacs, since when did honor, integrity and popularity with the masses save an unwilling victim from communism?

Jan Masaryk, Eduard Benes, free Czechoslovakia—where are they now?

And if it is going to be argued that they are where they are because Russian troops were on Czechoslovakia's borders, the answer must be made that so were American troops on Czechoslovakia's borders. (U.S. occupation troops in Germany.) And the fact that people remember the former but forget the latter provides an insight—not just to Communist estimates but to worldwide estimates of America's will to help those on its side at a time when something far more precious than a Cadillac is required.

If corruption in Laos were really an issue, the time for the Communists to have struck was between 1954 and 1958. But not August, 1960. For the fact is that the government of that time, led by Premier Tiao Samsonith, whose overthrow last August by Capt. Kong Le began the present tragedy, was by far the most progressive Laos ever had. If John Cool, the American director of the village help program and the one American who has really been to the grassroots in Laos, is to be believed, there is an excellent case for asserting that the Pathet Lao went back to war last year because their hopes of winning by political means were going glimmering.

There is, indeed, in Laos itself a province that aptly demonstrates the irony and tragedy of the belief that having the support of the people is a shield against communism. This is Xieng Thousang Province, peopled by the Meo tribesmen who fought the Communist Pathet Lao so fiercely both before and after their invasion that the tribe is being hunted down with a ruthlessness that indicates genocide. And yet fiercely anti-Communist Xieng Thousang Province was the first to be seized in this latest Red offensive.

"Thank God there was a Korea," an American diplomat said the other day. "For there the Communists found out that, even if every outward sign showed that America would not fight, they couldn't count on these signs because at the last minute America could change her mind."

And the crucial necessity of maintaining the deterrent of doubt explains why professional diplomats around town raised their eyebrows when Senator FULBRIGHT, chairman of the Senate Foreign Relations Committee, engaged in what Washington has dubbed "the wrong words at the wrong time at the wrong place." (A televised declaration opposing American intervention in Laos under virtually any conditions, made when critical negotiations with the Communists depended on their being faced with this possibility as a deterrent to their aggression.) Said a veteran diplomat: "If Senator FULBRIGHT'S words had been taken by the Communists as serious American policy, it could have had tragic results on the battlefield by removing the last real incentive for the Communists to stop the fighting."

In southeast Asia the United States dared to tempt the Communists with weakness—not of arms but of will. And however well meant, public declarations of a will to let freedom fail in Laos rather than intervene cannot but help to undermine the West's negotiating position, not only on the battlefield but in the crucial conference on Laos at Geneva.

Domestic Cancer

EXTENSION OF REMARKS
OF
HON. JOHN DOWDY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. DOWDY. Mr. Speaker, I request unanimous consent that the editorial entitled "Domestic Cancer," published in the Sunday, May 7, 1961, edition of the Palestine (Tex.) Herald-Press, be made a part of the appendix to the RECORD.

The malignancy that is eating away the moral structure and very vitals of our system of government is becoming increasingly apparent and more and more disturbing to many American citizens. This fine editorial is further evidence of that fact:

DOMESTIC CANCER

Thinking Americans of all walks of life, dismayed by the severe losses this country has taken in recent weeks in dealing with international communism, are wondering what is wrong. What has happened to the courage this country has always before shown in the face of adversity?

One very wise man we know supplies the answer. He says the United States "is eaten up with domestic cancer."

It is the cancer of being lackadaisical, the cancer of failing to react against the things in American life that are clearly wrong. We are not being defeated by communism. Instead, by failing to show the industry, the honesty, and the pride of work that is a major part of the American heritage, we are dying the slow death of rot—the rot of moral and physical courage.

The blame is easy to assess. Americans have lost their strength of individual character and purpose because Federal paternalism and soft living, coupled with incentive-destroying Federal taxes, have made the majority voluntary wards, as far as thinking is concerned, of the master-minds of Washington. But assessing blame for the past, that has brought us to a dangerous present, serves no purpose now.

In the present, and facing a relentless Communist enemy, it is up to all of us as Americans to bring back, if we can, our

American courage to do the right, and our temper to resent the wrong.

Resentment against wrong has been lulled to sleep. Most Americans merely shrugged, for example, when they learned that the Nation's biggest manufacturers of electrical equipment had been engaged in a massive and lengthy program of price fixing. So what? That was the usual comment, if comment was made.

Now comes word, from top officials in the U.S. missile program, that sloppy work and featherbedding, coupled with strikes, slowdowns, and astronomical wage scales, have drastically added to the cost of this vital defense program while slowing down development of missile bases to the point of acute national danger. During the four and a half years this country has been working to set up missile bases at 22 sites, there have been 327 major work stoppages and strikes. Refuse has been tossed into fuel tanks, perhaps causing some of our missile failures. And on wages:

A Cape Canaveral apprentice electrician has been drawing $748 a week. Unskilled laborers at some bases draw $287 a week, truckdrivers up to $324 a week, elevator operators $360.

In other years public indignation would have been instant and volatile. Now the topic hardly makes conversation.

We are in the most intense danger this country has ever faced in its history, and we are not going to survive unless we shake off national lethargy, in our private lives as well as in government. Yet neither category has shown real signs of shaking it off.

In answer to the missile base problem, Labor Secretary Arthur Goldberg has assigned a three-man team to try to resolve jurisdictional disputes between the unions. He also has appealed to the unions to stop striking.

Such a powder-puff approach to the problem would be inexcusable in a time of world tranquility. With the very existence of the United States at stake, it borders on idiocy. Yet, there's no point in getting too hard on Goldberg. How resentful have you been? How much capacity for resentment against wrong, or determination to correct it, remains in the average American?

Law and the Free Citizen

EXTENSION OF REMARKS
OF
HON. THOMAS G. MORRIS
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. MORRIS. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD an essay written by a 14-year-old girl from Alamogordo, N. Mex., Miss Barbara Lawless. The essay was the winner of a contest sponsored by the VFW auxiliary for junior high students, and I count it a privilege to call it to the Members' attention:

LAW AND THE FREE CITIZEN

Law is not something that this Nation, or even this country, can claim as its own. Even ancient tribes had their type of justice. Down through the ages, from the Greeks and Romans, the French and English, from Hammurabi's Code to the Magna Carta, the foundation for our code of law was being laid. Drawn up by our Founding Fathers, our Constitution, the law of the land was based on ancient and preceding law. The Constitution—and I refer also to the Bill of Rights—was established to protect not only a new republic, but also to safeguard the rights of individuals. Used properly, and as originally intended, our Constitution will accomplish these aims. If used improperly, however, untold damage may result. When the Constitution is not merely interpreted, but actually made over to fit a few individual ideas, then it is time to be wary, for our road to disaster is not only being paved, but actually being laid out.

Our country is distinguished from totalitarian forms of government principally by the rights of the individual. While a person living in an Iron Curtain country may be a citizen, he has no individual rights. We could hardly say that he is a free citizen.

A free citizen is one who, either by birth or naturalization, is recognized as having the rights of a citizen and is independent from the state. His rights cannot be infringed upon. He can, within reason, do what he pleases, unless his rights encroach upon the rights of another.

It has been said that the Constitution gives equal rights and privileges to everyone. In reality this is not always correct. Often a person's wealth, prestige, race or beliefs have interfered. While perhaps this may be unfair, it is a condition that exists and must be dealt with, not only by the legal profession, but by unprejudiced citizens.

Justice Hugo Black explained the position of the courts on equal rights in 1939 when he stated: "Courts stand as havens of refuge. No higher duty rests upon this court than that of translating into living law and maintaining this constitutional shield, deliberately planned and inscribed for the benefit of every human being."

When we study the crime rate we begin to understand how our system of law and order is seriously being undermined. Crime has outpaced the population at a rate of 4 to 1. The Federal Bureau of Investigation states, in its Uniform Crime Report of 1959, that crime has increased 69 percent over 1950. Having the highest crime rates of all civilized nations, we realize that all free citizens do not value their freedom highly.

There is perhaps no area in which the law is as openly disregarded as in respect to mobs. A country ruled by mobs inevitably falls. Police usually go easy on mobs, fearing that if they used some old time courage of law and order they will be called Gestapo brutes. As the fairly recent Communist-led demonstrations on the House Committee on Un-American Activities in San Francisco showed, unless the law cracks down on our misguided and disloyal free citizens, the mobsters and rioters will soon be running the country.
